"In this paper I will not examine the three-sided relationship between the Receptacle, primary substance, and primary matter. Such an examination would afford an interesting perspective from which to study the development of Aristotle's theory of substance from the Categories to the Metaphysics, but it would raise many difficult issues not easily resolved in a short paper. I will instead simply list the properties shared by the Receptacle and primary substance and discuss one important consequence of the link thereby established between Timaeus 49-52 and Categories V: that the well-known controversy between G. E. L. Owen and Harold Cherniss over the dating of the Timaeus must be decided in favor of Owen, at least with respect to the relative dating of the Timaeus and the Sophist. I propose to show, in other words, that Categories V owes a much greater debt to Plato than is usually thought and that an examination of this debt increases our understanding not only of Aristotle's theory of substance but also of the development of Plato's later philosophy." (pp. 253-254)

42. Duerlinger, James. 1988. "The ontology of Plato's Sophist: I. The problems of falsehood, non-being and being." *The Modern Schoolman* no. 65:151-184.

Second part: *The Modern Schoolman*, LXV, March, 1988, 170-184.

"This is the first part of a two-part article in which Plato's discussion of the problems of falsehood, non-being and being, as presented in his Sophist, 236D9-25908, is explained from an ontological perspective. A new, unifying account of Plato's discussion is introduced that place it squarely within the framework of his theory of forms as it was understood by Aristotle and the ancient Platonists instead of the linguistic frameworks in which it has been placed by modern scholars. Because these linguistic frameworks have dominated both the modern translations and interpretations of Plato's text, readers will need to take special care not to presuppose the correctness of one or another of them when assessing this explanation. In particular to understand what is said here readers must free themselves of the habit of assuming that we are concerned with interpretations of " is" in positive statements of existence,

predication, or identity, or with interpretations of "is not" in negative statements of existence, predication, or identity. The result of their effort, I believe, will be a clearer understanding of the novelty of my account, and consequently, a better understanding of the place of Plato's discussion within the history of ancient Greek ontology.

In the first part of this article I shall explain Plato's presentations of the problems of falsehood, non-being, and being, and in the second I shall explain his solutions to these problems in the context of his reply to those who deny that something can be both one and many. As Plato presents the problems of falsehood and non-being, I claim, he intends that we should realize that they rely on the assumption that because non-being is the contrary of being nothing can be both a being and a non-being. For this reason his solution to these problems is to argue, first of all, that non-being is not the contrary of being, but instead the form of otherness than another being, and secondly, that because every being, including being itself, partakes of this form, something can be both a being and a non-being." (p. 151)

43. Duncombe, Matthew. 2012. "Plato's Absolute and Relative Categories at Sophist 255c14." *Ancient Philosophy* no. 32:77-86.

"Beginning at Sophist 255c9 the Eleatic Stranger attempts a proof that 'being' (τὸ ὄν) and 'other' (τὸ ἕτερον) are different very great kinds. The key step in this proof is to group beings (τῶν ὄντων) into those that are themselves in themselves (αὐτὰ καθ' αὐτά) and those that are in relation to other things (πρὸς ἄλλα). Much effort has been made to understand this distinction between αὐτὰ καθ' αὐτά and πρὸς ἄλλα. The prevailing approach takes the former to name the class of 'absolute' terms and the latter to name the class of 'relative' terms, categories described in Diogenes Laertius' *Life of Plato*. Some, however, have argued that this category approach fails because it cannot say into which class some terms, such as 'sameness', fit. This represents a longstanding interpretive impasse. In this paper I show that an alternative

manuscript reading can preserve the general category approach, whilst allowing 'sameness' to fit into the scheme, and thereby end the interpretive deadlock. I then defend my alternative reading against the possible objection that certain terms do not fit into the new scheme by appealing to a range of texts where Plato discusses relative terms." (p. 77, notes omitted)

"For a good overview of the literature on this distinction, see John Malcolm, "A Way Back for Sophist 255c12-13", *Ancient Philosophy* 26: 275-289. 2006, p. 276."

44. Eisenberg, Paul D. 1976. "More on non-being and the one." *Apeiron* no. 10:6-14.

"In a recent issue of this journal, Prof. William Bondeson has argued⁽¹⁾ that previous translations of το μηδαμῶς οὐ will not do (or, in some cases, are even seriously misleading); and he proposes to translate that phrase by 'that which has no characteristics at all'. In the second section of his paper, he seeks to show that there is "a close resemblance" (p.17) — indeed, "a direct parallel" (p. 18)—between the Sophist's το μηδαμῶς οὐ and the ostensible subject of the first and sixth hypotheses of the second part of the *Parmenides*. Although, to be sure, he raises a number of other points as well—and although I am inclined to agree

with much else that he says or suggests in his paper—what I have just indicated seem to me to be the principal theses in his paper. In any case, in this paper I shall deal almost exclusively with them—and I shall take issue with both of them. Or, more exactly, I shall argue that Bondeson's proposal for a new translation is quite untenable; and, while agreeing that there is indeed a "direct parallel" between the materials in the two dialogues that he considers, I shall question what seems to be his interpretation of the significance of those materials or arguments." (p. 13)

45. El Murr, Dimitri. 2006. "Paradigm and Diairesis: A Response To M.L. Gill's 'Models In Plato's Sophist and Statesman'." *Plato: The Internet Journal of the International Plato Society* no. 6:1-9.

"In her interesting and stimulating paper, Mary-Louise Gill addresses one of the central issues in Plato's *Sophist* and *Statesman*: what is a model (paradeigma) and how does one become useful in a dialectical inquiry? Gill's main thesis is clear: a paradeigma becomes truly useful when not only the sameness between the example and the target but also their difference are recognized ("the inquirers need to recognize, not only the feature that is the same in the example and the target, but also the difference between the two embodiments and the procedural difference those different embodiments entail")." (p. 1)

46. El_Bizri, Nader. 2004. "On και κώρα. Situating Heidegger between the *Sophist* and the *Timaeus*." *Studia Phaenomenologica* no. 4:73-98.

Abstract: "In attempting to address the heideggerian Seinsfrage, by way of situating it between the platonic conception of *ὄν* in the *Sophist* and of *χώρα* in the *Timaeus*, this paper investigates the ontological possibilities that are opened up in terms of rethinking space. Asserting the intrinsic connection between the question of being and that of space, we argue that the maturation of ontology as phenomenology would not unfold in its furthestmost potential unless the being of space gets clarified. This state of affairs confronts us with the exacting ontological task to found a theory of space that contributes to an explication of the question of being beyond its associated temporocentric determinations. Consequently, our line of inquiry endeavors herein to constitute a prolegmenon to the elucidation of the question of the being of space as "ontokhorology."

47. Ellis, John. 1995. "Δύναμις and Being: Heidegger on Plato's *Sophist* 247d8-e4." *Epoché: A Journal for the History of Philosophy* no. 3:43-78.

"This definition of being is proposed by the Stranger in the course of his discussion of the "gigantic battle."

One side maintains that only tangible, visible bodies have being (οὐσία), while the other claims that being is limited to only incorporeal, invisible Forms, the bodies of the opponents being relegated to the realm of becoming (δύναμις)." (p. 43)

(...)

"There is hardly a line in the above summary of the setting for 247d-e that is uncontroversial. The crux of the controversy is of course whether Plato is offering a definition of being as δύναμις;. Should we take this seriously, or is it merely a mark of being, used to refute the corporealists? After all, it looks as if the Stranger merely suggests that the known is changed by the knower-it is in fact one of three options mentioned so

the friends of the Forms may not be forced to accept it. And if we do take the definition seriously, this surely entails that Plato has radically altered his view on the nature of the Forms.

The issue still divides scholars. Heidegger's interpretation of this passage in his lecture course on the Sophist is one that takes the definition seriously.

(...)

What is most interesting, however, is his relation to an unnamed interpreter, whom, as we shall see, Heidegger no doubt wants to take issue with, but who also fundamentally shaped Heidegger's own reading. This

kind of problematic relationship is even more so because he remains unnamed. He is none other than Paul Natorp, whose name explicitly occurs only one other time in the course of the lecture (with the obvious exception of the eulogy at the very beginning), and that is with respect to his article on Antisthenes [*]." (p. 44)

(...)

"The essay is divided into three subsequent sections. I will give a review of Natorp's interpretation in section II. In section III,

we shall turn to Heidegger's reading in the Sophist lecture, pointing out, along the way, influences of, and divergences from, Natorp. And in section IV, we will briefly consider the issue of destruction." (p. 45)

48. Esposti Ongaro, Michele. 2009. "The Ontological Ground of Syntax: An Analysis of Plato's Sophist, 262c2-5. A Reply to Bruno Centrone." *Les Études Platoniciennes* no. 6.

"In his most recent translation of the dialogue, B. Centrone(1) argues that the expressions οὐσία ὄντος and οὐσία μὴ ὄντος can be interpreted in different ways, according to how we interpret the noun οὐσία, either as an indication of what a thing is or as an indication of the fact that it is.

Therefore, Centrone remarks that the meaningful λόγος can assert (a) that a thing which is, or a thing which is not, are (the horse is; the chimera is); (b) what a thing which is (exists) is, or what it is not (the horse is a quadruped, it isn't a biped); (c) what a thing which is (exists) is, or what a thing which is not (doesn't exist) is (a swallow is winged; a chimera is winged); or (d) that a particular nature is or is not.

Centrone suggests that the first is the right interpretation. Nevertheless I am not sure that he really gives a complete range of choices. I don't believe that the expression οὐσία μὴ ὄντος could refer to a non-existing entity like "a chimera", for the simple reason that Plato had previously excluded not being as an entity: "not being" is rather an expression which means the idea of Difference, in relation to a subject. I will therefore try to demonstrate that the expressions ὄντος and οὐσία μὴ ὄντος aren't equivalent and that the first refers to a particular entity, while the second has a completely different function." (p. 178)

49. Esses, Daniel. 2019. "Philosophic appearance and sophistic essence in Plato's *Sophist*. A New Reading of the Definitions." *Ancient Philosophy* no. 39:295-317.

"Why does the Eleatic Visitor present so many definitions of sophistry in Plato's *Sophist*? Is the final definition complete, or should it be qualified and supplemented with further research? These are long-standing questions in scholarship on Plato's *Sophist*, and they have been the subject of lively debate.⁽¹⁾ I develop a new reading of the dialogue's definitions and provide fresh answers to these questions.

The distinguishing features of my reading are the following. First, I read the *Sophist* as a drama, paying special attention to how the dialogue's participants are portrayed and its place in a trilogy that also includes the *Theaetetus* and the *Statesman*. Second, rather than simply casting aside the first six definitions of sophistry as erroneous and irrelevant due to the success of the seventh definition, I examine what they each contribute to the search for the sophist. The multiple definitions not only help highlight the sophist's deceptiveness and manifold appearances, but they also though subtly and gradually turn our attention to the challenge of distinguishing Socrates and sophists. Last, I strike, middle course in my assessment of the Visitor's final definition. I accept it as an adequate disclosure of the sophist's essence, but I also grapple with the possibility that it fails to provide adequate guidance for differentiating between Socratic philosophizing and sophistry." (p. 295)

(1) See Rickless 2010 for a recent intervention in this debate. Brown 2010 and Gill 2010 are also notable for their focus on the dialogue's divisions and definitions. Though studies focusing on this particular aspect of the dialogue are relatively recent, interpretations of the dialogue as a whole generally address the status and significance of the definitions, with varying conclusions.

50. Ferejohn, Michael T. 1989. "Plato and Aristotle on Negative Predication and Semantic Fragmentation." *Archiv für Geschichte der Philosophie* no. 71:257-282.

"This paper opened with the proposal of a somewhat unorthodox approach to reading the Sophist (as a close companion to certain Aristotelian texts), to which can now be added a further methodological prescription which needs no apology whatsoever. Simply put, it is that the Sophist should be read as a single and continuous whole. This may not seem to need saying, but in fact it is all too tempting (and has been too common) to think of the dialogue almost as if it were two separate works: an "outer shell" (216 — 36 and 264 — 8) in which Plato is concerned primarily to show off his method of division (and secondarily to continue his sustained invective against the sophists), and a more philosophical "inner core" (237 — 64) where the aim is to vindicate the possibility of false thought and speech against Eleatic attack. This bifurcation is an excessive reaction to an unexceptionable fact.

For one can quite readily agree that there is a vast difference in philosophical content between the two parts of this alleged division without committing the correlative errors of regarding the "inner" section as self-contained, and dismissing the "outer" sections as so much optional reading when trying to puzzle out the discussion of negation, falsity, and related topics which occurs at 237 — 64.

Besides the general point that this false partition denies justice to Plato both as a philosopher and as a master of the dramatic

craft, there are very powerful reasons pertaining to the specific issues involved for suspecting that the parts in question must be more connected than the explicit transitions at 236,7 and 264 make it seem.

Chief among these is the fact that whereas the particular application of the method of division to the very special case of the sophist might depend on the intelligibility of false statement, Plato's very conception of the method itself presupposes the coherence of negative predication." "The avowed purpose of Plato's *Sophist* is to characterize the sophist. In the first part of his book, Plato employs the method of divisions to obtain this characterization, and eventually arrives at the conclusion that the sophist is an imitator and that "there is an art, concerned with speeches, by which it is possible to beguile the young" (234c). From here it is short shrift to arrive at the problem of falsity. This problem is, I claim, the philosophical leitmotiv that drives the discussions in the second part of Plato's *Sophist* (after 236d). One should be clear about what exactly this problem consists of. In the *Sophist*, Plato is not concerned with the problem of the meaningfulness of false statements concerning some high-minded realm of objects (e.g., forms) - quite to the contrary (see the epilogue). Plato is concerned with falsity in ordinary statements. This is worth emphasizing: Plato's main problem in the *Sophist* is to account for the meaningfulness of such simple and prosaic (false) statements as "Theaetetus is flying" (263a)." (p. 61)

53. Figal, Gunter. 2000. "Refraining from Dialectic: Heidegger's Interpretation of Plato in the *Sophist* Lectures (1924/25)." In, edited by Scott, Charles E. and Sallis, John, 95-109. Albany: State University of New York Press.

"We should begin with a general characterization of the *Sophist* and Heidegger's reading of the dialogue. The aim of the long and extremely difficult discussion between the Eleatic Stranger and Theaetetus is to find out how something like sophistry is possible. To find an answer to this question is equivalent to investigating the human way of being in the world. In this way Plato's dialogue is a contribution to ontology. Nearly needless to say that it is an ontology of a very special kind and that the ontological investigation also turns out to be very special because of the nature of its subject. As Heidegger puts it, from the attempt to hold up a mirror "to the sophist's concrete Dasein within Greek life" (GA, 19:189) soon arises the suspicion, that sophists are connected with "deception and fraud," and so the investigation has to determine the status of deception and fraud. A quite simple reflection makes clear that every deception makes a pretense of being something that it is not, it passes off "non-being for being." Accordingly, the

question of the being of the sophist's form of life is the question of the being of non-being. And, as Heidegger stresses, this means "a revolution in the previous way of thinking, even in the previous way in which Plato himself put forward the meaning of being"; the demonstration of non-being in being "is nothing less than the more radical conception of the meaning of being itself' (GA, 19: 192)." (pp. 96-97)

54. Fine, Gail. 1977. "Plato on Naming." *The Philosophical Quarterly* no. 27:289-301.

"Plato is sometimes criticized for having failed to distinguish names and sentences, and naming and stating, until the Sophist, and this failure is thought to underlie both his supposed perplexity about false belief in the *Cratylus*, *Theaetetus*, and elsewhere, and his claim, in the *Cratylus*, that names can be true and false" (p. 289)

(...)

"This does not imply that Plato is clear about the differences between names and sentences; but we shall at least find that there is no evidence committing him to any confusion here. Nor, as we shall see, does Plato conflate stating and naming, in either of the alleged ways. Finally, we shall see that neither his account of true names nor his account of false belief in the *Cratylus* rests on the crude views ascribed to him. The account of true names says no more than that names are true or false of things, and that correct assignments of names depend upon the descriptive content of names. The account of false belief, so far from depending on the atomist "hit or miss" model, in fact matches the Sophist's later, supposedly more mature, account." (pp. 290-291)

55. Flower, Robert. 1980. "G. E. L. Owen, Plato and the Verb To Be." *Apeiron* no. 14:87-95.

"When it comes to Plato, the question which Aristotle tells us has plagued philosophers from the beginning — namely, "What is being?" (1) — has been reduced by certain contemporary commentators to the question, "How many syntactically distinct uses of the verb "to be" can be discerned in Plato's Sophist.(2) Over this latter question there has arisen something of a controversy of interpretation between two camps, so to speak. The first camp, from which I have chosen as representative, J.L. Ackrill (3), claims to have discerned three distinct uses: the "is" of identity, the "is" of the copula, and the "is" of existence. The second camp, represented here by G.E.L. Owen,(4) claims that there are only two uses of the verb "to be" in the Sophist: the "is" of identity and the "is" of the copula. To quote Professor Owen,

"The Sophist will turn out to be primarily an essay in problems of reference and predication and in the incomplete uses of the verb associated with these. The argument neither contains nor compels any isolation of an existential verb."(5)

I should like to argue in this paper that both camps are mistaken. There is only one use of the verb "to be" in the Sophist — namely, the "is" of participation — and it is this and this use alone that constitutes Plato's answer to Aristotle's question.

Being, for Plato of the Sophist, is participation or, perhaps better, the "power of participating". Thus, while Owen is, I shall argue, quite correct when he inveighs against discerning a substantive, existential use of the verb "to be" in the Sophist, his own account (and the arguments he offers in favor of it) warrants, shall we say, a "friendly amendment".

Whether one has adopted Ackrill's position or been persuaded by Owen, the evidence in question is minimally two-fold. Either interpretation must account for, first, the various passages wherein Plato either employs or seems to imply the expression, "participates in being" and, second, the passage from 255b7 to 255e where the Eleatic Stranger distinguishes Being from the Same and the Other."

(1) Aristotle, *Metaphysics*, Z 1.7, 1028b3-8.

(2) While this is not the time to argue about the advisability of such a "reduction". I must admit to the suspicion that the approach to Plato inherent in such a reduction does generate certain confusions; if only because it fails to preserve the issue of the initial question.

56. ———. 1984. "The number of being." *The Modern Schoolman* no. 62:1-26.

"It is to my mind no accident that the primary interlocutor of both the *Theaetetus* and the *Sophist*, is the young mathematician, Theaetetus. In the former dialogue Theaetetus inroads into a theory of proportion that would include incommensurables constitute the model in terms of which Plato would have us understand the "fluid" logic of "maieutic"

inquiry. I should here like to argue that the "object" of Theaetetus' own mathematical studies - namely incommensurables - offer Plato, if not the literal truth with regard to Being, at least a revealing metaphor in terms of which the nature and logic of Being can be articulated." (p. 1)

57. Foshay, Raphael. 2017. "Plato at the Foundation of Disciplines: Method and the Metaxu in the Phaedrus, Sophist, and Symposium." *IAFOR Journal of Arts & Humanities* no. 4:15-23.

Abstract: "This paper situates the interpretation of Plato in its 2500-year trajectory toward a significant change in the mid-twentieth century, away from the attempt to establish Plato's metaphysical doctrines to a recognition of the intrinsic value of their literary-dramatic dialogue form. I discuss the lingering presence of doctrinal interpretation in the Nietzschean-Heideggerian tradition of Plato interpretation as it manifests in Derrida's reading of Plato's Phaedrus. I then give two examples of the transformative power of attention to the literary-dramatic structure of the dialogues in the work of two quite different but mutually confirming kinds of contemporary Plato interpretation, those by Catherine H. Zuckert and William Desmond, respectively. The Plato that emerges from their work confirms the growing recognition that the tradition of Platonism does not represent the thinking embodied in Plato's dialogues."

Abstract: "Plato's dialogue the Sophist seems to contribute to two separate projects that are not easily reconciled: on the one hand, defining the sophist, and, on the other hand, developing a theory of being and process. In this article, it is argued that

the two undertakings come together in what is a main focus for the dialogue's interlocutors and a major issue in Plato's writings overall, namely, education or development. This is an issue which in the Sophist finds expression in two separate but intimately interconnected questions, concerning the "who" and "how," respectively, of the educational process."

59. Foster, Bennett. 2018. "Platonic Agonism: A Dialogical Addendum to Plato's Sophist." *Sophia and Philosophia* no. 1:1-28.

"The following addendum to Plato's Sophist was fabricated as a kind of experimental answer to a specific contextual question: What is the relation of Plato's conception of philosophy to the practice of the agōn in Ancient Greece? For the "contest-system,"⁽¹⁾ to adopt Gouldner's phrase, has long been recognized as one of the salient features of Greek culture in the centuries leading up to Plato's time.⁽²⁾" (p. 1)

(...)

(1) By "contest-system," Gouldner means to convey the sense that the agōn is a systematic cultural entity, almost on the level of a formal institution. By agōn there is certainly meant more here than the sum of the various types of contests in Ancient Greece, let alone a particular type or instance of contest. Alvin Gouldner, "The Greek Contest System," in *Enter Plato: Classical Greece and the Origins of Social Theory* (New York: Basic Books, Inc., 1965), 41-77.

(2) Jacob Burkhardt is credited with popularizing the notion of the "Agonal Age" of Greek history, during which the agōn was a "motive power ... capable of working on the will and potentialities of each individual ... and indeed became the paramount feature of life." While the agōn was on the wane in Plato's time, its influence was formative and lasting, and it was still a live issue whether traditional values such as the agōn represented should be retained. [Jacob Burkhardt, *The Greeks and Greek Civilization*, trans. by Sheila Stern, ed. by Oswyn Murray (New York: St. Martin's Press, 1998), 162, 166.]

"...I want in what follows to focus on the discussion of false statements. Hence I will, only very briefly, comment on the remarks about being, and, in somewhat more detail, consider the remarks about what it is to be not being, to the extent that this seems necessary to understand Plato's resolution of the difficulty concerning false statements." (p. 399)

(...)

"Conclusion. In fact one thing that is striking about the *Sophist*, in comparison to the earlier dialogues, is its "dogmatic" and systematic character. It sets out carefully constructing a series of puzzles, *aporiai*. In this respect its first half resembles the early dialogues or even its immediate predecessor, the *Theaetetus*. But then it turns toward a resolution of these *aporiai*. In this regard the procedure of the dialogue reminds one of the methodological principle Aristotle sometimes refers to and follows, the principle that on a given subject matter we first of all have to see clearly the *aporiai* involved before we can proceed to an adequate account of the matter, which proves its adequacy in part by its ability both to account for and to resolve

the aporiai (cf. De An. I, 2, 403b20-21; Met. B1, 995a27 ff.). And the Sophist proceeds to resolve these difficulties in a very systematic and almost technical way. By careful analysis it tries to isolate and to settle an issue definitively. In this regard it does stand out among all of Plato's dialogues. And because of this it also is more readily accessible to interpretation. If, nevertheless, we do have difficulties with this text, it is in good part because in his day Plato was dealing with almost entirely unexplored issues for whose discussion even the most rudimentary concepts were missing. Seen in this light, Plato's solution of the difficulty presented by false statements is a singular achievement." (p. 423)

3. ———. 1996. "The Literary Form of the Sophist." In *Form and Argument in Late Plato*, edited by Gill, Christopher and McCabe, Mary Margaret, 135-152. Oxford: Oxford University Press.

"If one considers the literary form of the Sophist, one is primarily interested in what is characteristic of, or distinctive about, the literary form of this particular dialogue, as opposed to other Platonic dialogues. But this should not make us overlook the fact that the Sophist, first of all, is a dialogue, and that, in the case of the Sophist, there is something particularly puzzling about this. So I will first consider the question why Plato wrote the Sophist as a dialogue, and then turn to two other literary features of the text.

The puzzle is this. If we look at the early aporetic dialogues, we have a number of readily available explanations why Plato wrote them as dialogues. But, as we proceed to the middle and then the late dialogues, these explanations become less and less plausible. And they seem to be particularly implausible in the case of the Sophist. For the Sophist, in a way, is the most dogmatic of all of Plato's dialogues. And it might seem that Plato could as well have written at least the central part of this dialogue as a treatise on falsehood." (p. 135)

4. Friedländer, Paul. 1969. *Plato. Vol. III: The Dialogues, Second and Third Period*. Princeton: Princeton University Press.

Second edition, with revisions (First edition 1958) Chapter XXVI: Sophist, pp. 243-279.

Translated from the German *Platon: Seinswaheheit und Lebenswirklichkeit*, 3 vols. Berlin, Walter de Gruyter, 1954 by Hans Meyerhoff.

Publisher's note: "The first volume of this work, *Plato: An Introduction* (1958), contains seventeen chapters, each an independent study of an aspect of Plato's thought, his creative work, and his relation to modern thinkers, and a chapter on Plato as jurist by Huntington Cairns. A new edition is in preparation, with revisions and additional annotation.

The second volume, *Plato: The Dialogues, First Period* (1964), contains Chapters I-XIX, which interpret the works of Plato's early creative period, the "ascent."

The third volume, *Plato: The Dialogues, Second and Third Periods*, contains Chapters XX-XXXI. These take up the central and late dialogues, the works of Plato's major creative periods. At the end of this final volume, there is an Afterword, "On the Order of the Dialogues."

"We know that the task of clarifying the meaning of *pseudos*—falsehood, deception, and lie—occupied Plato from his beginnings as a philosopher. It did not grow out of a special interest in a difficult logical problem. It occupied him because (to speak in the concrete imagery of the *Sophist*) both sophistic and eristic hide in this darkness and confusion—everything, in other words, that is hostile to philosophy and that, because of its dangerously similar appearance, jeopardizes the reputation of philosophy and the life of the philosopher. Even one of the earliest of Plato's works, the *Hippias Minor*, deals with the problem of deception, involuntary and voluntary, sophistic and Socratic deception. Then, with the *Cratylus*, language becomes the instrument of positive enlightenment. There (*Cratylus* 431bc; cf. 385bc) discourse is explained as the "juxtaposition" of noun and verb. In the *Sophist*, it is the "combination" of the two, and this change is more than a mere difference in expression. In the *Cratylus*, we are shown that just as the

elements of a sentence, the “names,” may be used wrongly, so may the juxtaposition of these elements. The Sophist derives discourse not simply from “naming”; discourse has a new and autonomous structure. As a unique kind of being it has the structure of being itself, characterized by “communion.” In the *Cratylus*, the “names” have the function of revealing (δήλωμα, 433b et seq.); in the *Sophist*, it is the statement that has this function. Hence, the *Cratylus* seeks to discover falsehood in the elements of language; the *Sophist* seeks it more deeply, in the structure of language.”

5. Fronterotta, Francesco. 2011. "Some Remarks on the Senses of Being in the Sophist." In *Plato's Sophist: Proceedings of the Seventh Symposium Platonicum Pragense*, edited by Havlíček, Aleš and Karfík, Filip, 35-62. Praha: Oikoymenh.

Abstract: "In this paper I examine the question of the different senses of the verb "to be" and the notion of "being" in Plato's *Sophist*, discussing the relevant passages and bibliography."

6. ———. 2013. "Theaetetus sits - Theaetetus flies. Ontology, predication and truth in Plato's *Sophist* (263a-d)." In *Plato's Sophist Revisited*, edited by Bossi, Beatriz and Robinson, Thomas M., 205-223. Berlin: Walter de Gruyter.

"After solving the problem of “what is not” (259a–b) by elucidating the relations between the γένη that give rise to their reciprocal κοινωνία (259d-e), the next step, before getting back to hunting the sophist, is to clarify whether this also helps disentangle the difficulty connected with the possibility of falsehood in λόγοι, as the examination of what is not was introduced for precisely this purpose: once the logical aporia of falsehood has emerged from the ontological paradox of what is not, solving the latter would also solve the former. So, if what is not, whose form the Stranger has succeeded in identifying, “blends with thinking and discourse” (δοξη και λογω μειγνυται), there will be no contradiction in allowing falsehood in λόγοι, thus making approachable the dark place of images and appearances that are only similar to the truth, where the sophist has taken refuge; but if this were not the case, any λόγος would always have to be considered necessarily true and

the inaccessibility of falsehood would make the sophist's refuge safe from any threat (260d –261b). The section of the dialogue that opens in this way contains some of the fundamental premises of what can fairly be seen as Plato's philosophy of language (259e –264b)." (p. 205)

7. Gacea, Alexandru-Ovidiu. 2019. "Plato and the "Internal Dialogue": An Ancient Answer for a New Model of the Self." In *Psychology and Ontology in Plato*, edited by Pitteloud, Luca and Keeling, Evan, 33-54. Cham (Switzerland): Springer.

"The theme of the dialogic relationship that the ψυχή entertains with itself appears explicitly in the Theaetetus and the Sophist. (10) Naturally, one could argue that "dialogicity" represents one of Plato's main concerns throughout the dialogues.

However, I prefer to isolate the way the issue is treated in these two dialogues, because stating explicitly that thought is the "dialogue of the soul with itself" appears to be indicative of a particular Platonic outlook on thought and selfhood. I claim that Plato is subtly moving away from a descriptive perspective, the way thought has always been conceived in Greek culture, toward a prescriptive one, the philosophical appropriation and reinterpretation of this cultural trait. I thus propose not to treat this notion as being self-explanatory." (p. 35, a note omitted)

(...)

"In the Sophist, the description is couched in different terms, making the distinctions more explicit and adding some other elements: "Thought (διάνοια) and speech (λόγος), says the Visitor, are the same, except that what we call thought (διάνοια) is dialogue (διάλογος) that occurs without the voice (διάλογος ἄνευ φωνῆς), inside the soul (ἐντο`ς τῆς ψυχῆς) in conversation with itself. [...] And the stream of sound from the soul that goes through the mouth is called speech (λόγος)" (263e3-8). We find out that dialogic thought and speech are not identical but of the same kind, namely, λόγος. Διάλογος is a type of λόγος but not in the same way uttered speech is λόγος, i.e., doxic λόγος. The dialogue "placed inside the soul" occurs "without sound or voice," but speech is always uttered, it is something that is "breathed out."

Not all speech is thought or dialogue, but all thought can become speech when it is accompanied with sound or when it is exteriorized. Furthermore, the λόγος that is exteriorized, “breathed out,” is not the dialogue but its “conclusion,” i.e., the δόξα.

The belief marks the cessation of the conversation, the moment when the soul doesn't doubt anymore." (p. 40)

(10) There is a third passage about the “internal dialogue” in the Philebus (38c-e), but this is more of an example than a description of dialogic thought.

8. Galligan, Edward M. 1983. "Logos in the Theaetetus and the Sophist." In *Essays in Ancient Greek Philosophy: Volume Two*, edited by Anthon, John P. and Preus, Anthony, 264-278. Albany: State University of New York Press.

"In this paper I am concerned with the Theaetetus' dreamed theory [(201d-206b)] and its refutation in that dialogue. From the vantage point of the Sophist, I ask (1) whether and how Plato changed the theory's view of logos and (2) whether and how he might have been able to loosen the dilemma that refutes the theory." (p. 265)

(...)

"The dreamed theory and the Sophist differ about logos in rather much the way they differ about syllables. Though the Theaetetus contains a distinction of letters into kinds, not much was made of these distinctions. But according to the Sophist, vowels make non-vowels pronounceable. The latter dialogue claims part-part asymmetry for syllables. As for logos, the dreamed theory does not clearly have any part-part asymmetry, whereas the Sophist articulates just such a distinction. On the other hand, concerning the whole-part aspect of logoi, the dreamed theory and the Sophist are closer. According to the dreamed theory, by means of a statement we can express our knowledge of complexes, but what we can only name, elements, we can neither know nor state. According to the Sophist, we can name beings by means of a name or a verb, but in doing so we do not state anything of anything.

The Sophist's view of both statement and syllable seems to be that they are wholes that come to be when their parts are put together and that the wholes have a character that their parts do not have. This suggests that syllables and statements are open to whatever force there is in the second horn of the dilemma brought against the dreamed theory." (p. 270)

Reprinted in: Nicholas D. Smith (ed.), *Plato: Critical Assessments Vol. IV: Plato's Later Works*, London: Routledge 1998, pp. 125-141.

10. ———. 2006. "The 'Holy Solemnity' of Forms and the Platonic Interpretation of Sophist." *Ancient Philosophy* no. 26:291-304.

"There is a famous passage in Plato's Sophist which serves-as well as any, I believe-to indicate perhaps one of the most fundamental divides among Plato scholars. The division is between those who do and those who do not take seriously the ancient Platonic tradition's interpretations of Plato. The passage is the Eleatic Stranger's response to the claim of the 'Friends of the Forms' that 'real being' (τῆν ὄντως οὐσίαν, 248a11) is immovable."

(...)

"The argument leading up to this rhetorical question is this: if knowing is a case of 'acting' (ποιεῖν) on something, then being known is a case of 'being acted upon' (παρχειν). Since the Friends of the Forms agree that real being is known, they would seem to be forced to admit that the Forms, insofar as they are known, are acted upon. But that which is acted upon is 'in motion' (κινεῖσθαι). So, the Forms would seem to be in motion insofar as they are acted upon. But the Friends have maintained that Forms are not in motion; on the contrary, they are completely immovable. So, the Friends are faced with an apparent dilemma: either Forms are not known or else their claim that real being is immovable must be abandoned." (p. 291)

(...)

"In sum, the Platonic interpretation of Sophist maintains that the Friends of the Forms - both ancient and modern - do not grasp full-blown Platonism. Perhaps Plato himself at one time in his career did not grasp its nature either. Platonism is, among other things, the view that οὐσία must never be supposed to have its own separate reality. It is always and necessarily understood as embedded in the matrix Demiurge-οὐσία-Idea of the Good. From the Platonists' perspective, Aristotle wrongly collapsed or telescoped this matrix into the Prime Unmoved Mover, thereby making it unsuitable to be the absolutely simple first principle of all. The inseparability of ontologically primary thinking and being is a doctrine shared by Plato and Aristotle." (p. 302)

11. Giannopoulou, Zina. 2001. "'The Sophistry of Noble Lineage' Revisited: Plato's Sophist 226 b1 - 231 b8." Illinois Classical Studies no. 26:101-124.

"This paper deals exclusively with the sixth logos of sophistry, which depicts the sophistic art as "noble" and its practitioner, the sophist, as a teacher with apparently similar educational characteristics as those possessed by Socrates, the greatest enemy of sophistic practices. My aim is to shed some new light on the identity of the "sophist of noble lineage." Some of the methodological questions which will shape my argumentation are the following: is "noble sophistry" a suitable characterization of Socrates' elenctic method? If the answer to this question is positive, then how can one explain the fact that the Socratic method seems to be reflected in otherwise straightforward definitions of the sophists which condemn and repudiate their practices? If, on the other hand, the sixth definition does not intend to present Socrates as a "noble sophist" but simply reveals a more positive aspect of the σοφιστική τέχνη which could be seen as Socratic, what are the distinctive boundaries that clearly separate the elenchos from even the noblest eristic? In order to conduct my examination, I have divided this paper into three parts. In Part I, I attempt a close reading of the method used by the Eleatic Stranger and demonstrate its limitations; it is, I suggest, the nature of these limitations which contributes significantly to the ambiguity of

the logos provided in the sixth definition. In Part II, I explore the main methodological tool of the definition, namely the "body and soul" analogy, and assess its impact on the quality of the logos provided. Finally, in Part III, I offer my own interpretation; its novelty lies in the fact that it contextualizes this part of the Sophist in the broader frame of the dialectical quest conducted by the Stranger and attempts to account for its intentional definitional ambiguity." (pp. 101-102)

12. Gibson, Twyla. 2009. "The Code of Ethics in Medicine: Intertextuality and Meaning in Plato's Sophist and Hippocrates' Oath." In *Critical Interventions in the Ethics of Healthcare: Challenging the Principle of Autonomy in Bioethics*, edited by Holmes, David and Murray, Stuart J., 183-198. London: Routledge.

"I develop a set of criteria for identifying connections between Hippocrates and Plato by drawing upon media and information theory to adapt the principles devised by researchers working on intertextuality in other ancient Greek collections. Next, I turn to

Plato's Sophist, a dialogue that explains the procedure for distinguishing multiple sequences of classifications that make up the different branches of the definition of art or technique (techne). I delineate the topics in the definition of the Merchant of Learning, and then use this Platonic sequence as a template for comparing the organization of topics and ideas in the Oath. I show that the sequential order of topics in the Oath corresponds point by point to the serial order of the topics in the various classifications of the definition explained in Plato's Sophist. The presence in the Oath of the same sequence described in Plato makes it possible to line up the classifications in the two works and to cross-reference and compare information in corresponding categories. Cross-referencing of topics and ideas allows us to bring information presented in Plato to bear on the interpretation of the Oath. This new information provides the resources for dealing with issues of interpretation that have gone unresolved due to lack of evidence concerning the meaning and context of words and ideas. The discovery of connections between Plato and

Hippocrates adds to our understanding of the meanings communicated in the Oath by linking the Greek medical tradition to the wider context of ancient thought and expression.

This broadened context sheds new light on the foundations of Western medical ethics and provides the evidence and insights needed to reconstruct and reassess the history of our ethical tradition. It is my argument that the expanded horizons of meaning gained through the study of intertextual connections among Hippocratic and Platonic texts and traditions provides a rich resource for reevaluating the history of Western medical ethics, and for defending and critiquing the possibilities entailed by biomedical technologies today." (p. 184)

13. ———. 2010. "The Fisher: Repetition and Sequence in Plato's Sophist, Statesman, and Ion." *The McNeese Review* no. 48:84-112.

"In this study, I address the question of a coherent philosophical system in Plato's collected dialogues as well as the problem concerning the meaning and function of Plato's method. Is there evidence of a consistent set of principles in Plato's dialogues that pertain to all the disparate discourses in the collection?

What is the purpose of the method of division and of the sequences of topics and ideas that make up the classifications spelled out by the characters in Plato's Sophist and Statesman? This study proposes new answers to these questions." (pp. 86-87)

(...)

"Comparing passages from several important dialogues in light of one definition suggests that the Sophist does offer a technical explanation and demonstration of Plato's method. Tracing the definition of the fisher across three books highlights a number of consistencies that point to the presence of a system, and shows how repetition and sequencing are principles that may be applied to different texts in the collection. Moreover, finding the definition in four works makes it possible to transfer

findings from the case studies to Plato's dialogues more generally. Generalizing from the examples to the dialogues as a whole suggests that the "Forms" are the system of rules and conventions that govern the order, shape, and organization of all of Plato's dialogues." (pp. 108-109)

14. ———. 2011. "The Philosopher's Art: Ring Composition and Classification in Plato's Sophist and Hipparchus." In *Orality and Literacy: Reflections across Disciplines*, edited by Carlson, Keith Thor, Fagan, Kristina and Khanenko-Friesen, Natalia, 73-109. Toronto: University of Toronto Press.

"With Plato, argued media theorist Marshall McLuhan, the Greeks 'flipped out of the old Homeric world of the bards into this new, rational ... civilized world.'⁽¹⁾ McLuhan and other scholars associated with the foundations of media studies cite Plato's writings as evidence for dating the shift from primary orality to literacy in ancient Greek culture.

Further research has demonstrated that the 'great divide' of orality versus literacy is untenable; traditional oral modes of communication persist alongside and into written texts.

This study re-examines Plato's dialogues in light of recent research concerning ring composition, an oral formulaic technique found in Homer. Comparative analysis of two exemplary dialogues - Plato's Sophist and Hipparchus - shows that these works manifest the ring pattern associated with oral traditional modes of communication. This comparative evidence suggests that the dialogues are transitional compositions, and that Plato's writings represented not a break with the oral tradition but rather its transposition to written texts. I explain the implications of these findings for the interpretation of the history and philosophy communicated in Plato's dialogues, in other ancient oral derived works, and for the study of oral histories and traditions today." (p. 73)

15. Gili, Luca. 2017. "Plato, Soph. 216 a3–4." *Méthexis* no. 29:171-173.

"N.-L. Cordero has persuasively argued that there is no reason to delete ἑταίρων (l. 4) if one were to choose the reading ἕτερον (l. 3), that all manuscripts preserve, instead of ἑταῖρον.(2)" (p. 171)

(...)

"My reading turns the reference to the followers of the Eleatics as a piece of Platonic irony – they are philosophers, but definitely not as good as the stranger – Plato's alter ego? – nor, we can suppose, as their masters Parmenides and Zeno." (p. 173)

(2) Cf. N.-L. Cordero, *El Extranjero de Elea, 'compañero' de los Parmenídeos...desde 1561*, *Méthexis* xxiii (2013), 51–58. Cordero, however, seems to be unaware of the fact that Y, the earliest source for ἕτερον, does not have a primary status. On this issue see A. D'Acunto, "Su un'edizione platonica di Niceforo Moscopulo e Massimo Planude: il Vindobonensis Phil. Gr. 21 (Y)," *Studi classici e orientali* 45 (1996), 261–279. Accordingly, Cordero's intervention, whose rationale I fully endorsed, should not be understood as an emendation *ope codicum*, but rather as an emendation *ope ingenii* that at least one Byzantine reader already suggested. The text that Cordero and I defend is not an ancient variant.

16. Gill, Mary Louise. 2006. "Models in Plato's Sophist and Statesman." *Journal of the International Plato Society* no. 6:1-9.

"Plato's Sophist and Statesman use a notion of a model (paradeigma) quite different from the one with which we are familiar from dialogues like the Phaedo, Parmenides, and Timaeus. In those dialogues a paradeigma is a separate Form, an abstract perfect particular, whose nature is exhausted by its own character. Its participants are conceived as likenesses or images of it: they share with the Form the same character, but they also fall short of it because they exemplify not only that

character but also its opposite. Mundane beautiful objects are plagued by various sorts of relativity—Helen is beautiful compared to other women, but not beautiful compared to a goddess; she is beautiful in her physical appearance, but not in her soul or her actions; she is beautiful in your eyes, but not in mine, and so on. The Form of the Beautiful, which is supposed to explain her beauty, is simply and unqualifiedly beautiful (Symp. 210e5-211d1).

In the Sophist and Statesman a model involves a mundane example whose definition is relevant to the definition of some more difficult concept under investigation, the target. The steps taken to define the example also reveal a useful procedure to be transferred to the more difficult case. This much should be fairly uncontroversial. In my view it is important to recognize that a paradeigma is not merely an example (or paradigmatic example) of some general concept." (p. 1)

17. ———. 2010. "Division and Definition in Plato's Sophist and Statesman." In *Definition in Greek Philosophy*, edited by Charles, David, 172-199. New York: Oxford University Press.

"In this paper I will argue that dichotomous division yields a good definition of a target kind only in the simplest and most uncontroversial cases. Plato also uses division in defining more complex kinds, but then it serves as a preliminary strategy, which undertakes to expose some puzzle about the kind under investigation, which the enquirers must resolve in some other way, or at least in conjunction with some other method.

We have trouble catching the sophist, because we find him, not at the end of a single branch, but at many different termini, allowing multiple definitions. We find the statesman at a single terminus, but he has many rivals there, who claim to share his expertise; the definition of the statesman reached by dichotomous division, though very detailed, turns out to be much too general. These disappointing results serve a purpose. Plato wants us to see that something about the sophist explains why he turns up all over the map, and that something about the statesman explains why he has company at the terminus. In each dialogue, reflection on the peculiar outcome of division

enables the enquirers to recognize something about the kind in question which helps to explain the peculiarity. The enquirers aim to discover a real definition that applies to all and only instances that fall under a kind, and which specifies its essence -- the feature or complex of features that explains why in the case of the sophist he turns up in too many places, and why in the case of the statesman he is not alone at the terminus." (p. 173)

"The only thing that does not exist is something indescribable, something with no features at all: nothing—or to use Owen's colorful phrase, "a subject with all the being knocked out of it and so unidentifiable."(12) I take it that not-being, so understood, is the focus of the first three puzzles about not-being in the *Sophist* and of the sixth deduction in the *Parmenides*, so it could be that Plato restricts non-existence to an unidentifiable non-thing: Plato's notion of existence need not correspond to our own. Even so, he talks about fictional entities in several dialogues (centaurs and other mythical creatures), and the *Sophist* itself begins and ends with a discussion of production, defined by the Stranger as bringing into being something that previously was not (219b4–6, 265b8–10).(13) Furthermore, the *Battle of the Gods and Giants* at the center of the dialogue treats two distinct views about what is real (tangible things or immaterial forms), a dispute that surely concerns actual being or existence (a monadic property), what things have it and what things do not. The items rejected on each side are describable, even as the opponents on the other side (Gods or Giants) deny their being. The Stranger tries to settle the feud with his definition of being as *dunamis* (the capacity to act on or to be affected by

something else). Moreover, this same monadic being—the nature of being (250c6–7)—is the property that becomes mysterious in the Aporia about Being (249d9–250d4) directly following the Battle of the Gods and Giants.¹⁴ Plato is clearly interested in monadic being in the Sophist — what things have this feature, and what things, though describable, do not. In Chapter 5 I take the first steps toward an alternative interpretation of being, one indebted to Lesley Brown and Michael Frede, which aims to preserve the virtues of their different proposals without the shortcomings." (p. 176)

19. ——. 2021. "Images of Wisdom in the Prologue of Plato's Sophist." *The Journal of Greco-Roman Studies* no. 60:137-152.

Abstract: "This paper examines the prologue of Plato's Sophist in light of interpretive claims by Proclus, and revived by Myles Burnyeat,*] that Plato imaged in the opening scene of his dialogues the main philosophical themes of the work.

This paper applies that insight to the prologue of the Sophist and argues that Proclus is right but that the work in which this prologue is embedded is much larger than the dialogue it introduces. A close reading of the Sophist's prologue reveals it

to image, in a literary way, the whole series of dialogues—Theaetetus, Sophist, Statesman, and missing Philosopher—of which the Sophist is a member. At the end of the Sophist, the sophist is identified as imitator of the wise man. The paper explores the sophist in relation to the kinds it imitates, including two sorts of wise men, the philosopher and the statesman, and asks whether there is a wide kind covering all of them, both genuine experts and their benign and dangerous imitators. If there is such a kind, what is its status as a kind? The paper considers a genealogical family, descended from a common ancestor (intelligence or cleverness) with derivative kinds differentiated from one another by their object and their aims, either beneficial or harmful."

Abstract: "In this paper, I provide an interpretation of the sympleke ton eidon at *Soph.* 259e. My goal is to show that the specific metaphysical view expressed by the interweaving of forms best accounts for Plato's explanation of truth and falsehood.

In the first section, I introduce the fundamentals of the interpretation of the greatest kinds and their functions. After that, I propose an interpretation of the assertion at 259e, the upshot of which is that the interweaving of forms only deals with extra-linguistic items, that it is related to both truth and meaning of linguistic items, in a very complex way which I aim to explain throughout the paper, and that it never involves sensible particulars. In the second section, I put forward my reading of the Stranger's description of how logoi are structured and how they work. I pay particular attention to the view that words reveal being when they intertwine to form a

statement. In the third section, I interpret the statements concerning Theaetetus. My goal is to advance a new reading of the specific role that kinds and their interweaving play with regard to the truth and falsehood of the statements concerning Theaetetus. The result is the very specific view that the kinds, which are the separated ontological cause of what happens in space and time, are the grounds of both the truth and the meaning of statements."

21. Gómez-Lobo, Alfonso. 1977. "Plato's Description of Dialectic in the Sophist 253d1-e2." *Phronesis. A Journal for Ancient Philosophy* no. 22:29-47.

"In the Sophist there is an obscure and much disputed passage (253 d 1-e 2) which professes to say something about what is proper to the science of Dialectic (... μῶν οὐ τῆς διαλεκτικῆς φήσομεν ἐπιστήμης εἶναι ; 253 d 2-3). The *communis opinio* is that we are offered there a description of the Method of Division. The facts that the passage is introduced by the expression τὸ κατὰ γένη διαιρεῖσθαι, that it appears in a late dialogue and moreover in a dialogue where that method is explicitly practiced (218 b 5-236 c 8 and 264 b 9-268 d 5) seem to be very strong reasons for suspecting that here Plato must have in mind the Diaeretic Method. This conviction seems to be almost unavoidable when one takes the lines as an "ausführliche Definition des Dialektikers" (Stenzel). (2) If it is such an exhaustive definition, how could Division be missing from it? I would like to challenge the generally accepted view and show that another quite different interpretation gives a better sense to the text and solves some problems which otherwise must remain puzzling. Since nearly all recent interpretations depend on Stenzel's, I shall discuss it first (I). Then (II) I shall put forward the main theses of my interpretation and lastly (III) I shall paraphrase the whole text." (p. 29)

(...)

"Summary: Soph. 253 d 1-e 2 does not describe Division, it anticipates the comparison Being and Not-Being with other

Forms which will ultimately provide Plato's answer to the dilemma of Parmenides." (p. 47)

(2) Julius Stenzel, *Studien zur Entwicklung der platonischen Dialektik von Sokrates zu Aristoteles*, 2. Auf., Leipzig, 1931 (reprint Darmstadt: Wissenschaftliche Buchgesellschaft, 1961), English translation by D. J. Allan, *Plato's Method of Dialectic*, Oxford, 1940. Quotations or my own translations from the German original will be identified by 'orig.' Quotations from Allan's translation are identified by 'trans.' Occasionally Allan's version is inaccurate; in such cases I have referred to the original German text.

22. ———. 1981. "Dialectic in the Sophist: a reply to Waletzki." *Phronesis. A Journal for Ancient Philosophy* no. 26:80-83.

Reply to Waletzki (1979).

"In "Platons Ideenlehre und Dialektik im Sophistes 253d" (*Phronesis* 24 (1979) 241-252) Wolfgang Waletzki has criticized an earlier article of mine on that passage (*Phronesis* 22 (1977) 29-47). Although I have benefitted from a number of his observations, I am not in a position to accept his interpretation as a whole. Instead of arguing piecemeal against each of his claims, I would here like to embark first on a task which I believe to be more rewarding: the working out of criteria which would have to be satisfied by a correct interpretation of the disputed passage. In the light of these criteria I hope to show that Waletzki's approach is unsatisfactory, thus vitiating his specific claims." (p. 80)

23. Gonzalez, Francisco J. 1997. "On the Way to Sophia: Heidegger on Plato's Dialectic, Ethics, and Sophist." *Research in Phenomenology* no. 27:16-60.

"The great lacuna in the Heideggerian Gesamtausgabe has been a detailed interpretation of an entire Platonic dialogue. This situation has changed with the publication of the lecture course on Plato's Sophist (1924/25). (1) This text does not disappoint for lack of thoroughness or scope: Heidegger takes the task of interpreting this major Platonic dialogue so seriously that he devotes over two hundred pages to preparing his interpretation

and almost four hundred pages to detailed, almost line by line exegesis of the text, from the dramatic prologue to the explanation of the possibility of falsehood. With this course, therefore, we are finally in a position to assess the extent to which Heidegger succeeded in coming to terms with Plato's thought.

In this paper I argue that, despite some important insights, this attempted "philosophical appropriation of Plato"(2) fails. I also suggest that this failure exposes certain limitations of Heidegger's thought,

specifically with regard to the relation between ethics and ontology." (p. 16)

(2) To use Heidegger's own characterization of what Friedrich Schleiermacher failed to achieve: "die philosophische Aneignung Plato" (GA 19: 313). All translations of Heidegger and Plato in this paper are my own.

24. ——. 2000. "The Eleatic Stranger: His Master's Voice? ." In Who Speaks for Plato? Studies in Platonic Anonymity, edited by Press, Gerald A., 161-181. Lanham: Rowman and Littlefield.

"Interpreters of the Sophist and the Statesman almost universally assume that the Eleatic Stranger speaks for Plato. This is surprising, given how little speaks in favor of this assumption and even how intuitively implausible it is." (p. 161)

(...)

"Yet, interpreters are apparently willing to live with some implausibility here because they consider it even more implausible that the Stranger should not speak for Plato. Their argument, insofar as it can be reconstructed, assumes that the only positive assertions made in the two dialogues are the Strangers and that therefore one could, without losing anything essential, eliminate the dialogue form by putting what the Stranger says into the form of a treatise authored by Plato. The aim of the present chapter is to refute this specific assumption

and therefore the interpretation that depends on it. Socrates does speak in both dialogues, and what he says is of extraordinary importance; furthermore, a major, perhaps the major event of Socrates' life, namely, his trial, forms the dramatic context. These words and deeds of Socrates are not peripheral curiosities added to relieve the tedium of an otherwise highly abstract discussion. Instead, as I will show, what Socrates says and who he is, even his silence in the dialogue, expose serious problems in what the Stranger says. If Plato in this way uses Socrates against the Stranger, the assumption that the Stranger speaks for Plato, already implausible on the surface, is rendered untenable. On the other hand, we are not thereby required to conclude that Plato rejects everything the Stranger says and chooses Socrates instead as his mouthpiece. What we have here, as elsewhere, is not a disguised author expounding doctrines in a disguised treatise, but rather a drama in which two opposed and limited perspectives confront each other and in that confrontation leave us with a problem." (pp. 161-162, notes omitted)

25. ———. 2003. "Confronting Heidegger on Logos and Being in Plato's Sophist." In *Platon und Aristoteles - sub ratione veritatis. Festschrift für Wolfgang Wieland zum 70. Geburtstag*, edited by Damschen, Gregor, Enskat, Rainer and Vigo, Alejandro G., 102-133. Göttingen: Vandenhoeck & Ruprecht.

"In his WS 1924-25 lecture course on Plato's Sophist, Heidegger charges that, because in this dialogue the method of separation and division is applied not only to objects in the world, such as the angler, but also to Being itself and its structures, Plato recognized no distinction between the way of dealing with beings (*Behandlungsart des Seienden*) and the way of dealing with Being (*Behandlungsart des Seins*). What underlies this charge is Heidegger's conviction, which he seeks to support in the present course, that to address Being by way of *λόγος* and its structure, which is what the method of *διαίρεσις* does, is inevitably to collapse the distinction between Being and beings. Heidegger further suggests that Plato's Ideas or Forms are a product of this approach to Being and the confusion it produces (287). The goal of this paper is to defend Plato against this

charge by arguing the following: 1) Plato fully recognizes both the ontological difference itself and the inability of λόγος, and any λόγος-centered approach, to preserve and do justice to this difference; 2) Plato's response to this "weakness" of λόγος is, in the Sophist, to distance himself from the λόγος of Being (and non-being) presented there by means of various strategies, most generally the dialogue

form itself; 3) though the εἶδη are unavoidably objectified in discourse, Plato did not understand the εἶδη as objectively present things: indeed, it was precisely in order to avoid objectifying the εἶδη that Plato refrained from offering a "theory of Forms"; 4) Heidegger's attempt to reduce the dialogue's characterization of Being as δύναιμις to a characterization of Being as presence is unacceptable; 5) despite Heidegger's insistence to the contrary, even the account of Being as δύναιμις is presented in the dialogue not as final, but as aporetic and necessarily so. In pursuing this goal it is neither my intention nor even possible in the present context to give a detailed, step-by-step exposition of Heidegger's course, much less of the Sophist itself. Instead, I will assume some acquaintance with both in focusing on only those moments where Heidegger explicitly sets himself apart from Plato, with the aim of encouraging us to set ourselves apart from Heidegger's reading of Plato." (pp. 102-103, notes omitted)

26. ———. 2011. "Being as Power in Plato's Sophist and Beyond." In *Plato's Sophist: Proceedings of the Seventh Symposium Platonicum Pragense*, edited by Havlíček, Aleš and Karfík, Filip, 63-95. Praha: Oikoymenh.

"In the literature on Plato's metaphysics one finds much discussion of what kinds of beings exist for Plato, what makes one class of beings 'more real' than another, what relation exists between these different levels of beings, and what ultimate principles or causes can be invoked to explain the nature of these beings. What is much harder to find is reflection on what this word 'being' actually means for Plato. If both sensible objects and the Forms can be said to be, if the latter must nevertheless be said to be more truly, or 'more beingly',

than the former, then what exactly is meant by this word 'be'? If this fundamental question has been neglected in the literature, the reason is not that Plato fails to address it. In the *Sophist* this question is not only addressed, but given an answer. Since the passage in question (247d8-e4) is the only place in the Platonic corpus where this question is directly raised and answered - and this in a context that stresses the great importance and indispensability of the question - one would expect it to be the subject of a voluminous literature. Strangely, the exact opposite is the case. Not only the literature on Plato's ontology, but even the literature devoted specifically to the *Sophist*, displays little interest in the definition of being this dialogue offers. Those scholars who have discussed the definition at all have tended to dismiss it as purely provisional, *ad hominem*, and in the end unPlatonic. Other scholars, particularly in more recent works on the *Sophist*, quickly pass over the definition with little or no comment.' What explains this neglect? The first set of scholars presumably have interpretative grounds for denying that the definition is Plato's, but many devote little effort to making this case and all fail to suggest what might be a better definition in Plato's eyes.

The second set of scholars, in simply passing over the definition with no comment, perhaps have deeper philosophical reasons for just not being interested in the question, though these reasons are left unarticulated.

Ironically, many scholars writing on the *Sophist* today are in this way like those tellers of *muthoi* or those figures of *muthos* (the Giants and Gods) which the Eleatic Visitor criticizes for only talking about the number and kinds of beings without addressing the more fundamental question of what it means for any of these things to be.

My object in the present paper is to go against this trend by showing that the definition of being, far from being merely provisional and negligible, is absolutely indispensable not only to the argument of the *Sophist*, but to a proper understanding of Plato's metaphysics in both this and other dialogues. Specifically I wish to show that the characterization of being as

"nothing other than dunamis" is incompatible with attributing to Plato a conception of the "really real" as static and immutable." (pp. 63-65, notes omitted)

27. Gooch, Paul W. 1971. "'Vice is ignorance': The interpretation of Sophist 226a-231b." Phoenix no. 25:124-133.

"It is often held by Plato's commentators that the famous Socratic paradox "Virtue is Knowledge" has as its complement the doctrine that vice is ignorance. While Plato's readers never find such an aphorism as "Vice is Ignorance" stated categorically in the texts, it is interpreted to mean that in Plato's view moral evil is the result of ignorance. And from this it is an easy step to the "intellectualist" Plato, who thought that knowledge of the right thing to do was a sufficient condition of virtue." (p. 124, notes omitted)

(...)

"My own reading of this section [Sophist 226a-231b] is that Plato, not popular opinion, is responsible for the division of evils into two branches, and that the division therefore cannot be considered unimportant for his ethics. Yet I cannot feel as sure as Dodds that the classification places ignorance and vice into two watertight compartments; there are indications that at least one kind of ignorance is a vice, and that its treatment cannot leave the irrational parts of the soul untouched. This in turn means that while Hackforth is probably right to say that Plato's real belief was that wrongdoing always involves ignorance, I hope to provide some evidence that this belief is not as obscured by the Sophist passage as Hackforth seems to think. With these claims in mind we may now turn to an analysis of the passage. After purification has been introduced as a negative art whose function is to throw out the evil and undesirable, the discussion develops various divisions within the art until the following schema becomes evident." (p. 126)

("Plato and the Irrational," *Journal of Hellenic Studies* 65 [1945] 18).

R. Hackforth claims that for Plato all moral evil involves ignorance ("Moral Evil and Ignorance in Plato's Ethics," *Classical Quarterly* 40 [1946] 118.

28. Grams, Laura W. 2012. "The Eleatic Visitor's Method of Division." *Apeiron* no. 45:130-156.

"The method of division (diairesis) employed by the Visitor from Elea in Plato's *Sophist* and *Statesman* is often interpreted as a hierarchical classification, in which each cut divides a kind (genos) into smaller parts that are fully contained within it and each subsequent kind entails all of the previous kinds in the sequence. On this view, division begins with one large class and continues separating it into successively smaller portions, until no further cuts can be made and an infima species is reached. I argue that a strictly hierarchical interpretation of diairesis cannot adequately explain the Visitor's method for several reasons. First, division often produces kinds that are neither determined by nor fully contained within the intension or extension of the previous kinds, and division occasionally separates pairs of kinds that overlap in scope. In addition, division does not always move from general to more particular kinds, so the order in which a series of divisions is made often has no effect on the outcome. The same kinds may be divided in different ways in different contexts, which means that multiple paths may lead from a given starting point to the destination." (p. 130, note omitted)

29. Granieri, Roberto. 2019. "Xenocrates and the Two-Category Scheme." *Apeiron*:1-25.

Abstract: "Simplicius reports that Xenocrates and Andronicus reproached Aristotle for positing an excessive number of categories, which can conveniently be reduced to two: τὰ καθ' αὐτὰ and τὰ πρὸς τι. Simplicius, followed by several modern commentators, interprets this move as being equivalent to a division into substance and accidents. I aim to show that, as far as Xenocrates is concerned, this interpretation is untenable and that the substance-accidents contrast cannot

be equivalent to Xenocrates' per se-relative one. Rather, Xenocrates aimed to stress the primacy of Plato's binary distinction of beings, as presented at *Sophist* 255c13–4, over Aristotle's list of the categories."

30. Greenstine, Abraham Jacob. 2019. "Accounting for Images in the *Sophist*." In *Plato and the Moving Image*, edited by Biderman, Shai and Weinman, Michael, 19-36. Leiden - Boston: Brill Rodopi.

Abstract: "Plato's *Sophist* is a critical dialogue for the question of images, for here the interlocutors divide images into two kinds – likenesses and apparitions – in their hunt for an account of sophistry. Yet much of the recent scholarship on the *Sophist* does not make much of this division. This chapter defends the continuing significance of the distinction between likeness and apparition. It argues for its importance in Plato's analysis of images, in his theory of accounts, and in his endeavor to differentiate philosophy from sophistry. It further contends that one can only distinguish likenesses from apparitions by establishing a correct perspective on both the image and the original. Thus, the *Sophist* exhorts us differentiate likenesses from apparitions, even as we struggle to consistently find the right perspective for this task. Living in the cinematic age only intensifies the need to distinguish likeness from apparition. Over the course of this chapter, we consider two films that advance our questions about perspectives, images, and falsity: Carol Reed's *The Third Man* (1949) and Orson Welles' *F for Fake* (1974). Like the *Sophist*, both films reveal a world of apparitions, where names are confused, lies are constant, and the truth is elusive."

31. Griswold, Charles. 1977. "Logic and Metaphysics in Plato's *Sophist*." *Giornale di Metafisica* no. 6:555-570.

Abstract: "In part one of this essay I defend the thesis that the "greatest genera" of the "*Sophist*" are not the metaphysical ideas of the earlier dialogues, and that the "participation" of these genera in each other is to be understood from a linguistic or logical, rather than metaphysical, perspective. The genera are like concepts, not essences. In part two I argue that the

Stranger's doctrine of the genera means that they cannot be unified, self-predicative, separable, and stable; the doctrine deteriorates for reasons internal to itself. I suggest throughout that the Stranger's philosophical orientation is more "subjectivistic" than that of (Plato's) Socrates; unlike the ideas, the genera are subject to the soul's intellectual motion and productive capacity. finally, I suggest that there is no convincing reason for holding that the Stranger's views are superior to those of Socrates."

32. Grönroos, Gösta. 2013. "Two Kinds of Belief in Plato." *Journal of The History of Philosophy* no. 51:1-19.

"In the *Sophist* (263e10–264b4), Plato distinguishes between two kinds of belief.

On the one hand, there is a kind of belief that occurs "according to thinking" (κατὰ διάνοιαν), being "the completion of thinking" (διανοίας ἀποτελεύτησις). This kind is called 'doxa.' On the other hand, there is another kind of belief that occurs "through sense perception" (δι αἰσθήσεως). This kind is called 'phantasia,' perhaps best rendered as "appearing." The purpose of this paper is to uncover the distinction between these two different kinds of belief." (p. 1)

(...)

"The failure to recognize this distinction between two kinds of belief in Plato, despite the enormous scholarly effort devoted to the *Theaetetus* and the *Sophist*, is probably due to the fact that we do not operate with such a distinction any longer.

We may admit that beliefs are more or less justified, but this observation suggests that beliefs differ in degree (of justification), rather than in kind. Moreover, if we embrace the view that the formation of any belief requires the possession of concepts and the capacity for propositional thought, and that these capacities are the hallmarks of thinking and rationality at large, then it is difficult to escape the conclusion that even a phantasia is formed through thinking, and that it is a disposition of reason in precisely that sense. But attributing such an anachronistic starting point to Plato overshadows a

more specific notion of thinking, and a different way of accounting for the role of thinking in belief formation. As Plato's unfolding of the disguise of the sophist shows, this kind of thinking, giving rise to a qualified kind of belief, may well be worth serious consideration." (p. 18)

35. Hackforth, Reginald. 1945. "False Statement in Plato's Sophist." *The Classical Quarterly* no. 39:56-58.

"Plato's examination of False Statement (Sophist 259 D-263 D) is, like many of his discussions in the later dialogues, a mixture of complete lucidity with extreme obscurity. Any English student who seeks to understand it will of course turn first to Professor Cornford's translation and commentary(1); and if he next reads what M. Diès has to say in the Introduction to his Budé edition of the Sophist he will, I think, have sufficient acquaintance with the views of modern Platonic scholars on the subject. For myself, at least, I have not gained any further understanding from other writers than these two." (p. 56)

36. Hamlyn, David W. 1955. "The Communion of Forms and the Development of Plato's Logic." *The Philosophical Quarterly* no. 5:289-302.

"The impression given by many accounts of Plato's philosophy is that the doctrine of the communion of forms (or kinds) which is introduced in the Sophist is new and revolutionary. It may well be true that the use to which Plato puts this doctrine is

revolutionary, but there are unmistakable hints of it much earlier. In the Republic 476a we are told of the communion of forms with actions, bodies, and one another, and, as Ross points out,(1) the doctrine is implicit in the account of the theory of forms given in the Phaedo 102b ff., in the sense that we are told that certain forms exclude each other." (p. 289)

(...)

"The doctrine of the communion of forms is an attempt to do two things at once - to characterise predicates as names referring to a kind of particular, and also to relate such names to those occurring as the subjects of assertions by means other than that of identity and difference. Consequently the assertion that Plato looked on proper names as disguised descriptions should be qualified by saying that for him descriptions were only another kind of name-names of forms rather than names of sensible particulars. Hence the doctrine of ' communion ' is still vitiated by the fault from which Plato was trying to free himself. That it was an important advance nevertheless is clear." (p. 302)

37. Harte, Verity. 2002. Plato on Parts and Wholes: The Metaphysics of Structure. Oxford: Clarendon Press.

Contents: 1. The Problem of Composition 1; 2. Composition as Identity in the Parmenides and the Sophist 48; 3. A New Model of Composition 117; 4. Composition and Structure 158; 5. Plato's Metaphysics of Structure 267; References 293; General Index 300; Index of Names 300; Index Locorum 304-311.

"In my view—a view for which the book as a whole constitutes a defence—Plato's discussions of part and whole in the works I shall consider may be divided into two distinct groups: those in which Plato explores a model of composition which he does not endorse; and those which work towards building an alternative to the rejected model. This book is organized around discussion of these two groups. §1.6 to Chapter 2 examine the discussions of the first group, Chapters 3 and 4 those of the second.

The division between these two groups does not coincide with the division between different works. To the first group—those

which focus on the model which Plato does not endorse—belong passages of the Parmenides, the Theaetetus, and a passage of the Sophist. To the second group—those which develop an alternative to the rejected model—belong other passages of the Parmenides and of the Sophist, and passages of the Philebus and Timaeus. The Parmenides as a whole enacts the contrast between the two groups and provides an illustration of the framework I propose for understanding their relation. Over the course of the Parmenides arguments involving the rejected model of composition are used to expose the problems that arise from its adoption; problems to which the alternative model of composition is framed as a solution." 40. Heinaman, Robert E. 1981. "Being in the Sophist." *Archiv für Geschichte der Philosophie* no. 65:1-17.

"There is an influential view, developed during the last fifteen years, concerning the relationship between the concept of existence and the notion of Being in Plato's *Sophist*. (a)

Three distinguishable claims are involved in this account:

(1) Plato does not wish to isolate the existential use of 'to be' from its other uses.

(2) Plato's discussion of being concerns syntactically incomplete uses of 'to be,' not syntactically complete uses of the verb. (b)

(3) The concept of existence plays no role in the philosophical problems discussed or their solutions. Plato operates with a "scheme of concepts which lacks or ignores an expression for 'exist.'" (c)

I have no quarrel with (1). But (1) must be clearly distinguished from (3) since Plato may have failed to mark out the existential use of 'to be' while nevertheless using the word to mean existence with this latter concept playing an important role in the argument. In this paper I will try to show that there are no good reasons to accept (2) or (3). Although I shall deal with points raised by John Malcolm and Michael Frede, the focus will be on Professor Owen's paper. The first section will argue that Owen's interpretation of the *Sophist* is untenable and the

second section will show that his arguments for (2) and (3) are unsuccessful. Finally, the third section explains how the position I defend is compatible with Plato's employment of negative existentials.

The position I defend is that the concept of existence does not monopolize but is part of the notion of Being in the Sophist." (pp. 1-2)

(a) G. E. L. Owen, "Plato on Not-Being," in G. Vlastos (ed.) *Plato I* (New York, 1971), pp. 223-67; Michael Frede, *Prädikation und Existenzaussage* (Göttingen, 1967); J. Malcolm, "Plato's Analysis of τὸ ὄν and τὸ με ὄν in the Sophist," *Phronesis* (1967), pp. 130-46. Also cf. W. Bondeson, "Some Problems about Being and Predication in the Sophist," *Journal of the History of Philosophy* (1976), p.7, n. 15; A. P. D. Mourelatos, "'Nothing' as 'Not-Being'," in G. Bowersock, W. Burkert, M. Putnam (eds.) *Arktouros* (New York, 1979), pp. 319-29.

(b) Owen, pp. 225, 236, 240-41. Frede makes the still stronger claim that every use of 'to be' in the Sophist is incomplete (Frede, pp. 37, 40, 51). I discuss Frede's interpretation in an appendix.

(c) Owen, p. 263.

41. ——. 1981. "Self-Predication in the Sophist." *Phronesis*.A *Journal for Ancient Philosophy* no. 26:55-66.

"A major problem in the interpretation of Plato's metaphysics is the question of whether he abandoned self-predication as a result of the Third Man Argument in the Parmenides. In this paper I will argue that the answer to this question must be 'no' because the self-predication assumption is still present in the Sophist.(1)" (p. 55)

(...)

"It has often been said that 250c confuses identity and predication. But since 255 establishes Plato's commitment to self-predication, it is preferable to see the mistake as occurring a few lines later (250c 12-d3) where the Stranger concludes

that, since Being does not rest or move according to its own nature, it does not rest or move at all (cf. Parm. 139c6-d1). It is plausible to suppose that Plato believes that this error is corrected by the doctrine of the communion of Forms (cf. 252b8-10, 255e4-6, 258b9-c3)." (p. 63)

- (1) The claim that the Sophist is committed to self-predication has been made before. W. F. Hicken, "Knowledge and Forms in Plato's 'Theaetetus'," in R. E. Allen (ed.) *Studies in Plato's Metaphysics* (London, 1965), p. 192; R. S. Bluck, "False Statement in the Sophist," *Journal of Hellenic Studies* (1957), p. 186, n. 2; G. Striker, *Peras und Apeiron* (Gottingen, 1970), p. 37; W. K. C. Guthrie, *A History of Greek Philosophy V* (Cambridge, 1978), p. 43, n. 1. Cf. W. G. Runciman, *Plato's Later Epistemology* (Cambridge, 1962), pp. 80, 95, 102; R. Marten, *Der Logos der Dialektik* (Berlin, 1965), p. 214, n. 134.
42. ———. 1983. "Communion of Forms." *Proceedings of the Aristotelian Society* no. 83:175-190.

"At Sophist 259e5-6 Plato says: 'Logos exists for us on account of the interweaving of Forms'. It appears to be an important claim, and various suggestions have been made as to why Plato believed logos depends on the communion of Forms. It has often been thought that the communion of Forms referred to in 259e5-6 lays down conditions for meaning, not truth. Thus, in a well known paper Professor Ackrill has suggested that the communion of Forms covers relations of compatibility, incompatibility, and presumably other relations which determine the meaning of words. (1) I believe that such an interpretation is too optimistic and that Plato's view is less sophisticated than scholars would like to admit. I will argue that the communion of Forms does not provide an explanation of meaning but of an entity's being characterized by a property. It is simply the relation of participation which in earlier dialogues related individuals to Forms. (But I make no claims about resemblance.)

259e5-6 occurs in a context (259d9-260a3) where the Eleatic Stranger refers back to an earlier argument for the conclusion that some Forms combine and some do not (25 1d5-252e8).

And that earlier passage had been followed by a discussion where five 'Great Kinds' had been distinguished (254d4-255e1) and some relations of communion had been pointed out (255e8-257a12; cf. 254c4-5). If we want to determine what Plato means by 'communion of Forms' we must examine 251d-252e where Plato presents his arguments in support of the claim that some Forms combine and some do not.

One preliminary problem is the question of how to translate 'logos' in the statement that logos has come to be on account of the communion of Forms. The answer is provided by the context. 'Logos' also occurs in 260a5 and 260a7 where it possesses the same sense as 'logos' in 259e6. 260a7 says that we must determine what logos is, and when the explanation of logos is finally given (261d-262e) an explanation of statements is provided. So 259e5-6 is saying that statements exist because of the communion of Forms." (pp. 175-176)

43. ———. 1986. "Once More: Being in the Sophist." *Archiv für Geschichte der Philosophie* no. 68:121-125.

"According to what I will call the 'new' interpretation, the meaning of 'being' which plays an important role in the philosophical argument of the Sophist is not 'existence' but 'being such and such,' what is expressed by syntactically incomplete uses of 'to be. (a) In an earlier paper I claimed, to the contrary, that 'being' is used to mean existence in the Sophist's argument, although its meaning corresponds to the other uses of the verb as well. (b) Against the new interpretation I argued as follows:

(1) The aporiai of 237-41 are solved in 251-59 by rejecting 237-41's assumption that 'not-being' means 'contrary to being' and claiming that 'not-being' instead means 'different from being.'

(2) On the new interpretation, 'the contrary of being' means 'what is (predicatively) nothing.'

(3) The aporia of 240c-241b cannot be given a coherent interpretation if 'not-being', as there used, is understood to mean 'what is (predicatively) nothing.'

(4) Hence the meaning of 'not-being' required by the new interpretation is unacceptable, and the new interpretation should be rejected.

In a recent note John Malcolm has replied to this argument and raised some other objections to my paper. (c) Here, I will limit myself to explaining why Malcolm's objections have no force, and why his reply to my argument. simply exchanges one absurdity for others." (p. 121)

44. Hermann, Arnold. 2011. "Parricide or Heir? Plato's Uncertain Relationship to Parmenides." In *Parmenides, 'Venerable and Awesome'* (Plato, *Theaetetus* 183e), edited by Cordero, Néstor-Luis, 147-165. Las Vegas: Parmenides Publishing.

Summary: "Most scholars view Plato's critique of Parmenides in the *Sophist*, particularly the observations surrounding the "parricide" remark, as quite apt and justified. The theory is that Parmenides deserves to be rebuked for failing to recognize that "What Is Not" can be understood in more ways than one, namely, not only in an existential sense, but also predicatively or, in the language of the *Sophist*, as indicating "difference." I aim to show, nevertheless, that Plato's indictment of Parmenides misses the mark in significant ways, allowing Parmenides to escape the so-called threat of parricide not once but twice.

For example, Parmenides' abundant use of alpha-privatives (e.g., ἀγένητον)—as well as the negative οὐ (or οὐκ) when there is no a-privative form available—indicates that he was well aware of the difference between indicating “is not” predicatively versus existentially. Moreover, the Poem nowhere suggests that his strictures regarding the use of What Is Not are to be taken in the broadest possible sense, disallowing, in effect, the discrimination between the existential and the predicative case. Only when sought after as a “way of inquiry” does What Is Not—in contrast to the Way of What Is—fail to provide us with a graspable, expressible object. After all, the “Way of What Is Not,” lacks any sort of *sēmata*, or signs, that can be used to navigate it. As a “way of inquiry for thinking” (B2), it leads nowhere, lacking any sort of expressible or knowable object or goal. The complete absence of an object or result, however, does not hinder us from making statements to this effect, nor from uttering the words “What Is Not” or “Not Being.” Yet this fine distinction is lost to many who have criticized Parmenides for being inconsistent, careless, or simply ignorant. The move from the intellectual unavailability of an object that marks a defunct way of inquiry, to the claim that to even speak of such a “way” is both illegitimate and impossible—all the while insisting that Parmenides himself is to be blamed for such a monstrous fallacy—seems an egregious gloss-over, even if the perpetrator is someone of Plato’s stature. If my arguments prove sound, then Parmenides should be absolved of the charges leveled against him.”

45. Hermann, Fritz Gregor. 1998. "On Plato's 'Sophist' 226b-231b " *Hermes* no. 126:109-117.

"The sixth attempt to show what it is to be a sophist (226 b-231 b) marks a fresh starting point in the discussion by Theodorus' guest-friend from Elea and Theodorus' young pupil Theaetetus. The first five attempts were closely modelled on the exemplary search for the angler (218 e-221 c), and started from the division, διείρεσις, of all the arts and crafts into acquisitive, κτητική, and productive, ποιητική. Unlike the previous sections whose divisions were arrived at by abstract consideration, the passage commencing at 226 b starts with the enumeration of

concrete examples of household activities. Adduced by the Elean, they serve as illustrations of the art of separation, διακριτική (1)." (p. 109)

46. Hestir, Blake E. 2003. "A "Conception" of Truth in Plato's Sophist." *Journal of The History of Philosophy* no. 41:1-24.

" Plato's solution to the problem of falsehood carries a notorious reputation which sometimes overshadows a variety of interesting developments in Plato's philosophy. One of the less-noted developments in the Sophist is a nascent conception of truth which casts truth as a particular relation between language and the world. Cornford and others take Plato's account of truth to involve something like correspondence; some find the origin of Aristotle's "correspondence" account of truth in Plato's Sophist. But all this assumes a lot about Plato, much less Aristotle. For one, it assumes that to claim that the statement 'Theaetetus is sitting' is true is to claim that it is true because it corresponds with the fact that Theaetetus is sitting. Other scholars have been reluctant to accept Cornford's view, but few offer any explanation of what sort of account of truth we might ascribe to Plato by the end of the Sophist. Tarski has argued that truth is a simpler notion than that of correspondence. In fact, he claims his own "conception" of truth is similar to the classical conception we find in Aristotle's *Metaphysics* -- a conception of truth formulated in Greek in much the same way Plato formulates it in the Sophist. Unfortunately, Tarski never sufficiently explains what it is about the classical conception that makes it closer to his own. I argue that Tarski is generally right about the ancient conception of truth, but this is not to claim that Tarski's own conception is in Plato. By interpreting Plato's solution to the paradox of not-being and his solution to the problem of falsehood, I argue that Plato's account of truth implies a simpler notion of truth than correspondence. I outline various types of correspondence theory and show that none of these fits what Plato says about truth, syntax, and meaning in the Sophist." (pp. 1-2)

47. ———. 2016. *Plato on the Metaphysical Foundation of Meaning and Truth*. Cambridge: Cambridge University Press.

"My project is motivated by my interest in understanding the following two passages from Plato's *Sophist*. In the first passage, the so-called Stranger from Elea presents *Theaetetus* with an account of true and false statement.

In the second, he relates that account to thought and judgment, although my project concerns only that aspect of it that is an extension of the first.(2) He describes thought as "discourse without voice" (*dialogos aneu phônês*) and judgment as the end result of thought. Statement and judgment involve doing something with words and thoughts, respectively, namely asserting or denying, and assertions and denials are either true or false:

I [*Sophist* (263b4–12)]

II [*Sophist* (263e3–264b4)]

"Together these passages stand as what I consider to be the quintessential expression of Plato's account of truth and falsehood, yet they do not by themselves constitute a complete account of his conception of truth. I am interested in that conception and its relation to Plato's semantics and metaphysics.

This project aims to fill several gaps in the current scholarship on ancient Greek conceptions of truth, meaning, and language. What is missing is a detailed investigation into how the development of Plato's understanding of the metaphysical foundation of meaning plays an integral role in his conception of truth in the *Sophist*. The two aforementioned passages follow on the heels of a discussion of language and signification that emerges, I argue, from a systematic approach to semantics that Plato commences in the *Cratylus* and continues through the *Parmenides* and *Theaetetus*, each of which is commonly taken to precede the *Sophist*. The *Sophist* supplies something of an explanation of how being grounds meaning and truth. However, more needs to be said about the mechanism of being, its relation to meaning and truth, the relation between the latter two, and what sort of conception of truth emerges from all this. It is also the case that more could be said about how this conception of truth complements the account of truth as being in "middle-period" dialogues such as the *Phaedo* and *Republic*. Moreover, there has not been a detailed treatment of the striking parallels between Plato's and Aristotle's conceptions of meaning and truth. This book contributes to the developing scholarship in these areas. (pp. 2-3)

(2) So, for example, I will not be discussing Plato's account of concept acquisition and cognition.

48. Hopkins, Burt C. 2013. "The Génos of Lógos and the Investigation of the Greatest Genê in Plato's *Sophist*." *The New Yearbook for Phenomenology and Phenomenological Philosophy* no. 13:353-362.

Abstract: "It is argued that once the negative criterion for distinguishing eikones from phantasmata in lógos about the originals in the intelligible realm appears in the *Sophist*, the Stranger's claim in the final divisions that "we now indisputably count off the kind of image-making as two" (266e), i.e., likeness making and semblance making, becomes problematical.

Specifically, what becomes a problem is whether the distinction in question is a mathesis (learning matter) and therefore something capable of becoming epistême. Consequent this, it is

also argued that the eidetic-arithmoí that appear in the dialectical investigation of the greatest kinds rule out precisely the power of lógos to make the kind of clean cut the Stranger proposes regarding the sophist and philosopher belonging to different gene, given the incomparable nature of the gené and eidê being divided."

49. Horan, David. 2019. "Plato's Parmenides in Plato's Sophist." *Etudes platoniciennes* no. 15:1-23.

Abstract: "I wish to argue in this article that Plato, in considering the position of the monists in the Sophist, relies heavily upon arguments carried forward from the Parmenides. Accordingly, I argue, he invokes, in turn, three understandings of what one means, imported from the Parmenides, and finds that all of them fall short, and generate aporiai, when they are used in the Sophist as the basis for an account, not of the one, as in the Parmenides, but of being, or "what is". In fact I shall argue in this paper that an entirely coherent reading of the overall challenge to the monists in the Sophist, beginning with the naming argument, or names' argument, through to the argument about the whole, only emerges if we take account of the arguments of the Parmenides, and three conceptions of what "one" is, taken from that dialogue."

50. Hoseup, Rhee. 2021. "The Division of Images and the Deception of the Sophist." *The Journal of Greco-Roman Studies* no. 60:153-167.

Abstract: "This article discusses the division of images (eidōla) presented in Sophist, and explores how the sophist's verbal deception is made based on this division. In Sophist, the Eleatic Stranger distinguishes between two types of images: likenesses (eikones) and apparitions (phantasmata). If the likeness is an image that actually resembles the original, the apparition is an image that does not actually resemble the original but appears to resemble it. How exactly should this distinction be understood? Cornford's argument that the distinction between likenesses and apparitions is made according to the 'degree of reality' leads to the conclusion that Plato uses the concept of 'image' inconsistently. Bluck criticizes Cornford on the grounds

that likenesses and apparitions are both related to falsehood as branches of images.

This criticism is reasonable but does not help us to understand the distinction.

According to Notomi, given the metaphysical distinction between reality and appearance, if the likeness is a correct image that truly resembles the original and represents its appearance, then the apparition is an incorrect image that only appears to resemble it by points of view. I basically agree with Notomi's view, but his interpretation does not accurately reveal the falsehood particular to the apparition, nor does it accurately account for the deception of sophists, other than painters. It is because, according to Notomi's interpretation, apparitions will appear as likenesses, i.e., they will represent the same appearance as likenesses even in the 'unbeautiful point of view.' This, contrary to Notomi's assertion that the apparition is an incorrect image, seems to allow for the possibility that it can represent 'true appearances.'

Moreover, unlike painters, the deception of sophists occurs when the original is not well known, and therefore it is difficult for the observer to determine which is a likeness, that is, when he does not know which image represents true appearances. For this reason, I argue that the falsehood particular to the apparition arise on the one hand by accidental resemblance irrelevant of the essence of the original and, on the other hand, by aesthetic and emotional effect. Thus, the sophist's verbal deception can be achieved by stimulating the emotions of the audience with flashy rhetoric unrelated to the truth, and by imitating the appearance of a wise person in terms of performing discourses. Furthermore, the deception of the sophist can be discriminated into two types, according to the view on the relation between language and Forms."

"The focus of this short paper will be a couple of very famous lines at Sophist 242d–e, which constitute one of the precious few certain references to Heraclitus within the Platonic corpus. It will be well to recall from the outset that there are virtually no full quotations of Heraclitus in Plato's works, with the possible exception of two consecutive passages in *Hippias Maior* (289a – b) usually counted as sources for Heraclitus fragments (DK22) B82 and (DK22) B83, which do not qualify as verbatim quotations but are at best mere paraphrases. What looks like the dominant trend in current scholarship concerning Plato's views on Heraclitus is largely based on the *Cratylus* and the *Theaetetus*, which seem to provide a basic sketch for the official image of the Ephesian as the main representative of the Universal flux theory (the famous but apocryphal dictum, πάντα ῥεῖ). In spite of the popularity of this view, surely also based on Aristotle's authority, if Universal flux is what allegedly defines Heracliteanism, Heraclitus was no Heraclitean." (p. 103, notes omitted)

52. Ionescu, Cristina. 2013. "Dialectic in Plato's Sophist: Division and the Communion of Kinds " *Arethusa* no. 46:41-64.

Abstract: "This paper explores the Eleatic Stranger's use of the method of division in the *Sophist* and attempts to reveal it to be a dialectical method of discovery, not of demonstration, that proceeds tentatively while it ultimately aims to ground its discoveries in the communion of the very great kinds. To illuminate this view, I argue for three main theses: first, that the method of division is a method of discovery, not of demonstration; secondly, that the much discussed passage at *Sophist* 253d-e is about both the method of division and the communion of kinds; and thirdly, that the method cannot

succeed to discover natural articulations of reality as long as it ignores considerations of value."

53. ———. 2020. "Images and Paradigms in Plato's Sophist and Statesman." *Ancient Philosophy* no. 40:1-22.

"At the heart of two Platonic dialogues, one of which is the sequel of the other, the Eleatic Stranger draws two distinctions: one between two types of images (εἰδῶλα): εἰκασία (likenesses) and φαντάσματα (appearances), *Sophist* 234a-236d, and the other between two kinds of paradigms (παραδείγματα): perceptible and verbal paradigms, *Statesman* 277a-c, 285d-286b. My present aim is to examine the relevance of each of these distinctions in its respective context, and to suggest a way to understand the relation between them." (p. 1)

54. Isenberg, Meyer W. 1951. "Plato's Sophist and the Five Stages of Knowing." *Classical Philology* no. 46:201-211.

"in a well known passage in the Seventh Epistle (342 A ff.) Plato describes the five stages (1) which one traverses on the road to the knowledge of what is real. If this epistle was written about 353 B.C., its explanation of Plato's method, whether it is primarily directed to the beginner or the advanced student, (2) should have an intimate connection with the method pursued not only in the early and middle dialogues, but especially in the works of Plato's old age. Since the *Sophist* is one of the latest dialogues and has been generally considered one of the most difficult it may not be too far from the mark to inquire whether a right understanding of Plato's five stages of knowing in the Seventh Epistle may not be of use in the interpretation of that dialogue. In this way, perhaps, some difficulties which that work has raised may be solved and a more intimate acquaintance made with Plato's dialectical method.

It is, then, the purpose of the present paper to show that the movement of thought in the *Sophist* follows closely the description of method in the passage of the Seventh Epistle referred to above. All descriptions of method, however, tend to be more simple and more rigid than the actual application of the method itself." (p. 201)

(1) Plato does not use the word "stages." δι' ὧν (342 A 7) should be translated "instruments." But only "name," "discourse," and "image" are instruments.

The term "stages" in the present paper is used in a loose sense to indicate the unfolding of the dialectic.

It has no ontological significance. Various "stages" can only become definite in the context of the Sophist and its interpretation. It is important to note, then, that the various stages listed in this passage do not have even the apparent fixity of the levels of the divided line in the Republic, but are rather extremely fluid terms which flow into one another as the dialectic twists and turns. Note the term διαγωνή (343 E 1).

(2) Harward in his excellent edition of the Epistles states that Plato is "quoting material from some discourse addressed to a single learner, apparently a beginner in philosophy, who has already had a grounding in mathematics" (The Platonic Epistles [Cambridge, 1932], p. 213, n. 95). This may well be the case, but many an advanced student may be benefited by an elementary exposition. The importance of the passage on either count is not diminished.

55. Jeng, I-Kai. 2017. "Plato's Sophist on the Goodness of Truth." *Epoché: A Journal for the History of Philosophy* no. 21:335-349.

Abstract: " "Late" Platonic dialogues are usually characterized as proposing a "scientific" understanding of philosophy, where "neutrality" is seen favorably, and being concerned with the honor of things and/or their utility for humans is considered an attitude that should be overcome through dialectical training. One dialogue that speaks strongly in favor of this reading is the Sophist, in which the stance of neutrality is explicitly endorsed in 227b-c. This paper will propose a reading of the Sophist showing that this common view of late Plato is misleading. It will argue for three things. First, 227b-c, when contextually understood, actually shows the limitation of being neutral. Second, that limitation compels the interlocutors in the rest of the conversation to pursue a non-neutral way of philosophizing about the sophist, contrary to the advice put forward in 227b-c.

Finally, the non-neutral definition of the sophist that concludes the dialogue does not signal Plato's preference for a non-neutral conception of philosophical knowledge either. A careful consideration of the dramatic ending suggests that he has reservations about it no less than he does about a neutral conception. The fact that both these conceptions had limitations perhaps explains why Plato, even in his late years, did not turn to the treatise format but remained within the dialogue: only in this form is it possible to retain both in philosophical *logos*."

56. ———. 2019. "On the Final Definition of the Sophist: Sophist 265A10–268D5." *The Review of Metaphysics* no. 72:661-684.

Abstract: "This paper defends the closing definition of the sophist in Plato's *Sophist* as a modest success. It first argues that it consistently articulates the sophist's class structure as someone who resembles someone wise without being in the same class as that being. Then it explains why this structuring principle satisfies the demands of a successful definition as stated in the *Sophist* 232a1-6, and how the earlier definitions, despite being informative, nevertheless are failures. Since a number of scholars consider the final definition to fail no less than the earlier ones, the paper then turns to address four common objections in the literature. The conclusion briefly discusses how this reading affects our understanding of the method of division (*diaeresis*) in Plato."

57. Johnson, Patricia Ann. 1978. "Keyt on ἔτερον in the *Sophist*." *Phronesis. A Journal for Ancient Philosophy* no. 23:151-157.

"In his article, "Plato on Falsity: *Sophist* 263B," David Keyt introduces a crucial question for understanding the definition of false statement given by Plato in the *Sophist*: What is the relation of flying to Theaetetus (or, to the attributes which belong to Theaetetus)? The response given to this question will amount to an interpretation of the key line, 263B11-13. Keyt mentions five interpretations and argues briefly against each, but the major argument of his paper is devoted to showing that the definition of falsity is vague and therefore defies specific translation. I shall not discuss all of these possible

interpretations because my concern here is in defending what Keyt calls the Oxford interpretation. He argues directly against this view as raising serious epistemological problems, but he also challenges it as an interpretation by presenting counter arguments to the two most persuasive reasons for choosing this interpretation over the others. I shall try to respond to the more significant of these challenges." (p. 151)

58. Jordan, Robert William. 1984. "Plato's Task in the Sophist." *The Classical Quarterly* no. 34:113-129.

"I shall argue that it is clear that Plato would himself characterize his task in the Sophist as showing τὰ μὴ ὄντα ὡς ἔστιν (258d 5) - that what is notbeing is being.(3)

Problems arise only in the interpretation of Plato's task. We must be guided in our interpretation by the solution Plato offers to his problems. This solution turns firstly on his demonstration of Communion of Kinds, and secondly on his distinction between otherness and opposition. The conclusion Plato draws from his discussion of Communion of Kinds has sometimes been thought to lend support to the view that Plato's task here is that of distinguishing different senses of *einai*. I shall argue that this view of the passage presents serious problems for the commentator. And this view of Plato's task in the Sophist receives no support at all from Plato's contrast between otherness and opposition. That contrast, however, equally fails to support the other commonly held view of the problems Plato is facing in the Sophist, that Plato is keen to distinguish between the *medamos on* and the *me on*. In particular, the analogy Plato draws between 'being' and 'big' presents a major difficulty for this view.

Finally, I shall introduce a new interpretation of Plato's task, via a consideration of his stated intention to commit patricide and refute Parmenides' criticism of the road of enquiry followed by mortals. Once we have seen that Plato promises to refute Parmenides, but does not accomplish this task by distinguishing between different senses or uses of *einai*, nor yet by a distinction between being in no way and simply not being, only one possibility remains: Plato thinks the refutation of

Parmenides achieved if he can show that being (F) is not opposed to notbeing (G). This interpretation of Plato's task is then shown to fit well, both with the puzzles that introduce the central section of the Sophist, and with Plato's resolution of those puzzles by way of his demonstration of Communion of Kinds, and his distinction between otherness and opposition. It is compatible with what Plato says and does in Sophist 241-56; and it accounts well for the nature of Plato's discussion of negation and falsity in the dialogue. (pp. 113-114)

(3) We normally translate to mega as 'what is big'. I consequently translate to on as 'what is being' and to me on as 'what is notbeing', to preserve the parallel in the Greek.

60. Kahn, Charles H. 1988. "Being in Parmenides and Plato." *La Parola del Passato* no. 43:237-261.

Reprinted in C. H. Kahn, *Essays on Being*, New York: Oxford University Press, 2009, pp. 167-191.

"Despite the silence of Aristotle, there can be little doubt of the importance of Parmenides as an influence on Plato's thought. If it was the encounter with Socrates that made Plato a philosopher, it was the poem of Parmenides that made him a metaphysician. In the first place it was Parmenides' distinction between Being and Becoming that provided Plato with the ontological basis for his theory of Forms.

When he decided to submit this theory to searching criticism, he chose as critic no other than Parmenides himself. And when the time came for Socrates to be replaced as principal speaker in the dialogues, Plato introduced as his new spokesman a visitor from Elea. Even in the *Timaeus*, where the chief speaker is neither Socrates nor the Eleatic Stranger, the exposition takes as its starting point the Parmenidean dichotomy.(1) From the *Symposium* and *Phaedo* to the *Sophist* and *Timaeus*, the language of Platonic metaphysics is largely the language of Parmenides." (p. 237)

(...)

"My aim here has not been to analyze Plato's use of *to be* in the formulation of his own ontology, but only to demonstrate how faithfully Parmenidean he is in his progression from an initial, quasi idiomatic use of *ἐστίν* for truth and reality to more philosophically loaded, 'ontological' uses of the verb in which existential and predicative functions are combined with connotations of truth, stability, and permanence." (p. 257)

(...)

"In the Sophist veridical being is carefully analyzed as 'saying of what is that it is concerning a subject' (236b), whereas the problematic concept of not-being is dissolved into distinct negations for falsehood, identity, and predication. A long and laborious effort of analysis was required to bring to light the confusions hidden in Parmenides' argument. But these confusions infect only the negative concept of what is not. The positive conception of Being emerges unscathed, to dominate the metaphysical tradition of the West for many centuries to come." (p. 258)

(1) Timaeus 27d5: "The first distinction to be made is this: what is the Being that is forever and has no becoming, and what is that which is always becoming but never being?"

61. ———. 2007. "Why is the Sophist a sequel to the Theaetetus?" *Phronesis. A Journal for Ancient Philosophy* no. 52:33-57.

Abstract: The Theaetetus and the Sophist both stand in the shadow of the Parmenides, to which they refer. I propose to interpret these two dialogues as Plato's first move in the project of reshaping his metaphysics with the double aim of avoiding problems raised in the Parmenides and applying his general theory to the philosophy of nature. The classical doctrine of Forms is subject to revision, but Plato's fundamental metaphysics is preserved in the Philebus as well as in the Timaeus. The most important change is the explicit enlargement of the notion of Being to include the nature of things that change.

This reshaping of the metaphysics is prepared in the Theaetetus and Sophist by an analysis of sensory phenomena in the former and, in the latter, a new account of Forms as a network of mutual connections and exclusions. The division of labor between the two dialogues is symbolized by the role of Heraclitus in the former and that of Parmenides in the latter. Theaetetus asks for a discussion of Parmenides as well, but Socrates will not undertake it. For that we need the visitor from Elea. Hence the Theaetetus deals with becoming and flux but not with being; that topic is reserved for Eleatic treatment in the Sophist. But the problems of falsity and Not-Being,

- formulated in the first dialogue, cannot be resolved without the considerations of truth and Being, reserved for the later dialogue. That is why there must be a sequel to the Theaetetus."
62. ———. 2013. *Plato and the Post-Socratic Dialogue: The Return to the Philosophy of Nature*. Cambridge: Cambridge University Press.

Chapter 3. Being and Not-Being in the Sophist, pp. 94-130.

"In the Theaetetus Socrates insisted on avoiding the discussion (which Theaetetus had requested) of Parmenides' doctrine of Being. As the promised sequel to the Theaetetus, the Sophist is designed to fill that gap. A significant change in style suggests that a considerable lapse of time may have occurred between the composition of these two dialogues.

Nevertheless, the reappearance of Theaetetus as interlocutor in the Sophist is a clear reminder of continuity in this project.

It was presumably with these Parmenidean issues in view that Plato chose to replace Socrates as chief speaker with a visitor from Elea. One of Plato's principal tasks in this dialogue will be to correct Parmenides' account of Not-Being. The choice of a spokesman from Parmenides' own school will serve to guarantee an atmosphere of intellectual sympathy for the doctrine to be criticized." (p. 94)

Plato's *Sophist*. Bibliography of the studies in English: Kal - Mig

Bibliography

1. Kalligas, Paul. 2012. "From Being an Image to Being What-Is-Not." In *Presocratics and Plato: Festschrift at Delphi in Honor of Charles Kahn*, edited by Patterson, Richard, Karasmanis, Vassilis and Hermann, Arnold, 391-409. Las Vegas: Parmenides Publishing.

"As Cornford has formulated it,(5) "the class of 'images' (εἰδωλα) we are concerned with—semblances—imply two relations between image and original.

The image is more or less like the original, though not wholly like it, not a reproduction. But it is also conceived as possessing in some sense a lower grade of reality, as illusory, phantom-like" (author's emphasis). Thus it is not unusual to find Plato being accused of abandoning the world of concrete sensible reality in favor of a nebulous region of intangible presumed "prototypes" of the items encountered by our everyday experience, of assuming as properly real what—to every sober minded naturalist—seem to be no more than abstractions from things or features existing in the world of our common, and commonly shared, experience.

In what follows, I wish to challenge certain aspects of this interpretation of the analogy of the image and to suggest that Plato did not intend to question the reality of sensible existence, but only to deny that we can be confident about the truth of any statements we make in reference to it. In my view, in interpreting the image analogy we have to take seriously into

account the extended analysis Plato offers with respect to the various kinds of imaging in the Sophist, where a great amount of energy is given to an ex professo examination of this, at first glance, rather inconsequential or, at best, marginal topic." (pp. 392-393)

2. Karanasiou, Argyri G. 2016. "The Term *symplokē* in Symposium 202b1 and in Sophist 240c1ff, 259d-261c: Heidegger's Interpretation of the Concept of "Interconnection" in Platonic Thought " In *Sophistes: Plato's Dialogue and Heidegger's Lectures in Marburg (1924-25)*, edited by De Brasi, Diego and Fuchs, Marko J., 113-130. Newcastle upon Tyne, UK: Cambridge Scholars Publishing.

"The pivotal question raised in this study is, whether Socrates's presentation of Eros in the Symposium could serve as an allegory of the concept of *symploke*(2) of Forms anticipating the exclusive and exhaustive distinction of a thing, its polar contrary, and its different (the *tertium quid* or third alternative) as presented in the relevant discussion of the Sophist (240c1; 259e5f; 260a1-6; d5).(3) Heidegger (GA 19, 572) argues that although Plato has seen the heteron early (in the Symposium), he only conceived the difference between heteron and enantiosis (mere negation) later referring to *symploke* as a logical possibility of something 'being' and 'not-being' at the same time; existing, even if it is other than itself (GA 19, 431-32; 569-75; 580). Relating to this topic in his Lectures on the Sophist Heidegger refers to a passage (Smp. 202b1) where the idea of otherness (heteron) is probably defined as signifying not necessarily opposition (enantion, GA 19, 572).4 Both the discovery of the heteron as a category in the Symposium and the resolution of the problem of negation through the notion of interconnection (*symploke*) in the Sophist laid the foundation of dialectical logic (cf. Sph. 253d; 259c4ff)." (pp. 113-114)

(2) The term is rendered either as 'combination', 'dependency' or 'interrelation'. The verb *sympleko* means in general 'plait

together' and it is usually used with the verb *syndeo* which at Rsp. 309b means 'bind together' or 'unite'. Both verbs occur at Sph. 268c5-6 when a reverse recapitulation of the definition (*toúnoma*) of the sophist is concisely mentioned (beginning at the end and closing at the opening of the dialogue).

"About the middle of Plato's *Sophist* a perplexity (*ἀπορία*) emerges out of a lengthy discussion as to how to catch the "tribe" of sophists with a definition. It turns out that to define a sophist as somebody who has to do with falsehood implies the existence of not-being.(1)

Such a hypothesis clearly infringes the ban placed on not-being by Parmenides in his celebrated poem.(2)"

(...)

"The inquiry into this question, which eventually leads to a solution of the question about not-being, fills out the rest of the central part of the dialogue.⁷ Both these questions having been solved, the interlocutors take up the interrupted job of defining the sophist and bring it to a successful conclusion. The *Sophist*, unlike the *Theaetetus*, thus ends up with a positive answer to the question it has initially raised, namely: "What is a Sophist?"⁸ But the way to get there is anything but straightforward and raises more questions than it solves.

Formally, both subordinated questions, about not-being and about being, receive due answers, the first one via the second one.

But especially the answer to the question “What does it mean ‘to be’” is itself far from being clear. Modern interpreters do not agree about its general meaning and there are several more particular points in Plato’s presentation which are in dispute. In this paper I would like to enquire once again into these vexed issues in order to get clearer about the general meaning of Plato’s answer to the question: “What is being?” (pp. 120-121)

4. Keane, Niall. 2010. "Interpreting Plato Phenomenologically: Relationality and Being in Heidegger's *Sophist*." *Journal of the British Society for Phenomenology* no. 41:170-192.

"... this paper sets out to examine the phenomenological import of Heidegger’s subsequent interpretation and appropriation of relationality (*pros ti*) and *logos* in his analyses of the *megista gene* in the *Sophist*. This paper addresses some of the more philosophically salient points of Heidegger’s ‘phenomenological interpretation’ and addresses what were, according to him, both the philosophical merits and limitations of Plato’s ‘late ontology’. To this end, I will attempt to explicate the phenomenological issues that inevitably remained unthematized in Plato’s *Sophist*. In this respect, I shall largely focus on Heidegger’s early interpretation of Plato’s analysis of ‘movedness’ (*kinesis*), ‘otherness’ (*heterotes*) and ‘relationality’ (*pros ti*); each of which will then be considered with respect to the role of the *logos*.

The ancillary aim of this article will be to disentangle these specific issues from the perspective of the limits and ground of the *pros ti* and it will subsequently examine how Heidegger’s early reading of ‘relational movedness’ in the *Sophist* inspired his later *Being and Time* analysis of the disclosive negativity of

Dasein's "Being-in-the-world" (In-der-Welt-sein). By way of conclusion, I argue, against what I consider to be a renewed case of 'Platonic apologetics', that Heidegger's reading of Plato is best understood when approached from a purely 'phenomenological perspective'. I contend that it is only by approaching Heidegger's 'deconstructive' interpretation of Plato's highest kinds from the standpoint of his nascent existential-ontology of Dasein, that one can both meaningfully defend and contextualise his interpretation of the Sophist against the above reproach. In contrast to what I have called a 'Platonic apologetics', I would like to argue that Heidegger's compelling interpretation of the Sophist offers us an unconventional (yet nonetheless valid) way of responding to Plato's thought, a response which is thoroughly evinced in the 1924/25 interpretation which I shall now pursue." (p. 170)

5. Kerferd, George B. 1954. "Plato's Noble Art of Sophistry (Sophist 226a-231b)." *The Classical Quarterly* no. 4:84-90.

"Plato's Sophist begins with an attempt to arrive by division at a definition of a Sophist. In the course of the attempt six different descriptions are discussed and the results summarized at 231 c-e. A seventh and final account may be said to occupy the whole of the rest of the dialogue, including the long digression on negative statements. The first five divisions characterize with a considerable amount of satire different types of sophist, (1) or more probably different aspects of the sophistic art.(2) The sixth division (226 a-231 b) is very different. To quote Cornford's words, 'satire is dropped. The tone is serious and sympathetic, towards the close it becomes eloquent.' (3)

(...)

"It is the purpose of this paper to argue that the natural meaning of the passage is the right one the persons referred to are sophists and Plato was aware that one aspect of their activities was not only extremely valuable but was a necessary preliminary to his own philosophy." (p. 84)

(...)

"There is thus ample evidence of the practice by sophists of a method which could be described in the terms which Plato uses in the Sixth Definition, a method which if used in the right way could prepare the ground for a true understanding of reality based on the Forms. It is in this sense that Plato could speak of 'the art of sophistry which is of noble lineage'." (p. 90)

(1) Cornford, *Plato's Theory of Knowledge*, 173.

(2) Taylor, *Plato, the Man and His Work*, 379. There is nothing to support Jackson's view (*Journal of Philosophy*, XIV (1885), 176-82) that Plato is describing successive stages in the history of the sophistic movement. *Soph.* 232 a shows that Plato held there was a single common element underlying the name 'sophist' and it is for this that he is searching.

(3) *Op. cit.* 177.

6. Ketchum, Richard J. 1978. "Participation and Predication in the *Sophist* 251-260." *Phronesis. A Journal for Ancient Philosophy* no. 23:42-62.

"While a great deal of progress has been made in recent years in bringing to light the philosophical sense of the *Sophist* one problem, or cluster of problems, has resisted analysis.(1) The problem is that Plato seems to use a particular form of sentence ambiguously; the fact that he does so seems to reveal a fundamental confusion on Plato's part."

(...)

"Now it is argued that Plato uses sentences of the form "the F (is) ... sometimes to express a Form-predication and sometimes to say something about the nature of the F or perhaps about the nature of particular F 's. The fact Plato vacillates between these two types of predication not only obscures whatever philosophical point he may be making but also shows that Plato was confused about the nature of Forms.

I think, however, that there is a plausible reading of the *Sophist* which shows Plato to be in no way confused as to the meaning of such sentences.

None of the first-order sentences of the Sophist, I will argue, are Form predications.

After arguing that the text forces this conclusion on us (Part I), I will try to make the conclusion plausible (Part II) by describing a type of predication, different from Form-predication, in terms of which all of the first-order sentences of the Sophist can be consistently understood. A consequence of my interpretation is the rather surprising thesis that nowhere in the Sophist with the exception of those passages in which the friends of the Forms are discussed, does Plato mention the Forms of the middle dialogues. I will conclude (Part III) by explaining how I think those passages which seem to mention Forms are to be understood." (p. 42-43)

Crombie, *An Examination of Plato's Doctrine: II, Plato on Knowledge and Reality* (London, 1963), 401-410; M. Frede, "Prädikation und Existenzaussage," *Hypomnemata*, Heft 18, (1967) 9-99; and G. Vlastos, "On Ambiguity in the Sophist" in *Platonic Studies*, (Princeton, 1973), 270-322, among others, while it is alluded to by G. E. L. Owen, "Plato on Not-Being" in *Plato I: Metaphysics and Epistemology*, G. Vlastos, ed., (Garden City, 1971), 233, note 20.

7. Keyt, David. 1969. "Plato's Paradox that the Immutable is Unknowable." *The Philosophical Quarterly* no. 19:1-14.

"One of the great questions that Plato considers in the Sophist is that of the number and nature of real things (242C5-6). The protagonist of the dialogue, an Eleatic stranger, raises problems for both the pluralist (243D6-244B5) and the monist (244B6-246E5) without resolving them and then turns to the battle of gods and giants, the battle between those who hold that "body and being are the same" (246B1) and those who hold that "true being is certain intelligible and bodiless Forms" (246B7-8). What the one holds is the logical contrary, not the contradictory, of what the other holds; so it is possible that they are both wrong. This seems in fact to be the Eleatic's conclusion (249C10-D4), although by the time he gets to the friends of the

Forms the property under examination has shifted from corporeality to mutability. The Eleatic stranger presents the friends of the Forms with an interesting paradox (248D1-E5). This is my subject. The friends of the Forms hold that real being " is always invariable and constant " (248A11-12). But being is known (248D2). And on the hypothesis that to know is to act on something, that which is known is acted upon (248D10-E1). Further, to be acted upon is to be changed (248E3-4). Therefore, since being is known, it is changed (248E3-4). But this conclusion contradicts their original contention." (p. 1)

(...)

"My conclusions are that he is not deeply committed to the proposition that Forms undergo change, but that he ought to be, and that he is deeply committed to the proposition that Forms are completely changeless, but for insufficient reasons. A Platonist really ought to hold that Forms are changeless in some respects but not in others. In what respects? This is my third question. Aristotle, in commenting on Plato's theory of Forms, provides a basis for answering it." (p. 2)

8. ———. 1973. "Plato on Falsity: Sophist 263b." In *Exegesis and Argument. Studies in Greek philosophy presented to Gregory Vlastos*, edited by Lee, Edward N., Mourelatos, Alexander and Rorty, Richard, 285-305. Assen: Van Gorcum.
9. Klein, Jacon. 1977. *Plato's Trilogy: Theaetetus, the Sophist, and the Statesman*. Chicago: University of Chicago Press.

"There can be no doubt that the Platonic dialogues entitled *Theaetetus*, *The Sophist*, and *The Statesman* belong together --- in that order and are meant to be a "trilogy," regardless of when they were written. It is important to note that these three conversations are supposed to take place not during three days but two, shortly before the trial and the conviction of Socrates. (3) The conversation in the *Theaetetus* is followed on the next day by two conversations, by that in the *Sophist* and that in the *Statesman*. There is almost certainly no pause between the latter two. (4)" (p. 3)

(...)

"Independently of the time sequence within the dialogues, something is dealt with in the Sophist which happens to be the fundamental premise in the Theaetetus, namely, that the roots, the ultimate sources of everything, the "ruling beginnings" (the ἀρχαί), are these two: the 'Same' and the 'Other'. We shall, therefore, begin with the Sophist, continue with the Theaetetus, and end with the Statesman.

How shall we convey what is either said or not said explicitly but only implied in the dialogues? We shall watch the text carefully, always remaining aware of the playfulness --- the sister of seriousness which persists in the dialogues and determines the way they proceed. We shall watch how the spoken words produce the dramatic content presented to us. We shall participate in the discussions: the paraphrase of the text of the dialogues will be interwoven with what occurs in us as listeners." (p. 5)

10. Kohnke, Friedrich Wilhelm. 1957. "Plato's Conception of τοῦ οὐκ ὄντως οὐκ ὄν." *Phronesis. A Journal for Ancient Philosophy* no. 2:32.40.

"In the neo-Platonic philosophy of the fifth century A.D. the hypostases of being are found in connection with a four-level scale of being and non-being." (p. 32)

(...)

"Plato seems to have formulated the concept of οὐκ ὄντως οὐκ ὄν for the first time in the Sophistes." (p. 38)

(...)

"We are now in a position to recognise its roots: The neo-Platonists derived a terminology for their fourfold system of being from Plato's Parmenides, the dialogue which they honoured as the revelation of metaphysical truth, and

combined this with their system of hypostases of the cosmos."
(p. 40)

11. Kostman, James. 1973. "False Logos and Not-Being in Plato's Sophist." In *Patterns in Plato's Thought. Papers Arising Out of the 1971 West Coast Greek Philosophy Conference*, edited by Moravcsik, Julius, 192-212. Dordrecht: Reidel.

"In the Sophist, Plato argues that false statements are possible, defending this common-sense view against the claims of a notorious sophistic puzzle: if there are false λόγοι, according to the puzzle, then not-Being is (237a3-4); but, as Parmenides had testified, what is-not cannot be (237a4-b2).

After introducing this puzzle, Plato goes on to magnify the difficulties it raises (237b7-239c3), and he asserts that, in order to refute Parmenides, we must show both that what is-not is and that what is is-not (239c4-242b5). Plato then takes up several traditional theories about Being (242b6-251a4), and finds that this subject too is full of perplexity. So he attempts to resolve the whole cluster of problems he has raised, starting with the question of how one and the same thing can be called by many names (251a5-c7). This leads to the topic of the communion of Kinds (251c7-257a12). But, as we shall see, it is only at 257b1 that Plato begins

his direct reply to the original sophistic puzzle." (p. 192)

12. ———. 1989. "The Ambiguity of 'Partaking' in Plato's Sophist." *Journal of The History of Philosophy* no. 27:343-363.

"In the central section of the Sophist (250-259), as Gregory Vlastos has shown,(1) statements about Forms or Kinds are subject to a certain structural ambiguity: 'The F is G' may be either an 'ordinary' or a 'Pauline' predication, in Vlastos' terminology; that is, it may either attribute being G to the F itself or assert that necessarily whatever is F is G. For example, 'Being is at rest' may assert either that the Form Being itself is at rest, in which case it is an ordinary predication, or that necessarily whatever is is at rest, in which case it is a Pauline predication." A few scholars have quibbled with Vlastos' interpretations of some of the passages on which he bases the

claim that the ambiguity exists, but I find it surprising that, in the decade and a half since its publication, Vlastos' central thesis---that Plato was "utterly unaware" of the ambiguity--has never been directly challenged. After summarizing the evidence for the existence of the ambiguity in section 1 of this paper, I shall show in section 2 that the argument by which Vlastos concludes that there is "positive evidence" for his thesis is fundamentally incoherent.

In the rest of this paper, I offer an argument, based on my analysis of two important passages (255c-e and 250a-e) and the relationship between them, that there is additional circumstantial evidence that Plato was not only aware of the ambiguity but allowed it to play a significant, though indirect, role in the overall argument of *Soph.* 250-259." (p. 343)

(1) Gregory Vlastos, "An Ambiguity in the Sophist," in his *Platonic Studies*, 270-322. This article will be referred to as 'AS'; all references to it and other papers in *Platonic Studies* are to the first edition.

13. Lacey, Alan Robert. 1959. "Plato's Sophist and the Forms." *The Classical Quarterly* no. 9:43-52.

"The Sophist is on the face of it concerned to charge the sophist with being a mere maker of images, and to defend this charge by showing that images, though they 'are not' what they are images of, yet in some sense 'are'. This leads to the analysis of Not-being as being other than, but Plato makes it quite clear that the general problem concerns Being as much as Not-being (250 e); the difficulty is that Being is neither Rest nor Motion, and so can neither rest nor move of its own nature, but surely it must do one of these (250 c, d). In other words Being is in danger of not being able to have attributes except by being identical with them. The ensuing discussion seems to point out that this is not so, and that Forms, like other things, do have some attributes and not others, without being identical with them.

But such an interpretation will only hold if the Megista Gene are in fact all Forms. This is denied by Dr. A. L. Peck, who argues (*Classical Quarterly*. 1952; cf. 1953, 1954) (2) that the

whole point of the discussion is to show that Being, Not-being, Same, and Other are not Forms, but merely empty names, and so φάντασματα rather than the εἰκόνες which are the names of real things; the sophist raises paradoxes by relying on linguistic habits (Dr. Peck (S p. 52) points to the frequency of verbs of saying in the Sophist) to pervert the theory of Forms into positing absurd Forms." (p. 43)

14. Lanigan, Richard L. 1982. "Semiotic Phenomenology in Plato's Sophist." *Semiotica* no. 41:221-246.

Reprinted in: John Deely (ed.), *Frontiers in Semiotics*, Bloomington: Indiana University Press 1986, pp. 199-216.

"My essay attempts to explicate the main features of the Platonic argument in order to establish that the model of discourse analysis is semiotic in nature and phenomenological in function. I am using the term model in its technical theory construction sense as an 'exemplar' (combined 'paradigm' and 'prototype') in a theory."

(...)

"My essay does not represent an effort to claim that Plato is either a semiologist or a phenomenologist. Rather, I argue that the dialogue Sophist offers a long neglected textual model of binary analogue thinking that is foundational to many of the issues current in the study of the philosophy of communication where semiology and phenomenology intersect in the problematic of analysis. Indeed, many of the basic elements in the Platonic investigation are being unnecessarily reinvented by contemporary theorists. By addressing the fundamental problem of the Being of Not-Being, Plato provides a semiotic phenomenology of discourse in which he demonstrates the acceptability of analytic proofs as the concrete analysis of empirical communication acts. Thus, the dialogue Sophist represents a critical, but often ignored, theoretical foundation for an empirical examination of the sign relationship between the ontology of the speaking subject and the epistemology of the discourse system." (pp. 221-222, note omitted)

15. Larsen, Jens Kristian. 2007. "The Soul of Sophistry: Plato's "Sophist" 226a9–231b9 revisited." *Filosofiske Studier* no. 102:1-14.

"It is a widespread opinion that the first part of the *Sophist* (216a – 237b) is primarily concerned with the problem of finding an adequate definition of the sophist. Within this passage six different definitions

are given, each unsatisfactory, until a seventh description leads to the main problems of the dialogue, namely the questions concerning non-being, being, the intertwining of forms and the problem concerning false statements. Whereas the first five definitions are relatively unproblematic, the sixth is known to be troublesome – it has a peculiar resemblance to the Socrates-figure of the elenctic dialogues.

In the following I shall argue that the so-called sixth definition is not a definition of the sophist at all, but a methodological reflection which plays a central role in the overall composition of the dialogue. I shall further argue that this methodological reflection shows that Plato did not change his basic notion of philosophy in the late dialogues towards a more 'technical' concept, as is often maintained, but in a fundamental way stayed true to the Socratic, 'existential' impulse." (p. 1)

16. ——. 2013. "The Virtue of Power." *The New Yearbook for Phenomenology and Phenomenological Philosophy* no. 13:306-317.

Abstract: "The "battle" between corporealists and idealists described in Plato's *Sophist* 245e6–249d5 is of significance for understanding the philosophical function of the dramatic exchange between the Eleatic guest and Theaetetus, the dialogue's main interlocutors.

Various features of this exchange indicate that the Eleatic guest introduces and discusses the dispute between corporealists and idealists in order to educate Theaetetus in ontological matters. By reading the discussion between Theaetetus and the Eleatic guest in the light of these features, one comes to see that the primary audience for the proposal advanced by the Eleatic

guest in this passage, namely that being is power, is not any of the participants in the “battle,” as has been commonly assumed, but Theaetetus himself—a fact to bear in mind in any viable interpretation of the passage.”

17. ———. 2016. "Plato and Heidegger on Sophistry and Philosophy." In *Sophistes: Plato's Dialogue and Heidegger's Lectures in Marburg (1924-25)*, edited by De Brasi, Diego and Fuchs, Marko J., 27-60. Newcastle upon Tyne, UK: Cambridge Scholars Publishing.

"The present chapter investigates Heidegger's early understanding of Platonic dialectic in its contrast to sophistry as this comes to expression in his *Lectures on Plato's Sophist*." (p. 27)

(...)

"To investigate Heidegger's early understanding of sophistry is thus a challenging task, since this understanding cannot be isolated from his broader interpretation of Plato's understanding of philosophy or from his own understanding of philosophy, developed in discussion with the philosophical tradition. Moreover, as Heidegger's interpretation of Plato is primarily based on a reading of the *Sophist*, a text that may not be typical of Plato, we need to look at the *Sophist* itself if we wish to evaluate Heidegger's engagement with Plato. Accordingly, the chapter will have two main parts. The first part will focus on Plato's *Sophist*, in particular on the connection between arete, virtue, and the inquiry into sophistry in the dialogue. Here a now common reading of the *Sophist* will be examined critically. The second part will focus on Heidegger's interpretation of philosophy and sophistry in the light of the *Sophist* and will ask what role, if any, arete plays in this interpretation." (pp. 28-29)

18. ———. 2019. "Eleaticism and Socratic Dialectic: On Ontology, Philosophical Inquiry, and Estimations of Worth in Plato's *Parmenides*, *Sophist* and *Statesman*." *Etudes platoniciennes* no. 15:1-17.

Abstract: "The Parmenides poses the question for what entities there are Forms, and the criticism of Forms it contains is commonly supposed to document an ontological reorientation in Plato. According to this reading, Forms no longer express the excellence of a given entity and a Socratic, ethical perspective on life, but come to resemble concepts, or what concepts designate, and are meant to explain nature as a whole. Plato's conception of dialectic, it is further suggested, consequently changes into a value-neutral method directed at tracing the interrelation of such Forms, an outlook supposedly documented in certain passages on method from the Sophist and the Statesman as well.

The article urges that this reading is untenable. For in the Parmenides the question for what entities one should posit Forms is left open, and the passages on method from the Sophist and Statesman neither encourage a non-normative ontology nor a value-neutral method of inquiry. What the three dialogues encourage us to do is rather to set common opinions about the relative worth and value of things aside when conducting ontological inquiries; and this attitude, the article concludes, demonstrates a close kinship, rather than a significant difference, between Plato's Socrates and his Eleatic philosophers."

19. ———. 2020. "Differentiating Philosopher from Statesman according to Work and Worth." *Polis. The Journal for Ancient Greek and Roman Political Thought* no. 37:550-566.

Abstract: "Plato's Sophist and Statesman stand out from many other Platonic dialogues by at least two features. First, they do not raise a *ti esti* question about a single virtue or feature of something, but raise the questions what sophist, statesman, and philosopher are, how they differ from each other, and what worth each should be accorded. Second, a visitor from Elea, rather than Socrates, seeks to address these questions and does so by employing what is commonly referred to as the method of collection and division. Some scholars have argued that this so-called method is value neutral and therefore unable to address the question how philosophy differs from sophistry and statesmanship according to worth. This article contends

that the procedures of collection and division does not preclude the visitor from taking considerations of worth into account, but rather helps establish an objective basis for settling the main questions of the dialogue."

20. Lee, Edward N. 1966. "Plato on Negation and Not-Being in the Sophist." *The Philosophical Review* no. 81:267-304.

"On pages 257c-258c of the Sophist, Plato introduces a notion which he calls the "Parts of the nature of Otherness." He then writes explicitly - in fact, he writes it twice - that that Part of Otherness, and not merely Otherness by itself, defines the genuine non-Being that is needed to conclude his inquiry and to trap the Sophist.(2) But why does he say so? Just what difference is there between the not-Being explicated by means of the Parts of Otherness and the not-Being explicated through Otherness by itself? I am convinced that none of the existing interpretations of the Parts doctrine adequately answer that question or accurately analyze Plato's own meaning. My aim will be to do both. To begin (I), we will work through the details of the difficult passage in which Plato spells out his doctrine of the Parts of Otherness; then we shall try to clarify the philosophical role that the doctrine plays-first (II) in Plato's analysis of negation (particularly his account of the sense of negative predication statements), and then (III), though more briefly, in connection with one of the wider metaphysical issues raised in the Sophist." (p. 267)

(...)

"If the account in Sections I and II above is sound, then the logical force of Plato's theories in the Sophist proves to be much greater than the commentators have appreciated. Not only can he analyze the sense of negative identity statements, but he can analyze the sense of negative predication statements as well. To an extent much greater than had earlier been recognized, he did succeed in dealing with the problem of negation. Yet we have noted that his aims in the Sophist were not narrowly logical or "analytical" in nature, and we need also to ask what other substantive issues he may have hoped to illuminate by means of these analytic achievements." (p. 299)

21. Lee, SangWon. 2016. "The Dynamic Association of Being and Non-Being: Heidegger's Thoughts on Plato's Sophist Beyond Platonism." *Human Studies* no. 39:385-403.

Abstract: "This article examines Heidegger's interpretation of Plato's Sophist, focusing on his attempts to grasp Plato's original thinking of being and non-being. Some contemporary thinkers and commentators argue that Heidegger's view of Plato is simply based on his criticism against the traditional metaphysics of Platonism and its language. But a close reading of his lecture on the Sophist reveals that his view of Plato is grounded in Plato's questioning struggle with the ambiguous nature of human speech or language (logos). For Heidegger, Plato's way of philosophizing is deeper than the metaphysical understanding of Platonism which sees only fixed ideas of being. In the Sophist, dialectical thinking of Plato constantly confronts the questionable force of the logos which betrays the natural possibility of non-being based on the tension between movement and rest. Thus, from Plato's original insight Heidegger uncovers the dynamic association (koinōnia) of being and non-being as a natural ground of everyday living with others. However, although Heidegger's understanding of the Sophist powerfully demonstrates the lively possibility (dunamis) of being beyond the customary perspective of Platonic metaphysics, his interpretation fails to further disclose Plato's political question of being emerging in the Sophist, which seeks the true associative ground of human beings."

22. Leigh, Fiona. 2008. "The Copula and Semantic Continuity in Plato's Sophist." *Oxford Studies in Ancient Philosophy* no. 34:105-121.

"Lesley Brown first made a radical claim about uses of the Greek verb 'to be' (einai) in Plato's Sophist some twenty years ago (1986).(1)

(...)

"In brief, Brown's innovation is as follows: The verb 'to be' in Greek, unlike its counterpart in modern English, permits a complete and an incomplete use. Sometimes it does not take a

complement, though it could, and at other times context demands a complement (whether elided or not). In the former case, the verb exhibits what Brown calls a 'C2' complete use, and in the second, an incomplete use. Brown's view is that the verb is not being used merely homonymously in these cases, but, like 'to teach' in English, exhibits a certain continuity of meaning across uses. The mistake has been to take complete uses of *estin* as C1 complete uses, i.e. as uses that will not bear further completion.

The first critical discussion (to my knowledge) of Brown's reading has recently appeared in print.⁽⁶⁾ In it John Malcolm advances several arguments against Brown's reading. I shall argue, however, that Malcolm's textual considerations are less than decisive. More significantly, I shall suggest that his conceptual arguments miss their mark in two ways: one objection relies on a less than charitable reading of Brown, while another involves the questionable attribution of an assumption to the author of the *Sophist*. But despite my defence of Brown's view, I do not endorse it. On the contrary, I hope to show that Brown's central thesis—that there is a semantic continuity between complete and incomplete uses of *einai*—lacks the textual support it requires from the *Sophist*. Moreover, a central argument of that dialogue tells against it. (pp. 105-106)

(...)

"I have argued that Malcolm's arguments against Brown's reading of *einai* in the *Sophist* are ultimately unconvincing. None the less, I hope to have shown that Brown's reading receives insufficient support from the relevant passages, and is even rendered doubtful by a central argument of that work. If this is right, the contention that *einai* has a C2 complete use in the *Sophist*—a use referred to in the *kath' hauta/pros alla* distinction at 255 c 14—will turn out to be at best improbable, and at worst defeated." (p. 120)

23. ———. 2009. "Plato on Art, Perspective, and Beauty in the Sophist." *Literature & Aesthetics* no. 19:183-214.

"With only a few exceptions, readers of Plato's later dialogue, the Sophist, have not usually associated it with Platonic aesthetics. But this is to overlook two important features of the dialogue. First, the unfavourable contrast, built up throughout the dialogue, between the practice of sophistry – likened to the practice of the mimetic arts (235c-236e)–and the practice of philosophy. Only the latter, the Stranger implies, affords the possibility of what we might call an aesthetic experience, i. e., the experience of beauty in the soul, while the former results in ugliness (230d-e). Second, it overlooks the argument at 235d-236c, offered by the main speaker in the dialogue, the Eleatic Stranger, for the claim that certain artworks, such as monuments and large paintings, are necessarily illusory."

(...)

"I mentioned above that the conception of a beautiful soul figures in the Stranger's remarks on the benefits of knowledge, as contrasted with the deleterious effects of submitting oneself to the teaching of sophists.

However, the conception of beauty at work here, and its relation to truth and knowledge, is not argued for or defended in our dialogue, but instead appears to be presupposed: there is nothing in the Sophist that counts as an advance in Plato's thought on the conception of beauty. Nonetheless, as a preliminary, I want first to review this conception in the corpus, and its connection to truth, knowledge, and virtue, in order to provide a broader context within which to situate the importance accorded to a beautiful soul in the Sophist. We will see that the experience of beauty generally, and coming to have a beautiful soul in particular, is desirable because it has moral

value. We will also see, however, that aesthetic value is not thereby reduced to moral value, since it will emerge that the soul's beauty is for Plato a constituent of the good life, of eudaimonia, and not simply a means towards that end." (pp. 183-184, notes omitted)

24. ———. 2010. "Being and Power in Plato's Sophist." *Apeiron* no. 43:63-85.

"What should we make of the passage in the Sophist at 247d-e, in which the Eleatic Stranger declares that being is whatever has the power (*dunamis*) to act or be affected, even if only once, in the smallest way? Does this proposal about being — the 'dunamis proposal' (2) — express the view of the Stranger's interlocutors, the giants, or is the Stranger speaking in his own voice and so representing Plato's view? (3) If the latter, how could the proposal be seen to survive the encounter with the 'friends of the Forms', and be applicable to immutable Forms? Is the employment of 'horos' and 'horizein' at 247e3 meant to indicate that a mere mark of being is offered in the proposal, or the very definition of being? How these questions are answered determines what role, if any, one takes the *dunamis* proposal about being to play in the later constructive part of the dialogue, in which the Form, Being, takes centre stage."

(...)

"I shall argue that in the Sophist Plato has the Stranger forge the definition — that whatever has the power to act or be affected is a being — by distinguishing relations of causation (or *poiesis*) from relations of change." (p. 63-64)

(3) Although it has been recently challenged, the orthodox position, that provided one proceeds with care one can read off Plato's position — however partial and provisional — from the views expressed by the main character of a dialogue, remains, and I shall assume it here. (For the case pro, see D. Sedley, *Plato's Cratylus*, (Cambridge: Cambridge University Press

2003), 1-2; M. Frede, 'The Literary Form of the Sophist', In M. L. Gill and M. M. McCabe, eds., *Form and Argument in Late Plato* (Oxford: Oxford University Press 1996), 135-151. 142,150-1. For the case contra, see e.g., R. Blondell, *The Play of Character in Plato's Dialogues* (Cambridge: Cambridge University Press 2002), 18-21.)

25. ———. 2012. "Modes of Being at Sophist 255c-e." *Phronesis. A Journal for Ancient Philosophy* no. 57:1-28.

Abstract: "I argue for a new interpretation of the argument for the non-identity of Being and Difference at Sophist 255c-e, which turns on a distinction between modes of being a property. Though indebted to Frede [*Prädikation und Existenzaussage*] (1967), the distinction differs from his in an important respect: What distinguishes the modes is not the subject's relation to itself or to something numerically distinct, but whether it constitutes or conforms to the specification of some property. Thus my view, but not his, allows self-participation for Forms. Against Frede and the more traditional interpretation, I maintain that the distinction is not introduced by way of the *pros alla/kath' hauta* distinction, or by way of uses or senses of the verb 'to be', but is established prior to the argument and is deployed in its frame. Moreover, since I read the argument's scope as restricted to properties in what I shall call the attribute mode, my interpretation can explain, as its rivals cannot, why the criterion of difference at 255d6-7 does not apply to the Form, Difference, itself."

26. ———. 2012. "Restless Forms and Changeless Causes." *Proceedings of the Aristotelian Society* no. 112.

Abstract: "It is widely held that in Plato's *Sophist*, Forms rest or change or both. The received opinion is, however, false-or so I will argue. There is no direct support for it in the text and several passages tell against it. I will further argue that, contrary to the view of some scholars, Plato did not in this dialogue advocate a kind of change recognizable as 'Cambridge change', as applicable to his Forms. The reason that Forms neither change nor rest is that they are purely intelligible entities, not susceptible to changing or being at rest. Since Plato

continues in the Sophist to treat Forms as causes, it follows that Forms are changeless causes. I ask what conception of cause might allow for this view, and reject the suggestion that Plato was some kind of proto-dispositionalist about causation. Instead I suggest that he understood causation to incorporate a notion of structuring, such that Forms can be seen to structure their participants and so cause them to possess the attributes they possess."

27. Lentz, William. 1997. "The Problem of Motion in the Sophist." *Apeiron* no. 30:89-108.

"In the Sophist, Plato seems to introduce κίνησις, motion or change, into the unchanging and eternal realm of being. On the face of it, this looks like an outright contradiction; i.e., motion or change is introduced into a realm of unchanging and perfect actualities. The introduction of motion occurs in two ways: Plato suggests that when the soul knows its object it affects that object (248e2-4), and he claims that motion and rest define reality (249d3-4). Neither of these claims is very clear; both require some interpretative work.

After a brief examination of previous attempts to explain Plato's introduction of motion into being, I suggest that a solution to these problems begins with Plato's claim that being is defined by power. The concept of power is then filled out by reference to the genera of motion, rest, sameness, and difference. I oppose the tendency in the literature to reject motion and rest as essential genera. Instead I argue that these two genera are required in order for there to be relations in being — relations that are manifest between forms but do not affect the nature of the forms themselves. I also reject the tendency to explain the interweaving of forms as a function of discourse. Instead I argue that the interweaving of forms is referred to a metaphysical state that in turn makes knowledge and discourse possible." (p. 89)

28. Lewis, Frank A. 1976. "Did Plato Discover the "Estin" of Identity?" *California Studies in Classical Antiquity* no. 8:113-143.

Summary: "(I) The notion of an is of identity in English. Some passages from Plato suggesting the existence of the comparable notion of a special estin of identity in Greek. (II) What in particular would lead Plato to recognize such a special sense of estin? Forms, participation, and predication. In the account of ordinary singular predications, a predicate 'Y' is true of a subject X just in case X participates in the form the Y associated with. (III) Self-participation. If nothing can participate in itself, then for any forms X and Y, X participates in Y and so is Y only if X is not Y. Even if self-participation is allowed, still in the majority of cases a subject is not what it participates in. The difficulty for all theories of predication which wish to explain how a thing can be something which it also is not. (IV) The is of identity re-examined. Some fallacies which might support the notion, and some arguments against it. (V) Sophist 255e11-256d10. Plato does not explicitly recognize an estin of identity. Four competing, "equally best" accounts of the grammatical theory he may implicitly be invoking: (i) the estin of identity; (ii) relational terms; (iii) the definite article; (iv) the not of nonidentity. (VI) Conclusion. The notion of a special estin of identity has little basis in Plato's text."

29. ———. 1976. "Plato on "Not"." *California Studies in Classical Antiquity* no. 9:89-115.

"Plato's account of not being can be seen as a treatment of issues connected with the analysis of negation. It is generally agreed that his account covers at least one set of negative assertions. We are explicitly told how to analyze such sentences as "Motion is not rest," "Motion is not the same," which the context shows are intended to assert the nonidentity of motion and assorted other forms. For Plato, such assertions form a special class of sentences, which he analyzes by reference to the form "otherness." What is less clear is whether Plato successfully distinguishes negative sentences of this sort from negative sentences for which, on his terms, a different pattern of analysis is appropriate: "Socrates is not beautiful," "Helen is not wise." I shall call these sentences of negative predication proper ("NP" hereafter).(1) I argue that Plato does recognize this second sort of sentence, and that he does in the Sophist

offer a theory to say how such sentences get their meaning. At the same time, his theory is in many respects unlike the kind of theory we should demand for the task at hand. These differences may help explain why the details of his account have so often seemed so elusive.

I offer first (I) a general account of the context within which Plato's treatment of negation takes place. I then turn (II) to a detailed examination of the passage at 25 7b3-c3, where I shall argue that we find our best evidence for what Plato regards as the chief desiderata in an account of NP. I end (III) with some brief comments on the aims and limits of Plato's inquiry." (pp. 89-90)

(1) By "NP," accordingly, I mean to confine my attention to simple, singular, negative sentences other than sentences that are denials of identity. I follow Plato in ignoring the use of negation in combination with general sentences.

30. Lisi, Francesco Leonardo, Migliori, Maurizio, and Monserrat-Molas, Josep, eds. 2011. *Formal Structures in Plato's Dialogues: Theaetetus, Sophist and Statesman*. Sankt Augustin: Academia Verlag.

Abstract: "The three dialogues, which are the object of the collected papers included in this volume, are a unicum in the Platonic corpus. No other existing trilogy is connected dramatically so clearly as they are.

From the formal point of view, in these texts Plato shows his brilliant literary ability in all its facets in order to deploy all the grades of the philosophical inquiry, always related to education: maieutikos elenchus, dialectical dihairesis and everything entangled with allegory and myth. In the first dialogue of the trilogy Socrates searches in Theaetetus' soul for the definition of episteme, not knowledge in general, but the specific wisdom proper of the true philosophers. In the following Sophist and Statesman, on the other hand, a new character, the guest from Elea, offers the science they had looked for as a gift, the dihairesis. The exercises in it serve also for distinguishing the true philosopher-statesman from his fake: the sophist and all the historical politicians acting in the scene. Actually these

dialogues develop the subject of the excursus, which stands at the centre of the Theaetetus (172c3-177c5): the opposition between true and false philosopher."

32. Losev, Alexandre. 2020. "Plato's Quincunxes." *Philosophia: E-Journal for Philosophy and Culture* no. 26:200-209.

Abstract. The Five Greatest Kinds discussed in Plato's Sophist are taken to be just one instance of a fivefold structure found in various related texts. Contemporary linguistic theories are a source for ideas about its functioning."

33. Lott, Micah. 2012. "Ignorance, Shame and Love of Truth: Diagnosing the Sophist's Error in Plato's Sophist." *Phoenix* no. 66:36-56.

"In the past several decades, philosophers have shown substantial interest in Plato's dialogue the Sophist. Much of this interest has focused on the sections of the dialogue which provide an account of being and not-being, and of true and false speech. The sixth definition of the sophist, however, which is developed at 226b–231e, has received less attention." (p. 36, note omitted)

(...)

"I begin with a brief overview of the dialogue and a summary of the argument leading to the sixth definition. I then address some of the ambiguities in that argument and spell out some of

the argument's implications, paying particular attention to the notions of ignorance and shame. I then show how ideas from the sixth definition illuminate the final definition of the sophist. Although my focus in this paper is the Sophist, in my discussion of the sophist's condition I also touch on some relevant cases of learning and shame from other Platonic dialogues, including the Apology, Charmides, and the Republic. Two key assumptions that affect my interpretation but which remain mostly unargued for are: 1) that the sixth definition describes some kind of expertise, even if it does not accurately describe the sophist, and 2) that the final definition of the sophist is, at least within the context of the dialogue, an adequate definition of the sophist." (p. 37)

34. Luce, J. V. 1969. "Plato on Truth and Falsity in Names." *The Classical Quarterly* no. 19:222-232.

"Further discussion of the logical points at issue between Lorenz-Mittelstrass [*] and Robinson [**] would involve a critique of the modern reference-theory of names. I propose to confine myself to Platonic exegesis, and to ask which of their theories better fits the facts of Plato's thought about names, not only as it appears in the Cratylus, but as stated or implied in other dialogues. My general conclusion will be that Plato in practice regards names as functioning in the sort of way required by the Lorenz-Mittelstrass theory, though I would not be prepared to ascribe to Plato a theory of the proposition as sophisticated as that implied in their symbolism (p. 6). In section II of the paper I aim at showing in detail that the concept of 'stating a name', i.e. applying a name as a predicate to its nominate, is fully accepted and used by Plato throughout the Cratylus, that this implies that names may be vehicles of truth or falsity, and that there is no reason to suppose that Plato was unhappy or suspicious about the logical validity of the concept of truth/falsity in names. In section III I shall argue that Plato treated names as descriptive predicates in earlier dialogues, and continued to do so in late dialogues, notably in the Sophist and Politicus, and that this is not incompatible with the fact that a doctrine of propositional truth is developed in one section of the Sophist (261 d-263 d). In section IV I shall

consider briefly how a doctrine of truth-names and lie-names fits into Plato's general conception of the relations between language, truth, and reality." (p. 223)

Commentary on Z. Planinc, *Socrates and the Cyclops: Plato's Critique of 'Platonism' in the Sophist and Statesman*.

Abstract: "Zdravko Planinc's Odyssean reading of the *Sophist* and *Statesman* presents a radical critique of claims that these dialogues present developments of Plato's thought. His claim that Plato intends us to see the Stranger as no more than an outrageous sophist, however, is undermined by the quality of at least some of Stranger's arguments and insights."

36. Malabed, Rizalino Noble. 2016. "The Sophist of Many Faces: Difference (and Identity) in *Theaetetus* and the *Sophist*." *Φιλοσοφία: International Journal of Philosophy* no. 17:141-154.

Abstract: "One can argue that the problem posed by difference/identity in contemporary philosophy has its roots in the persistent epistemological imperative to be certain about what we know. We find this demand in Plato's *Theaetetus* and *Sophist*. But beyond this demand, there is a sense in the earlier dialogue that difference is not a passive feature waiting to be identified. "Difference" points towards an active differentiating. In the *Sophist*, difference appears in the method of dividing and gathering deployed to hunt for the elusive "sophist." Difference is also one of the great kinds that weaves together other kinds. Practically, difference enables the sophist's

expertise of appearance-making as he knowingly confuses things with words. This paper then quizzes the concept of difference in all these guises in the two dialogues."

37. Malcolm, John. 1967. "Plato's Analysis of τὸ ὄν and τὸ μὴ ὄν in the Sophist." *Phronesis. A Journal for Ancient Philosophy* no. 12:130-146.

"The main thesis I shall present is that in the Sophist Plato does not distinguish the existential sense of εἶναι from the predicative and identifying senses. It is regarded as a commonplace that he did so, (1) but I shall try to show that it is advisable to translate τὸ ὄν and εἶναι in a more general way, as "being" and "to be" respectively. This is sufficient not only to bring out the force of the paradoxes in 236e-250e, but also to explain Plato's use of the expression μέτερον τοῦ ὄντος in 251a-259e and his account of τὸ ὄν as a vowel form in the same section." (p. 130)

"In short, I am suggesting that neither in Sophist 251-259 nor in 236e-250e do we need to take τὸ ὄν to be existential. Insofar as it need not be so taken, and in certain places it must not be so taken, it ought to be translated as 'being' rather than as 'existence'." (p. 131)

(...)

"Although I have denied that Plato distinguishes an existential sense of εἶναι, I would agree that he does distinguish positive predication from positive identity. He makes the latter a subdivision of the former.

To say "XpY" is to predicate Y of X. 'X is identical with Y' is written 'XpSrY.' To identify is to predicate sameness.

Plato, however, does not distinguish negative predication from negative identity. At 256e τὸ μὴ ὄν is limited to non-identity (as opposed to predication which is here τὸ ὄν), but at 263b, a parallel phrasing, τὸ μὴ ὄν must include predication (e.g. the flying of Theaetetus).

Plato's account of negation holds only for negative identity. He gives no account of negative predication as such.(30) (p. 145)

(1) Pro Taylor pp. 60, 81; Cornford p. 296; Ackrill p. 1; Moravcsik pp. 42, 51.

Crombie, though he has reservations as to the success of Plato's undertaking, maintains (p. 502) that it was a prime purpose of his to distinguish the existential sense of εἶναι in the Sophist. Contra Runciman p. 84.

Addendum

I note with some satisfaction that my major thesis is consistent with the results attained by Michael Frede in his thorough study *Prädikation und Existenzaussage*. Vandenhoeck & Ruprecht, Gottingen, 1967.

38. ——. 1983. "Does Plato Revise his Ontology in Sophist 246c-249d?" *Archiv für Geschichte der Philosophie* no. 65:115-127.

"At Sophist 248 e—249 a, while examining the doctrine of the Friends of the Forms to the effect that real being or true reality (ἡ ὄντως οὐσία) is always unchanging and is attained by thought alone (248 a), the Eleatic Stranger forcefully poses the rhetorical question whether we can easily be convinced that change, life, soul and intellect are not present to true reality: is that which completely is (το παντελῶς ὄν), devoid of mind and changeless? Theaetetus readily agrees that we cannot exclude mind and change from the real. The Stranger concludes (249 b) that both change and that which is changed qualify as "beings" (ὄντα), and later (at 249d), that being (reality) is both the unchanging and the changed." (p. 115)

(...)

"Although I am persuaded that the Friends of the Forms include Plato himself, I shall not try to establish this or, indeed, to say definitively how the supposed emendation might apply in detail to Forms, souls and sense-objects. I shall suggest, rather, that the best way to read the passage in question is not to assume that Plato is here categorically affirming metaphysical truths which he endorses, be they at the expense of his earlier views or otherwise. On the contrary, given that we have here a part of a section which aims at showing confusion in the use of the term "being," we cannot plausibly regard it as a source of any new commitments on his part as to the nature of the real." (p. 116)

39. ——. 1985. "Remarks on an Incomplete Rendering of Being in the Sophist." *Archiv für Geschichte der Philosophie* no. 67:162-165.

"In this journal, Band 65, Heft 1, pp. 1-17, Robert Heinaman has launched an attack on those (1) who have claimed that Plato's solution to the alleged paradox of false statement (Sophist 236-264) restricts itself to an incomplete use of "being" (identity and predication) and is not concerned with questions of existence. It is my contention that Heinaman's assault miscarries in that he has totally misjudged the position he purports to oppose."

- (1) I consider pages 1-13 of Heinaman 's "Being in the Sophist". These are directed at G. E. L. Owen, "Plato on Not-Being, in: G. Vlastos (ed.), Plato I, New York 1971, pp. 223-267 and J. Malcolm, "Plato's Analysis of το ὄν and το μή ὄν in the Sophist", Phronesis (1967), pp. 130-46. An appendix, pp. 13-17, treats of M. Frede's Prädikation und Existenzaussage, Gottingen 1967 and is beyond the scope of this paper.
40. ———. 1985. "On 'What is Not in any Way' in the Sophist." The Classical Quarterly no. 35:520-523.

"To ensnare the sophist of the Sophist in a definition disclosing him as a purveyor of images and falsehoods Plato must block the sophistic defence that image and falsehood are self-contradictory in concept, for they both embody the proposition proscribed by Parmenides - 'What is not, is'. It has been assumed that Plato regards this defence as depending on a reading of 'what is not' (to me on) in its very strongest sense, where it is equivalent to 'what is not in any way' (to medamos on) or 'nothing'.

Likewise, the initial paradoxes of not-being (237b-239c) are seen as requiring that to me on be understood in this way, that later designated by Plato (257b, 258e-259a) as the opposite of to on or 'being'. On this interpretation, Plato's counter-strategy is to recognise a use of to me on which is not opposed in this strict sense to being, but is indeed a part of it and is 'being other than'.

In a stimulating article,(1) R. W. Jordan challenges this account.(2) I shall briefly attempt to show that his objections are not decisive and that his own interpretation is open to question." (p. 520)

(2) Referred to by Jordan as 'Malcolm's view'. Though flattered by the appellation, I can claim to be but an adherent and not the initiator (see Jordan, p. 120, notes 14 and 15.

41. ———. 2006. "A Way Back for Sophist 255c12-13." Ancient Philosophy no. 26:275-289.

"At Sophist 255c8 the Eleatic Stranger asks whether Difference is to be distinguished from Being. As evidence that these are two distinct items he introduces at c12-13 two ways in which beings can be: (1) in themselves or *αὐτὰ καθ' αὐτά* (hereafter, KH) and (2) with reference to others or *πρὸς ἄλλα* (hereafter, PA).(1)

At 255d1-7 it is then shown that Difference, unlike Being, only shares in the second way of being, since what is different is always different in relation to something else. Now this may be read in a straightforward and unproblematic manner since there are many ways in which something can be said to be without this something being said, in the surface grammar, to be in relation to something else.

Compare, for example, 'Socrates exists' or 'Socrates is a man' with 'Socrates is wiser than Miletus'.

Yet some of the most distinguished and deservedly influential commentators differ radically from such a 'naïve' reading and see the KH/PA contrast here as germane to such issues as replying to the late-learners, dealing with self-predication, contrasting statements of identity with those of predication, involving different uses of 'is', and discussing the so-called 'two-level' paradoxes.(2) There is no doubt that these approaches have been philosophically most instructive and inspiring, but, I shall maintain, they should not intrude into the exegesis of this particular passage. The naïve reading is to be preferred."

(1) Line references to Plato are from Burnet 1900. The title's passage is at lines 13-14 (mislabeled 15!) in Duke et al. 1995. The Budé edition, Diès 1925, agrees with Burnet.

(2) For this last item see Vlastos 1973, 323ff. The most discussed example is that where Motion, qua its nature as motion, moves, but, qua Form is at rest.

42. ———. 2006. "Some Cautionary Remarks on the 'Is' / 'Teaches' Analogy." *Oxford Studies in Ancient Philosophy* no. 31:281-296.

"Ancient Greek thinkers, notably Parmenides, Plato, and Aristotle, are regarded by some as having been led into error through a failure to recognize the difference between two uses of (their equivalent of) the verb 'to be': the incomplete or copula, and the complete or existential.(1) They allegedly acted as if 'X is F' entailed 'X is', i.e. 'exists'.

Not everyone is convinced by this. I shall consider two responses.

The one I favour is to grant that a rigid existence/copula distinction is a legitimate tool for the interpretation of these philosophers.

Furthermore, I suggest that their reasoning may be understood in a way that does not leave them as vulnerable to the charge of this confusion as is sometimes supposed. The other reaction takes a more subtle approach. It maintains that, with respect to 'being', the complete/incomplete distinction is a modern contrivance,(2) hence it is anachronistic to employ it in addressing the ancients. In the use of the Greek equivalent of 'to be' the copula had some 'built-in' existential import. Since writers in that language did not have two completely different uses to confuse, it is unfair to look at them from this perspective.

Two leading proponents of this latter doctrine are Charles Kahn and Lesley Brown. Although it was introduced some time ago, this view continues to enjoy current endorsement(3) and I believe it is not inappropriate to examine the reasoning offered

in its support in the work of Brown, especially that of 1994.(4)" (pp. 281-282, note 1 abbreviated)

(1) The charge is found in J. S. Mill, *A System of Logic* (London, 1843), 1. iv. i, who mentions Plato and Aristotle and implies that they were open to this error. He refers us to the *Analysis of the Phenomena of the Human Mind*, 2 vols. (1829; new edn. London, 1869), by his father James Mill.

(2) See e.g. C. Kahn, 'A Return to the Theory of the Verb be and the Concept of Being' ['Return'], *Ancient Philosophy*, 24 (2004), 381–405 at 385, who allows that we should use 'such modern distinctions' in our 'hermeneutical metalanguage', but that are (i.e. exist). My aim will be to help him avoid this precarious position as far as is possible.

(3) Let me give two items from 2003: B. Hestir, 'A "Conception" of Truth in Plato's Sophist', *Journal of the History of Philosophy*, 41 (2003), 1–24 at 6 n. 16 ; J. Szaif, *Der Sinn von 'sein'* (Freiburg and Munich, 2003), 19 n. 13. To these may be added two from 2002: J. van Eck, 'Not-Being and Difference: On Plato's Sophist 256 d 5–258 e 3', *Oxford Studies in Ancient Philosophy*, 23 (2002), 63–84 at 70–1; A. Silverman, *The Dialectic of Essence* (Princeton, 2002), 145 n. 17, 150 n. 21.

(4) The article in question is L. Brown, 'The Verb "to be" in Greek Philosophy: Some Remarks' ['Verb'], in S. Everson (ed.), *Language (Companions to Ancient Thought, 3; Cambridge, 1994)*, 212–36. (Any 'bare' page references in my article will be to this item.) Kahn, 'Return', 383, accepts Brown's contribution unreservedly. He writes, 'She shows [emphasis added] that the relation between the verb *einai* in sentences of the form X is and X is Y is like that between the verb *teaches* in Jane teaches and Jane teaches French'. See also his 385.

43. Marback, Richard C. 1994. "Rethinking Plato's Legacy: Neoplatonic Readings of Plato's Sophist." *Rhetoric Review* no. 13:30-49.

"In what follows I will historicize the reception of the terms Platonist and sophist by briefly exploring neo-Platonic discussions of sophistry and sophistic. As late Roman and early

Christian exegetes of the Platonic texts, the neo-Platonists might at first seem unflinching adversaries of sophistry. While it might be unrealistic for us to expect any sympathetic treatment of Gorgias from scholars so invested in the authority of classical authors like Plato, Aristotle, and Cicero, we should not be surprised to find these same scholars promoting sophistry-the contingency of meaning in the context of expression -- in the name of Plato." (p. 31)

(...)

"To recognize that Plotinus and Proclus and Augustine discerned and grappled with issues of sophistry raised by Plato in the Sophist is, I think, to recognize their creative influence over the subsequent reception and impact of classical rhetoric.

(...)

Along these lines I have attempted to show how the Sophist, as one instance, was used and can be used to fashion sophistic or antisophistic perspectives, how readings of it by rhetoricians, logicians, and ethicists, or by Augustine, Plotinus, and Proclus, reiterate or reject an antagonism to sophistry. Reading Plato in this way, I think we benefit from finding that along with the sophist whose language skills eluded easy capture in the Stranger's philosophical net, the neo-Platonist similarly eludes well-defined historical categories. Adding the Sophist to our Plato makes more elusive, more sophisticated, the contingent and contextual elements by which we fashion our rhetorical terms as historical, genealogical categories. This approach also raises questions about the kinds of textual strategies that led to the dialogue's exclusion from Plato's rhetorical canon. Discussions of why the primary rhetoric texts in the Platonic corpus have come to be the Phaedrus and Gorgias can and should inform discussions of what sophistry has meant throughout the years people have been forming this canon. Such selectivity presupposes reading and writing and talking about the dialogues in particular ways, employing strategies and making choices influenced by an inheritance of possible issues and conflicts as well as settled ways of reading and representing that reading that may or may not be identified as "sophistic."

Attention to the neo-Platonists and their readings of Plato's Sophist thus points not only, as Quandahl says, to the rhetorical elements of Plato (347), such attention points as well to the contextual and contingent rhetorical strategies constantly at work in the shaping of philosophy's, rhetoric's, and sophistry's intertwined histories." (p. 47)

"In Theaetetus and Sophist, Plato accomplishes a construction operation of his adversaries which leads him to associate doctrines regularly attributed to Heracliteans or Eleatic thinkers with different sophistic positions. However, his primary purpose is not to refute historical positions, but to assert fundamental theses and principles of his own philosophy. So I am not interested here in evaluating the legitimacy of such associations, or "dialectical combinations", as Cornford (1935, p. 36) calls them. I will focus instead on the peculiar kind of argument he employs for the refutation of both kinds of opponents. This is a sort of peculiar argumentation, as I will try to show, which does not appeal to the existence of the Forms but to the conditions of the possibility of language." (p. 77)

(...)

"To conclude, I would like to emphasize once more that the resource to the conditions of possibility of language rather than to the thesis of the existence of the Forms is not a defect of the argumentative strategy displayed in the passages of Theaetetus and Sophist analyzed here. On the contrary, such resource gives rise to a special type of argument that tries to persuade every language user and not only those who defend the Forms.

Despite this, Plato's reader will inevitably find veiled references to these realities in almost all of them." (p. 86)

45. Matthen, Mohan. 1983. "Greek Ontology and the 'Is' of Truth." *Phronesis. A Journal for Ancient Philosophy* no. 28:113-135.

Abstract: "This is an essay about the ontological presuppositions of a certain use of 'is' in Greek philosophy - I shall describe it in the first part and present a hypothesis about its semantics in the second.

I believe that my study has more than esoteric interest. First, it provides an alternative semantic account of what Charles Kahn has called the 'is' of truth, thereby shedding light on a number of issues in Greek ontology, including an Eleatic paradox of change and Aristotle's response to it.

Second, it finds in the semantics of Greek a basis for admitting what have been called 'non-substantial individuals' or 'immanent characters' into accounts of Greek ontology. Third, it yields an interpretation of Aristotle's talk of 'unities' which is crucial to his treatment of substance in the central books of the *Metaphysics*."

(...)

"I have argued in this essay for the recognition of a sort of entity that is not familiar in modern ontologies. I have argued on the basis of a syntactic and semantic analysis of certain uses of 'is', and found textual support for the analysis in certain texts of Aristotle. In addition, the recognition of predicative complexes enables us to give a unified treatment of a number of puzzling features of Greek ontology.

It is possible that the Greeks may have regarded predicative complexes not in the way I have presented them, namely as constructed entities derivative from more basic types, but as the entities given in perception, and so epistemically and even ontologically prior. If so, we may find that in positing the Forms, Plato was making a break with an ontology of predicative complexes, not, as is usually thought, with an ontology of individual substances. Similarly, it is possible that Aristotle posited individual substances against the background

of an ontology composed of predicative complexes and Platonic Forms. These possibilities offer the prospect of a richer appreciation of the development of Greek ontology than is now customary." (pp. 130-131)

In *Practicing Gnosis: Ritual, Magic, Theurgy and Liturgy in Nag Hammadi, Manichaean and Other Ancient Literature. Essays in Honor of Birger A. Pearson*, edited by DeConick, April D. , Shaw, Gregory and Turner, John D. , 469-493. Leiden: Brill.

"This essay constitutes the second part of a larger investigation into the evidence of a tacit debate between Plotinus and the Gnostics over the interpretation of Plato. In a previous part of this study, I made the case that Zostrianos drew on a number of specific passages describing the cyclical reincarnation of souls especially in the *Phaedrus*, but also in the *Phaedo* and *Republic*, and that Plotinus and Porphyry had tacitly responded in several locations throughout their writings.(4) Here I would like to present a similar case for the Gnostic use of the *Sophist*. The specific thesis of this essay is that the Platonizing Sethians drew at least in part upon the text of Plato's *Sophist* for central aspects of their metaphysics, and—in relation to the topic of the present volume—they even went so far as to reconceptualize the dialectical methods described in the *Sophist* in terms of their praxis of visionary ascent." (pp. 469-470)

Contents: Acknowledgments VII; 1 Introduction 1; 02 Elements of Gorgianic Rhetoric and the Forensic Genre in Plato's *Apology* 23; 3 The Rhetoric of Socratic Questioning in the *Protagoras* 56; 4 The Competition between Philosophy and

Rhetoric in the *Gorgias* 85; 5 The Dialectical Development of the Philosopher and Sophist in the *Republic* 111; 6 Philosophers, Sophists, and Strangers in the *Sophist* 138; 7 Love and Rhetoric in Plato's *Phaedrus* 167; Bibliography 197; Index 209-212.

"In this chapter, I argue that part of Plato's purpose in the *Sophist* and *Theaetetus* is to offer two different accounts of the nature of philosophy.

Plato engages his audience in a reflection upon the nature of philosophy through the contrast between Socrates' and the Stranger's ways of speaking. I focus on two main questions about the *Sophist*. First, how is the Stranger's character and way of speaking distinct from Socrates' character and speech in the *Theaetetus*? Second, how do the divisions and collections of the *Sophist* illuminate some of the differences between Socrates and the Stranger? I argue that the Eleatic Stranger is deliberately presented as an enigmatic figure who may alternately be identified as either a sophist or a philosopher. While the Stranger defines sophistry in such a way that he would separate his own activity from that of the sophists, the drama of the dialogue suggests that Socrates would not consider the Stranger to be a philosopher. That is, the dialogues function to draw us into the philosophical question of what philosophy is. The *Sophist* and *Theaetetus* as a pair demonstrate that the philosopher–sophist contrast is relative to the way in which one constructs a positive understanding of philosophy.

I argue that the Stranger's understanding of himself as a philosopher is inadequate from Socrates' standpoint, although the Stranger seems to identify himself as a philosopher. While the Stranger identifies philosophy with a method of division and collection, and especially with applying that method to metaphysical questions, Socrates emphasizes self-knowledge and knowledge of the human soul and its moral good as central to philosophical practice.⁴ Both Socrates and the Stranger are interested in persuasion, but Socrates' rhetoric is to be found in the role of a midwife who is helping others to give birth to ideas

and to grow in self-knowledge, while the Stranger's rhetoric is oriented toward making his interlocutor more compliant and dispassionate." (pp. 139-140, notes omitted)

48. McDowell, John. 1982. "Falsehood and Not-Being in Plato's Sophist." In *Language and Logos. Studies in Ancient Greek Philosophy Presented to G. E. L. Owen*, edited by Schofield, Malcolm and Nussbaum, Martha, 115-134. Cambridge: Cambridge University Press.

"For me, G. E. L. Owen's 'Plato on Not-Being' (1971) radically improved the prospects for a confident overall view of its topic. Hitherto, passage after passage had generated reasonable disagreement over Plato's intentions, and the disputes were not subject to control by a satisfying picture of his large-scale strategy; so that the general impression, as one read the Sophist, was one of diffuseness and unclarity of purpose. By focusing discussion on the distinction between otherness and contrariety (257B1-C4), Owen showed how, at a stroke, a mass of confusing exegetical alternatives could be swept away, and the dialogue's treatment of not-being revealed as a sustained and tightly organised assault on a single error. In what follows, I take Owen's focusing of the issue for granted, and I accept many of his detailed conclusions. Where I diverge from Owen - in particular over the nature of the difficulty about falsehood that Plato tackles in the Sophist (§§5 and 6 below) - it is mainly to press further in the direction he indicated, in the interest of a conviction that the focus can and should be made even sharper." (p. 115)

49. McPherran, Mark L. 1986. "Plato's Reply to the 'Worst Difficulty' Argument of the Parmenides: Sophist 248a- 249d." *Archiv für Geschichte der Philosophie* no. 68:233-252.

"In a previous paper I have argued that the theory of relations Hector-Neri Castañeda has discovered in the *Phaedo* is clarified and extended in the *Parmenides*. In particular, the paper contains an Interpretation of the 'worst difficulty' argument (Parm. 133a –135a), an argument purporting to establish that human knowledge of the Forms is impossible. My Interpretation showed the argument to utilize the extended

theory of relations in its premises. I also showed, contrary to previous interpretations, how Plato's argument was logically valid.

One consideration in favor of the Interpretation I offered is that it allows the argument at last to live up to its description as the most formidable challenge to the early theory of Forms (in a long series of tough arguments), requiring a "long and remote train of argument" by "a man of wide experience and natural ability" for its unsoundness to be exposed (Parm. 133b4 –c1).

Unfortunately, the Parmenides does not contain such a reply, even though the text at 133b seems to hint that Plato had already formulated one. Did he ever entertain and record a reply, and if so, could that reply rescue some version of the theory of Forms from the devastating consequences of the 'worst difficulty'? In the following, I present my previous reconstruction of that argument and the most plausible lines of response open to a defender of a theory of Forms. In the second section I argue that Plato gives clear recognition to one of those replies in the Sophist, and I show how that reply would save the theory of Forms. Finally, I will contend that this reply is Plato's best line of response, and I will discuss the problem of actually attributing the adoption of this solution to him." (pp. 233-234, some notes omitted)

(1) Mark McPherran, "Plato's Parmenides Theory of Relations," in F. J. Pelletier and J. King-Farlow (eds.), *New Essays on Plato*, Canadian Journal of Philosophy, Supplementary Volume IX (1983): 149 – 164 (hereafter, "Plato's Parmenides Theory").

(2) My Interpretation dealt explicitly only with the first half of the argument (133a11 – 134c3). The second half (134c4–135a3) attempts to establish that just as men cannot know Forms, so the gods cannot be knowers of particulars (e. g., men), but only Forms.

50. Mesquita, Antonio Pedro. 2013. "Plato's Eleaticism in the Sophist. The Doctrine of Non-Being." In *Plato's Sophist Revisited*, edited by Bossi, Beatriz and Robinson, Thomas M., 175-186. Berlin: Walter de Gruyter.

"The aporia experienced by the interlocutors in the Sophist on the notion of non-being is, essentially, the following:

1. That which absolutely is not cannot be thought of or spoken of (238c).
2. However, every assertion concerning that which is not, even if negative in content, requires the mediation of an "is" in order to be expressed.
3. In effect, when we say that non-being is not thinkable or utterable, we are, in actual fact, uttering it and, necessarily, uttering it as being, namely, as being unutterable (239a).
4. Therefore, due not to linguistic ambiguity but to ontological requirement, to say that non-being is not utterable is the same as asserting that it is unutterable and, in general, to say that non-being is not is to say that non-being is non-being, which certainly collides with what those assertions were intended to demonstrate in the first place, that is, the absolute unutterability and the absolute non-being of non-being.
5. In fact, each of those assertions tacitly affirms the opposite of what it declares, namely, that non-being is utterable (precisely as being unutterable) and, therefore, that non-being is (precisely as being nonbeing).

The most immediate interpretation of this section would be as follows: the Eleatic notion of non-being, here patently challenged, must be superseded; and the Platonic notion of "other" (ἑτέρων), introduced through the novel doctrine of the κοινωιῶ τῶν εἰδῶν, is exactly what supersedes it.

Such an interpretation has, however, the disadvantage of being external to the argument, replacing analysis of its internal progress with the abstract assumption of the two extreme moments that structure it, namely, the two different notions of non-being. As an act of supersession, it excludes the Eleatic notion of non-being to the benefit of the Platonic one, without realizing that every act of supersession is never simply one of negation, but also one of incorporation.

Now, this is precisely what happens with the question of non-being in the Sophist.

The Eleatic notion is not dissolved; it is, rather, interpreted in the light of another conception of non-being which, in absorbing it, refashions it into a different shape.

The peremptory interdiction of Parmenides, according to which non-being is not,⁽¹⁾ is never actually refuted: it is taken as possessing its own truth, although such truth is understood as limited, and confined within new boundaries." (pp. 175-176)

Summary: "This brief paper develops an interpretation of Plato's theory of negation understood as an answer to Parmenides' paradoxes concerning not-being. First, I consider some aspects that result from an analysis of Sophist 257b–259d, formulating some general theses which I then go on to unfold in more detail in the following section. Finally, I show what exactly Plato's so-called overcoming of the Eleatic problem related to negation and falsehood is; and I outline some of the main semantic and metaphysical consequences that are entailed by this overcoming."

"The Philosophical Contents of the Sophist.

First of all, one should establish as closely as possible the meaning of the dialogue in its Author's mind. With Plato this task is far from easy, for it is one of the issues that arouses the liveliest debate among critics. As elsewhere, I suggest following the classification put forward by Szlezák (1) in an attempt to single out three elements in the dialogue:

a) The overriding issue, the aggregating force that breathes life into the text and which Plato never lets his readers forget about;

b) The thematic hub of the writing, the philosophically crucial question which assesses the worth of the overriding issue and/or confers it legitimate meaning;

c) The foremost problem which the argumentative development must grapple with.

This model has always appeared to me as capable of yielding some kind of clarifying effect. It is especially helpful in showing

how the various facets of the discourse are not set alongside one another but necessarily recall each other. The aim is to identify three elements, strongly-linked yet not mutually coinciding, among the wealth of opinions in Plato's text. Weaving them into one another will provide us with the thread that can guide us through the dialogue." (pp. 93-94)

(1) T. A. Szlezák, *Come leggere Platone*, Rusconi, Milano 1991, pp. 126-127. [in English: Thomas A. Szlezák, *Reading Plato*, Translated by Graham Zanker, New York: Routledge 2003].

54. ——. 2021. "The Use and Meaning of the Past in Plato." *Plato Journal* no. 21:43-58.

Abstract: "This essay is based on two premises. The first concerns the vision of writing proposed by Plato in *Phaedrus* and especially the conception of philosophical writing as a maieutic game.

The structurally polyvalent way in which Plato approaches philosophical issues also emerges in the dialogues. The second concerns the birth and the development of historical analysis in parallel with the birth of philosophy.

On this basis the text investigates a series of data about the relationship between Plato and "the facts".

1) If we compare the *Apology* of Socrates with other sources, we discover a series of important "games" that Plato performs to achieve the results he proposes.

2) The famous passage of *Phd.* 96A-102A, which concludes with the *Ideas* and with a reference to the *Principles*, expresses definite judgments on the *Presocratics*.

3) In his works Plato attributes to the *sophists* some merits, even if the outcome of their contribution is overall negative.

4) However, in the fourth complicated *diairesis* of the *Sophist*, there is a "sophist of noble stock", an educator who can only be Socrates.

5) Plato in the *Sophist* shows the weakness of the *Gigantomachy*, and proposes an adequate definition of the

beings: the power of undergoing or acting. This reveals, before the Philebus and the Timaeus, the dynamic and dialectical nature of his philosophy

In summary, a multifocal vision emerges, adapted to an intrinsically complex reality."

Plato's *Sophist*. Bibliography of the studies in English: Mil - Pec

Bibliography

1. Miller, Dana. 2004. "Fast and Loose about Being: Criticism of Competing Ontologies in Plato's *Sophist*." *Ancient Philosophy* no. 24:339-363.

"In the *Sophist*, in the context of an argument designed to demonstrate that being ($\tau\omicron\grave{\alpha}\ \acute{\omicron}\nu$) is as puzzling as non-being, the Eleatic Visitor embarks on a discussion of competing views about being. It is generally thought that this discussion (242b6-250e4) establishes a number of significant claims that are made in the course of the Visitor's argument. The argument proceeds on two levels: (i) a general argument that focuses on what the Visitor regards to be a muddle about being and the consequences of this muddle, and (ii) specific arguments against specific views, where these arguments seek both (a) to refute these views and (b) to shed light on the muddle and consequences that are the concern of (i). Scholarship has been largely concerned with the claims made under (iia), as for example, the claim made in the argument against the Friends of the Forms that the objects of knowledge are somehow moved or changed by their being known. My intent, however, is chiefly to set out (i), the general argument, and then to examine the particular arguments from the perspective of (iib), that is, how these arguments relate to the general argument. Yet to get at (iib). it is necessary to examine the Visitor's arguments in some detail and this requires approaching them from the perspective of (iia). Because the claims made in the discussion should be understood with reference to their context, I begin by situating

the general argument within the larger argument of the Sophist and explain the dialectical purpose that the discussion is meant to serve. Then, in brief, I argue that the puzzle about being derives from muddled thinking about the notion of being and that this muddled thinking lies at the base of the various earlier views about being that the Visitor undertakes to refute. To show how this is the case, I examine the argument against these views." (p. 339)

2. Miller, Mitchell. 2016. "What the Dialectician Discerns: a new reading of Sophist 253d-e." *Ancient Philosophy* no. 36:321-352.

"At Sophist 253d-e the Eleatic Visitor offers a notoriously obscure schematic description of the kinds of eidetic field that the philosopher practicing dialectic 'adequately discerns' (ικανῶς διαισθάνεται, 253d7). My aim is to propose a fresh reading of that obscure passage. For all of their impressive thoughtfulness and ingenuity, the major lines of interpretation pursued so far have missed, I will argue, the full context of the passage. As a consequence, the proponents of these lines Statesman of interpretation have failed to avail themselves of resources that would have freed them from otherwise unavoidable moments of force or neglect in their readings. The key is to recognize the place of the Sophist within the trilogy of the Theaetetus, Sophist, and, accordingly, to expand the context of Sophist 253d-e to include the Theaetetus and the Statesman. In his schematic description at Sophist 253d-e, the Visitor refers to the eidetic fields traced by two distinct modes of logos. At the end of the Theaetetus, Socrates offers anticipatory sketches of each of these modes; but in the body of the Sophist the Visitor restricts his practice of dialectic to just one of the two—only in the second half of the Statesman does he take up the other mode. As a consequence, only a reader who is oriented by the close of the Theaetetus and who lets this orientation guide her in a reading of the Sophist and the Statesman together is well positioned to recognize the referents of the Visitor's remarks at Sophist 253d-e." (p. 321)

3. Mohr, Richard D. 1982. "The Relation of Reason to Soul in the Platonic Cosmology: "Sophist" 248e-249c." *Apeiron* no. 16:21-26.

Reprinted as Chapter X in R. D. Mohr, *The Platonic Cosmology*, Leiden: Brill, 1985, pp. 178-183.

"Since Cherniss' *Aristotle's Criticism of Plato and the Academy I*, there has been nearly universal agreement among critics that Plato's God or divine Demiurge is a soul.⁽¹⁾ Yet the *prima facie* evidence is that the Demiurge is not. In all three of Plato's major cosmological works the *Timaeus*, the Statesman myth, and the *Philebus* (28c-30e), the Demiurge is fairly extensively described and yet not once is he described as a soul. Rather souls, and especially the World-Soul, and what rationality souls have are viewed as products of the Demiurge (*Timaeus* 35a, 36d-e, *Philebus* 30c-d, Statesman 269c-d). Nonetheless, the overwhelming critical opinion is that since the demiurgic God of these works is described as rational, this entails that God is a soul. Three texts are adduced to prove this, *Timaeus* 30b3, *Philebus* 30c9-10, and *Sophist* 249a. These texts are taken as claiming A) that if a thing is rational, then it is a soul. Proclus saw that at least the *Timaeus* passage can mean only B) that when reason is in something else, what it is in must be an ensouled thing. The rhetoric of the *Timaeus* sentence strongly suggests that reading B is correct and the argumentative context of the *Philebus* sentence (properly understood) requires sense B. This leaves (as Cherniss is willing to admit, *ACPA*, p. 606) the *Sophist* passage alone as bearing the whole weight of Plato's alleged commitment to the view A) that everything that is rational is a soul. I wish to give a new, tentative interpretation to this passage which shows that it is, like the *Timaeus* and *Philebus*, committed only to the weaker claim B) that when reason is in something, it is so along with soul. This leaves the Demiurge who is not in anything free to be rational without being a soul and to serve rather as a maker of souls." (p. 21, notes omitted)

4. Mojsisch, Burkhard. 1998. "Logos and Episteme. The Constitutive Role of Language in Plato's Theory of Knowledge."

Bochumer Philosophisches Jahrbuch für Antike und Mittelalter
no. 3:19-28.

Abstract: "This essay first differentiates the various meanings of the term *logos* as it appears in Plato's dialogues *Theaetetus* and *The Sophist*. These are: the colloque of the soul with itself, a single sentence, a proposing aloud, the enumeration of the constitutive elements of a whole and the giving of a specific difference; further, opinion and imagination. These meanings are then related to Plato's determination of knowledge (*episteme*) and therewith truth and falsity. One can be said to possess knowledge only when the universal contents of thought -- dialogical thought -- are set in relation to the perceivable, imagination or opinion. Reflections on the principle significance of possibility as such -- a thematic not addressed by Plato -- conclude the essay."

5. Monserrat Molas, Josep, and Sandoval Villarroel, Pablo. 2013. "Plato's Enquiry Concerning the Sophist as a Way Towards "Defining" Philosophy." In *Plato's Sophist Revisited*, edited by Bossi, Beatriz and Robinson, Thomas M., 29-39. Berlin: Walter de Gruyter.

"The *Sophist* discloses the urgency of the question concerning being, and it is only in pondering this question that the essence of philosophising comes to light and is realised. In other words, the dialogue does not deal with the question of being simply because the problem of the sophist requires that it do so, but rather it deals and has to deal with the question concerning being in that its fundamental concern, its *σκοπός*, which consists in moving towards the essence of philosophy, not by way of a formal, abstract "definition", but rather through the consummation of philosophising.

For this reason the Stranger of Elea later on poses the question: *καὶ κινδυνεύομεν ζητοῦντες τὸν σοφιστὴν πρότερον ἀνηυρηκέναι τὸν φιλόσοφον* [253c8 – 9], "and have we unwittingly found the philosopher while we were looking for the sophist?". Who, then, is the philosopher?

He is that human being who has devoted himself fully, through thinking, to enquiring again and again into the essence of

- being: ὁ δὲ γε φιλόσοφος, τῆ τοῦ ὄντος ἀει` δια` λογισμῶν προσκειμένος ἰδέα [254a8 – 9]." (pp. 38-39, note omitted)
6. Moravcsik, Julius M. E. 1958. "Mr. Xenakis on Truth and Meaning." *Mind* no. 67:533-537.

"In a somewhat breathless article Mr. J. Xenakis has presented us with a new interpretation of Plato's theory of truth and meaning in *Sophist*, pp. 260-263.(1) In this brief note I shall show that the theory which Xenakis champions is objectionable, and toward the end I shall suggest that Plato need not be burdened with it. Xenakis claims that all statements must satisfy four rules. According to the third of these, all statements - if they are to be statements - must be about something.(2) Little can be found in the article that pertains to the status of the four rules. We are told, however, that two of them are formation rules, and two are truth-conditions. Since Xenakis insists that all statements must satisfy the truth-conditions, one can assume that he excludes the possibility of there being statements which are neither true nor false. I am not sure whether he would go on to say that any utterance which does not satisfy one of the truth-conditions is meaningless. It may be that he would restrict himself to maintaining that if any utterance does not meet one of the truth-conditions, then meaningful as it may be, it cannot be true or false - and hence it cannot be a statement. In order to be on the safe side, I shall examine rule [3] first as a criterion of meaningfulness, and then as a mere truth-condition." (p. 533)

7. ———. 1960. "ΣΥΜΠΛΟΚΗ ΕΙΔΩΝ and the Genesis of ΛΟΓΟΣ." *Archiv für Geschichte der Philosophie* no. 42:117-129.

"Δια` γὰρ τῆ ν ἀλλήλων τῶν εἰδῶν συμπλοκῆ ν ὁ λόγος γέγονεν ἡμῖν [For our power of discourse is derived from the interweaving of the classes or ideas with one another. (Translation added)] (*Sophist* 259e5—6)*. In these lines Plato states that rational discourse is made possible by the interwovenness of the Forms. The task of the Interpreter is to

discover what the nature of this interwovenness is, and to ascertain the exact nature of the relationship between the interwovenness of the Forms and the structure of rational discourse. At present there is considerable disagreement concerning these issues. In this paper the main difficulties of 259e5—6 will be outlined, and some recent attempts to overcome these difficulties will be surveyed. It will be indicated where and why I dissent from the positions taken by several contemporary authors, and a new Interpretation will be presented which attempts to show that a plurality of Forms, woven into a pattern, underlies each meaningful sentence, and that the interwovenness can be explained by reference to formal concepts. The importance which — in my opinion — Plato attaches to formal concepts in the Sophist has implications for the Interpretation of the theory of Forms as found in the later dialogues." (p. 117)

(...)

"In conclusion let me sum up the most important implications of what Plato says in 259e5—6. Plato believes that the changing dynamic combination of words, yielding meaningful discourse, is based on the static interwovenness of the Forms. For discourse is changing, man-made; and the language of 262d2—6 shows that Plato regards it s such. But he also believes that one of the essential tasks of meaningful discourse is to convey Information. Fundamental to the conveying of Information is the ability to order the elements of reality according to concepts (23). What makes this ordering possible, according to Plato, is the general fact that the elements of reality are identifiable and describable." (p. 129)

(*) Burnet's numbering of lines is followed throughout the paper.

8. ———. 1962. "Being and Meaning in the Sophist." *Acta Philosophica Fennica* no. 14:23-78.

From the Conclusion: "Communion and interweaving are the key concepts of the Sophist. They are used on two levels; the ontological and the semantic. The two are not sharply separated, and each helps to explain the other. The

Communion of the Forms parallels the interwovenness of words, and thus 253-256 parallels 260-262. A similar parallel and relations of dependence are presented between the discussions of Not-being and falsehood. Thus 257-258 and 263 go together. This interrelatedness not only brings out the nature of Plato's philosophizing in this period, but it also presents the interpreter with the task of working out the whole passage as a unit, for the interpretations of the parts are interdependent. This justifies and necessitates my lengthy analysis.

Plato's arguments show that truth and falsehood are not matters of mental sight or blindness. Thus one should not conceive of the objects of knowledge as self-sufficient atomic units. Philosophical atomism is denied on all levels. The paradigm-case of how not to read Plato therefore is: "each element in the statement has now a meaning; and so the statement as a whole has meaning". (1) The notion of Communion and the analogy with vowels lead to the conception of the Forms as functions, as something incomplete, something which need arguments in order really to express something. At least some of the Forms are shown to be like functions in this dialogue. If we are willing to pursue Plato's line of thought beyond the point to which it is carried in the dialogue, we see that what Plato says leads to construing all Forms as functions. For what we know are truths and falsehoods, and these are complexes which contain Forms. The constituents of these complexes are not 'simples', or metaphysical atoms of some sort. In order to understand them we have to know into what complexes they fit. We do not grasp them prior to all completions.

It is small wonder that modern commentators of this dialogue have not made much progress with it. They approach it with the 'part-sum, division-collection, genus-species' distinctions in mind. Merely because one aspect of dialectic is said to be the method of division they identify all of Plato's methodology with this notion, and seek to explain the middle part of the Sophist within this framework. But these are the wrong tools and the wrong questions. When seen in proper light, the suggestions of

the Sophist present themselves as topics the further exploration of which is one of the more important philosophical tasks today." (p. 77-78)

(1) F. M. Cornford, *Plato's Theory of Knowledge. The Theaetetus and the Sophist of Plato translated with a running commentary*, p. 315.

9. Morgan, Michael L. 1993. "'Philosophy' in Plato's Sophist." *Proceedings of the Boston Area Colloquium in Ancient Philosophy* no. 9:83-111.

"In this paper I want to use a different approach to understand Plato's primary task in the Sophist. I want to ask a rather large set of questions about the dialogue. These questions arise out of the dialogue when it is viewed in terms of its relation to the Theaetetus and Politicus, to issues Plato discusses in the Phaedo, Republic, and Phaedrus, and to a consideration of Plato's place in fourth century Athenian culture. Once I have stated these questions and clarified them, I shall consider how the Sophist might be taken to answer them. All of this will be somewhat programmatic and provisional. The Sophist is a puzzling, demanding, complex text, and to make my case regarding the issues I have in mind would require much more evidence, interpretation, and argument than I can provide here. This is a beginning, with a promissory note for future development.

The questions that I want to ask about the Sophist are these: where, in the dialogue, do we find what Plato would think of as philosophy? Where - if anywhere - does he engage in it? Where does he refer to it or describe it, either directly or indirectly?

Who is a philosopher in the Sophist-Socrates, the visitor from Elea, Plato, all or none of these? And why does Plato here seek to articulate what sophistry is and how it differs from philosophy?" (p. 84)

(...)

"Philosophy, then, differs from sophistry in purpose—as well as in method and object, for philosophy is essential to the best human life. It is a form of intellectual and religious

transcendence that is divine because its objects are divine and hence because its cognitive goal is pure, permanent, and comprehensive.

As the philosopher's understanding of the map of the world of Forms increases, so does the clarity, purity, and stability of the soul.

To Isocrates Parmenides is a sophist; to Plato he is a philosopher and divine, epithets that transfer to his followers, one a visitor to Athens, another Plato himself. Eleatic in spirit, the visitor advocates views that are Platonic in letter, for Plato is himself an Athenian with Eleatic convictions, and like the visitor a parricide and disciple all at once." (p. 110)

10. Morgenstern, Amy S. 2001. "Leaving the Verb 'To Be' Behind: An Alternative Reading of Plato's Sophist." *Dionysius* no. 19:27-50.

"Equating the terms *esti*, *to on*, and *ta onta* with the verb "to be", understood existentially, predicatively, or as an identity sign, cannot serve as a basis of an illuminating approach to the Eleatic Stranger's investigation in Plato's *Sophist*. An alternative reading of *esti* at 256 A 1, *Esti de ghe dia to methexein tou ontos*, allows a more comprehensive analysis of the limitations and accomplishments of this investigation. Here *esti* should be interpreted as *rhema*, i.e. a name that, in this instance, says something about *kinesis*, the implied subject."

11. Mourelatos, Alexander. 1979. "'Nothing' as 'Not-Being': Some Literary Contexts that Bear on Plato." In *Arktouros. Hellenic studies presented to Bernard M. W. Knox on the occasion of his 65th birthday*, edited by Bowersock, Glen, Burkert, Walter and Putnam, Michael, 319-329. Berlin: Walter de Gruyter.

Reprinted in: J. P. Anton, A. Preus (eds.), *Essays in Ancient Greek philosophy, Volume Two*, Albany: State University of New York Press, 1983, pp. 59-69.

"It has often been noticed that Plato, and before him Parmenides, assimilates "what is not" (to me *ón*) to "nothing" (*medén* or *oudén*). Given that the central use of "nothing" has important ties with the existential quantifier ("Nothing is here"

---- "It is not the case that there is anything here"), it has widely been assumed that contexts that document this assimilation also count as evidence that both within them and in cognate ontological contexts the relevant sense of "being" or "to be" is that of existence. That this assumption is not to be granted easily, has been compellingly argued by G. E. L. Owen [Plato on Not-being, 1971]. His main concern was to show that the assumption is particularly mischievous in the interpretation of the Sophist, where he found it totally unwarranted. My own concern is to attack the assumption on a broader plane.

"Nothing" in English has uses that do not depend on a tie with the existential quantifier. So too in Greek: *medén* or *oudén* can be glossed as "what does not exist," but it can also be glossed as "not a something," or in Owen's formulation, "what is not anything, what not-in-any-way is': a subject with all the being knocked out of it and so unidentifiable, no subject." In effect, the assimilation of "what is not" to "nothing" may-in certain contexts-work in the opposite direction: not from "nothing" to "non-being" in the sense of non-existence; rather from "non-being" as negative specification or negative determination to "nothing" as the extreme of negativity or indeterminacy. To convey the sense involved in this reverse assimilation I borrow Owen's suggestive translation "not-being" for me on, a rendering which makes use of an incomplete participle, rather than the complete gerund, of the verb "to be"." (p. 59 of the reprint)

(...)

"Observations made in this paper can be read as providing support, in yet a different way, for a thesis advanced by Charles H. Kahn (22) and others. In a formulation I prefer, the thesis is that the dialectic of Being in classical Greek speculation focuses not on "What there is" but on "What it is" or "How it is"; not on existence but on *physis*, constitution, or form. (23)" (p. 67 of the reprint)

Foundations of Language, suppl. ser., 16 (Dordrecht and Boston, 1973): 394-419.

12. Mouzala, Melina. 2019. "Logos as "weaving together or communion of indications about ousia" in Plato' s Sophist." Platonic Investigations no. 10:35-75.

Abstract: "In this paper, we set out to show that in the Sophist the interweaving of Forms (sumplokē tōn eidōn) is the substantial presupposition of the existence of logos, because what we do when we think and produce vocal speech is understanding by our dianoia the way in which the Forms are interwoven, and what we weave together in our speech are indications about ousia (peri tēn ousian delōmata). Dianoia conceives of the relations between the Forms, and these relations are reflected in our thought and its natural image, vocal speech. We support the idea that we cannot interpret the Platonic conception of the relationship between language and reality through the Aristotelian semiotic triangle, because according to it the relation between pragmata or onta and logos becomes real through the medium of thought (noēmata). On the contrary, logos in Plato has an unmediated relation with reality and is itself reckoned among beings.

In parallel, we set out to show the difference between the Platonic conception of logos and the Gorgianic approach to it, as well as the approaches of other Sophists and Antisthenes.

Logos itself in Plato is a weaving which reflects the interweaving of Forms, while vocal speech is a natural image of thought. Logos in its dual meaning, dianoia and vocal speech, is illustrated in Dialectic, because as vocal speech is a mirror to dianoia, so Dialectic is a means which clearly reflects the thinking procedures of dianoia."

13. Muckelbauer, John. 2001. "Sophistic Travel: Inheriting the Simulacrum through Plato's The Sophist." Philosophy and Rhetoric no. 34:225-244.

"A single question marks our departure, a question that, while apparently straightforward, has assumed so many shapes and disguises that it would not be unjust to claim it has infected all

of Western history. In its current manifestation, however, we will take our cue from Plato in phrasing it thus: What is a Sophist? When Plato first formulated the question in these terms, he well understood that its self-evident simplicity could be deceptive and that its effects might proliferate uncontrollably. As Jacques Derrida comments, "The question of what the Sophists really were is an enormous question" (Olson 17). In Plato's case, attempting to "hunt down" the Sophist led from a disturbing journey through the world of images to an unsettling encounter with the existence of nonbeing." (p. 225)

14. Muniz, Fernando, and Rudebusch, George. 2018. "Dividing Plato's Kinds." *Phronesis: A Journal for Ancient Philosophy* no. 63:392-407.

Abstract: "A dilemma has stymied interpretations of the Stranger's method of dividing kinds into subkinds in Plato's *Sophist* and *Statesman*. The dilemma assumes that the kinds are either extensions (like sets) or intensions (like Platonic Forms). Now kinds

divide like extensions, not intensions. But extensions cannot explain the distinct identities of kinds that possess the very same members. We propose understanding a kind as like an animal body—the Stranger's simile for division—possessing both an extension

(in its members) and an intension (in its form). We find textual support in the Stranger's paradigmatic four steps for collecting a subkind."

15. Naas, Michael. 2003. "For the Name's Sake." *Epoché: A Journal for the History of Philosophy* no. 7:199-221.

Abstract: "In Plato's later dialogues, and particularly in the *Sophist*, there is a general reinterpretation and rehabilitation of the name (onoma) in philosophy. No longer understood rather

vaguely as one of potentially dangerous and deceptive elements of everyday language or of poetic language, the world onoma is recast in the Sophist and related dialogues into one of the essential elements of a philosophical language that aims to make claims or propositions about the way things are. Onoma, now understood as name, is thus coupled with rhema, or verb, to form the two essential elements of any logos, that is, any claim, statements, or proposition.

This paper follows Plato's gradual rehabilitation and reinscription of the name from early dialogues through late ones in order to demonstrate the new role Plato fashions for language in these later works."

"The Sophist is explicitly dedicated to the question of getting to know what constitutes a sophist. It is, however, far from being the only dialogue where one finds a definition of one. This is natural enough, given that, from the Apology to the Theaetetus, a good part of Plato's work is devoted to pointing out the difference between Socrates and the sophists who were his contemporaries, considered less for who they were as individuals or for the particular positions they adopted than as representatives of a manner of thinking which Plato himself calls 'sophistry'.⁽²⁾ So it is normal that, as part of the enterprise, Plato would have been led to clarify just what the manner of thinking is which he condemns through the character Socrates. The question one ought rather to answer, however, is: Why, after so many repeated condemnations of sophistry, does Plato feel the need to devote a dialogue to it? After the Theaetetus, and the antithesis there – which takes up the central part of the dialogue – between the frequenter of the law courts and the philosopher,⁽³⁾ is it still necessary to ask the question whether the sophist and the philosopher are or are not the same thing?" (p. 57)

(2) Cf. Gorg. 463b6, 465c2, 520b2; the Protagoras (316d3 – 4) talks of the σοφιστικὴ τέχνη. (I naturally leave aside from the calculation the occurrences of the word in the Sophist).

(3) Theaetet. 172c3 –177b7.

17. Nehamas, Alexander. 1982. "Participation and Predication in Plato's Later Thought." *The Review of Metaphysics* no. 36:343-374.

Reprinted in: A. Nehamas, *Virtues of Authenticity. Essays on Plato and Socrates*, Princeton: Princeton University Press 1999, pp. 196-223.

"One of the central characteristics of Plato's later metaphysics is his view that Forms can participate in other Forms. At least part of what the Sophist demonstrates is that though not every Form participates in every other (252d2-11), every Form participates in some Forms (252d12-253a2), and that there are some Forms in which all Forms participate (253cl-2, 256a7-8). This paper considers some of the reasons for this development, and some of the issues raised by it." (p. 343)

(...)

"Having many properties is not being many subjects. Beauty is many things in virtue of participating in them, in virtue of bearing to them that relation which Plato had earlier introduced in order to account for the claim of some things which are not beautiful to be called "beautiful" nonetheless. But Plato came to see that the phrase "are not" is illegitimate in this context.

(...)

In arriving at this realization and in extending the ability to have many names, that is, to bear predicates, to Forms as well as to their participants, Plato finally left behind the tradition from which he had emerged. This tradition, he realized, was common to thinkers ranging from the sophists to the sage he most venerated and who was, astonishingly, discovered in the many-headed sophist's hiding place—a place which, even more astonishingly, he had himself supplied. In the Sophist Plato

liberated himself from that tradition and showed that to have a characteristic is not an imperfect way of being that characteristic. In this, I think, he offered us the first solid understanding of the metaphysics of predication in western philosophy." (p. 374)

18. Noriega-Olmos, Simon. 2012. "Plato's Sophist 259E4-6." *Journal of Ancient Philosophy* no. 6.

Abstract: "There are at least seven different well-known interpretations of Sophist 259E4-6. In this paper I show them to be either misleading, in conflict with the context, or at odds with Plato's project in the dialogue. I argue that 259E4-6 tells us that in view of the fact that statements consist in the weaving of different linguistic terms that stand for different extra-linguistic items, if there is to be statements, then reality must consist in a plurality of items some of which mix with some and some of which do not mix with some according to certain ontological rules. My argument for this construal of Sophist 259E4-6 involves an analysis of the passage as well as an assessment of how that text fits into its context."

19. ——. 2018-2019. "'Not-Being', 'Nothing', and Contradiction in Plato's 'Sophist' 236D–239C." *Archiv für Begriffsgeschichte* no. 60-61:7-46.

Abstract: "At 236D-239C, Sophist presents three arguments to the conclusions, that the expression 'not-being' does not say or express anything, that we cannot even conceive of the alleged entity of not-being and that we contradict ourselves when claiming that not-being is not and that the expression 'not-being' does not express anything at all. I intend to answer five questions concerning these arguments: (Question 1) What does Plato mean when he says that the expression 'not-being' does not say anything at all? (Q2) What sort of semantic relation does he think the expression 'not-being' involves? (Q3) How could he possibly explain that 'not-being' is, after all, an expression? (Q4) What does he think we are to learn about the contradictions ensued by our talk of not-being? (Q5) And what does he think is the ontological status of not-being? My motivation for considering these questions is that the

arguments against not-being in Sophist 236D-239C have not been charitably discussed and therefore have not been fully explored."

20. Notomi, Noburu. 1999. *The Unity of Plato's Sophist: Between the Sophist and the Philosopher*. Cambridge: Cambridge University Press.

"The aim of this work is to clarify the topic with which the Sophist is mainly concerned, and I do not discuss other hotly debated topics, such as the senses of the verb 'to be', and the dialogue's relation to the theory of Forms." (p. XIV)

"About the philosopher only a few passing reflections are offered in the Middle Part, as we saw in Chapter 7. It is a philosopher's attitude to value intelligence, wisdom, and knowledge (249c6-d5), and it was also philosophical to admit the proper combination of kinds, since it saved discourse, and therefore philosophy (260a7-7). The more important passage is in the midst of the Middle Part (253c6-254b6), where knowledge of dialectic is said to be rightly ascribed to the philosopher. In that digression, the Eleatic visitor wonders whether the inquirers, in searching for the sophist, may by chance have stumbled on the philosopher (Passage 38: 253c6-9; cf. e4-6). Yet clearly the description of dialectic in that digression (Passage 39) is not decisive, but rather, proleptic, and the mention of the philosopher is just an anticipation which needs further investigation. In this way, the question of what the philosopher is is not explicitly discussed in the Sophist. However, this does not imply that Plato intended another dialogue, the Philosopher, to give a fuller account and definition of the philosopher. On the contrary, the whole project of the Sophist has already shown the philosopher in three ways." (p. 297)

"The Sophist says little about the philosopher, but the dialogue as a whole shows something of what the philosopher really is. The inquirers try to be philosophers in defining the sophist, by performing dialectic. Apart from this way, there does not seem to be any other proper way of revealing the essence of the philosopher; for it is by our confronting the sophist within

ourselves that philosophy can be secured and established." (p. 299)

21. ———. 2007. "Plato on What Is Not." In *Maieusis. Essays on Ancient Philosophy in Honour of Myles Burnyeat*, edited by Scott, Dominic, 254-275. New York: Oxford University Press.

"What is not (τοῦ μὴ ὄν) was scarcely discussed in ancient philosophy before Plato.

Although this phrase, or concept, made occasional appearances in philosophical arguments, it did not figure as their primary subject." (p. 254)

(...)

"Modern philosophers often assume that Plato treats what is not merely as the privation of being and that he dismisses the idea of absolute nothingness from the inquiry altogether, although the latter always remains a real philosophical problem. Pointing to the way in which Plato in the *Sophist* describes what is not as 'different from what is', these philosophers fault him for reducing the problem of absolute nothingness to that of something lacking particular properties. Against this interpretation, which at first sight seems to give an adequate account of the argument of the dialogue, I suggest that Plato tackles a more profound problem.

What is not is no more trivial or easy to deal with than its counterpart, what is. It is perhaps a more perplexing concept, since it seems to prevent any discussion (λόγος). This feature takes us to the heart of the problem that Plato faces in the *Sophist*. There he works out a new strategy to overcome the difficulty: what is not can only be clarified together with what is. The purpose of my paper is to clarify the implication of this strategy." (pp. 255-256)

22. ———. 2008. "Plato Against Parmenides: *Sophist* 236d-242b." In *Reading Ancient Texts: Vol. I: Presocratics and Plato. Essays in Honour of Denis O'Brien*, edited by Suzanne, Stern-Gillet and Corrigan, Kevin, 167-187. Leiden: Brill.

"Parmenides, one of the greatest and most influential Greek thinkers, is not mentioned in Plato's earlier dialogues. His name appears only in four dialogues: Symposium, Parmenides, Theaetetus, and Sophist. This peculiar fact by no means implies that Parmenides had little influence on Plato's earlier thinking. On the contrary, it is generally agreed that Republic V bases the theory of forms on the Parmenidean scheme of what is and what is not. Nevertheless, that passage contains no reference to its source. (p. 167)

(...)

"It is noteworthy that Parmenides is never mentioned again after the Sophist." (p. 168)

(...)

"In presenting his own view, O'Brien criticises my reading of the Sophist on philological and philosophical grounds.(8)" (p. 169)

(...)

"Our disagreement concerns how we view Plato's attitude toward Parmenides.

O'Brien suggests that Plato introduces a new distinction between two 'kinds' of what is not, which is unknown to Parmenides. Consequently, according to him, Plato's response is oblique. From one point of view, Plato can agree with Parmenides, while from another he is in disagreement; but from the standpoint of Parmenides himself, Plato's criticism is irrelevant or unanswerable. By contrast, my reading is straightforward: Plato tackles the same philosophical difficulty that Parmenides faces, and criticises him so forcefully in order to secure the possibility of logos and philosophy.

In this paper, I present my arguments against O'Brien's criticisms, first by focusing on the key text, secondly by reconsidering Plato's strategy, and finally in respect of philosophical interpretation.(9)" (p. 170)

(8) O'Brien (2000), 56, 68–75, 79, 84, 93–94, 96, takes up and criticises my 1999 (esp. pp. 173–179).

(9) I have also discussed Plato's argument on what is not, in Notomi (forthcoming).

25. ———. 2011. "Image-Making in Republic X and the Sophist. Plato's Criticism of the Poet and the Sophist." In *Plato and the Poets*, edited by Destrée, Pierre and Herrmann, Fritz-Gregor, 299-326. Leiden: Brill.

"The famous phrase, 'the ancient quarrel between philosophy and poetry' (Rep. X, 607b), represents Plato's critical attitude towards poetry. However, this phrase might mislead us, the modern readers, in multiple ways.

I believe it as yet a matter in need of clarification what the real target of Plato's criticism is and how he deals with it. To re-examine his treatment of poetry reveals how Plato

conceptualizes his own pursuit, namely philosophy, in contrast to its rivals." (p. 299)

(...)

"The Sophist is the later dialogue which finally defines the sophist as 'the imitator (mimêtês) of the wise' (Soph. 268c). While this dialogue does not deal with a poet or poetry in a direct way, it nevertheless examines the foundation of Plato's earlier criticism of poetry in Republic X: namely the ontological basis of the art of image-making. Plato's implicit intention can be seen in remarkable correspondences between the two dialogues."

(...)

"Republic X presents the ontological argument to criticise the poet; poetry is treated as a special kind of making, i.e. image-making or imitation.

In a parallel way, the Sophist defines the sophist as a specific kind of making, i.e. image-making and apparition-making in particular. Finally we should consider some differences between the two treatments of image-making.

First of all, while, as we saw in the previous section, the Sophist confronts the difficult challenge concerning the problematic notions of 'image' and 'making', the Republic does not seem to worry about such a metaphysical danger. Whereas the Sophist clarifies the concept of image in the course of defining the sophist, the Republic simply uses it." (p. 324, notes omitted)

26. ———. 2017. "Reconsidering the Relations between the Statesman, the Philosopher, and the Sophist." In *Plato's Statesman: Dialectic, Myth, and Politics*, edited by Sallis, John, 183-195. Albany: State University of New York Press.

"In the opening conversation of the Sophist, Socrates (just before the trial in 399 BC) raises a crucial problem about the philosopher: how to distinguish between three kinds of people, a philosopher, a sophist, and a statesman." (p. 184)

(...)

"From this initial problem, the Sophist first engages in definition of the sophist and finally clarifies what the sophist is. The Statesman next discusses and defines the statesman." (p. 184)

(...)

"In the Sophist, the philosopher surprisingly appears in the middle of the inquiry. When the art of discerning combinations and separations of kinds is discussed, the Eleatic Visitor abruptly suggests that they may have come across the philosopher before finding the sophist (253c), and he gives a description of the art of dialectic, which belongs to philosophy. However, when he says that they will see the philosopher more clearly if they wish (254b), this is far from clear indication of a plan for another dialogue.

Rather, it is more important that the inquirers may have encountered the philosopher already in search for the sophist; for they are like two sides of one coin, or, more precisely, the original and its image." (p. 185)

The Sophist does not present the definition of the philosopher, but it finally shows the philosopher through definition of the sophist in three ways (11):

(1) First, since each feature of the sophist illuminates its opposite characteristic, the definitions of the sophist show what the philosopher should be. In addition to the contrast between apparition making (φανταστική) and likeness making (εἰκαστική), which we shall see, the sophist is characterized as "ironical" in consciously concealing his ignorance (267e–268a), while the philosopher sincerely admits it.

(2) Second, the inquiry into the sophist discusses dialectic (διαλεκτική), the art of the philosopher, in the middle part of the dialogue. The inquirers actually practice and demonstrate dialectical arguments, and thereby show what philosophers should do.

(3) Third, the project of the whole dialogue, namely, to define the sophist and thereby to show the philosopher, is itself a pre-

eminent task of the philosopher. In this way, the Sophist represents the philosopher in stark contrast to the sophist. As for the problematic sixth definition, the “sophist of noble lineage” eventually turns out to represent more Socrates than the sophist.” (pp. 185, 186 a note omitted)

27. O'Brien, Denis. 1993. "Non-Being in Parmenides, Plato and Plotinus: a Prospectus for the Study of Ancient Greek Philosophy." In *Modern Thinkers and Ancient Thinkers*, edited by Sharples, Robert W., 1-26. London: University College London Press.

English version of "Le non-être dans la philosophie grecque: Parménide, Platon, Plotin", in Pierre Aubenque (ed.), *Études sur le Sophiste de Platon*, Napoli: Bibliopolis 1991, pp. 317-364.

"Negation and contrariety. In the *Sophist*, a Stranger from Elea sets out to refute Parmenides. Or so at least he does in most modern studies of that deceptively simple dialogue. But because Parmenides has been misunderstood, so too, inevitably, has been the Eleatic Stranger's criticism of Parmenides. For although the Eleatic Stranger does warn of the dangers of parricide (he may have to murder Parmenides, the father of Greek philosophy), in fact he starts off by agreeing with Parmenides, and that agreement, contrary to what most modern scholars will tell you, is never withdrawn or cancelled in the course of the argument.

Let me explain. The Eleatic Stranger distinguishes between two uses of the negation in the expression to me on, "what is not".

The negation may be used to mean "what is not in any way at all" (to medamos on, 237b7-8). "What is not in any way at all" is what would be, impossibly, the contrary of being (d. 258e6-7).

Impossibly: for there is no contrary of being, since there is nothing entirely without participation in being. What is entirely without participation in being is what you might expect it to be - just plain nothing. There isn't any." (p. 5)

28. ———. 2000. "Parmenides and Plato on What is Not." In *The Winged Chariot: Collected Essays on Plato and Platonism in Honour of L.M. de Rijk*, edited by Kardaun, Maria and Spruyt, Joke, 19-104. Leiden: Brill.

"Understanding of Plato's Sophist cannot therefore be dissociated from our understanding of the poem of Parmenides, and vice versa.

To understand the poem of Parmenides we need to appreciate that the goddess is working with a single conception of non-being, an appreciation which we can best arrive at by seizing the distinction between the two uses of non-being that are established in Plato's Sophist and yet, at the same time, refusing to read back that distinction into the poem of Parmenides.

Understanding the Sophist requires us, on the contrary, to appreciate that the Stranger arrives at his new definition of 'what is not' by consciously distancing himself from the way in which Parmenides had thought of nonbeing, nearly one hundred years before.

The distinction between the two 'kinds' of non-being is, in both cases, the same. But where the Stranger consciously and deliberately marshals his arguments in the light of that distinction, Parmenides, on the contrary, produces the arguments he does because the Stranger's distinction forms no part of his conscious self. (298)" (p. 90)

(298) Some of the implications of this style of conclusion for how I understand the history of philosophy are spelt out in O'Brien (1993).

29. ———. 2011. "The Stranger's "Farewell" (Sophist 258e6-259a1)." In *Plato's Sophist: Proceedings of the Seventh Symposium Platonicum Pragense*, edited by Havlíček, Aleš and Karfík, Filip, 199-220. Praha: Oikoymenh.

"Don't let anyone try and tell us that we dare say of the contrary of being that it is. We have long ago said farewell to any contrary of being, to the question of whether it is or of whether it isn't...' Those are the first words spoken by the Stranger after Theaetetus' enthusiastic reaction (258 E 4-5: 'absolutely so', 'most true') to the Stranger's declaration (258 D 5-E 3) that he and Theaetetus have 'dared' speak of 'the form that there turns out to be, of what is not'.

A 'contrary of being'. A 'form that there turns out to be, of what is not'. The meaning of those two expressions, together with their difference of meaning, lies at the very heart of Plato's dialogue, of what the Sophist is all about. If the meaning, with the difference in meaning, of those two expressions has not been understood, then the dialogue itself has not been understood." (p. 199)

30. ———. 2013. "A Form that 'Is' of What 'Is Not' . Existential Einai in Plato's Sophist " In *The Platonic Art of Philosophy*, edited by Boys-Stones, George, El Murr, Dimitri and Gill, Christopher, 221-248. Cambridge: Cambridge University Press.

"Motivated by an otherwise very understandable desire to study ancient philosophical texts philosophically, recent commentators have taken to weeding out from Plato's dialogues any existential use of the verb einai, seemingly in deference to the supposedly philosophical principle that existence cannot be a predicate. The result is disastrous. This is not only because Plato very clearly does use the verb as a predicate complete in itself, with a meaning that can properly be described as 'existential', notably in his account of being and non-being in the Sophist, but also because the principle itself is not what it is all too often thought to be." (p. 221)

(...)

"Veer to one side or another of that narrow line and you end up in one or other of the errors portrayed in the concluding pages of this essay. Identify the form of non-being with a straightforward negation of the existential meaning of the verb, and the Stranger will end up asserting, of 'what is not in any way at all', that it 'is' (Notomi's error). Identify the form of non-being with a negation of the copulative use of the verb joined to any and every complement, so that 'non-being' is so because it is 'other than' and therefore 'is not' any one of all the vast variety of different forms that participate in being, and you will end up asserting, of 'being itself', that it is 'non-being' (Owen's error). Start from Plato's own assumption that an existential use of *einai* has to be subjected to the same analysis as 'is the same' or 'is beautiful', with one specific part of otherness, and only one, opposed to 'being', whether to the form or to the instantiation of the form, while at the same time taking into account the different extension of forms that are, and forms that are not, participated universally, and you will, if you pay close attention to both syntax and argument, avoid both errors. You may even come within shouting distance of the essentials of Plato's reply to Parmenides." (p. 248)

31. ———. 2013. "Does Plato refute Parmenides?" In *Plato's Sophist Revisited*, edited by Bossi, Beatriz and Robinson, Thomas M., 117-155. Berlin: Walter de Gruyter.

"I have a couple of times ventured to suggest that in the *Sophist* Plato does not refute Parmenides.(2) The reaction has been, to say the least, hostile.(3) Hostile, with more than a touch of disapproval. You might have thought I had suggested that the Queen of England was a man. The suggestion was not only false, but foolish. A mere eye-catcher. Absurd, and unseemly." (p. 117)

(...)

"Not only is it obvious why Plato should want to refute Parmenides; it also seems clear enough, to many readers of *Plato's Sophist*, that he no less obviously claims to do so. When the Stranger of *Plato's dialogue* introduces Parmenides (237a3 – b3), he quotes a pair of verses giving voice to what are called

elsewhere in the poem the ‘opinions of mortals’ (fr. 1.30 and 8.51 –52), summarised in the pithy sentence ‘things that are not, are’ (237a8 = fr. 7.1: εἶναι μη ἔόντα)." (p. 119)

(...)

"Pinned down to their context, the places where the Stranger supposedly speaks of successfully ‘refuting’ Parmenides vanish like the morning dew on a summer’s day. But if the Stranger doesn't claim to have ‘refuted’ Parmenides, does he then leave it to be understood that he therefore agrees with him?

Not at all. But at the crucial moment when he prepares to trumpet his discovery of ‘the form that there turns out to be, of what is not’, the language he uses is not the language of ‘refutation’.

The Stranger: ‘So do you think we’ve been unfaithful to Parmenides, in taking up a position too far removed from his prohibition?’ (258c6 – 7: οἴσθ’ οὖν ὅτι Παρμενίδη μακροτέρως τῆς ἀπορρήσεως ἠπιστήκαμεν) Theaetetus: ‘What do you mean?’ (258c8: τί δῆ;)

The Stranger: ‘By pushing on ahead with the search, what we’ve shown him goes beyond the point where he told us to stop looking’ (cf. 258c9 –10: πλεῖον ἢ ἑκεῖνος ἀπέιπε σκοπεῖν, ἡμεῖς εἰς τοῦ πρόσθεν ἔτι ζητήσαντες ἀπεδείξαμεν αὐτῷ.).

Just so. The metaphor of distance, of uncharted and forbidden territories, hits off the situation very neatly. The Stranger and Theaetetus have entered a new world, far removed from the world of Parmenides, and have survived to tell the tale. But that does not mean that they claim to have ‘refuted’ him in any simple sense. How could they have done?

Refutation implies contradiction. No-one in his right mind would think to contradict Parmenides’ denial that ‘things that are not, are’, in so far as those words are taken as meaning, or even as implying, that ‘things that do not exist, do exist’." (pp. 151-152, note omitted)

"Surely you can no more say of something that it both is and is not (as do Parmenides' mortals) than you can say of it that, at one and the same time, it is non-being and being (as does the Stranger of Plato's Sophist)?"

3. Words and their meaning

The solution to the puzzle, if there is one, will have to depend on the precise meaning of the words in Greek. Dictionaries and grammars will take you only so far. The ultimate test has to be Plato's use of the common idiom of his time, modified, when necessary, by the context—by the meaning, however idiosyncratic, that he has given his words in the course of an argument.

Those are the two criteria adopted in the course of this article. To steer your way through the Greek text of the Sophist, you will need to recognise a distinction that Plato has taken over from the common parlance of the day, while at the same time adapting it to his own purposes.

The distinction lies between two uses of *einai*, its common-or-garden use as a copula, joining a subject to an attribute, the verb and its attribute making up the predicate (x 'is so-and-so'), and a less common, but still well authenticated, use as a predicate complete in itself (x 'is'), traditionally called, for convenience, an 'existential' use of the verb, simply because such a use may easily lend itself, in modern English, to translation by 'exist'." (p. 3 a note omitted)

33. O'Leary-Hawthorne, Diane. 1996. "Not-Being and Linguistic Deception." *Apeiron* no. 29:165-198.

"Though it is certainly clear that Plato spends a great deal of time in this dialogue [the *Sophist*] grappling with problems that we now place squarely in the domain of philosophy of language, we should think carefully about the context of these pursuits. As Owen,

Wiggins, Pelletier and countless others would have it, Plato is concerned with the nature of language, with the structure of sentences, with negation, with truth and with falsity simply because these problems are important and Plato was aware of their importance. Reluctant as I am to place any obstacles in the way of Plato's unstable popularity, I submit that we must think again about the relevance that these problems had for Plato." (p. 167)

(...)

"At the very least, even if we are skeptical about attributing a mistrust of language to Plato, there are certainly grounds here for caution. If indeed Plato has devoted himself in the *Sophist* to repairing 'the naive semantics of natural language' or some similar project, it is

unlikely that he will have done so without some hint as to how these issues might fit into his broad scheme of philosophical knowledge. At best Plato is concerned with linguistic matters in the *Sophist* precisely because he wants to examine and explain what underlies the linguistic skepticism that runs through the dialogues. In what follows I shall argue that beneath the glistening surface of debate about reference and truth in the

Sophist there does lie a beautifully simple, though highly rigorous, account of the disparity between language and the world it purports to represent. Embedded within the Stranger's most technical linguistic pursuits is something we should have been missing in the Platonic corpus, that is, an explanation of Plato's persistent suggestion that language is not a good place to turn for philosophical insight." (p. 168)

34. O'Rourke, Fran. 2003. "Plato's Approach to Being in the Theaetetus and Sophist, and Heidegger's Attribution of Aristotelian Influence." *Diotima.Revue de recherche philosophique* no. 31:47-58.

"Olympiodorus reports the last dream of Plato: «Shortly before he died, Plato dreamt that he had become a swan which flew from tree to tree, thereby causing the utmost trouble to the archers who wanted to shoot him down.

Simmius the Socratic interpreted the dream as meaning that Plato would elude all the pains of his interpreters. For to archers may be likened those interpreters who try to hunt out the hidden meanings of the ancients, but Plato is elusive because his writings, like those of Homer, must be understood in many senses, both physically, and ethically, and theologically, and literally»(1)" (p. 47)

"It is significant to note that in the three dialogues we have examined, the Phaedrus, Theaetetus and Sophist, Plato brings the reciprocal, dynamic, distinction and relation «to act and act upon» to bear in his reflections, respectively, on φύσις, κίνησις, and εἶναι: these themes are inseparable; they refer to the intrinsic principles of every reality in its constitution, operation and foundation. The distinction and relation are clearly for Plato of central and lasting importance. In further support of Plato's own discovery of δύναμις it is worth noting that for Plato in the Republic, the Good which is the principle of all things, the source of their Being and intelligibility, is not itself Being, but «lies beyond Being, surpassing it in dignity and power» (509 b: ἐπέκεινα τῆς οὐσίας πρεσβείῃ καὶ δυνάμει ὑπερέχοντος.). This is to place power at the heart of being, suggesting that for Plato the dignity or value of being is its

power to act or be acted upon! Επέκεινα is indeed an unresolved dilemma.

Despite the criticisms offered earlier, we must conclude that Plato contributed immeasurably to the early development of the philosophy of being. His self-reproach, that the discussion in the Sophist concerning nonbeing was lengthy and irrelevant, is not only harsh but untrue. To quote Solon, as he does himself: κ.χαλεπα`τα`καλά [beautiful/goods things are difficult]. The Sophist is a worthy contribution to this most difficult and rewarding of questions. It offers rich insights and distinctive signposts on a path of far reaching discovery. To refer again to Olympiodorus (32): whereas Aristotle wrote that all men seek wisdom, he suggests that all philosophers seek Plato as a source which overflows with wisdom and inspiration. Plato deserves our praise and, in words which he placed in the mouth of Socrates, in Athens it is easy to praise an Athenian." (pp. 57-58)

35. Oberhammer, Arnold. 2021. "Dialectic in Plato's Sophist and Derrida's 'Law of the Supplement of Copula' " In Platonism: Ficino to Foucault, edited by Rees, Valery, Corrias, Anna, Crasta, Francesca M., Follesa, Laura and Giglioni, Guido, 314-324. Leiden: Brill.

"Derrida [*] refers to Sophist 253d, where the Eleatic Stranger determines being to be the ability (δύναμις) to connect. He sees being (ὄν), in addition to motion and rest, as the third 'in the soul' (ἐν τῇ ψυχῇ).(12) The progress of the Eleatic Stranger, as opposed to the older aporetic ontologies where either motion or rest were considered to be, is based on the concept of 'otherness', ἕτερον. Being is different (ἕτερον) to motion and rest with the result that, 'according to its own nature' (κατὰ τῆν αὐτοῦ φύσιν), it is neither one nor the other.(13) Plato's definition of being as disposition (δύναμις) or commonality

(κοινωνία) takes place with reference to ‘the most general classes’ (μεγίστα γένη), which are connected because they are different to each other. In line with the critique of some ‘old men who came by learning late in life,’ it is impossible for one to be many.

Here the relationship between λόγος and ὄν takes centre stage. (14)" (pp. 316-317)

(12) Plato, Sophist, 250b7–10: ‘τρίτον ἄρα τι παρα ταῦτα το ὄν ἐν τῇ ψυχῇ τιθεῖς, ὡς ὑπ’ ἐκείνου τὴν τε στάσιν καὶ τὴν κίνησιν περιεχομένην, συλλαβῶν καὶ ἀπιδῶν αὐτῶν πρὸς τὴν τῆς οὐσίας κοινωνίαν, οὕτως εἶναι προσεῖπας ἀμφοτέρα.’

(13) 13 Ibid., c3–7: ‘οὐκ ἄρα κινήσεις καὶ στάσις ἐστὶ συναμφοτέρον το ὄν ἀλλ’ ἕτερον δὴ τι τούτων. [...] κατα τὴν αὐτοῦ φύσιν ἄρα το ὄν οὔτε ἔστηκεν οὔτε κινεῖται.’

(14) Ibid., 251b6: ‘τῶν γερόντων τοῖς ὀψιμαθέσι.’

36. Oscanyan, Frederick S. 1973. "On Six definitions of the Sophist: Sophist 221c-231e." *Philosophical Forum* no. 4:241-259.

Abstract: "The paper shows that the definitions of the Sophist on 221c-231e refer to specific contemporaries of Socrates: Gorgias, Protagoras, Hippias, Prodicus, Euthydemus and Thrasymachus. Produced by the method of divisions, each definition consists of a nesting class of attributes. An examination of the Platonic corpus reveals that these same characteristics are used to satirically describe the sophists listed above. As the final definition equally describes Thrasymachus and Socrates, it is shown why Plato viewed the method of divisions as inadequate for obtaining the proper definition of sophistry: a good Platonic definition must have ostensive truth as well as essential validity."

Reprinted in: Alexander Mourelatos (ed.), *The Pre-Socratics: A Collection of Critical Essays*, Garden City: Anchor Press, 1974 and in: G. E. L. Owen, *Logic, Science, and Dialectic. Collected Papers in Greek Philosophy*, Ithaca: Cornell University Press, 1986 pp. 27-44.

"In sum, it is part of the originality of Plato to have grasped, or half-grasped, an important fact about certain kinds of statement, namely that they are tenseless whereas others are tensed. But he tries to bring this contrast under his familiar distinction between the changeless and the changing. So he saddles the familiar distinction with a piece of conceptual apparatus taken from Parmenides, a tense-form which retains enough of a present sense to be coupled with expressions for permanence and stability, yet which has severed its links with the future and the past. Armed with this device Plato is able to turn the distinction between tensed and tenseless statements into a more congenial distinction between timebound and timeless, changing and immutable, objects.

But at a price. The concept of stability has been stretched so that stability is no longer a function of time. And the interesting propositions, so far from staying tenseless, are restated in an artificial and degenerate tense-form. The theory for which we are asked to tolerate these anomalies will need to hold firm against scrutiny. But on scrutiny there seems to be something wrong at its roots.

What is wrong, I think, can be put very shortly. It is that to be tensed or tenseless is a property of statements and not of things, and that paradoxes come from confusing this distinction; just as they come from trying to manufacture necessary beings out of the logical necessity that attaches to certain statements. But how is the distinction to be recognized? One way, a good way, is to notice that tenseless statements are not proprietary to one sort of subject and tensed statements to another. And there seems to be evidence in another work of

Plato that he did notice this, and brought the point home by a valid argument.

I want to end by discussing that evidence. It occurs in the Sophist, in the criticism that the chief speaker brings against the so-called "friends of the Forms.(15)" (pp. 335-336)

(15) My account of this argument lies close to that given by J. M. E. Moravcsik [Being and Meaning in the Sophist] in *Acta Philosophica Fennica*, 14 (1962), 35-40, which should be consulted for its criticism of alternative views.

38. ———. 1971. "Plato on Not-Being." In *Plato. A Collection of Critical Essays. I: Metaphysics and Epistemology*, edited by Vlastos, Gregory, 104-137. Notre Dame: Notre Dame University Press.

Reprinted in: G. E. L. Owen, *Logic, Science and Dialectic. Collected Papers in Ancient Greek Philosophy*, Ithaca: Cornell University Press, 1986, pp. 104-137 and in: Gail Fine (ed.), *Plato 1: Metaphysics and Epistemology*, Oxford: Oxford University Press, 1999, pp. 416-454.

"Platonists who doubt that they are Spectators of Being must settle for the knowledge that they are investigators of the verb 'to be'. Their investigations make them familiar with certain commonplaces of the subject for which, among Plato's dialogues, the Sophist is held to contain the chief evidence. But the evidence is not there, and the attempt to find it has obstructed the interpretation of that hard and powerful dialogue. The commonplaces that I mean are these: In Greek, but only vestigially in English, the verb 'to be' has two syntactically distinct uses, a complete or substantive use in which it determines a one-place predicate ('X is', 'X is not Y') and an incomplete use in which it determines a two-place predicate ('X is Y', 'X is not Y'). To this difference there answers a semantic distinction. The verb in its first use signifies 'to exist' (for which Greek in Plato's day had no separate word) or else, in Greek but only in translators' English, 'to be real' or 'to be the case' or 'to be true', these senses being all reducible to the notion of the existence of some object or state of affairs; while in its second use it is demoted to a subject-predicate copula

(under which we can here include the verbal auxiliary) or to an identity sign. Plato's major explorations of

being and not-being are exercises in the complete or 'existential' use of the verb. And, lest his arguments should seem liable to confusion by this versatile word, in the Sophist he marks off the first use from the verb's other use or uses and draws a corresponding distinction within the negative constructions represented by to me on, 'not-being' or 'what is not'. For the problems which dominate the central argument of the Sophist are existence problems, so disentangling the different functions of the verb 'to be' is a proper step to identifying and resolving them." (pp. 104-105, notes omitted)

39. ———. 1973. "Plato on the Undepictable." In *Exegesis and Argument. Studies in Greek philosophy presented to Gregory Vlastos*, edited by Lee, Edward N., Mourelatos, Alexander and Rorty, Richard, 349-361. Assen: Van Gorcum.

Reprinted in: G. E. L. Owen, *Logic, Science and Dialectic. Collected Papers in Ancient Greek Philosophy*, Ithaca: Cornell University Press, 1986, pp. 138-147.

Contents: Preface IX-X; On the nature of the Negative 1; Epilogue 77; Notes 79; Bibliographical references 103; Index nominum 115-118.

On Plato's Sophist see in particular pp. 63-75.

"The immensity of the 'tours de force' necessary in the Parmenides and Sophist for the admission of nonbeing on a par with being reflects the enormous hold that Parmenides must have exerted over the Greeks. His writing in verse, like the monotheist Xenophanes, reflects divine inspiration and the transcendent powers of thought. Thus it is not he but the goddess who speaks throughout.

The style of Parmenides fr. B8, 12-21 is strikingly reminiscent of the Vedic hymn and may easily be read as a solution to the

anonymous poet's riddle. But his answer that there is only 'is' and no 'is not' cannot, I think, be understood as meaning that Parmenides wished to reject negative predication out, as Anscombe (Parmenides, Mystery and Contradiction, 1969) would have in the first place, Parmenides himself consistently uses negatives, which would be highly implausible if that was what he wished to outlaw, and secondly, his position on the illusory nature of 'opinion' and the nonexistence of what is not is quite compatible with the use of the negative.

For in Parmenides (fr. B2, B6, 1-2, & B8 34-36) thought and reality are probably even more closely bound together than in Plato, in that reality - or at least true reality - can be thought, and if 'opinion' is part of what is not, then the result of thinking that is what he calls a non-thought, which must be taken to mean something that is not a true or authentic thought. We find Aristotle (Posterior Analytics 89a) still pondering over this problem of how true knowledge and mere opinion could have the same object of reference.

Similarly, Parmenides' convincing rebuttal (fr. 3) of what is having been produced out of what is not, which would then mean what is being in some sense what is not, led Aristotle (De Anima 417a and Metaphysics 1051b) to his theory of potentiality in order to bridge the gap somehow between nonbeing and being.

And this is a radical challenge to the common concept of time: the unreality of past and future which are illusory, the present which is all there is, timeless and eternal.

For Parmenides, then, reason, namely the correct use of thought in contact with reality - not the world of appearance but the real world - will alone lead to truth." (pp. 73-74)

41. Painter, Corinne. 2014. "The Stranger as a Socratic Philosopher: The Socratic Nature of the Stranger's Investigation of the Sophist." *The St. John's Review* no. 56:65-73.

"Much of the secondary literature on Plato's Sophist considers the Stranger to be a non-Socratic philosopher, and regards his

appearance in the dialogues as a sign that Plato had moved on from his fascination with Socrates to develop a more “mature” way of philosophizing.(2) This essay will argue, on the contrary, that the investigation led by the Stranger in the Sophist demonstrates an essentially Socratic philosophical stance. In order to do this, I will consider carefully some dramatic evidence in the Sophist that allows us to notice a philosophical “transformation” in the Stranger.

My consideration focuses upon the Stranger’s rejection of the Parmenidean way of philosophizing followed by his acceptance of the Socratic way of practicing philosophy. This is revealed most decisively by the Stranger’s willingness to pursue truth and justice at the expense of overturning the practices of his philosophical training, and, secondarily, by his genuine concern with showing that Socrates is not guilty of sophistry."

(2) There are far too many accounts to list here; but see, for example, Stanley Rosen, *Plato’s Sophist: The Drama of the Original and Image* (South Bend, Indiana: St. Augustine’s Press, 1999). Just as Rosen argues in his text, most of the accounts in the literature that treat this issue view the Stranger as non-Socratic and advance the position that he represents at least a change, or perhaps even a progression, in Plato’s thinking away from, for instance, emphasis on the Socratic elenchus, to a more developed, mature philosophical practice that emphasizes dialectic."

42. Painter, Corinne Michelle. 2005. "In Defense of Socrates: The Stranger's Role in Plato's Sophist." *Epoché: A Journal for the History of Philosophy* no. 9:317-333.

Abstract: "In this essay I argue that the Stranger's interest in keeping the Philosopher and the Sophist distinct is connected, primarily, to his assessment of the charges of Sophistry advanced against Socrates, which compels him to defend Socrates from these unduly advanced accusations. On this basis, I establish that the Stranger's task in the Sophist, namely to keep philosophy distinct from sophistry, is intimately tied to the project of securing justice and is therefore not merely of

theoretical importance but is also -- and essentially - of political and ethical significance."

43. Palmer, John. 1999. *Plato's Reception of Parmenides*. Oxford: Clarendon Press.

"The Gorgianic perspective on Parmenides' philosophy also figures crucially in the First Deduction of the subsequent exercise in which Parmenides undertakes an examination of his own theory. Plato has Parmenides reject this reductive perspective, thereby providing us with a crucially important instance of how Plato is concerned with combating certain sophistic appropriations of Parmenides so as to recover him for the uses he himself wants to make. This dynamic of reappropriation becomes increasingly important as we continue to examine Plato's later period reception.

This theme in fact guides my discussion of the complex representation of Parmenides in the *Sophist*, where I argue that Plato's efforts to define the Sophist so as to discriminate between this figure and the Philosopher are accompanied by an attempt to recover Parmenides from sophistic appropriations that challenge certain of the key distinctions of Plato's middle period metaphysics. I therefore take

issue with the common view that Plato in the *Sophist* is determined to 'refute' Parmenides. The *Sophist's* denial of the viability of the distinctions between truth and falsehood and between reality and

appearance employ the logic of Parmenides in ways Plato himself finds unacceptable. Plato's own view of Parmenides in this dialogue emerges in the ontological doxography in which Parmenides is significantly associated with Xenophanes and in the subsequent interrogation of this doxography's first two groups. The interrogation of the Eleatics in particular has important connections with various deductions in the Parmenides's dialectical exercise. These connections make it possible to see where in each dialogue Plato is concerned with sophistic appropriations of Parmenides and where he is engaging with him in ways that reflect his own understanding. This understanding is reflected to some extent in portions of

the *Timaeus* but most directly and importantly in the Parmenides's Second Deduction. I therefore conclude this study by describing how Plato will have understood Parmenides' account of the attributes of Being in B8 and the relation of this account to the cosmology he presented alongside

it, and I explain how this understanding is reflected in the Second Deduction." (p. 16)

44. Palumbo, Lidia. 2013. "Mimesis in the Sophist." In *Plato's Sophist Revisited*, edited by Bossi, Beatriz and Robinson, Thomas M., 269-278. Berlin: Walter de Gruyter.

"Mimesis is the production of images (Soph. 265b1 – 3). These cover a very wide semantic field, including the meanings of "opinion" and "viewpoint". A false image is a wrong opinion that says the things that are not: in believing, we imagine; in thinking, we represent what we think. The false belief is therefore a mental scene, an image that possesses neither a corresponding reality nor a model, although it is perceived as a real scene. The virtue of an image (the *arete eikonos*) lies in its being similar to what is true, whereas the similarity between false and true can produce a deception similar to that caused by a dream or by poetry.

The aim of this paper is to show that in the Sophist falsity is closely linked to mimesis. This is not because every mimesis is false, but because all falsity is mimetic. That not every mimesis is false is shown at 235c – 236c. The crucial distinction between *eikastike* and *phantastike* must be understood as the distinction between true and false mimesis. That every falsity is mimetic is a far more complex issue, which I shall be discussing in this paper. I shall claim that falsity does not consist in confusing something for something else, but, more specifically, in confusing an image for its model." (p. 269)

45. Panagiotou, Spiro. 1981. "The 'Parmenides' and the 'Communion of Kinds' in the 'Sophist'." *Hermes* no. 109:167-171.

"The section on the Communion of Kinds in the 'Sophist' is prefaced with an outline of the view that in calling the same thing by many names we make it 'many', and are thus guilty of contradiction: we make what is 'one' to be 'many' and vice versa (251 A - C). The language here leaves no doubt that this aspect of the 'one and many' problem ought to be regarded as specious (cf. 251 B 5 - 6; C 4), although the Stranger does not explain why it should be so regarded. After making some derogatory remarks on those who are impressed by this aspect of the problem, the Stranger abruptly turns to the section on the Communion of Kinds. Though we are not told so, we may be certain that the two sections are related and that the Communion of Kinds has something to do with problems of the 'one and many' variety. We may, furthermore, fill in some of the missing details by considering what Plato has to say on the same topic in the 'Philebus'." (p. 168)

46. Pappas, Nickolas. 2013. "Introduction." *The New Yearbook for Phenomenology and Phenomenological Philosophy*:277-282.

Abstract: "Plato's Sophist is part of the most striking change that occurs within the chronology of his dialogues. Their dramatic presentation changes, the main speaker Socrates replaced by the Eleatic stranger. The dialogues still seek to define terms, but now use the method of division and collection and succeed where earlier attempts used to fail. They transform Platonic metaphysics to include the great kind heteron "other," which points the way to a new enterprise of understanding the reality of appearance rather than opposing appearance to reality. The seven papers collected in this part explore metaphysical, methodological, and pedagogical topics explored in or arising from the Sophist. Their subjects include the other, number (arithmos), power (dunamis), mixture, appearance, and myth."

47. ———. 2013. "The Story that Philosophers Will Be Telling of the Sophist." *The New Yearbook for Phenomenology and Phenomenological Philosophy* no. 13:338-352.

Abstract: "Plato's stranger exemplifies the impulse to move beyond myth into logos, anticipating the later author

Palaephatus. The stranger wishes earlier philosophers had not mythologized being to their students; he works to define the sophist so as to escape myths about that figure. Yet reading the Sophist alongside Palaephatus illuminates how far myth continues to permeate this work. The sophist's moneymaking is mythologized into his wildness. The stranger's closing words about announcing the meaning of the sophist hark back to a dense mythic passage from the Iliad. If philosophy begins by bidding good-bye to myth, it has not left home yet."

48. Partenie, Catalin. 2004. "Imprint: Heidegger Interpretation of Platonic Dialectic in the Sophist lectures (1924-25)." In *Heidegger and Plato: Toward Dialogue*, edited by Partenie, Catalin and Rockmore, Tom, 42-71. Evanston: Northwestern University Press.

"My essay will follow one episode of this Platonic-Heideggerian interplay. The episode has at its core four theses centered upon the Platonic dialectic that Heidegger advances in his lectures on Plato's Sophist. I shall argue that these theses, although they reveal a biased reading of Plato, manage to draw our attention to a genuine and important Platonic distinction, usually overlooked, between authentic and inauthentic human existence, and that this distinction also lies at the core of the fundamental ontology expounded in *Being and Time*. At the close of the essay I shall address, but only in a preliminary way, the question of why Heidegger did not acknowledge this Platonic imprint on his *Being and Time*.

The lectures on Plato's Sophist were delivered at the University of Marburg during the winter semester 1924–25. They contain a running commentary of the Sophist completed by extensive analyses of book Z of the *Nicomachean Ethics*, book A (chapters 1 and 2) of the *Metaphysics*, and the *Phaedrus*.

Of the many theses Heidegger advances in these lectures (whose published text counts 653 pages), I shall focus here on four, centered upon the Platonic dialectic." (pp. 42-43)

49. ———. 2016. "Heidegger: Sophist and Philosopher." In *Sophistes: Plato's Dialogue and Heidegger's Lectures in Marburg (1924-25)*, edited by De Brasi, Diego and Fuchs,

Marko J., 61-74. Newcastle upon Tyne, UK: Cambridge Scholars Publishing.

"Heidegger's Lectures on Plato's Sophist are a long and complex affair. In their opening section, entitled "Preliminary Considerations", Heidegger claims that a double preparation is required for an interpretation of Plato's late dialogues: one philosophical-phenomenological, the other historiographical-hermeneutical." (p. 61)

(...)

"Usually, scholars go "from Socrates and the Presocratics to Plato"; Heidegger, however, will go from "Aristotle back to Plato" (11). Why? Because "what Aristotle said is what Plato placed at his disposal, only it is said more radically and developed more scientifically" (11-12)." (p. 62)

(...)

"So, we know how to grasp in the right way the past we encounter in Plato: through Aristotle. But how are we to grasp in the right way the past we encounter in Aristotle? In other words, if Aristotle is going to be the guiding line for our interpretation of Plato, what will be our guiding line for the interpretation of Aristotle? Who said more radically, and developed more scientifically, what Aristotle placed at our disposal? Nobody, Heidegger claims. Aristotle "was not followed by anyone greater", so "we are forced to leap into his own philosophical work in order to gain an orientation" (12), or guiding line. In what follows I shall argue that Heidegger's actual guiding line throughout the lectures was not Aristotle, but his own thinking at the time, which he brought to its fullest development in the fundamental ontology of Being and Time." (p. 62)

50. Peck, Arthur Leslie. 1952. "Plato and the ΜΕΤΙΣΤΑ ΓΕΝΗ of the Sophist. A Reinterpretation." *The Classical Quarterly* no. 2:32-56.

"It is important to recognize that the problem dealt with by Plato in the central part of the Sophist (232 b-264 d) is one which arises from the use of certain Greek phrases, and has no

necessary or direct connexion with metaphysics (although the solution of it which Plato offers has an important bearing on the defence of his own metaphysical theory against one particular kind of attack).

We tend to obscure this fact if we use English terms such as 'Being', 'Reality', 'Existence', etc., in discussing the dialogue, and indeed make it almost impossible to understand what Plato is trying to do. It is the way in which the Greek terms ὄν and μή ὄν and other such terms are used by the 'sophists' which gives rise to the problem." (32)

(...)

"It is not easy to suppose that Plato thought the business of the true philosopher, as described at Sophist 253 d-e, consisted in spending his time on such verbal futilities as saying that Rest is not Motion, Motion is the same as itself, Motion is other than Being, etc. (Indeed, even in the discussion in the Sophist, the Eleatic Visitor and Theaetetus require no 'high art' to see that Rest and Motion cannot 'mix'.) The difficulties caused by sophistic verbal conjuring must, of course, be overcome by the philosopher; but once they are overcome, the philosopher can go forward with his own proper work. It is indeed surprising that the view has ever been entertained that the business of the true philosopher, as described in Sophist 253 d-e, is illustrated by the argument about the μέγιστα γένη. The philosopher's work, as epitomized in the phrases κατα γένη διαιρεῖσθαι (253 d) and διακρίνειν κατα γένος ἐπίστασθαι (253 e), is surely much more closely represented by the making of 'Divisions', of which semi-serious examples are given in the earlier part of the dialogue, than by the discussion about the μέγιστα γένη. It is, of course, true that any such work of Division would be blocked at the outset so long as the τό μη ὄν ουκ ἔστιν objection held the field; but once that objection is cleared away the course is open for the true dialectical philosopher to proceed with his work." (p. 56)

51. ——. 1962. "Plato's "Sophist": The συμπλοκή τῶν εἰδῶν." *Phronesis. A Journal for Ancient Philosophy* no. 7:46-66.

In Plato's Sophist, at 259 E 4 ff., we read the following sentence:

τελεωτάτη πάντων λόγων ἐστὶ ν ἀφάνισις τοῦ διαλύειν ἕκαστον ἀποῦ πάντων: διαῦ γὰ ρ τηῦ ν ἀλλήλων τῶν εἰδῶν συμπλοκηῦ ν ὁ λόγος γέγονεν ἡμῖν [The complete separation of each thing from all is the utterly final obliteration of all discourse. For our power of discourse is derived from the interweaving of the classes or ideas with one another (translation added)].

A few pages later, at 263 A2 and 8, we find these examples of λόγος:

῾Θεαίτητος κάθηται, [Theaetetus sits] Θεαίτητος πέτεται [Theaetetus flies].

The difficulty which seems to present itself is that these examples of λόγος do not illustrate what is said in the second part of the sentence quoted." (p. 46)

(...)

"The amount of effort expended by Plato in combating the activities of 'sophists' and αντιλογικοὶ is itself an indication of the prevalence and (as he felt it) the danger to philosophy of the kind of talk which was in vogue. The danger of this attitude, as Plato saw it, was its superficiality, its undue preoccupation with words instead of realities."

(...)

"Plato's attack, then, is against those who confine their attention to terminology, who fail to consider whether their terminology is a correct representation of the facts, or who believe it is a reliable index to truth and reality - or think they can floor Plato by specious verbal manipulations.

It will, I believe, be found that μετέχειν and all the various verbs and nouns used to denote 'combining' and 'mixing' in the Sophist imply no more than that two terms can be used together in the same sentence without self-contradiction." (p. 66)

Bibliography

1. Pelletier, Francis Jeffrey. 1975. "'Incompatibility' in Plato's *Sophist*." *Dialogue: Canadian Philosophical Review* no. 14:143-146.

"I want to consider a much-disputed reading of a certain critical area of Plato's *Sophist*. It is widely agreed by most commentators that in this text, between 255E and 259E there occurs a refutation of Parmenides' dictum that "one cannot say that which is not", and that this is followed by an application of the foregoing discussion to the problems of sentential falsity. (For a partial list of commentators, see bibliography.) It is also generally agreed that Plato uses the Form, The Different, for this purpose. What is not generally agreed upon is how Plato uses The Different." (p. 143)

2. ———. 1983. "Plato on Not-Being: Some Interpretations of the συμπλοκή εἶδον (259e) and Their Relation to Parmenides Problem." In *Midwest Studies in Philosophy VIII*, edited by French, Peter A., Uehling Jr., Theodore E. and Wettstein, Howard K., 35-65.

"We have witnessed," says Mourelatos (1979: p. 3), "in the 'sixties and 'seventies, in English language scholarship, that rarest of phenomena in the study of ancient philosophy, the emergence of a consensus." This interpretation is so agreed upon that "one may even speak of a standard Anglo-American interpretation of Parmenides." One of the presentations counted by Mourelatos as standard, indeed one of the paradigms, is that of Furth (1968). According to this interpretation, Parmenides' infamous ontological views follow as corollaries from his implicit views about language and meaning. I will briefly present this Parmenidean view about language, but I will not here try to justify the attribution (for these sorts of arguments see Furth, 1968; Mourelatos, 1979; and Pelletier, forthcoming [1990]).

In this paper, I am interested in the Platonic response to Parmenides, especially the response that occurs in the middle portion of the *Sophist* (249-265). Since I am going to evaluate this as a response to the "standard interpretation" of

Parmenides, it is clear that I owe a justification for my belief that Plato understood his opponent to be our "standard Parmenides." This issue, too, I will avoid here (further discussion can be found in Pelletier [1990], which discusses the "Parmenidean" arguments of Sophist 237-241, Theaetetus, 188-189, and Cratylus 429-430, with an eye toward showing that Plato was aware of these types of argument.)" (p. 35)

"It seems that one way to clarify the details of the interpretation of Parmenides is to investigate the symplokê eidôn of the Sophist. Unfortunately, Plato's position is also open to a variety of interpretations and cannot be convincingly elucidated in the absence of a precise account of what Parmenides' argument was. One, therefore, wishes to set up all the possible interpretations of Parmenides and all the interpretations of the symplokê eidôn and then to inspect these lists to discover which pairs of Parmenidean/Platonic interpretations mesh the best. This, it seems to me, would provide the best evidence possible that one had finally gotten both Plato and Parmenides right. I will not attempt that Herculean task. Rather, I will state one interpretation of Parmenides, Furth 's, and ask which of the many ways to understand Plato's position best accords with that interpretation of Parmenides. (p. 36)

4. Peramatzis, Michail. 2020. "Conceptions of Truth in Plato's Sophist." *Archiv für Geschichte der Philosophie* no. 102:333-378.

Abstract: "The paper seeks to specify how, according to Plato's Sophist, true statements achieve their being about objects and their saying that 'what is about such objects is'. Drawing on the 6th definition of the sophist, I argue for a normative-teleological conception of truth in which the best condition of our soul –in its making statements or having mental states– consists in its seeking to attain the telos of truth. Further, on the basis of Plato's discussion of original and image, his distinction between correct and incorrect image, and the 7th definition, I argue that achieving the telos of truth involves preserving the original's proportions and appropriate features. The view that Plato's conception of truth takes statements or mental states to be certain types of image is not ground-breaking. The important contribution of my argument is that it offers a plausible way to understand two recalcitrant claims made by Plato: first, that falsity obtains not only in the region of incorrect images (appearances) but also within correct images (likenesses); second, that some incorrect images are based on knowledge and so could be true."

5. Perl, Eric D. 2014. "The Motion of Intellect On the Neoplatonic Reading of Sophist 248e-249d." *The International Journal of the Platonic Tradition* no. 8:138-160.

Abstract: "This paper defends Plotinus' reading of Sophist 248e-249d as an expression of the togetherness or unity-induality of intellect and intelligible being. Throughout the dialogues Plato consistently presents knowledge as a togetherness of knower and known, expressing this through the myth of recollection and through metaphors of grasping, eating, and sexual union. He indicates that an intelligible paradigm is in the thought that apprehends it, and regularly regards the forms not as extrinsic "objects" but as the contents of living intelligence. A meticulous reading of Sophist 248e-

249d shows that the “motion” attributed to intelligible being is not temporal change but the activity of intellectual apprehension. Aristotle’s doctrines of knowledge as identity of intellect and the intelligible, and of divine intellect as thinking itself, are therefore in continuity with Plato, and Plotinus’ doctrine of intellect and being is continuous with both Plato and Aristotle.”

6. Petterson, Olof. 2018. "The Science of Philosophy: Discourse and Deception in Plato’s Sophist." *Epoché: A Journal for the History of Philosophy* no. 22:221-237.

Abstract: "At 252e1 to 253c9 in Plato’s Sophist, the Eleatic Visitor explains why philosophy is a science. Like the art of grammar, philosophical knowledge corresponds to a generic structure of discrete kinds and is acquired by systematic analysis of how these kinds intermingle. In the literature, the Visitor’s science is either understood as an expression of a mature and authentic platonic metaphysics, or as a sophisticated illusion staged to illustrate the seductive lure of sophistic deception. By showing how the Visitor’s account of the science of philosophy is just as comprehensive, phantasmatic and self-concealing as the art of sophistry identified at the dialogue’s outset, this paper argues in favor of the latter view. "

7. Philip, James Allenby. 1961. "Mimesis in the Sophistes of Plato." *Transactions and Proceedings of the American Philological Association* no. 92:453-468.

"If a generalized use of mimesis was current in Plato's time, it was current as an extension of a more specific use. We shall find in Plato instances of both the specific and the generalized use and instances in which, because Plato allowed them to co-exist, the meaning and connotations of the one overlap those of the other, and ambiguities arise. Already in the Republic these two senses of mimesis, the specific or dramatic sense and the generalized or metaphysical sense, are both present. They are exhibited again in the final division of the Sophistes as two classes related to one another as genus to species. When we have delimited the two senses in the Republic we will consider

their relation in the Sophistes and its implications." (pp. 453-454)

(...)

"We must then ask ourselves: What enables us to know? and by what process of knowing do we make ourselves like the object of our knowledge?

(...)

So we affirm that in the wide spectrum of meaning given to mimesis in the Platonic dialogues we can distinguish two principal senses: a restricted or dramatic sense of making oneself like another, and a wider sense describing the creative processes in all the productive crafts; and further that in the final division of the Sophistes we find the latter related to the former as genus to species." (p. 468)

8. ———. 1968. "False Statement in the Sophistes." Transactions and Proceedings of the American Philological Association no. 99:315-327.

"I shall limit myself to showing what are the moves he makes, and how he reaches the conclusion he does reach.

The question whether Plato's doctrine is tenable, in whole or in part, in terms of modern logic is beyond the scope of this study.

The discussion of false statement falls into five parts, each part corresponding to a move in the development of the thesis. It will be convenient to conduct our discussion conforming to these divisions:

1. 256D11-258C7: Not-being and its two kinds.
2. 258C7-260A1: Summing up against Parmenides.
3. 260A1-261C6: The problem of statement (logos).
4. 261C7-263A1: Basic doctrine of meaning and statement.
5. 263A1-263D5 : Test case : "Theaetetus flies" etc.

It must be remembered throughout that Plato is single-mindedly pursuing his purpose, which is to show that false

statement as τὸ μὴ ὄν λέγειν is possible; and further that this phrase means: (a) in the Parmenidean sense, (if anything) nothing relevant to our inquiry, (b) in a modified sense, to say what is not as what is other than (or different from) X, and (c) to make a false statement. This last sense is for Plato's purpose the important one. He will use it to differentiate between the activities of the sophist and the philosopher, and to justify his relegating the sophist to the class of purveyors of false statement.

It must also be remembered that, here as elsewhere, Plato for all his frequent prolixity excludes from his argument what he does not consider essential to it. In the present instance he attempts no general logical doctrine." (pp. 315-316)

9. ———. 1968. "The apographa of Plato's Sophistes." *Phoenix* no. 22:289-298.

Since Burnet's edition of Plato it has been recognized that B, T, and W are primary sources for the first half of the Platonic corpus, and for most of those dialogues, including the Sophistes, the only primary sources. (In the Budé Sophistes, edited by Diès, Y is cited in the apparatus as a primary source; though this has been shown to be the case for other parts of Y it is not the case for the Sophistes, as will appear below.) All other manuscripts are conceded to be apographa of these, and their mutual relations have been in part explored. They have not been examined systematically, on the basis of collations, to discover precisely how they depend on one another and whether any of the manuscripts other than the principal three can be primary sources for our tradition in whole or in part." (p. 289)

Codices referred to by sigla are as follows: B = Clarkianus 39 of the Bodleian Library, Oxford; T = Ven.app.cl. 4.1 (542 in the new numbering of Mioni's catalogue) of the Marciana Library, Venice; W = Vind.sup.phil.gr.7, Oesterreichische Nationalbibliothek, Vienna; Y = Vind.phil.gr.21, Oesterreichische Nationalbibliothek, Vienna. All other codices are referred to by the abbreviation of their library designations; a list is given in Post [L. A. Post, *The Vatican Plato and its*

Relations (Middletown 1934)]; I shall discuss the primary source manuscripts, B, T, and W, in a separate study.

10. ———. 1969. "The Megista Gene of the Sophistes." Phoenix no. 23:89-103.

"Five common concepts or megista gene -- being, identity, difference, motion and rest-play a key role in the Sophistes.(1) They are not an innovation. Allusion is made to them, and to similar concepts, in earlier dialogues. Already in the Phaedo (103E-105C) certain ideas having a mathematical character-equality, oddness, evenness-are recognized not as a special category but as functioning in special ways and having peculiar problems. It is in the Parmenides that we first encounter them as a grouping.(2) There Parmenides introduces them as similar ideas specially suited to the training of neophytes in dialectic. The ideas mentioned are (136A-B): unity/plurality, similarity/dissimilarity, motion/rest, being/non-being, coming-to-be/passing away. To these are later added identity/difference (139B) and equality/inequality (140B)." (pp. 89-90, note 1 partly omitted)

(...)

"Let us now turn to the Sophistes. If we are to understand the role of the megista gene we must observe how and in what context they are introduced. The critical issue of the whole dialogue is approached by an episode to which Plato has given the name Gigantomachia, or Battle of the Giants. In this episode idealists and empiricists are pitted against one another in bitter conflict. Their ideological quarrel is about οὐσία.

The giants maintain that only what has physical body and is perceptible to touch or contact may be said to be real, or to exist. The idealists maintain that the only genuine reality/substance is to be found in incorporeal, intelligible kinds or ideas, physical body being merely genesis or change and process.

In the thesis of the idealists we have in its most uncompromising form Plato's chorismos of intelligibles and sensibles. But we find Plato not, as we might expect,

championing the cause of the Friends of the Ideas, as he calls his idealists. Instead he attempts to mediate. Let us observe how he does so, remembering always that he develops only such aspects of his metaphysical assumptions as seems to him necessary for the theme he is treating." (p. 92)

(1) I use for *megista gene* "common concepts." That equivalent is suggested by *Tht.* 185c 4, and Ryle has pointed out in *Studies in Plato's Metaphysics*, ed. R. E. Allen (London 1965) 146 that it is used also by Aristotle. So it may have had some currency in the Academy. To translate by "greatest," "highest," "very important," is to suggest that they occupy a place in some hierarchy of concepts or ideas, whereas their importance derives from the fact that they are topic-neutral and of almost universal application. Their logical importance has been pointed out by Ryle, *loc. cit.*, and in *New Essays on Plato and Aristotle*, ed. R. Bambrough (London 1965) 64-65. My debt to those discussions will be obvious.

(2) By "first" I mean first in the order Plato assigned to the dialogues -- *Parmenides*, *Theaetetus*, *Sophistes*, *Politicus*. I shall treat the *Timaeus* as subsequent to these. I shall not attempt to discuss again the actual date of writing of any dialogue or part of a dialogue. Relative dating does not affect my thesis here. It ceases to be of major importance if we accept even in part the Krämer/Gaiser theory of *agrapha dogmata*.

11. Pippin, Robert B. 1979. "Negation and Not-Being in Wittgenstein's *Tractatus* and Plato's *Sophist*." *Kant Studien* no. 70:179-196.

"The origins of our contemporary fascination with language are, of course, quite complex and go to the very heart of that persistent twentieth-century attempt to see philosophy as a "critique of language". But, in investigating those origins, it does no one an injustice to insist upon the importance of Ludwig Wittgenstein and especially his little book, the *Tractatus Logico-Philosophicus*, in bringing the issue to the prominence it enjoys today."

(...)

"In fact, [Wittgenstein] seems to return quite explicitly to Plato's account of language as an eidolon in a dialogue like the Sophist. In a certain sense, one could claim that the central problem of dialogues like the Theaetetus and the Sophist was Wittgenstein's major concern in his early work."

(...)

"Further, in the opinion of some commentators, the Eleatic Stranger and Wittgenstein not only begin with very similar problems, they seem to arrive at very similar solutions.

The picture theory's representational model of language's relation to the world, the ontology taken by some to be supported by the picture theory (Wittgenstein's infamous "simples"), the doctrines of logical space and the "form" of objects, and perhaps more than any other issue, Wittgenstein's "derivative" explanation of negation (the claim that any not-X depends on X for its intension and the claim that it has no negative extension, that there are no negative facts), all count as evidence for Platonic shadows stretching across the Tractatus. This seems especially true when we consider that Wittgenstein regarded as a major consequence of the picture theory its ability to account for meaningful, false propositions, that it could explain how "Thought can be of what is not the case".

Plato's discussion of images is clearly and directly concerned with much the same problem in "capturing" the elusive sophist.

In the following, I will consider two such comparable issues—the general theory of language involved in both accounts, and their specific solution to the problem of negation and false propositions. What I hope to accomplish by this contrast is to illuminate two very different kinds of analyses appropriate to the topic of "not-being", differences one could roughly characterize as "semantic" versus "ontological". Further, this difference in orientation and in emphasis will involve differences within each mode; specifically it will involve a "picture" versus an "image" theory of language, and atomistic versus nonatomistic ontologies." (pp. 179-180, notes omitted)

12. Pirocacos, Elly. 1998. False Belief and the Meno Paradox. Aldershot: Ashgate.

Abstract: "The Sophist is a dialogue that may be addressed as a sequel to the Theaetetus. It also finds Socrates suspended of his capacity as director of inquiry, and replaced by an Eleatic Stranger. The difficulty of the task is located in the form of refutative argumentation adopted by each, and therefore involves the evaluation of the justifying epistemological systems supporting each. The stage setting of the Sophist is even more involved than the three phased report of the dialogue in the Theaetetus. The philosophical persuasion of the Stranger deserves special attention, especially given that he has been assigned the role to designate the criteria of philosophical inquiry by way of establishing the true relations between the tripartite subjects of inquiry. Both Theaetetus and the Eleatic Stranger are agreed that being and not-being are equally puzzling terms; but Theaetetus seems to have understood the objective of the present dialogue in a slightly different way."

13. Pitteloud, Luca. 2014. "Is the Sensible an Illusion? The Revisited Ontology of the Sophist." *Aufklärung* no. 1:33-57.

"I want to argue in this paper that, in the Sophist, behind the discussion about the nature of non-being, Plato provides the reader some elements about a revision of his ontology. First, the analysis of the notion of image gives some indications concerning the nature of the sensible, which is usually described as an image of the intelligible (Republic 509a9 and 509e1-2, Timaeus 52c).

Second, since the dialogue seems to assume that not only Forms are part of the realm of being, but what is in motion too, it will appear that sensible objects must somehow belong to being. The focus of this paper is the revision of the nature of the sensible." (p. 33)

(...)

"Conclusion: A new realm of being

The Friends of the Forms have to admit that Forms are acted upon but not that they change. In this way, they could easily defend the idea that for a Form, to be known, does not imply any alteration or change. Nevertheless, they seem to accept another different thesis, namely that some objects that are in motion belong to the realm of being. The Eleatic Stranger asks the question of the pantelôs on (248e7): this does not refer to what is really being (ontôs on), but to the total family of being. To this realm of being belong motion (κίνησις), life (ψυχὴν) and intelligence (φρόνησιν). In this way, the Sophist does not only assert that an image cannot be reduced to non-being, but also that what is in motion is part of the realm of being. Those two elements seem to plead for a reevaluation of the nature of the sensible, which has to be part of the set of being. We face an ontology with two degrees of being: the intelligible and its image, namely the sensible. The sensible is not reducible to an illusion or to falsehood (and nothingness), but is somehow a being. As the Timaeus will explain it, it is the image of the intelligible appearing into a milieu (the Receptacle), which guaranties to it some degree of existence (Timaeus, 52b3-d1)." (pp. 52.53)

14. Planinc, Zdravko. 2015. "Socrates and the Cyclops: Plato's Critique of 'Platonism' in the Sophist and Statesman." Proceedings of the Boston Area Colloquium in Ancient Philosophy no. 31:159-217.

Abstract: "The Eleatic Stranger plays a central role in all reconstructions of Plato's "Platonism."

This paper is a study of the literary form of the Sophist and Statesman and its significance for interpreting the Eleatic's account of the nature of philosophy. I argue that the Eleatic dialogues are best understood through a comparison with the source-texts in the Odyssey that Plato used in their composition. I show that the literary form of the Sophist is a straightforward reworking of the encounter of Odysseus and his crewmen with Polyphemus the Cyclops; and that the form of the Statesman is a somewhat more complex reworking of the narrative in which Odysseus and those loyal to him oppose Antinoös, leader of the Ithacan suitors. The comparison reveals

that the Eleatic Stranger is no way Plato's spokesman. On the contrary: by casting the Stranger in the role of Polyphemus and the Cyclopean Antinoös, Plato intends the Sophist and Statesman to be read as an explicit critique of the metaphysical and political doctrines that have since come to be identified as Platonism. In Plato's characterization, the Eleatic Stranger is neither a philosopher nor a sophist. He is an intellectual—the sort of person who professes to be a philosopher and is often mistaken for one."

15. Politis, Vasilis. 2006. "The Argument for the Reality of Change and Changelessness in Plato's Sophist (248e7-249d5)." In *New Essays on Plato: Language and Thought in Fourth-Century Greek Philosophy*, edited by Herrmann, Fritz-Gregor, 149-175. Swansea: The Classical Press of Wales.

"Plato's metaphysics, from beginning to end, is tiered rather than tier-less.(1) This is because Plato's general account of reality is characterized by a fundamental distinction between certain things, especially the changeless forms, which he argues are perfect beings,(2) and certain other things, the changing objects of sense-perception, which he argues are something, as opposed to being nothing at all, only in virtue of being appropriately related to and dependent on those perfect beings. (3) However, in a dialogue addressed to the very question, 'What is there?' – and to the related question, 'What is being?' – he defends an answer which, so it appears, makes no reference to two tiers of reality and indicates rather a tier-insensitive ontology. This is the argument in the Sophist (248e7–249d5) which, together with the arguments that precede it in the dialogue, is summed up in the conclusion that any changing thing (κινούμενον), and likewise any changeless thing (ἀκίνητον, στάσιμον), is something that is.(4) There can be no doubt that this conclusion is about any changing thing and any changeless thing, and there is no suggestion, moreover, that the things referred to must occupy one or the other of two tiers of reality.

Following Julius Moravcsik and Gwil Owen, Lesley Brown has recently defended a tier-insensitive interpretation of this argument, such that the 'upshot is an all-inclusive ontology'.(5)

On the other hand, a number of critics, including David Ross, Harold Cherniss, and Michael Frede, have defended a tiered interpretation.(6) It seems to me, however, that the choice between these two interpretations – which evidently is of central importance for the understanding of Plato – has not been properly characterized, much less settled. My aim in this paper is to show, first, that the choice between these two fundamentally different and opposed interpretations of this argument, the tier-insensitive and the tiered interpretation, depends on how we read the single phrase, τοῦ παντελῶς ὄν, at 248e8–249a1; and second, that the correct reading of this phrase commits us to a tiered interpretation beyond reasonable doubt, and that Plato’s formulation of the conclusion (249c10–d4), which sums up both this and the previous arguments in the dialogue, does not state a commitment to a tier-insensitive ontology." (pp. 149-150)

(1) See for example Phaedo 74 (esp. 74d5–8), 78–9 (esp. 79a6–7), 100b1–e7; Republic 475e9 ff.; Symposium 210e6–211b5; Timaeus 27d6–28a4, 51d3–52a7 (I am assuming that the Timaeus is a late dialogue); Philebus 58e4–59a9, 61d10–e3.

(2) παντελῶς ὄντα (Republic 477a3 and Sophist 248e8–249a1; see below). Also εἰλικρινῶς ὄντα (e.g. Republic 477a7, 478d6), ἀληθινῆ οὐσία (e.g. Sophist 246b8), ὄντως ὄν / οὐσία (e.g. Timaeus 28a3–4, 52c5 and Sophist 248a11), and sometimes simply οὐσία (e.g. Phaedo 78d1 and Sophist 246c2). Plato’s terminology is not fixed, indeed reconciling, or otherwise, his terms is an inquiry of long standing.

(3) i.e. the relation of one-way dependence which Plato sometimes refers to as ‘participation’ and ‘communion’ (μέθεξις, κοινωνία).

(4) The conclusion is stated at 249c10–d4. It is important to observe (as we will see in section 6) that this conclusion sums up not only the immediately preceding argument (248e7–249c9), i.e. the argument against the friends of the forms (which is our present concern), but also the earlier argument

against the materialists (246e5–247c8, which is not our main concern at present).

(5) Brown 1998, 204. Moravcsik (1962, 31 and 35–41) argues that Plato defends an ‘all-inclusive’ and ‘tier-insensitive’ answer to the question ‘What exists?’ So too Owen 1986b [originally 1966], 41–4 [336–40]. A tier-insensitive interpretation is also defended by Teloh 1981, 194–5 and Bordt 1991, 514, 520, 528.

(6) see Ross 1951, 110–11; Cherniss 1965, 352; Frank 1986; Frede, 1996, 196; and Silverman 2002.

16. Prior, William J. 1980. "Plato's Analysis of Being and Not-Being in the Sophist." *Southern Journal of Philosophy* no. 18:199-211.

"In this paper I offer an account of Plato's analysis of Being and Not-Being in the Sophist. This account differs from those current in several important respects. First, although I take it that Plato distinguishes in the Sophist among existential statements, statements that are predicative in grammatical structure, and statements of identity, I do not believe that he distinguishes corresponding senses or uses of the verb "to be." Second, I do not take Plato's analysis to be linguistic or logical in nature, but rather metaphysical or ontological. In my view, the Greek verb "esti" is analyzed in terms of a metaphysical theory, the Theory of Forms, and specifically in terms of the metaphysical concept of participation. This indicates a third difference between my view and that of commentators who believe that Plato's late dialogues show a trend away from transcendent metaphysics and toward a more neutral sort of conceptual analysis. As I shall hold that the genuine conceptual breakthrough of the Sophist is made with metaphysical apparatus not much changed from the *Phaedo*, I deny that this passage, at least, can be taken as evidence for such a trend.

The passage in which Plato makes his analysis is *Soph.* 251a-257c. I shall examine briefly the entire passage, but concentrate on 255e-256e, from which I draw the bulk of the material for my account." (p. 199)

"The above observations suggest that only by situating the arc of the Sophist between the Theaetetus and Statesman does the larger significance of its issues emerge. Obvious though this may sound, scholars who treat the Sophist's place in the trilogy as a whole don't approach it from the perspective of Socrates' failure to define false opinion in the Theaetetus. As we have seen, Plato presents the Stranger's inquiry into being and non-being as a response to Socrates' shortcomings in the Theaetetus; and, as I hope to show, his response anticipates the specific inquiry taken up in the Statesman. Toward this end, I will walk the arc of the Sophist's argument from the Theaetetus to the Statesman as follows. First, I will consider how the initial definitions of the sophist frame the dialogue's famous digression on images, being, and non-being (Section II). I will then consider how this frame necessitates the distinction of 'spoken images' (εἶδωλα λεγόμενα) into φαντάσματα and εἰκόνες, i.e. those that respectively distort and preserve the proportions of the beings, the very distinction that eventually allows the Stranger to distinguish between true and false opinions (Section III).

Thereafter, I will discuss how this distinction in spoken images necessitates the acquisition of a 'dialectical science' (διαλεκτική ἐπιστήμη), which very acquisition appears intractably problematic (Section IV). I will then conclude with some general reflections on the stance of the dialogue as a whole, the possibility of defining false opinion, and how the interpretation advanced informs the search for the statesman in the Statesman (Section V). My basic aim throughout will be to show that, in so situating the Sophist between its prequel Theaetetus and sequel Statesman, we come to see the place of the philosopher in Plato's Sophist." (pp. 7-8, noted omitted)

19. Przelecki, Marian. 1981. "On What there Is Not." *Dialectics and Humanism* no. 8:123-129.

"It is my contention (which I shall try to defend in what follows) that the text of the dialogue contains thoughts and ideas that closely correspond to those characteristic of modern logical semantics. The difficulties which Plato is coping with and the solutions proposed by him find their explicit counterparts in the discussions of contemporary logicians and semanticists.

This statement, however, needs some qualification. The text of the dialogue is comprehensive and indefinite enough to allow for different readings and interpretations. It is only some interpretation of some of its fragments that may be said to yield that version of its problems which is suggested below. I would, however, contend that the interpretation advanced is a warranted one and the fragments so interpreted essential for the author's standpoint. One more point should be explicitly stated beforehand. Referring to what I call modern logical semantics, I mean by this a definite semantic theory: model theoretic semantics in its standard version, which might be regarded as a "classical" form of contemporary logical semantics. Some deviations from this use will be indicated in what follows.

The most important philosophical content of the dialogue is contained in its second part (esp. in the paragraphs 237-264). The main problem concerns the semantic characteristic of falsehood and, involved in it, notion of not-being." (p. 123)

20. Quandahl, Ellen. 1989. "What is Plato? Inference and Allusion in Plato's Sophist." *Rhetoric Review* no. 7:338-348.

"In this essay I will suggest that when rhetoricians consider the Sophist, they will find the opposition of Plato to Sophists disturbed. My argument is not particularly new; for several decades scholars like E. A. Havelock, Mario Untersteiner, and G. B. Kerferd have been reevaluating, and indeed revaluing, Sophistic thought, and noticing similarities, rather than contradictions, between the Sophists and Plato's Socrates. And yet I think that for many rhetoricians "Plato" means Phaedrus, Gorgias and perhaps portions of the Republic and Symposium, dialogues that are all striking in their "literary" qualities and in

their discussion of the "Forms," Plato's version of the "foundations" around which the recurrent foundational/antifoundational debate centers. But the Sophist, rather than disproving sophistic relativism, provides philosophical underpinnings for the view that meaning is contextual and not absolute. At the level of inference—and the Sophist has often been seen as prototypically "logical"—we see in this dialogue how logical categories are in fact metaphorical. And if we read it with "literary" or "rhetorical" eyes, although it lacks the "poetic" quality of other dialogues, we find an extended illustration of ways in which words are allusive, replete with covert histories which, fully as much as "logical" inference, contribute to conclusions." (pp. 338-339)

(...)

"Whether Plato abandoned the theory of Forms or loyalty to his character Socrates in the late dialogues is not, at last, my concern. Rather, I want to question ways in which Plato has been appropriated and summarized, and the tradition in which the Plato of rhetoricians did not write the same texts as did the Plato of, say, logicians or ethicists. When rhetoricians add the Sophist to their Plato, Plato is no longer "Platonic," but a writer whose text acknowledges, both theoretically and by example, the power of contextual and contingent elements in rhetoric." (p. 347)

21. Ray, A. Chadwick. 1984. *For Images. An Interpretation of Plato's Sophist*. Lanham: University Press of America.

"Our dialogue is apparently an inquiry into the nature of the sophist. Theaetetus and Theodorus have kept their appointment with Socrates from the day before, when the Theaetetus is supposed to have transpired, (1) and after which Socrates was to go to the portico of the King Archon to meet the indictment of Meletus against him. (Theaet. 210d) Socrates, the lover of wisdom, has been indicted by Meletus on charges of "criminal meddling," inquiring into natural phenomena, making the weaker argument defeat the stronger, (Apol. 19b-c) and embracing atheism (Apol. 26c). The philosopher seems to have been mistaken in the popular mind for a sophist. His

defense, the Apology, may be read largely as an attempt, adumbrated from the first sentence, to distinguish between appearance and reality; Socrates is not what his accusers make him appear to be. After Socrates has met the King Archon, it should not be surprising in the dramatic context if he shows a keen interest in the difference between the Philosopher and the Sophist. Thus the nature of the Sophist is to be today's topic.

A further reason for Socrates to bring the discussion to the nature of the Sophist is that Theodorus and Theaetetus have brought with them a guest from Elea, a student of the school of Parmenides and Zeno. Briefly, the "Eleatic School", as will become clearer, affirms the reality of being and denies the reality of any non-being, the upshot being (so the Stranger will suggest) that there could be no such thing as mere appearance or any falsehood, such as might seem to be real without being so. If the Apology presents a personal defense against false images propagated about Socrates, the Sophist can be seen in large part as a philosophical defense of the logical possibility of images at all. In fact, this will be the perspective of the present interpretation. As Socrates at the end of his life must give an account of himself to answer his critics, so perhaps must Plato toward the end of his career answer some of his most astute critics.

The concept of an image is central to Plato's metaphysics because he explains how many things may be called by one name by appeal to that concept. Where a number of individuals are all called F, this is possible because of F-ness itself, a Form which is different from the individuals but of which these are called images. The Form is said to make the many things F (Phaedo 100d) as these come to mirror that Form, to resemble it to one degree or another. The relationship of "the many" to the Form, which accounts for their somehow having its character, is called participation or sharing, but the nature of this relationship is somewhat problematic. Plato's diffidence on the subject is evident in the middle dialogues both in his refusal to let any explanatory terms harden into technical vocabulary and from his own explicit tentativeness, as Socrates expresses it at Phaedo 100d. That the uncertainty remains in Plato's later

thought, including the Sophist, will be evident in the present discussion. But the reality of images cannot be open to question.

Now Plato in the Sophist will identify certain Eleatically inspired challenges to his theory of participation and images, challenges which he will be able to answer in part from the resources of his own "classical theory" as developed in middle dialogues like the Phaedo and the Republic. To the extent that those resources are sufficient, the Sophist is essentially a "conservative" dialogue upholding the adequacy of the classical theory to handle particular objections. On the other hand, new developments in Plato's thought are apparent in the dialogue, (the upgraded status of sensible objects, for instance), developments for which Plato probably would have found no need had he not taken seriously the problems of deceptive appearance and falsehood." (pp. 1-2)

(1) Clearly Plato is using these details as a literary device. The historical Socrates never addressed the issues treated here.

22. Reagan, James T. 1965. "Being and nonbeing in Plato's Sophist." *The Modern Schoolman* no. 42:305-314.

"I take it that the principal problem of the dialogue concerns the ontological status of the Forms, or true being: to discern a real differentiated plurality in being which will at once ground a true dialectic or science and repudiate the false dialectic of the Sophist. Plato is wholly lacking in any conception of what will later be called metaphysical analogy, which might permit an essentially differentiated plurality of being. The famous Hypotheses of the latter part of the Parmenides have established the controlling limits within which Plato must solve the problem of the metaphysical status of the Forms. In fact, he concludes to a plurality which is differentiated not in terms of essence but in terms of relations which remain outside the essence of the Forms. This in turn will require that he posit a new metaphysical factor, relative nonbeing. Finally, he will accept as the epitome of science or true knowledge the true but nonessential dialectic which this view of being will support." (p. 305)

23. Reeve, C. D. C. . 1985. "Motion, Rest, and Dialectic in the Sophist." *Archiv für Geschichte der Philosophie* no. 67:47-64.

"If discourse is to be possible at all, some Kinds (γενε) (1) must blend (μετέχειν) with one another (251d5ff.).(2) To follow the 'late learners' (251b5-6) in refusing to allow one thing to share in another is 'to make short work of all theories' (252a5-6). But nor can it be that all Kinds blend (252d2ff.), otherwise Motion itself would rest, and Rest itself would move, and both are impossible (252d6-11).(3) We need some science then 'to be our guide on the voyage of discourse' (253d10) and to tell us 'which Kinds are consonant, which incompatible' (253b10-c1). The science in question is dialectic (253d1-3).

My present topic is one rather stormy section of that voyage, namely the Eleatic Stranger's dialectical remarks about Rest and Motion and their proper interpretation. However what I have to say bears directly on the larger issues of Dialectic and the Theory of Forms." (p. 47)

(...)

Conclusion

If the foregoing discussion is cogent, the Sophist contains a cleverly constructed trap, and many of the Eleatic Stranger's remarks about Rest and Motion cozen us into it. If we take his bait, and fail to learn the lessons he teaches us in his discussion of Not-being, the Sophist presents us with paradoxes and contradictions of the sort I have been addressing. These lead us to believe that Plato was himself confused and urge us to import solutions from elsewhere. (49) If, on the other hand, we detect the trap, and learn the lesson the Stranger has to teach, we solve his puzzles about Being and being known, and the paradoxes and contradictions disappear.

Of course no analytic philosopher would play tricks of this sort - we like our philosophy transparent not tricky. Thus we tend to mistrust, often rightly, readings of the great philosophers which exhibit them as other than plain. We all know, of course, that Plato was a great literary artist and a great teacher as well as a great thinker. And we know that art is artful and that teachers

often leave dangling puzzles to test their pupils' acumen. But we often read Plato as if his art and pedagogical purposes were extraneous to his thought. The result is that we often get the thought wrong." (p. 62)

(1) 1 The Eleatic Stranger calls the five *μεγιστα γενε*, Being, Rest, Motion, Identity, and Difference, both *γενε* (254d4) and *ειδε* (255c5). He applies both appellations to *λόγος* and *δόξα* (260a5, 260d7-8). At 255c12-d7 *το` καθ' αὐτό ανδ το` προς άλλο αρε ψαλλεδ ειδε*. 'The question is thus unavoidably raised, Are all of these to be reckoned as Platonic Forms?', Peck (1962: 62). To postpone it for treatment on another occasion I adopt the following convention: I call all the items referred to either as *γενε* or as *ειδε* 'Kinds', and I leave open the question of whether or not Kinds are Forms.

(2) 2 Line references are to Burnet (1900). References are fully explained in the Bibliography.

(3) I have followed Vlastos (1970: 272n5) in using 'Motion' and 'Rest' as dummies for the Greek words *κινεσις* and *στασις* (and their cognates). I remind you that *κινεσις* covers all kinds of variation and that *στασις* stands for invariance in its most general sense.

24. Rickless, Samuel C. 2010. "Plato's Definition(s) of Sophistry." *Ancient Philosophy* no. 30:289-298.

Abstract: "Plato's Sophist is puzzling inasmuch as it presents us with seven completely different definitions of sophistry. Though not all seven definitions could be accurate, Plato never explicitly indicates which of the definitions is mistaken. Recently, Kenneth Sayre and Mary Louise Gill have proposed a

clever solution to this puzzle. In this paper I explain why the Sayre-Gill solution is mistaken, and suggest a better solution."

"There is something about the Sophist that has always bothered me. Why are there so many definitions of sophistry in the dialogue? Here is the problem: either all the definitions are right, or all of them are wrong, or some of them are right and some of them are wrong. But it can't be that all the definitions are right, because, after all, they are all different.

(...)

In this paper, I want to consider one influential answer to what we might call "the puzzle of the many definitions", criticize it, and then provide an answer of my own. The answer I am going to criticize appears most clearly in the work of Kenneth Sayre, and also perhaps in the work of Mary Louise Gill. It is, I think, a very clever and compelling answer, but, as I will argue, it is mistaken." (p. 289)

25. Rijk, Lambertus Marie de. 1981. "On Ancient and Mediaeval Semantics and Metaphysics. Part V. Plato's Semantics in His Critical Period (Second part)." *Vivarium* no. 19:81-125.

"In concluding the previous section I argued (1980: nr. 4.9, p. 62) that Aristotle's *Categories* may be viewed as dealing with the several ways in which an individual man can be named without destroying his concrete unity. A well-known passage of Plato's *Sophist* (251 A 8ff.) was referred to in which Plato deals with the puzzle of one man with many names. It is true, Plato labels the puzzle as just 'a magnificent entertainment for the young and the late-learners' (251 B), and is more interested in the related question of how 'things' like Rest and Change (presently called Kinds) can also have several attributes (attributive names) and the general problem of attribution as

implying the 'Communion' of Kinds. But it is obvious at the same time that in this shape too the puzzle is mainly concerned with the notions of naming, asserting and predication. So Plato's Sophist unavoidably has to be part of our discussion. A further argument for taking the Sophist into consideration may be found in Ammonios' commentary to Aristotle's *De interpretatione*. He remarks {ad 17 a 26ff. : Comm. in Aristot. graeca IV 5, p. 83, 8-13, ed. Busse) that the analysis of the apophantikos logos as given by Aristotle is to be found scattered all over Plato's Sophist (261 Cff.) right after that master's excellent expositions about Non-being mixed with Being (*peri tou synkekramenou toi onti mê ontos*). For that matter, on more than one item of Aristotle's *Categories* and *De interpretatione* the Ancient commentators refer to related questions and discussions in Plato's later dialogues, especially the Sophist. I hope to show in sections (5) and (6) that the views found in the *Categories* and *De interpretatione* are most profitably compared with what Plato argues in the related discussions of the Sophist." "5. 8 Conclusion. From our analysis of Soph., 216 A-259 D it may be concluded that Plato did certainly not abandon his theory of Forms. We may try to answer, now, the main questions scholarship is so sharply divided about (see Guthrie [*A History of Greek Philosophy*] V, 143ff.). They are, in Guthrie's formulation: (1) does Plato mean to attribute Change to the Forms themselves, or simply to enlarge the realm of Being to include life and intelligence which are not Forms?, and (2) is he going even further in dissent from the friends of Forms and admitting what they called Becoming --changing and perishable objects of the physical world -- as part of the realm of True Being?

The first question should be answered in the negative. Indeed, Plato is defending a certain Communion of Forms, but this regards their immanent status and, accordingly, the physical world primarily, rather than the 'Forms themselves' (or: 'in their exalted status' as Guthrie has it, p. 159). As to the second question, to Guthrie's mind Plato's language makes it almost if not quite insoluble. I think that if one pays Plato's expositions the patient attention he asks for 'at 259 C-D and follows his analysis stage by stage, the exact sense and the precise respect in which he makes his statements (cf. 259 D 1-2: *ekeinêi kai kat' ekeino ho physi*) about Being and Not-being, Sameness and Otherness, and so on will appear. It will be easily seen, then, that there is no recantation at all in Plato's development. He still maintains, as he will maintain in his later works (e.g. *Philebus*, 14 D ff.) the Transcendent Forms as what in the last analysis are the only True Being. But Plato succeeds in giving a fuller sense to the old notions of 'sharing' and 'presence in' without detracting the 'paradigm' function of the Forms in any respect. Matter, Change and Becoming is given a better position in the Theory of Forms in that their immanent status has been brought into the focus of Plato's interest. From his *Parmenides* onwards Plato has been searching for the solution of his metaphysical problems and has actually found it in the *Sophist* in a new view of participation. Forms in their exalted status are just a too eminent cause for the existence of the world of Becoming. But their being shared in, i.e. their immanent status, make them so to speak 'operable' and yet preserve their dignity of being paradigmatic standards. What makes something to be a horse is, no doubt, the Transcendent Form, HORSENESS, but it only can partake of that Form and possess it as an immanent form. So the Highness of the Form and the unworthy matter can come together as matter 'informed', that is, affected by an immanent form.

Plato never was unfaithful to his original view about Forms as the only True Being. In our dialogue, too, he brings the eminence of True Being (taken, of course, as a Transcendent Form) into relief by saying (254 A) that the true philosopher, through his devotion to the Form, 'What is' ('Being'), dwells in

the brightness of the divine, and the task of Dialectic, accordingly, is described from that very perspective (see Part (5), 96ff.). Focussing on the immanence of the Forms does not detract anything from their 'exalted status', since immanent forms are nothing else but the Transcendent Forms as partaken of by particulars.

(...)

In his critical period Plato never ceased to believe in the Transcendent World. The important development occurring there consists in his taking more seriously than before their presence in matter and their activities as immanent forms. In the Sophist he uses all his ingenuity to show that a correct understanding of the Forms may safeguard us from all extremist views on being and not-being and zealous exaggerations of the Friends of Forms as well." (pp. 125-127)

"The way in which Plato announces (Sophist, 249C-D) his novel metaphysics has been puzzling modern scholars for a long time: 'What is and the All consist of what is changeless and what is in change, both together'. Did Plato really introduce Change into the Transcendent World and thus abandon his theory of Unchangeable Forms?

Many of Plato's commentators have claimed that the use of modern techniques of logico-semantic analysis can be a valuable aid in unraveling this problem and other difficulties Plato raised and attempted to solve. However, not all modern distinctions and tools can be applied without reservation; for many of these are entirely alien to Plato's thought. Interpreters of Plato must also resist the temptation of applying methods as disjointing the dialogue and selecting specific passages only, in their eagerness to prove that Plato was explicitly interested in (their own favourite) problems of 'identity and predication' (not to mention such oddities as the 'self-predication of Forms'), or the distinctions between different senses (or applications) of 'is'.

The present author has tried to understand Plato by a close reading of the complete dialogue and to relate the doctrinal outcome of the Sophist to Plato's general development. Close reading Plato involves following him in his own logico-semantic approach to the metaphysical problems, an approach which shows his deep interest in the manifold ways to 'name' (or to 'introduce into the universe of discourse') 'what is' (or the 'things there are').

The reader may be sure that my indebtedness to other authors on this subject is far greater than it may appear from my text. Also many of those who have gone in quite different directions than mine have been of great importance to me in sharpening my own views and formulations. Two authors should be mentioned nominatim: Gerold Prauss and the late Richard Bluck; two scholars, whose invaluable works deserve far more attention than they have received so far.

I owe my translations of the Greek to predecessors. Where I have not followed them, my rendering is no doubt often

painfully (and perhaps barbariously) literal: I do not wish to incur the suspicion of trying to improve Plato by modernising him." (from the Preface)

28. Ringbom, Sixten. 1965. "Plato on Images." *Theoria* no. 31:86-109.

The purpose of the present paper is to discuss Plato's use of the concept of picture in three different contexts. First, his use of the picture as a metaphysical model; secondly, the picture-object relation as a semantic explanation; and, thirdly this same relation as an argument of value.

(...)

In his metaphysical model Plato regards the objects of our experience as pictures of the Ideas (1). But he also discusses the relationship between the visible things and the pictures of these things-for instance, the relation between a bed and a painting of a bed, or the name "bed".

(...)

The obvious procedure in approaching Plato's theory of pictures is to discuss each aspect in turn. But this must not mean that we isolate the three functions from each other; the purpose of the following discussion is, on the contrary, to show that Plato's line of thought in all three cases adheres to the same pattern, and that it is actually based on an analogy between the three aspects." (pp. 86-87)

(1) D. Ross, *Plato's Theory of Ideas*, Oxford 1953, p. 12 f.

29. Roberts, Jean. 1986. "The Problem about Being in the Sophist." *History of Philosophy Quarterly* no. 3:229-243.

Reprinted in: Nicholas D. Smith (ed.), *Plato. Critical Assessments, Vol. IV: Plato's Later Works*, London: Routledge 1998, pp. 142-157.

"It is by now a matter of firmly entrenched orthodoxy that Plato's discussion of being in the Sophist serves to distinguish different meanings or uses of "esti." This claim has taken different forms in different hands.

Nevertheless, almost everyone seems agreed that a large part of what Plato needs (and gets) in order to rescue negation and falsity from sophistic attacks is either a distinction between the existential "is" and one or more incomplete uses of "is," a distinction between the so-called "is" of identity and the copula, or some more subtle distinction between incomplete uses of the word which amounts to a distinction in kinds of predication.

I shall argue that what Plato says about being in the Sophist is in no useful way described as a distinguishing of different senses or uses of the word "is." (1) The Eleatic puzzles Plato is out to solve here are solved, in large part, by demonstrating that being is something distinct from any or all of the things that might normally be described as being." (p. 229)

(...)

"There is, moreover, reason for suspicion of any interpretation which reduces the discussions of being and not-being to discussions of positive and negative statement in general. The commentators have failed to notice how careful Plato is to separate questions about the nature of being and not-being and the bearing of alternative answers on the status of negative and false statement. When he first sets out the problem he begins by describing the Eleatic position on not-being (237b10-239a12) and then showing, in a separate argument (240c7-241b3), that this makes false statement and negative statement impossible. The pattern is repeated later. After he has shown that not-being is he goes on (260a5-264b8) to explain how statements in general are put together and how false statement is to be explicated. That the blending of not-being and logos is still taken as, at least in principle, an open question after the discussion of not-being is completed suggests that that discussion could not have been intended as an account of negative statement. Nor is there any reason to take the previous account of being as an account of positive statement. They are, just what they claim to be, and all that they need to be, purely metaphysical accounts of being and not-being." (p. 239)

(1) I do not mean to deny that there is something to be learned from looking at Plato's use of esti, only that this is not his own

- object in the Sophist. For the record, I think that there is a complete use of "is" to be found in the Sophist for reasons I will not go into here. Much of what I would say in defense of this has been said by Robert Heinaman in "Being in the Sophist," *Archiv fur Geschichte der Philosophie*, vol. 65 (1983), pp. 1-17.
30. Robinson, David B. 1999. "Textual notes on Plato's « Sophist »." *The Classical Quarterly* no. 49:139-160.

"In editing Plato's Sophist for the new OCT [Oxford Classical Texts] vol. I, ed. E. A. Duke, W. F. Hicken, W. S. M. Nicoll, D. B. Robinson, and J. C. G. Strachan (Oxford, 1995), there was less chance of giving novel information about W = Vind. Supp. Gr. 7 for this dialogue than for others in the volume, since Apelt's edition of 1897 was used by Burnet in 1900 and was based on Apelt's own collation of W."

(...)

"A reviewer counts 66 changes in our text of the Sophist, which may perhaps be a slight over-estimate. Classification of changes as substantive or as falling into different groups is sometimes difficult, but I think plausible figures are as follows. We (myself aided in the earlier sections by Nicoll) have in 25 places made a different choice of readings from the primary mss. and testimonia. We have printed conjectures where Burnet kept a ms. reading in 17 places, but conversely we have reverted to a ms. reading where Burnet had a conjecture in 8 places. We have printed alternative conjectures to conjectures adopted by Burnet in 6 places. So we have actually departed from the primary sources on at most 9 more occasions overall than Burnet. What must be noted is that Burnet had already printed conjectures (including readings from secondary mss.) on something like 87 occasions (12 from secondary mss., 75 from modern conjectures from Stephanus onwards), so our percentage addition to Burnet's departures from the primary sources is modest. Moreover Burnet printed about 25 readings from testimonia; we have followed him in 20 or so of these cases, and this in turn implies that the primary mss. are in error at these further 20 places." (p. 139)

31. ———. 2001. "The Phantom of the Sophist: το ουκ οντως ουκ ον (240a–c)." *The Classical Quarterly* no. 51:435-457.

"A spurious phantom, Platonistic but non-Platonic, a non-entity by the name of ουκ οντως ουκ ον, made spectral appearances in manuscripts and printed texts of Plato's *Sophist* over a long period. It perhaps first manifested itself a little earlier than Proclus and Damascius; but there seems to be no evidence of its appearing to Plotinus. It was rather strongly present in the primary MSS (give or take a little blurring). It still appeared in the Teubner edition by Hermann in 1852. But it was attacked by Bonitz in 1864, and on most views was successfully exorcized when Badham's conjecture of 1865 was added to an earlier conjecture of Baiter's, each removing an unwanted ουκ. Campbell's edition of 1867 shows no awareness of Badham's conjecture, but on an overall view, since then it might seem that the phantom had been left for dead by most interpreters. Apelt in 1897 said 'locus . . . sanitati suae est redditus'. Burnet, as we have seen, banished the phantom from his 1900–5 OCT." (p. 436)

(...)

"The cruel deception practised by both phantoms turns upon readers making the erroneous assumption that we have exposition of doctrine in this passage, where in fact we have what is at least primarily intended as a *reductio ad absurdum*. This is not a situation where the Visitor is stating a Platonic view of ειδωλα; what is happening is that the supposed Sophist attempts to reduce the concept of ειδωλον to absurdity.

The passage does not set out to show that Plato or his Visitor, or even his Sophist, thought that ειδωλα have some degree of phantom being, but that an enterprising Sophist could argue that they have no being at all. Plato will later refute his own imaginary Sophist (not by introducing intermediates); but here the Sophist must be allowed to make his challenging manoeuvre." (p. 437)

32. Robinson, Jim. 1993. "A Change in Plato's Conception of the Good." *Journal of Philosophical Research* no. 18:231-241.

Abstract: "One of the most interesting passages in the Republic is the comparison of the Form of the Good with the Sun. Although this depiction of the Good was never repeated, many hold that the Good retained its privileged place in Plato's metaphysics. I shall argue that there are good reasons for thinking that Plato, when writing the Sophist, no longer held his earlier view of the Good. Specifically, I shall contend that he ceased to believe that as the Sun makes its objects visible, so the Good makes the Forms knowable. This being the case, it cannot also be said to illuminate either the Forms or the order they exhibit. My procedure will be first to consider briefly how, in the Republic, the Good can be said to illuminate the Forms. I shall then determine the extent to which, in the Sophist, this function can still be credited to the Good. "

33. Robinson, Thomas M. 2013. "Protagoras and the Definition of 'Sophist' in the Sophist." In *Plato's Sophist Revisited*, edited by Bossi, Beatriz and Robinson, Thomas M., 3-13. Berlin: Walter de Gruyter.

"I should like to begin by setting out as clearly as I can what seem to be the main things that can be said about Protagoras, and offer an evaluation of them. This will be in large part without reference to the final definition of 'sophist' in the Sophist. I shall then turn to the definition, and see where if anywhere it appears to fit into the picture, and what can be said about the definition as a definition." (p. 3)

(...)

"As the dialogue draws to a close an intense, and uncompromisingly negative definition of the sophist is finally offered, and this one undoubtedly excludes what had earlier been called the sophist of noble lineage.

The sophist (268c) is now described as a mimetes who operates on the basis of belief not knowledge, by contrast with mimetai who operate on the basis of knowledge not belief. More precisely the mimesis characterizing a sophist is said to be a) mimesis of that which is 'insincere', of that which is productive of 'contradictions', and of that which is non-knowing; b) mimesis of that specific form of copy-making that constitutes

appearance-making; and c) mimesis of that species of production which is marked off as human not divine." (pp. 10-11)

34. Rodriguez, Evan. 2020. "Pushing Through' in Plato's Sophist: A New Reading of the Parity Assumption." *Archiv für Geschichte der Philosophie* no. 102:159-188.

Abstract: "At a crucial juncture in Plato's Sophist, when the interlocutors have reached their deepest confusion about being and not-being, the Eleatic Visitor proclaims that there is yet hope. Insofar as they clarify one, he maintains, they will equally clarify the other. But what justifies the Visitor's seemingly oracular prediction? A new interpretation explains how the Visitor's hope is in fact warranted by the peculiar aporia they find themselves in. The passage describes a broader pattern of 'exploring both sides' that lends insight into Plato's aporetic method."

35. Rosen, Stanley. 1983. *Plato's Sophist: The Drama of the Original and Image*. New Haven: Yale University Press.

"I said previously that I prefer the dramatic to the ontological approach to the Sophist. It should now be clear that this does not require a suppression of the narrowly technical themes in the dialogue.

On the contrary, it requires their meticulous analysis, both in themselves and as elements in a comprehensive dramatic structure.

In this section, I should like to clarify this view from a somewhat different angle and to introduce a term to describe my reading of the Sophist. The term in question is dramatic phenomenology.

Whereas a dialogue is not a "drama" in the sense of a poetic play written to be performed in the theater, it has a manifestly dramatic form. A dialogue is a poetic production in which mortals speak neither to gods nor to heroes, but to each other. At the same time, there is a hierarchy of mortals within a Platonic dialogue that is rooted, not in the contingencies of birth but in the natures of diverse human souls. Similarly, a

dialogue is not a phenomenological description, but an interpretation of human life. As a poetic production, it so orders its scenes of human life as to provide an indirect commentary on the significance of the speeches delivered within those scenes.

Adapting a distinction of the Stranger's to our own purposes, we may say that a dialogue is centrally concerned with the better and the worse, the noble and the base." (p. 12)

36. Roupa, Vichy. 2020. *Articulations of Nature and Politics in Plato and Hegel*. Cham (Switzerland): Palgrave Macmillan.

Chapter 3: Producing the Categories of Being: The Sophist

"The Cratylus's aporetic ending inevitably raises the question whether this is Plato's last word on names or whether the issue is explored further in another dialogue where a more positive outcome is reached. The aim of this chapter is to show that the dialogue where Plato carries forward the programme of the Cratylus is the Sophist.⁽¹⁾ Although it is sometimes argued that the Sophist breaks new ground completely unanticipated in the Cratylus, there is an area of shared concern between the two dialogues that warrants, I believe, reading the Sophist as a development of the Cratylus.⁽²⁾ This area is marked, in the first instance, by the methodological approach adopted; the two interlocutors—it is set down early on in the dialogue—will strive to reach agreement not only as regards the name but, first and foremost, as regards the thing itself. Thus, the Eleatic Visitor, who leads the discussion in the Sophist, claims in 218c to have only the name ('sophist') in common with his discussant Theaetetus at this stage, but this is not enough because 'in every case' they 'always' need to be in agreement 'about the thing itself [pragma auto] by means of verbal explanation [dia logoñ], rather than doing without any such explanation [choris logou] and merely agreeing about the name [tounoma]'. So, the aim of the dialogue is to achieve an understanding of the sophist that goes beyond the un-stated assumptions that each of the discussants has about the sophist. (p. 43)

(1) I thus follow the interpretative approach of Fine and Barney both of whom reject a sharp distinction between the analysis of

the Cratylus (which is aimed at the level of the name) and that of the Sophist (which is aimed at the level of the statement or sentence). See Gail Fine, 'Plato on Naming', *The Philosophical Quarterly* 27, no. 109 (1977): 289–294; Rachel Barney, *Names and Nature in Plato's Cratylus* (London: Routledge, 2001), 170–172. This view is reinforced by Kahn: "The contents of the Cratylus on the theory of naming, the problems of flux, Protagorean relativism and the paradox of false statement, all point ahead to discussion of these topics in the Theaetetus and Sophist". Charles Kahn, *Plato and the Socratic Dialogue: The Philosophical Use of a Literary Form* (Cambridge: Cambridge University Press, 2008), 364. See also R.M. van den Berg, *Proclus' Commentary on the Cratylus in Context: Ancient Theories of Language and Naming* (Leiden: Brill, 2014), 8–13.

(2) The proponents of this view see in the Sophist a radical break in Plato's thinking because in it Plato offers an account of language at the level of the sentence or statement rather than that of the name. The distinction between name and statement is not made in the Cratylus, nor is there any recognition in the earlier dialogue of the importance of syntax for the truth value of a proposition. See Barney's summary of this view (which she calls the 'syntactical reading of the Sophist') in Barney, *Names and Nature in Plato's Cratylus*, 170.

37. Rowe, Christopher J. 1983. "Plato on the sophists as teachers of virtue." *History of Political Thought* no. 4:409-427.

Abstract: "When he came to try to find a formal definition of the sophist, Plato found him an elusive creature; and with good reason. But there are two features which regularly recur in his references to them: the sophist is a professional teacher, and what he professes to teach is ἀρετή. Sophists are people who claim παιδεύειν ἄνθρώπους εἰς ἀρετήν;(1) they set themselves up as παιδεύσεως καὶ ἀρετῆς διδάσκαλον (2) The only apparent exception is Gorgias, who though classified as a sophist in other dialogues, is represented in the Meno as laughing at other sophists for claiming to teach ἀρετή;(3) and it may well be that Plato regarded this disclaimer as disingenuous. (4) But there is a difficulty here, in that on the

face of it different sophists claimed to teach different things under the title of ἄρετή. Hippias, for example, is portrayed in the Hippias Major as professing to encourage a 'devotion to honourable and beautiful practices', (5) whereas in the Euthydemus the ἄρετή which the two brothers Euthydemus and Dionysodorus claim to impart is apparently coextensive with skill in eristic debate.(6) In that case, 'teacher of ἄρετή' appears to be a highly ambiguous description, and therefore incapable of serving, even informally, to define the class. In general, historians of philosophy tend to suggest that behind the apparent differences between individual sophists in this respect lies a single shared purpose: the teaching of 'the art of success'."

38. ———. 2015. "Plato, Socrates, and the genei gennaia sophistike of Sophist 231b." In *Second Sailing: Alternative Perspectives on Plato*, edited by Nails, Debra and Tarrant, Harold, 149-167. Helsinki: Societas Scientiarum Fennica.

39. ———. 2015. "Plato versus Protagoras: The Statesman, the Theaetetus, and the Sophist." *Diálogos* no. 98:143-165.

Abstract: "The Statesman is nowadays generally read either on its own, or with Republic and Laws. But more attention needs to be given to the fact that it is designed as part of a trilogy, alongside Theaetetus and Sophist. Reinstating the dialogue in

this context gives a fuller perspective on its purposes. The Statesman (1) identifies existing so-called «statesmen», for whom the Protagoras of Theaetetus is chief apologist, as the greatest exemplars of sophistry as defined in Sophist: mere «imitators» and dealers in falsehood; (2) offers the Platonic alternative to the Protagorean vision of human life and organization sketched in the first part of Theaetetus; and (3), in common with Sophist, illustrates –after the apparent failures of Theaetetus– both what knowledge is and how it can be acquired. Finally, and controversially, the Statesman emerges, along with Theaetetus and Sophist, as part of one and the same project as the Republic."

40. Rudebusch, George. 1990. "Does Plato Think False Speech is Speech?" *Noûs* no. 24:599-609.

"Before Plato came along, there was no satisfactory account of the nature of false speech. This is not to say that no one had yet figured out how to tell a lie; the Greeks were notorious, even in their own literature, as skillful liars. What I mean is that there was a pair of puzzles floating around unanswered. These puzzles were expressed as arguments that false speech was impossible. One puzzle went like this: to say what is false is to say what does not exist, but to say what does not exist is to say nothing at all, and to say nothing at all is not to speak. Thus there can be no such thing as false speech. The other puzzle went like this: to say what is false is to say what is other than the things that are. Nonetheless (in view of the first puzzle), to say what is other is to say something that is. But to say what is is to speak the truth. Thus there can be no such thing as false speech.(1)" (p. 599)

(...)

"In what follows, I shall look at (I) the problem of false speech which Plato faces, (II) the solution he gives in the Sophist, and (III) how that very solution is undermined by the argument of the Theaetetus. It will then be clear (IV) what sort of reconciliation is ruled out and what sort remains to be investigated, if we are to avoid paradox." (p. 600)

(1) The distinction between these two puzzles is not always recognized. But the puzzles are two, and Plato presents them as a pair: Eud. 283e7-284a8 and 284bl-b7; Crat. 429d4-6 and 429e3-9; and Tht. 167a7-8 and 167a8-b1.

41. ———. 1991. "Sophist 237-239." *Southern Journal of Philosophy* no. 29:521-531.

"The text of the Sophist at 237-239 is aporetic: it leads any talk of non-being into perplexity. This passage shares with many other of Plato's dialogues the following structure. A question is asked and an answer, given in a single sentence, is reached and accepted by the interlocutor. Then the interlocutor is examined further, his assent to that answer is undermined, and the interchange ends. After giving the details of this passage (in section I), I shall argue (section 11) that the Stranger does not share Theaetetus's perplexity and continues to hold the rejected answer. Such an interpretation needs an explanation: why should the Stranger behave this way? Sufficient reasons can be found in the Stranger's pedagogy. What those pedagogical reasons are, and how good they are, I consider in section 11." (p. 521)

Reprinted in: R. E. Allen, *Studies in Plato's Metaphysics*, London, Routledge & Kegan Paul, 1965 pp. 97-147; G. Ryle, *Collected Papers*. Volume I. *Critical Essays*, London: Hutchinson 1971 (reprint: New York, Routledge, 2009), Essay I pp. 1-44.

On The Sophist see in particular pp. 42-46.

"However, there is a pair of concepts which are forced upon our notice in the course of the operations which turn out to require a very different sort of elucidation, namely those of non-existence and existence. For a Sophist is a pretender who either thinks or says that what is not so is so.

The puzzle which arose in the Theaetetus arises again here. How can what does not exist be named, described or thought of? And if it cannot, how can we or Sophists talk or think of it, falsely, as existing? So the question is squarely put: What does it mean to assert or deny existence of something?

(...)

"Now the interesting thing is that it is true that existence and nonexistence are what we should call 'formal concepts', and further that if modern logicians were asked to describe the way in which formal concepts differ from proper or material or content-concepts, their method of exhibiting the role of formal concepts would be similar to that adopted here by Plato. But we need not go further than to say that Plato was becoming aware of some important differences of type between concepts.

There is no evidence of his anticipating Aristotle's enquiry into the principles of inference, which enquiry it is which first renders the antithesis of formal and other concepts the dominant consideration.

There is, consequently, in Plato, no essay at abstracting the formal from the contentual features of propositions, and so no code-symbolisation for the formal in abstraction from the material features of propositions." (pp. 44-46 of the reprint)

44. ———. 1960. "Letters and Syllables in Plato." *The Philosophical Review* no. 69:431-451.

Reprinted in G. Ryle, *Collected Papers*. Volume I. *Critical Essays*, London: Hutchinson 1971 (reprint: New York, Routledge, 2009), Essay III pp. 57-75.

"In his later dialogues Plato makes a lot of use of the notions of letters of the alphabet and the spelling of syllables out of these letters. He frequently uses these notions for the sake of

analogies which help him to expound some more abstract matters.

There is one of his uses of the letter-syllable model which is not of special interest to me, namely, for the exposition of some merely chemical theories about the combinations of a few material elements into multifarious compounds.

Plato employs this model in this way in the *Timaeus* (48B–C), though he says that the analogy is not a good one. Here he is stating what is essentially an Empedoclean theory. Sextus Empiricus says that *stoicheion*, used thus to denote an ultimate material element, was a Pythagorean term.

My interest is in Plato's use of the alphabet model in expounding his logical or semantic views, namely his views about the composition of the thoughts, that is, the truths and falsehoods that we express or can express in sentences (*logoi*)."
(p. 57 of the reprint)

(...)

"Conclusion. Plato in his late dialogues was concerned with some of the same cardinal problems as those which exercised Frege and the young Russell, problems, namely, about the relations between naming and saying; between the meanings of words and the sense of sentences; about the composition of truths and falsehoods; about the role of 'not'; about the difference between contradictories and opposites; and in the end, I think, about what is expressed by 'if' and 'therefore'. His admirable model, which Frege lacked, of the phonetic elements in syllables enabled Plato to explain more lucidly than Frege the notion of the independent-variability-without separability of the meanings of the parts of sentences. On the other hand, lacking the apparatus of algebra, he was nowhere near abreast of Frege's and Russell's symbolisation of substitution-places. Plato could not extract implications from their particular contexts or therefore codify implication patterns. A blackboard would have been of no use to him.

Plato says nothing about the bearings of the alphabet model on the Theory of Forms, or of the Theory of Forms on the alphabet

model. So I shall not say much. If the Theory of Forms had maintained or entailed that Forms are just subject-terms of a superior sort, that is, just eminent namables, then this theory could contribute nothing to Plato's new question, What does a sentence convey besides what its subject name mentions?

But if the theory of Forms had been meant or half-meant to explain the contributions of live predicates, including tensed verbs, to truths and falsehoods about mentioned subjects, then in his operations with the model of letters and syllables, Plato has raised to maturity things which, in his Theory of Forms, had been only embryonic. To his terminal questions about the composition of logoi and, therewith, about the roles of live, tensed verbs, the Theory of Forms was either quite irrelevant or else quite inadequate." (pp. 74-75 of the reprint)

45. Saati, Alireza. 2015. "Plato's Theory of the Intercommunion of Forms (Συμπλοκή Είδῶν): the Sophist 259, e4-6." *Philosophy Study* no. 5:35-43.

"Plato's lifelong confrontation with Parmenides and his metaphysical mire of believing that nothing (το μη ὄν) does not actually exist, gradually in the Sophist comes into finish, insofar as the philosopher after facing the foe and having the last laugh simmers down. In this paper after giving an interpretation of what Parmenides says, I shall present an analysis of Plato's drastic answer to him (Sophist, 259 e4-6) to see how Plato opens the impasse way created by the Eleatic philosopher. Here the intercommunion of Forms is regarded as the final answer by which Plato devastates Parmenides infamous thesis. Since hitherto no in-depth analysis is given by the scholars who are puzzled with the subject, I have tried to analyze the intercommunion of Forms philosophically. Plato's Eleatic challenge has always been crucial in Plato himself and philosophical development after him. As while as Parmenides thesis (Sph., 238 a8-9) provides the sophists opportunity to reject the falsehood, Plato's theory of Forms in contrast in order to cross off the extremely sly sophists tries to make Parmenides come down. In my opinion, the intercommunion of Forms, as the last step of the theory of Forms, basically determines Plato's late ontology tightly knitted with logic.

Vindicating this proposal depends on true understanding of the intercommunion of Forms. Since Plato's late ontology, in my opinion, is closed to Frege's ontology and discussion of language, we are armed to interpret the intercommunion of Forms with recent recent logico-philosophic achievements, I think.

In this respect, this is what I have done in my paper: analyzing sentence from Plato's logico-metaphysical point of view.

Ultimately, I have tried to show how the aim of the intercommunion of Forms, which Plato himself states, is demonstrating the possibility of dialogue and discourse. This statement explicitly sets forward that the discussion is bound up with several logical approaches, according to which finally full bright light is shed on different implications of the subject such as universals." (p. 35)

46. Sabrier, Pauline. 2019. "Parts, Forms, and Participation in the Parmenides and Sophist: A Comparison." *Etudes platoniciennes* no. 15:1-9.

Abstract: "This paper addresses the vexed question of the outcome of the second horn of the dilemma of participation in Plato's Parmenides bringing in Sophist 257c7-d5 where the Eleatic Stranger accepts what he seems to reject in the Parmenides, namely that a Form can have parts and nevertheless remain one. Comparing Plato's treatment of parts of Forms in both passages, and in particular the relation among Being, Change and Rest at Sophist 250a8-c8, I argue that unlike in the Parmenides, in the Sophist, parts and wholes are seen as offering a structure that can explain how things that may, at first, appear unrelated nevertheless belong together."

47. ———. 2020. "Plato's Master Argument for a Two-Kind Ontology in the Sophist: A New Reading of the Final Argument of the Gigantomachia Passage (249b5–249c9)." *Apeiron*:1-20.

Abstract: "In this paper I defend a new reading of the final argument of the Gigantomachia passage of Plato's Sophist (249b5–249c9), according to which it is an argument for a two-kind ontology, based on the distinction between the changing beings and the unchanging beings. This argument, I urge, is

addressed not only to Platonists but to all philosophers – with one exception. My reading is based on the claim that this argument does not rely on the view that nous requires unchangeable objects – what I call the traditional reading – but on the view that nous itself is unchanging. The difference between the traditional reading and my reading is that on the former, Plato’s argument relies on a distinctive epistemological assumption, whereas on the latter, Plato’s argument is free from any such commitments. If the argument of this paper is along the right lines, then this implies that this argument has a much more far-reaching scope than critics have usually assumed. It also invites us to reconsider Plato’s

approach to the question of being in the Sophist."

48. Sallis, John. 1975. *Being and Logos. The Way of Platonic Dialogue*. Atlantic Highlands: Humanities Press International.

Second edition with a new preface 1986; Third edition titled: *Being and Logos. Reading the Platonic dialogues*, Bloomington: Indiana University Press, 1996.

Chapter VI. *The Way of Logos: Sophist*, pp. 456-532.

49. ———. 2013. "Plato’s Sophist: A Different Look." *The New Yearbook for Phenomenology and Phenomenological Philosophy* no. 13:283-291.

Reprinted in: Hallvard Fossheim, Vigdis Songe-Møller, Knut Ågotnes, Knut (eds.), *Philosophy as Drama: Plato’s Thinking through Dialogue*, New York: Bloomsbury Academic 2019, pp. 231-240.

Abstract: "This paper deals with the question of difference in the Sophist. It begins with the difference that sets this dialogue apart from its dramatic predecessor, the Theaetetus, and with the task posed at the outset of determining the difference between the sophist, the statesman, and the philosopher. An account is then given of the critical engagements through which the question of being and of its intertwining with nonbeing is taken up. Outlining the discussion of the five kinds, it concludes with a close examination of the *genos* difference as “chopped into bits” and hence as a different “look”."

50. Sampson, Kristin. 2013. "A Third Possibility: Mixture and Musicality." *The New Yearbook for Phenomenology and Phenomenological Philosophy* no. 13:328-338.

Abstract: "This paper considers two small textual places within Plato's *Sophist*, namely 252d–253c and 259d–260b. First it turns to what is called a third possibility and looks at how this is described by examples related to the letters of the alphabet and the notes of music. Three words that are used to describe the mixing that these two examples display are *συμμίγνυμι*, *κοινωνία*, and *μίξις*. What is common for these three words is that they are shrouded in a similar kind of ambiguity of meaning, related to sexuality.

This paper argues the relevance of taking this ambiguity seriously, something which has not, to my knowledge, previously been done. Next it considers how the exposition of this third possibility results in the emergence of the philosopher. At this point also a view of language and thinking (*logos*) related to the philosopher is developed, and used in order to distinguish between the philosopher and the sophist. At the end of the paper, in the last textual fragment mentioned (259d–260b), it is indicated how this is a place where an echo of the musical and the philosophical resound, where these two elements are linked to each other, to *logos*, and to the necessity of mixture."

Plato's *Sophist*. Bibliography of the studies in English: Say - Z

Bibliography

1. Sayre, Kenneth M. 1970. "Falsehood, Forms and Participation in the Sophist." *Noûs* no. 4:81-91.

"The Sophist is one of Plato's most constructive dialogues, and one of the most cleverly constructed. Feigning pursuit of the essential sophist, Plato analyzes in turn (a) δύνναμις as the mark of what is, (b) collection and division as the source of "the free man's knowledge," (c) the modes of combination among the forms, (d) Difference as the nature of "that which is not" and, in culmination, (e) the distinction between false and true judgment which separates the sophist from the philosopher. These results surpass in their solidity any positive contribution of the *Phaedo* or the *Republic*.

Yet they are achieved with a more austere conception of the forms than any found in these earlier dialogues. The structure of this more mature conception, I believe, is best illustrated in Plato's analysis of true and false discourse. My purpose in this paper is (1) to recapitulate what I take to be Plato's analysis of truth and falsehood in the *Sophist*, (2) to contrast the theory of forms presupposed by this analysis with the theory of the *Phaedo* and the *Republic*, and (3) to sketch against this background the theory of participation which seems to be implicit in the *Sophist* and other late dialogues. My contention, in preview, is that a form in this later context is a kind definable in terms of criteria for membership, and that participation is the relationship by which individuals qualify for membership in a kind." (pp. 81-82)

2. ———. 1976. "Sophist 263b Revisited." *Mind* no. 85:581-586.

"This passage [Sophist 263b: 'Theaetetus sits' and 'Theaetetus flies'] has posed problems for sympathetic commentators. One is the problem of mere intelligibility. (1) A more basic problem has been that of reconstructing from the passage a credible account of true and false judgment. In *Plato's Analytic Method* (Chicago, 1969) I offered an interpretation which, although I believe accurately directed, is potentially flawed in an important respect. (2) The difficulty with this interpretation stems from a mistaken assumption, which most commentators share, about the nature of not-Being in the Sophist account. Correcting this mistake yields an interpretation which is more fully Platonic both in content and elegance, and which is considerably more faithful to the text of the dialogue."

(1) A sensitive discussion of syntactical ambiguities in these sentences may be found in David Keyt's 'Plato on Falsity: Sophist 263B,' in E. N. Lee, A. P. D. Mourelatos, and R. M. Rorty (eds.), *Exegesis and Argument: Studies in Greek Philosophy Presented to Gregory Vlastos* (Humanities Press, New York: 1973), to which I am indebted in the translation above.

Robert Vacca also is to be thanked for advice on Plato's use of ὄν ἔστι ἄν.

(2) I say 'potentially flawed' because, although the interpretation in the book is literally compatible with what I now believe to be the correct account, its further elucidation in my 'Falsehood, Forms and Participation in the Sophist,' *Noûs*, iv (1970), 81-91, brought the flaw to the surface. I am indebted to Alvin Plantinga for drawing the problem to my attention.

This interpretation was developed originally in response to difficulties with other accounts of false judgment in the Sophist, which need not be reviewed for present purposes.

3. ———. 1983. *Plato's Late Ontology: A Riddle Resolved*. Princeton: Princeton University Press.

Second edition: Parmenides Publishing, 2005 with a new introduction and the essay "Excess and Deficiency at Statesman 283C-285C".

4. ———. 1992. "A maieutic view of five late dialogues. Methods of interpreting Plato." Oxford Studies in Ancient Philosophy no. Supplementary volume:221-243.

"There are five dialogues of Plato's late period, each consisting of a conversation with a master philosopher, in which the conversation is organized by methodological principles explicitly proposed by the philosopher himself. In the case of the Theaetetus, the method was stated by Socrates in earlier dialogues, notably the Phaedo and book 6 of the Republic. In each of the remaining four, however, the method is expounded and applied within the same conversation-by the Stranger from Elea in the Sophist and the Statesman, by Parmenides himself in his namesake dialogue, and by a renovated Socrates in the late Philebus. I shall refer to these five as the methodological dialogues." (p. 221)

(...)

"I have made two claims concerning the methodological dialogues.

The first is that the conversational format of these dialogues is intended to serve the maieutic function described by Socrates in the Theaetetus, and characterized in the Seventh Letter as the only path to the flame-like revelation of philosophic knowledge. The second is that the respective methods of these conversations provide the structure by which they are enabled to lead the reader to that state of fulfilment.

The first claim is supported by the texts involved, the second by the experience of the attentive reader. Neither claim by itself, perhaps, is particularly adventuresome. I have suggested further, however, that together these claims answer the question posed at the beginning of this discussion: namely, how the conversational format of these five late dialogues relates to the methods they severally illustrate. The answer, in summary, is that the method in each case provides the discipline by which

the reader is enabled to follow the path of the conversation, to the state of wisdom that can be found at its end." (p. 243)

5. ———. 2006. *Metaphysics and Method in Plato's Statesman*. Cambridge: Cambridge University Press.

Chapter 2. Collection in the *Phaedrus* and the *Sophist* 36;

Chapter 3. Division in the *Phaedrus* and the *Sophist* 52-72.

"The *Statesman* is third in a sequence of dialogues employing the method of dialectical division. In both the *Phaedrus* and the *Sophist*, division is paired with a companion procedure of collection. To evaluate the absence of collection in the *Statesman*, it is helpful to look carefully at how it functions in these two previous dialogues. This is the purpose of Chapter 2. Also discussed in this chapter is the language of collection that appears in the *Philebus*, despite the absence of the corresponding methodological procedure.

In similar fashion, Chapter 3 addresses the use of division in those two earlier dialogues. A notable feature of division in the *Phaedrus* is its use of nondichotomous distinctions, a feature which is absent in the *Sophist* but reappears in the *Statesman*. The *Sophist* contains eight fully developed lines of division in all, each of which is examined in the course of this chapter." (p. 5)

6. ———. 2008. "Dialectic by Negation in Three Late Dialogues." In *Reading Ancient Texts: Vol. I: Presocratics and Plato. Essays in Honour of Denis O'Brien*, edited by Suzanne Stern-Gillet and Kevin Corrigan, 189-212. Leiden: Brill.

"While little is beyond dispute in Platonic commentary, it seems clear that there are three distinct methods of dialectical inquiry to be found in the middle and late dialogues. One is the method of hypothesis featured in the final arguments of the *Phaedo* and implicated in the Divided Line of the *Republic*. Another is the method of collection and division, introduced in the *Phaedrus* and employed extensively in the *Sophist* before collection is phased out in the course of the *Statesman*. And third is the method introduced by Parmenides in his namesake dialogue and meticulously illustrated in the ensuing arguments

on Unity.(1) I shall refer to this latter as “Parmenides’ method.” (p. 189)

(...)

But what are we to say in this regard about Parmenides’ method?

Unlike the other two, the dialectical procedure employed by Parmenides is confined to a single dialogue. On initial consideration, at least, it appears that we lack evidence for earlier versions in Plato’s thought.(4)

While the dialectical approach in question is said (at Parmenides 135D) to be essential for achieving the truth, and while it produces some of the most substantial results in the entire Platonic corpus, (5) we encounter it here in full-blown form with no indication of prior development. Or so at least it appears.

The purpose of the present paper is to dispel this appearance. Parmenides’ method is distinguished from the other two primarily by its use of negative hypotheses. As we shall see, there are sections of both the Sophist and the Statesman where negation figures in the explication of important topics. While these passages are familiar in their own right, I am not aware of any previous attempt to connect them with the distinctive method of the Parmenides. If the attempt of the present paper is successful, we will have reason to believe that Parmenides’ method was anticipated in dialectical manoeuvres employed (appropriately enough) by the Eleatic Stranger." (p. 190)

(1) While any of these three methods might be accompanied by elenchus in a particular rhetorical setting, it should be noted that Socratic refutation by itself is not a dialectical method.

(4) Although one part of the procedure is said at 135D8 to trace back to Zeno, there is no reason to think that the method overall is not due to Plato himself.

(5) This claim is supported in K. Sayre, *Parmenides’ Lesson: Translation and Explication of Plato’s Parmenides* (University of Notre Dame Press, 1996).

7. Schipper, Edith Watson. 1964. "The Meaning of Existence in Plato's Sophist." *Phronesis. A Journal for Ancient Philosophy* no. 9:38-44.

"In this paper, I should like to give arguments for the following points: (1) that, for the later Plato, what exists must be defined by forms interrelated in logos; (2) that the particular things of experience exist, and also are defined by the interrelated forms. Their existence is not that of substantial subjects beyond their predicative forms, but is comprised by the forms, which formulate them and bring them out of the matrix of experience. Thus, Plato is sketching a profoundly original approach to the perennial problems of philosophy." (p. 38)

8. ———. 1965. "Souls, Forms, and False Statements in the Sophist." *The Philosophical Quarterly* no. 15:240-242.

"In a provocative and ingeniously worked out article, Robert Turnbull has presented his view of the Sophist's account of false statements. (1) I should like to bring out some passages which raise questions about his position, and briefly suggest an alternative view to which I think they point.

The argument, as I understand it, rests upon Mr. Turnbull's interpretation of the Platonic ontology as consisting of " forms, souls, and immanent characters " (2) Immanent characters or actions, " the stuff of Becoming ", exist in the souls, and participate in the forms for which the souls strive.

A false statement about a soul ascribes to it a possible action participating in a form which is not (is different from or contrary to) the form for which the soul strives. For " the contrariety of forms is reflected in references to actions " (3) Thus, a false statement rests on the difference of some forms from others, though it is about the possible actions which illustrate the contrary forms and are somehow in the souls." (p. 240)

9. ———. 1965. *Forms in Plato's Later Dialogues*. The Hague: Martinus Nijhoff.

Chapter IV: *Forms in the Sophist*, pp. 31-42.

"This little book is concerned with one problem, that of whether and in what respects Plato continued to hold his earlier theory of forms of the *Phaedo* and *Republic* in his later dialogues. The earlier theory is first considered; since those who deny that Plato continued to hold his theory base their contention on an interpretation of it which is inadequate to explain even the arguments of the earlier dialogues. The later dialogues are then examined, in an attempt to show that the earlier theory is continually assumed, in all its essentials; although it is developed and modified to make it more consistent and adequate to experience.

Special attention is given to Plato's treatment of the problem of the relation of the forms to the perceived things, left unexplained in the earlier dialogues, but clearly recognized and wrestled with in the later ones. This problem is the perennial one of how the objects of intellectual argument and explanation are related to the things of experience. A solution to that problem is brought out in Plato's reconsideration of his theory of forms." (Preface, P. VII)

"The *Sophist* by common consensus, is placed sometime after the *Parmenides* and *Theaetetus*, and before the *Politicus*. Its place in the dialogues is thought to follow their literary order; and it starts with an appointment made at the end of the *Theaetetus*, while the *Politicus* refers to the immediately preceding discussion of the *Sophist*.

The *Sophist* could be subtitled: *On Being and Not Being*.

Ostensibly, it is a laboriously worked out definition of the sophist by means of diaeresis, carried on by the Eleatic Stranger. Again, *Theaetetus* responds. Yet the defining of the sophist seems to serve primarily as a means of introducing discussions of the nature of existence and as an illustration of the interconnecting of the forms, the *σμπλοκη ειδων*, the

central conception of the dialogue and the most important addition to Plato's later metaphysics." (p. 31)

10. Schoener, Abraham. 2000. "Not the Sophist." In *Retracing the Platonic Text*, edited by Russon, John Edward and Sallis, John, 41-54. Evanston: Northwestern University Press.

"We must pause for a moment to recall just what Penelope is weaving. It is a burial shroud for Laertes, the father of Odysseus-the father of the image of the philosopher-who is not yet dead. This is a sign that, for Plato, the writing of the dialogues is not a supplement or marker for the dead, defunct Philosopher, but that the writing precedes and even announces his death. Plato's Socratic dialogues are Socrates' Penelopean burial shroud, tolling the death of conversational, "living," philosophy.

This brings us to our last question. This is a very vexed one and seems to be addressed with the greatest seriousness in all of the literature on the Sophist. The question is: Who is the (real) Philosopher?

Our answer must now be "Nobody in particular." Stop worrying about the question. It is a question left over from the pretextual era of philosophy. Once philosophy becomes and recognizes itself to be textual, the question for now and all time is: What is being? This displacement is the deepest form of the patricide of Socrates by Plato." (p. 53)

11. Sedley, David. 2019. "Etymology in Plato's Sophist." *Hyperboreus. Studia Classica* no. 25:290-301.

Abstract: "The etymological method displayed at considerable length in the *Cratylus* is widely assumed to be intended by Plato as an object of ridicule. In my 2003 monograph *Plato's Cratylus* I resisted this assumption. In the present paper I seek to strengthen my case by arguing that in Plato's major work on philosophical logic, the *Sophist*, the same method is re-employed twice, at 221 a-c and 228 b-e, for entirely serious purposes."

12. Seligman, Paul. 1974. *Being and Not-Being. An Introduction to Plato's Sophist*. The Hague: Martinus Nijhoff.

"The present study has been undertaken with the ontological perspective in mind. In addition the historical roots of Plato's thinking will be emphasized. His struggle with the Eleatic legacy permeates this dialogue in a deeper sense and to a greater degree than has generally been admitted. On the other hand, the value of logically and linguistically oriented exegeses of the Sophist, such as have appeared during the last thirty years, is readily acknowledged. Still, they have not given us the whole story; they have neglected a significant dimension of Plato's thinking, and therefore need supplementing, and it only speaks for the richness of his work that it can be approached in more than one way.

My discussion will concentrate on the middle sections of the dialogue and follow the order of its argument, which develops organically and with greater cohesion than its dramatic form and artistic presentation might suggest. There can be no doubt about the seriousness of Plato's concern (contra Peck, 1952, cp. Runciman, 1962, p. 59), but there is also present a tinge of poetic playfulness which can have a baffling effect on readers seeking straightforward, unequivocal answers. At times it looks as though Plato lived up to the Heraclitean word that nature likes to conceal itself. It seems though that on some issues raised in the Sophist Plato himself was wavering, that there are others on which he had not made up his mind. In any case, he was never prone to produce a closed and final system, and each dialogue right to the end of his life meant a fresh start. But certain positions he never surrendered, and some of these permeate the Sophist as well. One of them is his belief in a rational and intrinsically knowable order of reality. That order is apprehended by the intuitive intellect and capable of being set out, indeed needing to be set out, in reasoned discourse; i.e., it is apprehended by noesis, accompanied by logoi. As Plato matured, the emphasis shifted from the former to the latter mode. And while the latter takes the stage in the Sophist, there is no evidence that the former was abandoned by him even then." (pp. 2-3)

13. Sellars, John. 2010. "Stoic Ontology and Plato's Sophist." *Bulletin of the Institute of Classical Studies*:185-203.

"It has been suggested that Stoic ontology should be conceived as a reaction against Platonism thus understood. It has also been suggested that Stoic ontology be conceived as a 'reversal' of Platonism,⁽⁴⁾ inverting the order of priority between bodies and incorporeals, or particulars and universals, depending how one views it. The most significant attempt to analyse the relationship between Stoic ontology and the work of Plato, however, must be Jacques Brunschwig's article "The Stoic theory of the supreme genus and Platonic ontology" in which he argues that Stoic ontology was in effect a philosophical response to material the early Stoics found in Plato's Sophist. ⁽⁵⁾ It was through reading Plato, Brunschwig claims, that the early Stoics developed their own distinctive position.

The aim of what follows is to assess this claim and to ask whether Stoic ontology can be read as the product of a critical engagement with Plato's Sophist. I shall begin in the first section with a brief overview of Stoic ontology along with a closer look at some of the differences between the principal recent interpretations. I shall focus my attention not only on Brunschwig's account of Stoic ontology but also those of David Sedley (which came before) and Victor Caston (which came after).⁽⁶⁾ In the second section I shall move on to consider the Sophist, giving a brief overview of those sections of the dialogue that Brunschwig claims already contain the central features of Stoic ontology. In the third and final section I shall consider to what extent, if any, Stoic ontology can be said to be the product of a critical reading of the Sophist." (pp. 183-184)

⁽⁴⁾ This is a claim made by G. Deleuze, *Logique du sens* (Paris 1969), where he says that the Stoics were the first to reverse Platonism. However he doesn't specify how he thinks they achieved this and his account of Stoic ontology is eccentric to

say the least (on which see J. Sellars, 'Aiôn and Chronos: Deleuze and the Stoic theory of time', *Collapse* 3 (2007) 177-205 (178 n. 4)). Elsewhere, in *Différence et répétition* (Paris 1968), he claims that Plato himself was the first to reverse Platonism.

(5) First published as J. Brunschwig, 'La théorie stoïcienne du genre suprême et l'ontologie platonicienne', in *Matter and metaphysics*, ed. J. Barnes and M. Mignucci (Naples 1988) 19-127 and translated in *Brunschwig's Papers in Hellenistic philosophy* (Cambridge 1994) 92-157. All subsequent references are to the English version.

(6) It goes without saying that I have learned an enormous amount from the work of each of these authors and what I offer here is merely by way of a footnote to their contributions to our understanding of Stoic ontology. I shall not discuss directly earlier accounts of Stoic ontology as they are dealt with and taken into consideration in the works I shall consider, but I note the earlier discussion in J. M. Rist, *Stoic philosophy* (Cambridge 1969) 152-72.

"To sum up the common sense of the matter, in the Sophist and in order to disparage the sophist, Plato says that we may distinguish two kinds of imitation in all the mimetic arts, that which produces a likeness and that which produces an illusion. He employs a similar if not precisely identical distinction in Republic 380 D for another purpose. Elsewhere, when he has no such purpose in mind and is merely speaking of the general theory of art, he amplifies "imitation" by the addition of the virtual synonym "representation," and says art is imitation and representation. This, as the passage of Aristotle quoted shows [*], is a perfectly natural mode of expression, and it is the height of hypercriticism to read into it a contradiction or withdrawal of the special point that there are tricky arts for

which illusion is a better name than representation or the production of an objective likeness." (p. 324)

"The aim of this chapter is a discussion of the concept of tékhnē in Plato's Sophist, since this dialogue distinguishes and defines many different tékhnai. But what is tékhnē for Plato? Very often tékhnē is translated by 'art', but this is not the case for Plato and especially not in the Sophist.

The chapter is divided into four main parts. First of all I would like to propose Heidegger's definition and interpretation of tékhnē. Then I will examine the etymology and precise meaning of tékhnē in Ancient Greek.

The third part is concerned with the meaning and use of tékhnē in Plato's dialogues, and finally, in the last part of the chapter I will try to reach the meaning of tékhnē in Plato's Sophist." (p. 131)

18. Smith, Colin C. 2019. "Dialectical Methods and the Stoicheia Paradigm in Plato's Trilogy and Philebus." *Plato Journal* no. 19:7-23.

Abstract. "Plato's Theaetetus, Sophist, and Statesman exhibit several related dialectical methods relevant to Platonic education: maieutic in Theaetetus, bifurcatory division in Sophist and Statesman, and non-bifurcatory division in Statesman, related to the 'god-given' method in Philebus. I consider the nature of each method through the letter or

element (στοιχείον) paradigm, used to reflect on each method. At issue are the element's appearances in given contexts, its fitness for communing with other elements like it in kind, and its own nature defined through its relations to others. These represent stages of inquiry for the Platonic student inquiring into the sources of knowledge."

19. ———. 2020. "Diairesis and Koinonia in Sophist 253d1-e3." *History of Philosophy Quarterly* no. 378:1-20.

Abstract: "Here I interpret a central passage in Plato's *Sophist* by focusing on understudied elements that provide insight into the fit of the dialogue's parts and of the *Sophist*–*Statesman* diptych as a whole. I argue that the Eleatic Stranger's account of what the dialectician "adequately views" at *Sophist* 253d1–e3 involves both division and the communion of ontological kinds—not just one or the other as has usually been argued. I also consider other key passages and the turn throughout the dialogue from imagistic opining toward noetic understanding."

20. ———. 2021. "The Method of Bifurcatory Division in Plato's *Sophist*." *Elenchos. Rivista di Studi sul Pensiero Antico* no. 42:229-260.

Abstract: "The strange and challenging stretch of dialectic with which Plato's *Sophist* begins and ends has confused and frustrated readers for generations, and despite receiving a fair amount of attention, there is no consensus regarding even basic issues concerning this method. Here I offer a new account of bifurcatory division as neither joke nor naïve method, but instead a valuable, propaedeutic method that Plato offers to us readers as a means of embarking upon the kind of mental gymnastics that will stretch us properly in preparation for further, more challenging dialectical work. Considering several interpretive issues, I argue that bifurcatory division is a process of collective inquiry into the common through which an account, both definitional and taxonomical, is discovered. Depending on the level of understanding exhibited by the inquirers, this account may or may not allow for noetic understanding of the object in the deepest sense."

21. Solana, José. 2013. "Socrates and «Noble» Sophistry (Sophist 226b-231c)." In *Plato's Sophist Revisited*, edited by Bossi, Beatriz and Robinson, Thomas M., 71-85. Berlin: Walter de Gruyter.

"The sixth division of the Sophist has caused and continues to cause notable perplexity for several reasons.

1. It is introduced into the dialogue in an anomalous way. The Stranger speaks about two kinds of art: acquisitive (κτητική) and productive (ποιητική). However, later on he introduces a third kind: separative (διακριτική) art, whose relationship with the earlier types remains unexplained.

2. The role of this new art in relation to the overall objective of the dialogue, which is to reach a strict definition of the nature of the sophist, is also not explained.

3. Apart from not contributing to the main objective, it creates great difficulties, since, on the one hand, the Stranger speaks of a "noble Sophistry" and, on the other hand, the sophist is defined as a negative figure: one who is in possession of a knowledge which is merely apparent (233c10). Thus the paradox occurs that noble Sophistry is entrusted with the task of destroying the apparent knowledge (231b5) produced by Sophistry.

In view of these difficulties, it is relevant to question, with Cornford ([1935] 182), why in that case this division stands here." (pp. 71-72, notes omitted)

(...)

"So Plato would have faced two options: either to discard the αντιλογική τεκνηέ which would have seriously affected the έλεγχος, or to preserve it in the form of γενναία σοφιστική. This second option, chosen by Plato in the Sophist, is proof that Plato's position against the sophists has to do with axiological and normative postulates rather than with theoretical questions and arguments." (p. 85)

22. Speliotis, Evantha. 2013. "Sophist and Philosopher in Plato's Sophist." In *Socratic Philosophy and Its Others*, edited by

Dustin, Christopher and Schaeffer, Denise, 197-215. Lanham: Lexington Books.

"Having completed the search for the sophist and having identified the nature of his activity (see 218b-c), we may now reflect back and "calculate before ourselves" (dialogisometha, 231d) how he has appeared and what we have learned. From the beginning, the sophist has been particularly associated with appearances, and he may be said to dwell in, even to be a master of, appearances.

(...)

And yet the philosopher, too, appears. Just as the sophist faces a threat because of his overweening attention to the appearances and, the Stranger has argued, insufficient attention to knowledge, being, and truth; the philosopher also faces a challenge and a threat if, in his devotion to and pursuit of knowledge and truth, he does not care sufficiently for the appearances.

(...)

The Stranger, therefore, concludes the Sophist with both an affirmation and a criticism of Socrates. Socrates is in his being, his intention, and his activity a philosopher. But Socrates is also, in a sense "poor in speeches" (phaulos en logois). As masterful as he is at phantastic imitation, he is not masterful enough. For all his knowledge and his skill, his devotion to truth and being to the exclusion of appearance is a weakness, not a strength. The philosopher need not be a victim of others' opinions. Being masterful as he is at phantastike, he should also give some care and attention not only to what he does, but how he appears to others when he does it. As Plato seems to suggest also in the Phaedrus, the philosopher must embrace, not eschew, the true art of rhetoric, the art of making both true and beautiful speeches (see Phaedrus 277b-d)." 25. Stough, Charlotte. 1990. "Two Kinds of Naming in the Sophist." *Canadian Journal of Philosophy* no. 20:355-381.

"Those who hold the view that Plato is committed to self-predication by his theory of Forms are forced to consider whether he ever came to terms with the problem and, if he did not, why he did not, in view of the apparently damaging effects of the Third Man Argument. Their opponents in the tradition, on the other hand, insist that Plato would not have agreed that a Form can be predicated of itself and that his theory does not imply it. But they in turn have been hard put to explain the import of the Third Man Argument, which appears to trade so heavily on that assumption, as well as the unmistakably self-predicative language of the dialogues.

I believe that this line of thinking focuses too narrowly on what we have come to understand as the 'problem of self-predication'. To begin with, no winner in the debate is anywhere in view. Plato's language, overtly self-predicative though it is, gives no purchase to either party in the dispute, and the textual evidence on both sides is notoriously inconclusive. Much of the debate has centered on several controversial passages in the Sophist. In this paper I shall argue that the Sophist offers no unambiguous interpretation of grammatically self-predicative statements because it does not, either by design or in effect, distinguish between predication and identity. Instead of attacking certain troublesome puzzles connected with Being by directly analyzing that concept (*esti*), Plato offers a solution to those problems by distinguishing between two kinds of names." (pp. 355-356)

26. Strawser, Bradley Jay. 2012. "Those Frightening Men: A New Interpretation of Plato's Battle of Gods and Giants." *Epoché: A Journal for the History of Philosophy* no. 16:217-232.

Abstract: "In Plato's Sophist (245e–247e) an argument against metaphysical materialism in the "battle of gods and giants" is

presented which is oft the cause of consternation, primarily because it appears the characters are unfair to the materialist position. Attempts to explain it usually resort to restructuring the argument while others rearrange the Sophist entirely to rebuild the argument in a more satisfying form. I propose a different account of the argument that does not rely on a disservice to the materialist nor restructuring Plato's argument. I contend, instead, that the argument is enthymematic in nature, allowing the definitions employed to flow out of the reasoning as originally presented. Moreover, it suggests that Plato's idealism was so deeply ingrained that modern defenses of materialism were not even live options."

27. Sweeney, Leo. 1988. "Participation in Plato's dialogues: Phaedo, Parmenides, Sophist, Timaeus." *The New Scholasticism* no. 62:125-149.

"Having witnessed Plato's upgrading intelligence (and thereupon the efficient causality it exercises) and his disclosing the efficient causality it exercises) and his disclosing the extent and nature of divine artistry, let us now, before moving to the Timaeus. bring the Sophist into focus with the Phaedo and Parmenides." (p. 125)

(...)

"In order to succeed, the three-factor theory of the Phaedo (the Form itself, the participated perfections, participants) needed further causes to explain how the participated perfections themselves were produced in the participants without the Form itself being changed, multiplied, divided. His answer can be found in the Parmenides and Sophist, where he joined participation explicitly with exemplarity and efficiency. More adequately, then, participation consists in things being made-as-images of the Forms (Parm. 132D3-4), which thereby are present in their participants through the participated perfections they cause by paradigmatically directing the artistic activity of cognitive agents (Sophist. 248E sgg. and 264 sgg.).

The advantages of this more adequate conception are obvious. By their activity agents are genuine causes that sensible existents are what they are. By their indirect presence through

participated perfections the Forms are genuine causes of what things are. Yet they are not divided or multiplied or changed or lessened by their causality. Simply by being what it is, a Form can constantly direct as model whatever artistic activity the cognitive agent wishes to engage in. Sensible existents themselves are actually produced and yet they remain imperfect: they are only images of the Forms, upon which they depend constantly for being what they are.

Plato's procedure in formulating his philosophy was, then, to start with participation and end with efficient and exemplary causalities. But these latter do not replace the former: they complement and enrich it. "A thing's participation in Forms results from the divine agent producing it while acting under their paradigmatic guidance." (p. 134)

28. Swindler, James Kenneth. 1980. "Parmenides' Paradox: Negative Reference and Negative Existentials." *The Review of Metaphysics* no. 33:727-744.

"In this section I hope to show that Plato offers in the *Sophist* an alternative conception of being and irreferential language which avoids commitment to forms without instances.

Although I believe the *Sophist* contains a general semantics of reference, including the germ of a solution to the paradoxes of intensionality, I will confine myself here to Plato's solution of Parmenides' Paradox. Whereas the modern accounts I have been discussing begin with language and take some settled ontology for granted, Plato insists that a real solution requires a reconsideration of being itself. Only when we understand the nature of being can we begin to fathom reference to nonbeings.

There are at least three statements by the Eleatic Stranger defining being. At 238a he says, "To that which is may be added or attributed some other thing which is. . . . But shall we assert that to that which is not anything which is can be attributed?" (24) An object exists if and only if it is possible for it to possess some real property besides existence. This principle is said to be violated in all attempts to refer to or describe what does not exist. At 247a, in refutation of materialists, the Stranger, alluding to virtues and vices, says, "But surely they will say that

that which is capable of becoming present or absent exists." If it is possible for anything to possess or not to possess some property, then that property exists. These two principles give us existential conditions for objects and properties.

(...)

"Being" means "possible relatedness"; being is exactly identical to possibility (dunamis); being is the possible possession of properties. At Plato's hands Parmenides' ontology falls prey to his own logic. They agree that nonbeings can have no properties, but Plato adds that beings must have properties besides their being. There can be no simple, either Parmenidean or Russellian." (p. 738)

Chapter 4: Parmenides in *Theaetetus* and *Sophist*: Introduction 127; Plato's Critique of Protagoras in *Theaetetus* 128; Parmenides and Parmenides in *Sophist* 141; Conclusion 163-165.

"The eight arguments of the Parmenides are governed by eight hypotheses, or "suppositions" (henceforth, H1, H2, H3, etc.)." (p. 59)

(...)

"There is a noteworthy suggestion in *Sophist* to the effect that Parmenides's principle is self-contradictory. On the one hand, (1) Parmenides claims that only the one is (as in H1) or that it is not many in any way. On the other hand, (2) his description of the one suggests that it has being and thus is a whole with parts (as in H2). What we have here is akin to setting argument 2 against argument 1. Relatedly, *Sophist* does not take up (1) directly as an object of refutation except when the Stranger mentions briefly, but critically, that Parmenides denies any combination and any conception of the real as a plurality.

However, the Stranger's refutation of (2) makes it rather evident that H2 is attributable to the historical Parmenides and that Plato thinks it creates a "measureless perplexity" for Parmenides's doctrine.

Sophist also briefly, but strongly, suggests that Plato supports H3.

This is implied in the Stranger's definition of Unity itself." (p. 163)

30. Tegos, Michalis. 2019. "How does the Sophist reply to the Parmenides? Or, Why the One is not among the Megista Gene." Platonic Investigations no. 10:42-73.

Abstract: "This paper explores the relation of the Sophist to the Parmenides: in what ways the Sophist responds to the questions, aporias and demands raised in the Parmenides.

It aims to show how the problems encountered in the first part and the categories used in the second part of the Parmenides, relate to the solutions proposed in the Sophist. The Parmenides has been interpreted in various ways: as a logical exercise and as a theory about gods, even as an example of perfect symmetry in impossibility.

It has been acclaimed as the best collection of antinomies ever produced, but also, as an impossible map sketching how the theory of forms should not be thought. Its purpose, a parody, or training, a pedagogic exercise necessary for the proper way to truth.

Not, however, in order to discard forms, but, on the contrary, to affirm their necessity and to refine them, lest we end up abandoning forms and, with them, the possibility of dialectic and Philosophy. Throughout the Parmenides, the Theaetetus and the Sophist, we are led through a complex argumentative and dramatic strategy to the refutation of the Eleatic doctrine and the mature ontology of the Timaeus. We shall seek to show that the sections on dunamis, the megista gene and the community of forms that follow the Gigantomachia episode about ousia in the Sophist, propose a way out of the aporias of participation and the 'greatest difficulty' of the Parmenides, a

way to salvage the theory of forms, and, with them, the possibility of knowledge, logos and Philosophy altogether."

31. Thomas, Christine Jan. 2008. "Speaking of Something: Plato's Sophist and Plato's Beard." *Canadian Journal of Philosophy* no. 38:631-668.

"After close examination of the Eleatic Visitor's arguments, I shall defend the view that Plato intends the something requirement articulated in the Sophist to be a metaphysical condition on significant discourse and contentful thought. For Plato, whatever is something is some one thing that is. In other words, whatever is something exists as a well-individuated, countable entity. Being and number 'belong to' whatever is something. Moreover, whatever is something is self-identical (by sharing in sameness) and different from everything else (by sharing in difference).

One of the central aims of the Sophist is to articulate and to develop Plato's metaphysics of somethings. We learn in the dialogue that, strictly speaking, speech and thought must be of existing, countable beings that are self-identical and different from everything else.

Some qualifications are, of course, in order. There is reason to believe that not simply any apparently contentful piece of speech commits Plato to the somethinghood and existence of the purported subject. For example, the apparent meaningfulness of the sentences 'Pegasus does not exist' and 'Pegasus is winged' does not commit Plato to the somethinghood or existence or being of Pegasus. Or so I argue. (pp. 632-633 a note omitted)

Note 1: "This paper is a reply to Y. Lafrance "Sur une lecture analytique du Sophiste 237 b 10 - 239 a 12" [*Revue de Philosophie Ancienne*, 2, 1984, pp. 41-76]. His paper and my reply continue a discussion which began when we gave a seminar together in 1982 - 83 at the University of Ottawa on 'The analytic and continental traditions in the exegesis of

Plato's Sophist'. I wish to thank him both for his vigorous curiosity and also his friendly tolerance throughout the seminar and since." (p. 77)

(...)

"Conclusion

In conclusion let me simply restate the principal thesis which I have argued. Plato's Forms and analysts' concepts are fundamentally the same things. Once we see this a good deal of Plato's philosophical work becomes remarkably alive.

And given that Plato is thus sufficiently on our wavelength that we can take him out of the museum and treat him seriously as a philosopher, why should we not do so? I am sure it is what he would have wanted." (p. 92)

33. Tilgham, B. R. 1969. "Parmenides, Plato and logical atomism." Southern Journal of Philosophy no. 7:151-160.

"In the Sophist Plato does not give us a theory of proper names although there is no reason to suppose he is not committed to thinking of names as meaning their bearers and likely enough he thinks of the names of the forms as logically proper names. Whether he would consider the name of a sensible object, e.g., "Theaetetus," as a logically proper name, there is no evidence to suggest. At any rate, it doesn't make any difference. Whatever he takes to be logically proper names, it would, I think, be easy enough to impose the theory of descriptions upon him to take care of the other words that we use to refer and, besides, what is important and original is not a theory of names, but a theory of sentence meaning." (p. 157)

34. Trevaskis, J.R. 1955. "The Sophistry of Noble Lineage (Plato, Sophistes 230a5-232b9)." Phronesis. A Journal for Ancient Philosophy no. 2:36-49.

"This passage has recently been examined by Mr G. B. Kerferd in the Classical Quarterly.(1) He reaches interesting and novel conclusions.

The following article questions the results of his investigations and attempts to support the usual view of the passage.

It may be best to begin with a recapitulation of the dialogue up to 231 e6. An Eleatic visitor and Theaetetus attempt to define the sophist.

Five divisions are pursued under the generic starting-point κτητική. The sixth is preceded by a Collection which yields the term διαλεκτική. The τέχνη διαλεκτική is successively divided until a cathartic method of education is isolated. The question is then raised whether its practitioners are sophists. The Eleatic is doubtful about this, but is prepared to accept the qualified title." (p. 36)

(...)

"The reason for the sixth division appearing where it does in the Sophist must surely be that the method of Socrates portrayed in it was often confused with sophistry. After five divisions which characterize sophistry as Plato saw it and are plainly hostile, the sixth is "serious and sympathetic; towards the close it becomes eloquent.(2)" (p. 48)

(1) N.S. IV I, 2 (Jan.-Apr. 1954) pp. 84-90.

(2) i.e. Plato to his reader: "Continue to call it sophistry, if you insist; but if you do you are talking of a 'sophistry' of a very different order."

35. ———. 1966. "The μέγιστα γένη and the Vowel Analogy of Plato, Sophist 253." *Phronesis. A Journal for Ancient Philosophy* no. 11:99-116.

"I wish to discuss the μέγιστα γένη section of the Sophist (251a5-259d8) and in particular some difficulties in the passage 253a1-c3.

Let us begin by considering a couple of general points about the Sophist: 1. What is the Sophist about? Answers commonly given are that it is concerned with the relations of Ideas to one another, or with the elucidation of significant negative and of false statement, or with a development in Plato's ontology, or with the practical illustration of the method of Collection and Division, or with a number of these topics.

Even on the assumption (which I do not share) that all these topics are to be found treated in the dialogue, it does not seem to me that their treatment is other than incidental to a more fundamental theme: philosophy. The dialogue is an exercise in doing philosophy, which is distinct from its counterfeit, sophistry or casuistry. Of course all the dialogues are in a sense exercises in doing philosophy: the reader's mind is exercised by them in philosophical questions. But the Sophist is a dialogue which is itself pre-eminently a demonstration of philosophy in action. The passages concerned with significant negative and with false statement, for instance, are practical examples of casuistical positions refuted. No-one strongly interested in philosophy is likely to find the dialogue dry or technical. These adjectives may be applied to it by those more interested in literature than philosophy.

2. The discussion is led by a visitor from Elea' who, it is emphasized at the beginning of the dialogue and elsewhere, is a philosopher and no mere logic-chopper. He is, in fact, indistinguishable from Plato's Socrates in some traits: for example, his use of the aporematic method, and his penchant for the method of diaeresis.

The dialogue, then, shows us philosophy in action, and is conducted by a serious philosopher." (p. 99)

(1) I call him an 'Elean' rather than an 'Eleatic' since, although he is described at the opening of the dialogue as ἑταῖρον... τῶν ἀμφὶ Παρμενίδην καὶ Ζήνωνα, it becomes clear in the course of the dialogue that he does not adopt the Eleatic position.

36. ——. 1967. "Division and its Relation to Dialectic and Ontology in Plato." *Phronesis. A Journal for Ancient Philosophy* no. 12:118-129.

"The formal divisional exercises which we meet above all in the Sophist may strike the reader as tedious. Yet it is usually said that Plato lays great store by Division as a method of philosophy, one, moreover, to which he gives the title of 'dialectic' and which reveals the real structure of Ideas.

I wish to discuss how far the method is to be identified with dialectic, what relation, if any, it bears to Plato's ontology, and what Plato hopes for from it. I shall be mainly concerned with Phaedrus, Sophist and Statesman, having discussed the Philebus on a previous occasion (Phronesis 5,1 [1960], 39-44)." (p. 118)

37. Trindade Santos, José. 2013. "For a Non-Predicative Reading of *esti* in Parmenides, the Sophists and Plato." *Méthexis* no. 26:39-50.

Abstract: "The absence of grammatical subject and object in Parmenides' "it is/it is not" allows the reading of the verbal forms not as copulas but as names, with no implicit subject nor elided predicate. Once there are two only alternatives, contrary and excluding each other, sustaining that a 'no-name' does not grant knowledge implies identifying its opposite – "it is" – as the only name conducive to knowledge in itself, denouncing the 'inconceivability of a knowledge that does not know. If "it is" is the only [name] "which can be thought/known", and "what is" is the way in which 'thought/knowledge' can be accomplished, there is no need to postulate the existence of 'anything' that is, nor of anything that can be said of "what is". Being the only name which "can be thought of/known", the unifying synthesis of "knowledge, knowing and known" in one infallible cognitive state, it is unthinkable that "what is" does not exist."

38. ———. 2016. "Reading Plato's Sophist." In *Plato's Styles and Characters. Between Literature and Philosophy*, edited by Cornelli, Gabriele, 89-99. Berlin: Walter de Gruyter.

"Plato's Sophist explores a cluster of philosophical interconnected problems, namely those of truth/falsity and being/not-being. Highlighting some key passages in Plato's dialogues in which these problems are approached I come to the Sophist where they are brought together and solved." (p. 89)

(...)

"The greatest innovation contained in this conception of dialectics consists in the previous separation and subsequent

combination of the ontological and epistemological perspectives on reality(14). While the three first Greatest Kinds – Being, Movement and Rest – refer to what exists, the Same and the Other provide the dialectician with the ability to relate them using different kinds of statements: existential, identitative and predicative ones (this last one exploring the participation of Forms in one another: 255a–b, 256a).

Plato's theory of Being shows how this kind includes all the others granting them 'existence' (Being is everything that is, seen in itself). In his conception of Not-Being he starts by making manifest the function played by the Other as 'difference' (Not-Being is Being seen from the perspective of any other kind: 255d, 256d–e). He then proceeds to condense in the idea of 'contraposition' (257d–258c) the role played by Not-Being in the generation of ontological hierarchies.

In these each grade is what it is, in contraposition to all the others it is not, but in relation to which it is and is said by discourse (258d–259b)." (p. 97)

(14) In the *Phaedo* or the *Republic* Epistemology and Ontology are tied together, for each one of the two cognitive competences "is related to" its own content – "being" or "opinion" – and "effects" its product: "knowledge" or "belief" (R. [*Republic*] V 477d ff.).

39. Turnbull, Robert G. 1964. "The Argument of the *Sophist*." *Philosophical Quarterly* no. 14:23-34.

"The aim of this paper is to present and defend an explanation of the connections between the most noteworthy parts of *Sophist*. That explanation ties together the battle of gods and giants, the section on non-being and the section on speaking and thinking falsely. As always in Platonic interpretation, however, my explanation accords with a more comprehensive interpretation of Platonic ontology and has ramifications for the explanation of other dialogues.

Baldly stated, my claim is as follows. In the battle of gods and giants section the Stranger insists that both forms and souls are, both being *dynamais* (powers). In the section on non-being

a distinction is drawn between forms which, as it were, run through all the other forms as principles of their division and contrariety and forms which might be called "illustrable" forms (cf. the "illustrability" of mathematical forms in Republic in that the mathematician may draw diagrams). The former are Being, Same, and Different, the latter, Motion and Rest. Motion and Rest are among the "most important", for every other illustrable form may be regarded as a kind (or sub-kind) of one of them. They are, moreover, contraries, that is, they mingle with Different with respect to each other. The section on speaking and thinking falsely requires that souls are, for "names" refer always to souls. It also requires contrariety, for "verbs" refer to immanent characters (i.e., to what, strictly, participate in forms) or, better, to "possible" immanent characters. And immanent characters, sharing contrariety with the forms in which they participate, provide the possibility of speaking or thinking what is not. To speak or think what is not (i.e., to make a false "statement") is to refer to a soul and a "possible" immanent character, the "possibility" of which is assured by the diversity and contrariety of "illustrable" forms. The "discourse" principle which parallels the contrariety principle among the forms is: No soul may have in it at the same time (and in the same respect) contrary immanent characters.

And discourse here, of course, consists of juxtaposition of "names" and "verbs".

In what follows, Part I will develop the intellectual considerations upon which my interpretation rests, providing a more general framework for it.

Part II will deal directly and briefly with the text of Sophist." (p. 23)

40. Turner, E. G. 1955. "A Ptolemaic scrap of Plato, Sophistes." *Rheinisches Museum für Philologie* no. 98:97-98.

"Shortly before the publication in May 1955 of The Hibeh Papyri Part II, I identified the contents of two small scraps printed therein as No. 228 as from Plato, Sophistes. I had time to insert a slip stating the identification, but not to revise or

assess the value of the text, and I attempt that revision and evaluation here." (p. 97)

41. Van Eck, Job. 1995. "Falsity without Negative Predication: On Sophistes 255e-263d." *Phronesis. A Journal for Ancient Philosophy* no. 40:20-47.

"The dramatic aim of the Sophistes is to characterise the sophist and capture him in a definition. He is to be described as an illusionist who creates false beliefs. Therefore, an analysis of falsity is needed, which is provided in 263.

Now, three of the main problems the Sophistes has raised among interpreters are: 'What is the preparation Plato made before he could arrive at his analysis of falsehood?', 'What is the nature of the problem about falsity Plato gets to grips with?' and 'What account of negative predication, if any, can we derive from the dialogue?' In the following I want to deal with these questions." (p. 20)

(...)

"To conclude: there is no treatment of what we usually call negative predication (that is, nonpredication) in 255e-258e, nor any reference to it, nor any use made of it in 258e-263d; further, the analysis of a sentence of the type 'x is not F' we can derive from 240e-241a and 263b-d, shows that it does not imply negative predication in the strict meaning of the phrase, viz. that a negative predicate is attributed to x. Thus, in a double sense we can say that there is no negative predication in the Sophistes. What we do find is falsity without negative predication. In consequence, it is wrong to speak of the 'crucial inadequacy of [the] Sophist account of negation to sustain Plato's theory of false judgement (50); the Platonic account of negation we can derive from the Sophist is an immediate result of the theory of false judgement we find there, and an adequate one indeed." (p. 40)

42. ———. 1997. "A Note on Sophist 257b9-c3." *Mnemosyne* no. 50:75-77.

"In the literature we find two kinds of translations of Sophist 257b9-c3, but, strange enough, no discussion among the commentators of the point of difference at issue. In my opinion, both versions are unsatisfactory. I will try to prove this claim and offer an alternative. The question behind the difference between the translations is: on what part of the sentence do the genitives τῶν ἐπιόντων ὀνομάτων (c1-2) and τῶν πραγμάτων (c2) depend?" (p. 75)

43. ———. 1999. "Plato's Analysis of Falsity. A Landmark in the History of Logical Analysis." In *JFAK — Essays Dedicated to Johan van Benthem on the Occasion of his 50th Birthday*, edited by Gerbrandy, Jelle, Maarten, Marx., de Rijk, Maarten and Venema, Yde. Amsterdam: Amsterdam University Press.

Abstract: "Plato's theory of falsity and its preliminaries, as presented in *Sophistes* 254d-263d, has evoked many grave criticisms: it is said to be fundamentally flawed in several respects. Yet it appears that the main origin of this view is an incorrect reading of the section on negation, which precedes the analysis of falsity. This section is interpreted as treating negative predication; in fact it treats higher order (non-)identity propositions (F is [not] G). And it is on the basis of these (non)identity propositions that the falsity of atomic first order sentences is explained. The resulting analysis turns out to be impeccable and fully adequate to the problems at issue."

44. ———. 2000. "Plato's logical insights: On Sophist 254d-257a." *Ancient Philosophy* no. 20:53-79.

"Plato has often been censured for a serious lack of important logical insights.

Especially his theory of not being and falsity and its preliminaries, as presented in the middle part of the Sophist, particularly 254d-263d, has evoked many grave criticisms." (p. 53)

(...)

"I shall discuss those parts of the text that have given rise to these criticisms, which I show to be all mistaken: Plato is not guilty of any of the fallacies or failures mentioned. On all points at issue here Plato's logical insights are perfectly sound." (p. 54)

(...)

"On the basis of the criticisms dealt with above, the section 254d-263d of the Sophist, containing Plato's theory of not-being and falsity, has been called 'one great logical mistake' (Bostock 1984, 90). Now that we have seen all these criticisms are false, how should we evaluate the theory? We found that it is not faultless either, as it contains the idea that (a) rest does not participate of movement and movement not of rest, because (b) this would turn their-opposite-natures into each other. Actually, only the first part of (a) is true and the reason given for it is not sound. In fact, this makes the system inconsistent: it follows from the text

that every form is at rest (contra a), and also that resting is not part of the physis of any form (except for rest, of course), and so will not interfere with the form of movement either (contra b). How serious is this and what is the position of the inconsistency within the theory as a whole?" (p. 77)

(...)

"Thus, within the theory as a whole the idea that movement would not partake of rest and vice versa because this would turn their natures into each other, is merely a marginal slip. In fact it is the only fault in an otherwise impeccable series of arguments, leading, as our outline in the introduction can only adumbrate, to a highly adequate analysis of not being and falsity. Far from being the logical mess the criticisms would make us believe it is, the theory of falsity and negation we find

in the Sophist is a masterpiece of logical analysis, to be reckoned among the great achievements in the history of the discipline." (p.78)

45. ———. 2002. "Non-Being and Difference: on Plato's Sophist 256d5-258e3." Oxford Studies in Ancient Philosophy no. 23:63-84.

"Plato's analysis of falsity at Sophist 263 is given in terms of notbeing and difference. 'Theaetetus flies' is false because what is different is stated as the same, and what is not as what is, θάτερα ὡς τὰ αὐτὰ καὶ μὴ ὄντα ὡς ὄντα, (263 D 1-2), things that are different from what is the case concerning him (viz. flying) are described as the same (as what is the case about him). That there are indeed many μὴ ὄντα, 'not-beings' in the sense of things different from the things that are, the Eleatic Stranger (ES) and Theaetetus remarked some lines above, 'for we said there are many things that are with regard to each thing and many things that are not' (263 B 11-12), referring to 256 E 6-7, 'so, with regard to each of the forms, being is many and not-being is indefinite in quantity'. In this way they had been disobedient to Parmenides, who had stated, 'Never shall it force itself on us that things that are-not are [εἶναι μὴ ἔόντα].' But they had gone even further in their disobedience: 'but we have not merely shown that the things that are-not are, but also brought to light the form not-being happens to have' (258 o 5-7).

The context of both points has caused commentators a lot of problems. The main question is, how is it that something (i.e. a form) is called an οὐκ ὄν in 256 o 8-257 A 6? Is it because it is different from the form of being; or is it because it is different from any thing (i.e. any form) it is not identical with? And on which of the two lines is the form of not-being defined as it is introduced in the section that follows, in 258 A 11-B 8 and 258 D 7-E 3? Only a few commentators have tackled the problems systematically, and as far as I know no interpretation has been

reached that is both coherent and sound. Nevertheless, such an interpretation is possible, as I shall argue in the following. I shall discuss the passages at issue, criticize commentaries that have been given, and present the interpretation intended." (pp. 63-64)

46. ———. 2008. "Self-predication and Being the Aitia of Things." *Ancient Philosophy* no. 28:105-124.

"In recent times sentences of self-predication in Plato, that is, sentences in which it is said that a certain form F-ness, is itself F. have been explained by referring to the causal role of forms. The form F-ness is F because it is the aitia of any particular x being F. This is taken in different senses. Some commentators are of the opinion that to say that F-ness, also called 'the F'. is itself F is to say that it is the ultimate source (explanation) of why anything is F (Fine 1992, 26 and 2003, 36, 314-315). For others, sometimes the form of F is itself F because as a cause of other things' being F, it must itself have the quality F (Malcolm 1991, 154-158 and Devereux 2003, 79).

I examine the evidence put forward for these interpretations and look at some passages pertinent to the issue of self-predication from the *Phaedo* and the *Sophist*. The *Sophist* features a context in which there is no question of the role of forms as aitiai; the *Phaedo* passage is explicitly about the causal role of the forms concerned. From both dialogues we can learn why a form F-ness cannot be not F, and what it means that it is F, without referring to the F as the aitia of F-things being F. Yet there is a very interesting connection between the causal role of the forms and a certain type of self-predication. Surprisingly, however, it is not self-predication of forms that is at issue, but self-predication with relation to the F-ness 'in us'." (p. 105)

"There are two main rival interpretations of the text, the so-called Oxford interpretation and the incompatibility range interpretation.⁽¹⁾ On the Oxford interpretation, the sentence 'Theaetetus flies' is false, because flying is different from everything that applies to Theaetetus. So it reads a universal quantifier implied in the text: 'other things than all the things that are'. The incompatibility range interpretation, however, says that 'Theaetetus flies' is false, because flying is different from something taken from the range of attributes incompatible with flying (viz., sitting) that applies to Theaetetus. Thus it reads an existential quantifier in the text: 'other things than some things that are'. This reading finds its inspiration in an earlier passage, 257b1-c3, on negative expressions, where the idea of a range of incompatible attributes is introduced indeed, and where it is said that 'the prefixed "not" indicates some of the other things than... the things the words uttered after the negative stand for'. On this interpretation 'not big', for instance, would signify middle-sized, or small, because it means 'something other than big'.

What is at issue here, namely, to which interpretation we should subscribe, concerns an important point: whether the *Sophist* offers an adequate theory of falsity or not. On the Oxford interpretation it does, on the incompatibility range interpretation it does not.

Now, the incompatibility range interpretation is winning more and more support.² Brown 2008, 453-458 argues against the Oxford interpretation. As her criticisms are incisive and

forceful indeed, adherers to this interpretation cannot ignore them. In the following, I will oppose the incompatibility range interpretation and point out that it involves a remarkable inconsistency in the treatment of negative terms in 256-257. Then I will show that a natural reading of 263 justifies the Oxford interpretation." (pp. 275-276)

"In view of much recent discussion of the passage in the Sophist in which Plato discusses the relations among the forms, (*) it may not be inappropriate to examine this passage from the point of view of modern logical theory. There is indeed already one such study by Karl Dürr, (**) who attempts to represent the relations among the forms within the framework of classes in *Principia Mathematica*. Since we consider some of these

relations to be modal in character, we cannot accept the adequacy of this framework for this purpose.

In what follows we shall examine the connection between relations among the forms and the relation of participation between forms and individuals (section 2), the peculiar character of forms corresponding to relative terms (section 3), and finally the formal representation of the described logical structures (section 4). The main point which emerges is that the problems discussed by Plato are closely related to difficult problems in current logical theory." (p. 482)

49. Vázquez, Daniel. 2018. "Argumentation and Reflection in Plato's Gigantomachia (Sophist 245e6–249d5)." *Archiv für Geschichte der Philosophie* no. 100:241-285.

Abstract: "This paper argues that Plato's gigantomachia is simultaneously concerned with first-order arguments about metaphysics and epistemology and with second-order arguments that reflect on the impact of ethical components, argumentative strategies and theoretical assumptions in the conversation. This complex argumentative structure reveals, I suggest, an organic and systematic conception of philosophy where all the elements are interdependent. This interpretation has four consequences, two at the second-order level, and two concerning the first-order arguments. First, it shows that there are methodological and ethical requirements without which philosophy is impossible. Second, it shows that the text does not refute materialism but tries to reflect the necessary conditions

to consider possible the existence of incorporeal beings. Third, it argues that the text assumes a conception of knowledge where knowing something is a complex activity composed of

two causal relations. Finally, it offers a new interpretation of the overall conclusion of the passage."

50. Vigdis, Songe-Møller. 2013. "Socrates, the Stranger, and Parmenides in Plato's Sophist: Two Troubled Relationships." *The New Yearbook for Phenomenology and Phenomenological Philosophy* no. 13:292-305.

Abstract: "Who is the xenos, the Eleatic stranger, in the Sophist? Or rather: who is he not? In this paper, I try to shed light on this (latter) question by discussing Socrates' relationship toward the stranger as well as the stranger's relationship toward Parmenides. I argue that in the opening of the dialogue, Socrates creates an aura of disinterest, distance, and alienation toward the visitor and thus indicates that the stranger is a philosopher of another kind than himself. Through an analysis of the stranger's treatment of Parmenides' notions of non-being and being I come to the conclusion that the stranger also diverges from his spiritual father Parmenides: while both Socrates and Parmenides never lose the divine ideal out of sight, the stranger confines himself to a purely human perspective, in total isolation from the divine ideal."

51. Vlasits, Justin. 2021. "The Puzzle of the Sophist." *Archiv für Geschichte der Philosophie*:1-29.

Published first online.

Abstract: "The many definitions of sophistry at the beginning of Plato's Sophist have puzzled scholars just as much as they puzzled the dialogue's main speakers: the Visitor from Elea and Theaetetus. The aim of this paper is to give an account of that puzzlement. This puzzlement, it is argued, stems not from a logical or epistemological problem, but from the metaphysical problem that, given the multiplicity of accounts, the interlocutors do not know what the sophist essentially is.

It transpires that, in order to properly account for this puzzle, one must jettison the traditional view of Plato's method of division, on which divisions must be exclusive and mark out relations of essential predication. It is then shown on independent grounds that, although Platonic division in the

Sophist must express predication relations and be transitive, it need not be dichotomous, exclusive, or express relations of essential predication. Once the requirements of exclusivity and essential predication are dropped, it is possible to make sense of the reasons that the Visitor from Elea and Theaetetus are puzzled. Moreover, with this in hand, it is possible to see Plato making an important methodological point in the dialogue: division on its own without any norms does not necessarily lead to the discovery of essences."

54. Webb, David. 2000. "Continuity and Difference in Heidegger's Sophist." *Southern Journal of Philosophy* no. 38:145-169.
"My argument in this paper comprises four claims. First, Heidegger's interpretation of nous and logos can only be fully understood in conjunction with his reading of phronesis and sophia. Second, the way in which the two pairs of terms bear upon each other turns at a series of levels on the question of relation. Third, for Heidegger the question of relation is articulated in terms of movement, and moreover Heidegger wishes movement, and thereby relation, to show itself as itself without being reduced either to a thing or to a subsequent relation between preexisting things. Fourth, while Heidegger's reception of the Aristotelian conception of movement as "continuous" (squelches) assists in holding open the possibility of a more fundamentally ontological discourse than is possible within the dialectical form of inquiry as presented in Plato's Sophist, it is paradoxically Heidegger's deployment of continuity that leads to the movement by which philosophy

relates to truth being revealed as aporetic and even discontinuous. As a result, we shall see that Heidegger's attempt to secure a more "fundamental" philosophical relation to truth in fact draws philosophy back into the concreteness of human existence." (p. 146)

55. Wedin, Michael V. 1981. "Plato on What "Being" is Not." *Philosophia* no. 10-11:265-295.

"Three puzzles are raised at "Sophist" 243b-245e concerning theories that make claims about the number of things that are. I argue that they are preliminary to and reflect Plato's positive theory of being, in particular they indicate that it is a mistake to regard being as a standard first-order predicate and so support the thesis that for Plato being is a second-order or formal concept."

56. Wiggins, David. 1971. "Sentence Meaning, Negation, and Plato's Problem of Non-Being." In *Plato. A Collection of Critical Essays. I: Metaphysics and Epistemology*, edited by Vlastos, Gregory, 268-303. Notre Dame: Indiana University Press.

Synopsis: "I. An analysis of *Sophist* 236E ff. The sentential variant of the problem of non-being in dialogues earlier than *Theaetetus* and *Sophist*. II. The display theory of sentence meaning as an escape from Plato's problem of false judgement. The theory's inability to accommodate negation. III. Plato's analytical approach to the problem of sentence-sense in *Sophist*, and anticipations of this in *Cratylus* and *Theaetetus*. IV. Relevant points from the discussion of Being in *Sophist*. V. The *Sophist* explanation of negation. Preliminary criticism and a suggested amendment of the explanation. VI. The analysis of true and false judgement at *Sophist* 263B4 ff. and Plato's return from negation to falsity. VII. Crucial inadequacy of *Sophist* account of negation to sustain Plato's theory of false judgement. VIII. Positive achievements of the analysis."

"For these reasons I do not myself believe that Plato came near to solving the problem of negation, or that he reached any satisfactory understanding of what problem this problem really is. The little clarity we now have about the nature of the problem of negation does not lead me to think that Plato's

notion of the notion of Other is of fundamental importance in solving it. A theory of speech acts is a more likely focus for a satisfying answer. On the other hand we are not in a position to condescend to him on the subject. As J. L. Austin complained, we ourselves are all too apt to define negation in terms of falsehood and falsehood in terms of negation, and to fend off the charge of circularity by keeping the occasions of such interdefinition apart (rather than by getting really clear about what exactly is to be expected from an analysis of negation).

As for falsity, Plato's objective was as much to find room for falsity as to define it by means of his account of negation; and in the former project I believe he has more success. Admittedly he mistakes the gravity of some of the obstacles which he thinks he sees in the way of admitting the existence of falsity, and he does not always take the best or the shortest way round them. As a result his eventual theory is a more primitive theory than it otherwise might have been. But in the course of it he puts logic and philosophy onto the subject of parts of speech and the asymmetrical roles of names and other parts in the completed sentence." (p. 302)

57. Wiitala, Michael. 2015. "Non-Being and the Structure of Privative Forms in Plato's Sophist." *Epoché: A Journal for the History of Philosophy* no. 19:277-286.

Abstract: "In Plato's Statesman, the Eleatic Stranger explains that the division of all human beings into Greek and barbarian is mistaken in that it fails to divide reality into genuine classes or forms (eide). The division fails because "barbarian" names a privative form, that is, a form properly indicated via negation: non-Greek. This paper examines how the Stranger characterizes privative forms in the Sophist. I argue that although the Stranger is careful to define privative forms as fully determinate, he nevertheless characterizes them as having a structure unlike that of their non-privative counterparts. A privative form, in contrast to a non-privative form, is indifferent to the specificity of its members."

58. ———. 2018. "The Argument against the Friends of the Forms Revisited: Sophist 248a4-249d5." *Apeiron* no. 51:171-200.

Abstract: "There are only two places in which Plato explicitly offers a critique of the sort of theory of forms presented in the *Phaedo* and *Republic*: at the beginning of the *Parmenides* and in the argument against the Friends of the Forms in the *Sophist*. An accurate account of the argument against the Friends, therefore, is crucial to a proper understanding of Plato's metaphysics. How the argument against the Friends ought to be construed and what it aims to accomplish, however, are matters of considerable controversy. My aim in this article is twofold. First, I show that the two readings of the argument against the Friends that dominate the contemporary literature – the "Cambridge Change" reading and the "Becoming-is-Being" reading – lack sufficient textual support.

Second, I offer an alternative reading of the argument against the Friends that better explains both the text of 248a4-249d5 and the role the argument plays within the Stranger's wider project of demonstrating that non-being is. My thesis is that the Stranger's argument against the Friends seeks to demonstrate that the forms must be both at rest and moved, where "moved" (*kineisthai*) has the sense of "affected." To participate in a form is to be affected by that form. I argue that since, according to the Stranger, every form participates in some other forms (see 251d5-253a2), every form is "moved" in the sense that it is affected by the forms in which it participates. Likewise, I argue that every form is at rest in the sense that its unique nature remains unaffected by the other forms in which it participates."

60. Wolfe, C. J. 2012. "Plato's and Aristotle's Answers to the *Parmenides* Problem." *The Review of Metaphysics* no. 65:747-764.

"The question raised by the great pre-Socratic philosopher *Parmenides* were perhaps the main challenge for Plato and Aristotle, two of the greatest post-Socratic philosophers. To

summarize the challenge briefly: Parmenides denied that there was any change in the world.

(...)

If Parmenides' argument seems tricky, it ought to. It has seemed tricky to all thinkers who have followed Parmenides. There were even a few unscrupulous thinkers who took advantage of this trickiness and used it as a justification for moral relativism. These thinkers were the sophists, and the most brilliant of them was Protagoras.

Protagoras claimed that each individual man was "the measure of all things," so the same thing that was good for one man might not be good for another based on perspective.⁽¹⁾ Ultimately, Protagoras claimed there was no measure of goodness based on human nature because human nature as a separate individual form did not exist. Only being exists, as Parmenides argued; Protagoras said the rest of what we take to be reality is an illusion and subjective. Protagoras' argument is a stronger version of the sophist arguments about convention and nature (nomos and physis). As Plato and Aristotle both recognized, the Parmenides problem had implications for politics as well as for philosophy.

No philosopher was able to accurately interpret and refute the Parmenides problem until Plato and Aristotle. Plato answered it in an important way in his dialogue the Sophist, and Aristotle followed this up with the complete answer in Physics book 1, chapter 8. My thesis is that Plato's answer would have been good enough to defeat Protagoras in extended argument, thereby remedying the political aspects of the Parmenides problem. However, Aristotle's answer is required to answer some additional philosophical and scientific aspects.

The first section of this paper will summarize the history of presocratic philosophy and explain why Parmenides was a turning-point.

The second section will explain the sophist Protagoras' relation to the Parmenides problem. The third part will present Aristotle's complete answer to the Parmenides problem, and in

the fourth part I will compare that approach with Plato's solution in the Sophist. Lastly, I will sum up by characterizing how I think Plato and Aristotle would have responded to Protagoras' Parmenidean sophistry in political life." (pp. 747-748)

61. Wood, James L. 2009. "Is There an "Archê Kakou" in Plato?" *The Review of Metaphysics* no. 63:349-384.

"Does Plato admit an archê kakou, a source or principle of evil? One or more than one? If he does, is the principle of evil matter, soul, a god or gods, some combination of these, or something else entirely? Or, is evil merely a human phenomenon? Just what does Plato understand by evil anyway? These questions have been repeatedly addressed by Plato's commentators, but by no means has a consensus been reached on any of them. (p. 349)

(...)

"In what follows I intend to defend this stance by an analysis of key metaphysical passages in several Platonic dialogues, and in the process I will address the central disputes in the scholarship on the present topic. I begin with the idea of the good in the Republic in order to elicit, by contrast, the concept of an arche kakou, and the negativity of this notion will be developed through the discussion of me on (nonbeing) and thateron (difference) in the Sophist. I turn then to the Philebus, where negativity is conceived as the unlimited or indeterminate (apeiron), and evil is realized in the embrace of the unlimited in hedonism, the pursuit of pleasure, and particularly the pleasure of the body. In the next section I show with reference to key passages in the Statesman and Timaeus that what seems to be a competing principle of evil, the bodily element (to somatoeides), in fact is a metaphysically derivative notion referring back to the generative cosmic order and specifically to the relative negativity, thateron, that makes genesis possible. Finally, I consider the possibility of psychic evil on the cosmic

level in the discussion of an evil cosmic soul in the Laws. Throughout I will show that positive evil lies only in the defection of the intellect from its responsibility to generate our being as good." (p. 350)

62. Xenakis, Jason. 1957. "Plato on Statement and Truth-Value." *Mind* no. 66:165-172.

"Plato discusses the notions of false, true and statement in a number of places, but Sophist 261e-3b stands out. I propose to analyse, and not merely to reproduce in other words, this passage because I expect to make it evident that it has been unduly if not regrettably neglected by those who concern themselves with such matters. I am almost tempted to retrodict, for example, that the Theory of Descriptions would not have been born had this passage been paid the attention it deserves. In any case, 'the present King of France is bald' would not have perplexed anybody because it would not have been even seriously considered, let alone chosen as a legitimate specimen of a false statement, or indeed of a statement." (p. 165)

(...)

"That Plato's analysis applies to 'there is '-statements of the form 'there is (isn't) a mouse in here 'is evident from what has already transpired before the preceding paragraph; the subject (in the by now familiar sense of 'subject') of this statement is not of course 'a mouse'—a substance expression—but 'in here', a place expression. Relational statements too can be accommodated in Plato's analysis, only that the elucidation of the truth-value of these is, perhaps, more complicated.

I am not necessarily maintaining, with Russell and others, that the higher-order use or elucidation of 'to exist' is the only one; nor that Plato did successfully cope with existential, as against attributive, statements, but rather that his present analysis can accommodate the former without postulating a Meinongian Realm of Being. If so, Quine's 'Plato's beard' need not be Plato's." (p. 172)

63. ———. 1959. "Plato's Sophist: A Defense of Negative Expressions and a Doctrine of Sense and of Truth." *Phronesis. A Journal for Ancient Philosophy* no. 4:29-43.

"The Sophist anyhow may be said to surmount the difficulty about knowledge and logos appearing toward the end of the *Theaetetus*: logos, not being a name, can after all enter into the definition of knowledge; and it can do so, of course, as true not as false logos. You have knowledge not because you are "apprehending" an object if an ethereal one - for apprehension according to the Sophist is not thought and hence knowledge - but because you have a true logos.

This does not conflict with the *Theaetetus* thesis that perception is not knowledge; on the contrary it agrees with it, since perception is a form of apprehension - I should say the only form, but let that be as it may.

Nor would it conflict with that dialogue had Plato maintained in it, as perhaps he at bottom does, that knowledge is not of particulars but of principles; for principles demand logoi.⁽¹⁾ However, the *Theaetetus* is not my present concern. In fact, I am rather uneasy over the way certain concepts are managed in the "commons" passage (185a ff.), some of which might correspond to some of the "highest concepts" of the Sophist: they seem to be treated as though they were first-order or attributive concepts, like "red" and "sound," only not perceptual.

Perhaps this is a slip. Anyhow Plato's stand against perceptionism does not require anything of the kind. Indeed, that passage could be said to amount to the following valid argument: Knowledge entails reality or truth (right: "illusory or false knowledge" is a contradiction in terms); neither truth nor reality is a perceptual concept (right; cf. "'existence' is not a predicate"); therefore knowledge cannot be identical with perception." (pp. 42-43)

(1) It is worth adding that the Wax Tablet metaphor in the *Theaetetus* goes against "innate ideas" of course, but also

against the "Theory of Recollection" and, to that extent, against Formism.

64. Zaks, Nicolas. 2016. "Is the 'In-Itself' Relational? Heidegger and Contemporary Scholarship on Plato's Sophist 255c–e." In *Sophistes: Plato's Dialogue and Heidegger's Lectures in Marburg (1924-25)*, edited by De Brasi, Diego and Fuchs, Marko J., 95-112. Newcastle upon Tyne, UK: Cambridge Scholars Publishing.

"For some scholars, the proof offered by the Eleatic Stranger in Plato's Sophist 255c9-e2 of the fact that otherness and being are not two names for one kind is "probably the most crucial text in the dialogue", since "it contains two lines (255c13-14) that seem to speak directly about being and how the form being is spoken of'." (p 95, a note omitted)

(...)

"I will proceed as follows. After presenting the difficult text, accompanied by preliminary remarks making explicit how Heidegger's interpretation both aligns with and yet remains very different from contemporary scholarship, I start with two versions of what one might call the 'standard reading' of the proof. I claim that Heidegger would have endorsed this standard reading. But Heidegger goes further by adding a sharp remark concerning the relational character of the 'in-itself. To clarify his argument, I dig into the conception of 'understanding' and temporality developed in *Being and Time*. Then, I argue that Heidegger's remark concerning the relational character of the 'in-itself in some sense foresees Michael Frede's objection to the standard reading.(3) Finally, I present and discuss two different kinds of reactions to this objection. The first kind is a defence of the standard reading; the second regards the 'in-itself as relative. In my conclusion, I argue that even if the standard reading is right concerning the proof of 255c9-e2, the fact remains that Plato, at strategic points of the *Sophist*, speaks of forms relatively to themselves." (p. 96)

65. ———. 2018. "Socratic Elenchus in the Sophist." *Apeiron* no. 51:371-390.

Abstract: "This paper demonstrates the central role of the Socratic elenchus in the Sophist. In the first part, I defend the position that the Stranger describes the Socratic elenchus in the sixth division of the Sophist. In the second part, I show that the Socratic elenchus is actually used when the Stranger scrutinizes the accounts of being put forward by his predecessors. In the final part, I explain the function of the Socratic elenchus in the argument of the dialogue. By contrast with standard scholarly interpretations, this way of reading the text provides all the puzzles about being (241c4-251a4) with a definite function in the dialogue. It also reveals that Plato's methodology includes a plurality of method and is more continuous than what is often believed."

66. ———. 2020. "Διακριτική ἡ τέχνη in the Sophist." *The Classical Quarterly*:1-3.

Abstract: "The διακριτική τέχνη (the art of separating or discriminating), from which the sixth definition of the Sophist starts (226b1–231b9), is puzzling. Prima facie the art of separating does not fit the initial division of art between ποιητική τέχνη (production) and κτητική τέχνη (acquisition) at 219a8–c9. Therefore, scholars generally agree that, although mutually exclusive, ποιητική and κτητική are not exhaustive and leave room for a third species of art, διακριτική τέχνη, on a par with ποιητική and κτητική. However, I argue that textual evidence suggests otherwise."

67. Zistakis, Alexandar H. 2006. "Difference, συμπλοκή and the hierarchy of ideas in Plato's Sophist." *Phronimon* no. 7:29-45.

Abstract: "Starting from the dialectic of intertwinement, the weaving together (συμπλοκή) of ideas in the Sophist, this paper tries to determine the place, function and significance of Difference and Hierarchy among platonic ideas. To that effect, it is first established that and how the notion of difference becomes the fundamental and even substantial structural principle of the dialectic of being and non-being, motion and rest, and finally of the notions of unity and identity themselves. In the second instance, the question of the hierarchy among ideas is interpreted and understood as the question of liberty. Namely, that very hierarchy is understood as an intrinsic and an innate one, i.e. as the set of dialectical relationships between ideas that follow from their own essence and being, which therefore is not nor cannot be externally imposed or forced upon them. Such a character of hierarchy is, then, recognized and exemplified in the case of the individual and the collective, where it turns out not only that there exists a clear idea of individuality in Plato, but also that every individual necessarily belongs to some collective and indeed seeks to unite with the collective in the same way and for the same reasons everything or idea tends towards its form, or its own proper good."

68. Zucchetti, Nicholas. 2020. "An unexplained overlap between Sophist 232b1-236d4 and Republic X. The case of the sophist as a painter." *Archai* no. 30:1-27.

Abstract: "Although most scholars agree that the lexicon of Sophist 232b1-236d4 is similar to that of Republic X, they leave undetermined whether they are theoretically compatible. Notably, both dialogues elucidate the art of imitation through the metaphor of the painter who deceives his pupils through φαντάσματα. I argue that Plato's conception of imitation of the Republic is not only consistent with that presented in the Sophist, but also importantly integrates it."

69. Zuckert, Catherine H. 2000. "Who's a Philosopher? Who's a Sophist? The Stranger v. Socrates." *The Review of Metaphysics* no. 54:65-97.

"Many readers have taken the Eleatic Stranger to represent a later stage of Plato's philosophical development because the

arguments or doctrines the Stranger presents in the Sophist appear to be better than those Socrates articulates in earlier dialogues. (1) In particular, in the Sophist Plato shows the Stranger answering two questions Socrates proved unable to resolve in two of his conversations the day before. In the Theaetetus Socrates admitted that he had long been perplexed by the fact of false opinion; he was not able to explain how it was possible. Likewise, in the Cratylus Socrates and his interlocutors were not able to determine satisfactorily the relation between names and the things to which they refer. Through his teaching about the idea of the other, the Stranger shows not only how false opinion is possible but also why names do not always correspond to the kinds or ideas of things. More generally, in the course of his account of previous thought the Stranger presents a fundamental critique of the teaching of "friends of the forms" like Socrates. When we examine the definition of the sophist to which the Stranger comes at the end of the dialogue, however, we find reasons to question the adequacy of his teaching and, consequently, his superiority to Socrates.

If philosophy consists in knowledge - of the whole or merely of self - we are forced to conclude, neither the Stranger nor Socrates is a philosopher.

Each or even both might appear, therefore, to be a pretender - or sophist. If, on the other hand, philosophy consists in the search for knowledge by means of a dialectical sorting of things according to kinds, Socrates and the Stranger represent two different, although related types." Platon, *Le Sophiste*. Bibliographie des études en Français (A - L)

Bibliographie

1. Aubenque, Pierre. 1991. "Une occasion manquée: la genèse avortée de la distinction entre l' "étant" et le "quelque chose"." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 365-387. Napoli: Bibliopolis.

Repris dans: P. Aubenque, *Problèmes aristotéliens*. Philosophie théorique, Paris: Vrin 2009, pp. 307-320.

"Platon, dans le *Sophiste*, ne consent pas à remettre en cause le primat de l'ontologie, remise en cause qui lui aurait peut-être permis de réfléchir sur le statut infra-ontologique de la temporalité et de la fausseté, mais peut-être aussi sur le statut supra-ontologique du premier principe, qui, selon Resp. VI 509 B, "n'est pas une essence", puisqu'il est "au-delà de l'essence".

P. Hadot, dans une analyse célèbre, a émis l'hypothèse que le Dieu transcendant de Porphyre, «non-étant au-dessus de l'étant (μή ὄν υπέρ το ὄν)», venait remplir la place éminente qu'occupe le "quelque chose" dans le schéma stoïcien.(22) Mais, en réalité, c'est l'Un, et non le "quelque chose", qui désigne le plus constamment pour les Néoplatoniciens le terme premier par rapport à quoi l'ontologie se trouve rabaissée à la seconde place, et il ne me paraît pas que le néoplatonisme ait été conscient de l'affinité structurale profonde qui existe entre son hénologie et la "tinologie" stoïcienne. J'ai moi-même souligné l'«aveuglement de Plotin à l'égard d'une doctrine qui pourrait passer à bon droit pour l'une des sources du dépassement néoplatonicien de l'ontologie» (23), rappelant

notamment l'analyse très critique où Plotin, se référant à l'aristotélisme le plus orthodoxe, qualifie d' «incompréhensible et irrationnelle» la notion stoïcienne d'un "quelque chose" qui ne serait pas nécessairement un étant (24). La tradition néoplatonicienne n'a retenu expressément que le refus platonicien de la "tinologie", et par là de l'occasion, que saisira le stoïcisme, d'un dépassement de l'ontologie surdéterminée du substantialisme au profit d'une doctrine plus englobante du "quelque chose", c'est-à-dire de la détermination en général (25). L'occasion restera à jamais manquée pour la tradition platonicienne, qui dépassera certes l'ontologie, dans sa phase néoplatonicienne, mais par d'autres voies. Il reste que le problème, doublement posé par le Sophiste, du statut du discours faux et de celui de la non-présence "incorporelle" représente un premier et décisif ébranlement de l'ontologisme parménidien. C'est là un aspect trop méconnu du "parricide" : le discours sur l'être ne retrouvera jamais plus, après le Sophiste, son innocence perdue, celle d'une prééminence qui lui reviendrait en quelque manière de droit." (pp. 384-385)

Les textes de ce volume ont été recueillis par Michel Narcy.

Table des Matières

Pierre Aubenque: Avant-propos 11

Première Partie: L'ORDRE DU TEXTE: SOPHISTIQUE,
ONTOLOGIE, COSMOLOGIE

Francis Wolff: Le chasseur chassé. Les définitions du sophiste 17; Maria Villela-Petit: La question de l'image artistique dans le Sophiste 53; Nestor-Luis Cordero: L'invention de l'école éléatique: Platon, Sophiste, 242D 91; Jean Frère: Platon, lecteur de Parménide dans le Sophiste 125; Michel Fattal: Le Sophiste: logos de la synthèse ou logos de la division? 145; Monique Dixsaut: La négation, le non-être et l'autre dans le Sophiste 165; Antonia Soulez: Le travail de la négation: l'interprétation du Sophiste par Gilbert Ryle 215; Monique Lassègue: L'imitation dans le Sophiste de Platon p. 247; Rémi Brague: La cosmologie finale du Sophiste (265 B4 - E6) p. 267;

Deuxième Partie: VUES PERSPECTIVES

Barbara Cassin: Les Muses et la philosophie. Éléments pour une histoire du pseudos 291; Denis O'Brien: Le non-être dans la philosophie grecque: Parménide, Platon, Plotin 317; Pierre Aubenque: Une occasion manquée: la genèse avortée de la distinction entre l'"étant" et le "quelque chose" 365;

Troisième Partie: LA TRADITION DU SOPHISTE

Pierre Pellegrin: Le Sophiste ou de la division. Aristote-Platon-Aristote 389; Michel Narcy: La lecture aristotélicienne du Sophiste et ses effets 417; Luc Brisson: De quelle façon Plotin interprète-t-il les cinq genres du Sophiste ? (Ennéades VI 2 [43] 8) 449; Annick Charles-Saget: Lire Proclus, lecteur du Sophiste (avec un appendice par Christian Guérard: Les citations du Sophiste dans les œuvres de Proclus) 475; Françoise Caujolle-Zaslavsky: Note sur l'ἐπαγωγή dans le Sophiste. A propos de Diogène Laërce III 53-55 509; Alain Boutot: L'interprétation heideggerienne du Sophiste de Platon 535;

INDEX

Index de citations de Platon: I Index des citations du Sophiste 563; II Index des citations d'autres dialogues 567; Index des citations d'auteurs anciens (Platon excepté) 571; Index des noms d'auteurs modernes 582-587.

"Le Centre de Recherches sur la Pensée antique (Centre Léon Robin) de l'Université de Paris-Sorbonne (Paris IV), formation

associée au C.N.R.S. (U.A. 107), s'est attaché ces dernières années à l'étude des fondements grecs d'une théorie de l'être, de ce que les Modernes ont appelé "ontologie". Deux ouvrages déjà parus portent témoignage de ces recherches(1).

Après le Poème de Parménide, il était naturel que notre attention se portât - ce fut le cas des séminaires tenus entre 1984 et 1986 - sur le dialogue platonicien où la compréhension parménidienne de l'être se trouve contestée, mais aussi d'une certaine manière assumée, en même temps que transformée.

L'occasion de cette crise, que Platon dramatise au point de la voir culminer dans l'exigence d'un "parricide" pourtant impossible, avait été suscitée par l'existence du mouvement sophistique, dont la pratique "polymorphe" visait en fait à donner !'apparaître - donc une certaine forme d'être - au non-être, contrevenant par là à l'interdiction de Parménide de dire étant le non-être. On connaît la solution platonicienne : l'introduction dans l'être d'un certain non-être sous la forme de l'altérité." (p. 13)

(...)

"Replacer l'onto-logie dans les circonstances historiques de son surgissement, c'est, croyons-nous, redonner vie et d'abord sens à ce qui ne devrait plus apparaître dès lors comme le simple complément, général et abstrait, d'études philosophiques plus particulières, dont le platonisme nous fournit par ailleurs maints exemples, mais comme le fondement même et le garant de leur possibilité. En ce sens, le Sophiste est bien, dans toute l'acception du terme, un texte central, pour le platonisme comme pour l'histoire de la philosophie." (p. 14)

(1) Concepts et catégories dans la Pensée antique, Paris 1981; Etudes sur Parménide, Paris 1987, 2 voll.

3. Audouard, Xavier. 1966. "Le simulacre." Cahiers pour l'Analyse no. 3.

"Qui sait donc ? Celui qui commence ou celui qui parvient ? le sujet dont on part ou le sujet auquel on arrive? Qu'est ce sujet supposé savoir, sinon le sage lui-même? Savoir quoi? qu'il a toujours su précisément ce qu'il fallait savoir. Le sophiste, lui,

prétend que savoir et ne pas savoir reviennent au même, parce qu'il n'y a pas de vérité du simulacre, parce que l'écart qui crée le simulacre le différencie autant de la copie de la réalité que de la réalité même, que de la réalité même, que le simulacre seul institue le sujet en l'incorporant comme cet écart même. Que le sujet n'est pas et ne peut pas être référence, sinon en mettant en lumière, à chaque instant, du procès dichotomique, qu'il est l'écart nouveau pris par rapport à toute référence, que jamais ce sujet-là ne survolera comme "sujet de connaissance", l'ensemble des écarts où, il s'est institué, que le sujet à connaître est un simulacre, un fantôme enfin, car il ne peut être connu que du point de vue particulier du sujet auquel il se révèle." (p. 71)

4. Ballériaux, Omer. 2001. "Platon. Aporía, euporía et les mots étymologiquement apparentés : Sophiste." In *Aporia dans la philosophie grecque, des origines à Aristote*, edited by Motte, André and Rutten, Christian, 81-128. Louvain: Peeters.

"La fréquence relative des mots de la famille d'ἄπορι ᾗ y est [dans le Sophiste], en effet, la plus élevée de tous les dialogues, à savoir 0,149 alors que la moyenne générale est de 0,044 (1) Les occurrences des mots à connotation positive, εὐπορος et εὐπορέω y sont très peu nombreuses et n'offrent guère d'intérêt. Trois d'entre elles sont, on le verra plus loin, prises dans l'acception physique ou socio-économique. Et la quatrième, la seule qui fasse référence à un stade atteint dans la connaissance, dépeint une réussite qui est en réalité illusoire.

Εὐπορεῖν φαμεν (2433 c3) : nous nous berçons d'illusion lorsque nous prétendons être sorti d'incertitude." (p. 81)

(...)

"Mais l'examen le plus révélateur est incontestablement celui qui porte sur l'inégale répartition des occurrences dans les diverses parties du dialogue. L'introduction (section A [216a 1-218b 5] ne retiendra guère notre attention. Elle ne comporte qu'une seule occurrence, d'ailleurs peu significative. Socrate ayant manifesté son intention d'interroger l'Étranger d'Élée sur le sophiste, le politique, le philosophe, Théodore constate, en

passant, que Socrate a donc été jeté dans l'embarras à propos de ces trois personnages, περι` αὐτῶν διαπορηθεῖς (217 a 4-5). Nous négligerons également les deux occurrences (267 c 7 et 10) qui, dans la conclusion (section I [264b 10-268 d5]), font référence à l'embarras éprouvé à un moment antérieur de la discussion. Restent 23 occurrences, fort inégalement réparties au sein du reste du dialogue, où nous distinguerons trois parties, la première (les divisions) correspondant aux sections B [218b 6-231 a 5], C [231 a 6-232 b 3], D [232 b 3-236 c 8], la seconde regroupant les sections E [236 c 9-241 c 3], F [241 c 4-242 b 5], G [242 b 6-251 a 4] (examen des opinions des philosophes), la troisième enfin (section H [251 a 5-264 b 9]) étant celle où l'Éléate expose la doctrine des genres." (pp. 87-88)

(1) Pour un relevé complet des occurrences présentes dans chaque dialogue, voir le début du §6. Conclusions.

5. Boutot, Alain. 1991. "L'interprétation heideggerienne du Sophiste de Platon." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 537-559. Napoli: Bibliopolis.

"De toutes les interprétations modernes du Sophiste de Platon celle qu'en a donnée Heidegger dans un cours professé à Marbourg pendant le semestre d'hiver 1924-25, mais non encore publié à l'heure [*] compte probablement parmi les plus originales."

"L'exégèse heideggerienne du Sophiste, telle qu'elle s'exprime à travers les textes de la première période de Heidegger, reste, on le voit, très lacunaire. Elle n'est probablement que l'écho affaibli de l'interprétation développée dans le cours de Marbourg. Elle montre très clairement cependant que Platon n'était pas encore pour Heidegger, à cette époque, ce penseur charnière qu'il sera plus tard, en tant qu'initiateur de la tradition métaphysique, mais n'était qu'une étape, une étape essentielle certes, mais une étape seulement dans le développement de la pensée grecque qui va de Parménide à Aristote. Cette présentation, somme toute assez classique, de la place de Platon au sein de la philosophie grecque, a pu être suggérée à Heidegger par la problématique du Sophiste elle-

même, puisque dans ce Dialogue Platon s'efforce précisément de dépasser l'ontologie parméniennienne et ouvre la voie, du même coup, à l'ontologie aristotélicienne et à la doctrine des significations multiples de l'être. Le fait que Heidegger soit resté fidèle à cette présentation, qui apparaît déjà dans le cours de 1925/26 : Logik (56), jusque dans le cours sur Aristote de 1930/31 (57), tout comme les évocations, assez rares, mais persistantes, du Sophiste pourraient laisser supposer que c'est essentiellement à travers ce Dialogue que Heidegger appréhendait Platon ou plus précisément l'ontologie platonicienne pendant la première partie de son œuvre. Heidegger trouvait dans le Sophiste une anticipation de ses propres vues aussi bien sur le problème de l'être, que sur celui du λόγος. Ensuite, on le sait, Heidegger privilégiera, dans son analyse de la pensée de Platon, les textes où s'affirme l'idéalisme platonicien sous sa formulation la plus "traditionnelle", comme ceux de la République, et s'efforcera de montrer que, dans et par cet idéalisme, l'être en tant qu'être sombre dans l'oubli." (pp. 557-558)

6. Bregue, Rémi. 1991. "La cosmologie finale du Sophiste (263b4-e6)." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 269-288. Napoli: Bibliopolis.

Repris dans Rémi Bregue, *Introduction au monde grec. Études d'histoire de la philosophie*, Chatou: Les Éditions de la Transparence 2005 (Édition revue 2008), pp. 195-218.

"Le but de la note qui suit est simplement d'attirer l'attention sur un passage du Sophiste de Platon: les pages 265 B 4 à E 6, qui forment la première moitié (hormis les quatre premières lignes) du paragraphe 49 du découpage traditionnel. Ce morceau se trouve communément négligé par les commentateurs, à ma connaissance (et à celle des répertoires spécialisés, comme par exemple celui de la revue «Lustrum»)

depuis une bonne trentaine d'années. On peut comprendre les raisons de cette omission : les philosophes, le plus souvent, et avant tout ceux de la tendance que l'on étiquette aussi commodément que caricaturalement comme «analytique», ne lisent du Sophiste que quelques pages qu'ils considèrent comme cruciales, et qui portent sur les cinq genres, la négation, le sens du verbe "être", etc. - problèmes avec lesquels notre passage n'a, à première vue, rien à voir. Par ailleurs, ceux, et ils ne sont pas si nombreux, qui se donnent la peine de fournir de tout le Sophiste un commentaire suivi, semblent curieusement pressés d'en finir, et passent rapidement sur les dernières répliques - non d'ailleurs sans imiter en cela les protagonistes mêmes du dialogue. Il me semble que l'on passe de la sorte à côté d'un texte fort intéressant et, en particulier, lourd d'implications pour la signification de tout ce que Platon dit ailleurs à propos de l'univers physique. Je ne puis ici que donner quelques rapides indications, me réservant de revenir plus en détail sur le contexte de ce qui reste ici programmatique." (pp. 269-270 notes omises)

7. Brisson, Luc. 1991. "De quelle façon Plotin interprète-t-il les cinq genres du Sophiste ? (Ennéades, VI 2 [43] 8)." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 451-474. Napoli: Bibliopolis.

"Il arrive souvent que le scholar contemporain qui essaie de comprendre un dialogue de Platon tombe sur une interprétation qui, de prime abord, le déconcerte, tout en excitant chez lui un grand intérêt, en raison de la profonde originalité qui s'en dégage. Or, il n'est pas rare qu'une recherche des sources de cette interprétation mène à Plotin. C'est le cas notamment en ce qui concerne les cinq genres du Sophiste. Voyons donc ce qu'il en est dans le détail, en prenant pour texte de référence Enn. VI 2 [43] 8, chapitre qui, après avoir été replacé dans son contexte théorique et historique, sera traduit et commenté." (p. 451)

(...)

"Pour Plotin donc, le problème est moins d'expliquer comment communiquent entre elles les formes intelligibles, qui

représentent l'être par excellence, que de décrire l'intellect, lieu de l'intelligible et donc de l'être. Ce décalage entraîne des conséquences importantes. Alors que, dans le Sophiste, l'être, le même et l'autre, déduits d'une analyse du couple de contraires : repos/mouvement, constituent les genres véritablement suprêmes qui régissent la communauté des formes intelligibles, en Enn. VI 2. 8, l'être, le mouvement, le repos, et surtout le même et l'autre, ne sont que des aspects de l'intellect (voũç). Ils perdent ainsi leur autonomie ontologique, pour devenir, comme le veut d'ailleurs Plotin, des catégories du monde intelligible, c'est-à-dire des instruments permettant la description de la seconde hypostase." (p. 472)

8. ——. 2008. "La définition de l'être par la puissance. Un commentaire de Sophiste 247 b - 249 d." In Dunamis. Autour de la puissance chez Aristote, edited by Crubellier, Michel, Jaulin, Annick, Lefebvre, David and Morel, Pierre-Marie, 173-196. Louvain-La-Neuve: Peeters.

"Lorsque, dans le Sophiste, il définit l'être par la puissance, Platon modifie-t-il sa position sur les formes intelligibles en les soumettant au changement ? Telle est la question à laquelle je voudrais tenter de répondre ici." (p. 173)

(...)

"Comme il est difficile d'admettre qu'il s'est contredit, on a fait l'hypothèse que Platon avait changé d'idée sur les Formes, qui, à partir du Sophiste, ne seraient plus totalement dépourvues de changement.

Depuis la seconde moitié du XXe siècle, deux types d'interprétation inspirés tous les deux par la philosophie allemande ont été développés, l'une dans le cadre de la philosophie analytique, et l'autre par Francesco Fronterotta récemment.

Les commentateurs analytiques suivent Gilbert Ryle(23), qui prétendait que Platon avait abandonné la doctrine des Formes dans la seconde partie du Parménide. Et ils estiment donc que le Sophiste est le témoin de ce changement. Les Formes ne sont plus des réalités séparées, des modelés, mais des concepts,

susceptibles de changement comme le prétendent Julius Moravcsik(24), G.E.L. Owen(25) et I. M. Crombie(26) entre autres.

L'interprétation analytique, où se fait sentir une très forte influence aristotélicienne(27), est en fait un avatar des grandes interprétations néo-kantiennes, celles de Ritter(28) et de Natorp(29).

Pour sa part, Francesco Fronterotta(30) propose une interprétation qui s'apparente à celle de Zeller(31), lequel était sous l'influence de Hegel. Francesco Fronterotta attribue aux Formes une activité causale qui est non pas seulement d'ordre paradigmatique, mais aussi d'ordre efficient.

(...)

À la suite de F.M. Cornford(34), de H. Chemiss(35) et de Gr. Vlastos(36), j'estime que Platon n'a pas modifié sa position sur le sujet. Relisons Sophiste 247b-249d. Force est d'admettre qu'il y a bien une définition de l'être par la puissance en Sophiste 247d-e. Mais des divergences apparaissent, lorsqu'il s'agit de déterminer à qui fait référence Sophiste 248d-e, et quel sens il faut donner au pantelôs ôn de 248e." (pp. 179-180)

(27) Notamment chez Keyt [1969] «Plato's paradox that the immutable is unknowable», *Philos. Quarterly*, 19, p. 1 sq.

Keyt essaie de tenir les deux bouts de la chaîne en renvoyant à Aristote : «The Eleatic Stranger, in Sophist 248d 1-e 5, presents the friends of the forms with the paradox that the immutable is unknowable. Plato does not indicate in the Sophist how his own theory of forms avoids the paradox. He is not deeply committed to the proposition that the forms undergo change, but ought to be; he is deeply committed to the proposition that the forms are changeless, but for insufficient reasons. Aristotle, in Topics 137b3-13, distinguishes two respects in which a form may have an attribute, which suggests that a Platonist ought to hold that the forms are changeless in some respects, but not in others».

"Le philosophe, chien de garde de la vérité et du désir de vérité, est commis à l' aletheia. Le sophiste, ce loup depuis qu'il y a des philosophes, est commis au pseudos. Or pseudos nomme dès l'origine et indissolublement le "faux" et le "mensonge" : la "fausseté" donc de celui qui trompe et/ou se trompe; c'est le concept éthico-logique par excellence. Le Sophiste de Platon marque expressément ce double lien qui rattache sophistique et pseudos aux yeux de la philosophie : le sophiste est une imitation, une contrefaçon sauvage du philosophe (Soph. 231 A), parce qu'il élit pour domaine le faux, le semblant, le phénomène, l'opinion, en un mot, tout ce qui n'est pas. Philosophie des apparences et apparence de la philosophie : sophiste simulateur-dissimulateur.

Je voudrais tenter de localiser le pseudos, essentiellement à travers Parménide et Hésiode, pour déterminer la manière dont la sophistique s'y loge, afin de comprendre, à travers Platon,

comment la philosophie à ses débuts domestique l'idée même de pseudos, et aménage la place de la sophistique. Place de l'alter ego dans la structure : d'une part le pseudos, la possibilité de choisir le pseudos, est une condition de possibilité de l'existence même du langage; autrement dit : tous ne sont pas sophistes, mais, pour parler, il faut qu'il y ait des sophistes.

D'autre part, l'interprétation du pseudos en termes de mimesis bloque toute assignation de critère et brouille l'imputation : «Sage ou sophiste?» se demande l'Etranger jusqu'au bout." (pp. 293-294)

12. Caujolle-Zaslavsky. 1991. "Note sur l'ἐπαγωγή dans le Sophiste. A propos de Diogène Laërce, III 53-55." In Études sur le Sophiste de Platon, edited by Aubenque, Pierre, 511-534. Napoli: Bibliopolis.

"Examinons donc, pour commencer, l'emploi effectif du terme ἐπαγωγή dans l'œuvre de Platon. Il se trouve que Platon a employé ἐπαγωγή en un sens correspondant à l'un des emplois courants du terme, celui de "charme", de sortilège, de mauvais sort, d'influence magique, ou encore d' "induction", mais dans l'acception aujourd'hui désuète de séduction, emprise. Il a utilisé, également, le terme ἐπαγωγός, en un sens que semblent retrouver de nos jours la médecine et la biologie contemporaines avec le néologisme "'inducteur": une cause "inductrice" déclenche un phénomène avec un certain retard par rapport au moment où elle intervient. Platon parlait d'un «inducteur de sommeil» : c'est la description qu'on pourrait donner, aujourd'hui, d'un somnifère.

Il est évident que l'usage platonicien d'ἐπαγωγή est simplement, ici, l'usage courant et n'a rien de technique ni de particulier. Surtout, cette sorte-là d'ἐπαγωγή n'a rien à voir avec celle qui lui est attribuée chez Diogène Laërce [III, 53-55], et que nous allons examiner maintenant." (pp. 520-521, notes omises)

(...)

"Si nous tentons ici de récapituler les notices et les thèmes qui semblent liés à l'enseignement "épagogique" selon Platon, nous

observons successivement : le procédé est lié à l'analyse de cas particuliers, concrets, que la perception et l'évidence sensible y jouent le premier rôle, qu'il ne s'applique qu'à des choses présentant une similitude : (les lettres, par exemple). Car la place tenue dans cette méthode par la notion de το ὁμοιον exige une homogénéité de cas." (p. 534, note omise)

13. Charles-Saget, Annick. 1991. "Lire Proclus, lecteur du Sophiste (avec un appendice par Christian Guérard : Les citations du Sophiste dans les oeuvres de Proclus)." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 451-474. Napoli: Bibliopolis.

"Nous ne connaissons pas de commentaire de Proclus au Sophiste de Platon. Quelques indices textuels permettent de supposer qu'il y eut, sinon un commentaire continu, du moins quelques "explications" ou exégèses de passages considérés comme essentiels. Mais pour le lecteur philosophe d'aujourd'hui, il ne reste qu'une série de citations sur laquelle faire fond, citations ou simples références qui représentent ici le matériau de notre travail.

Au premier examen, nous remarquons combien la densité des renvois varie avec les oeuvres, ce qui est bien naturel et correspond à la diversité des thèmes, mais ne saurait à soi seul être significatif. L'*In Parmenidem* viendrait en premier (plus de 50 renvois), puis la *Théologie Platonicienne* (31 références pour les tomes I à V), l'*In Timaeum* (21), l'*In rempublicam* (9), les *Trois Opuscules* (7), enfin l'*In Alcibiadem* (2), l'*In Cratylum* (1). Même si le nombre des occurrences ne permet pas de préjuger de la résonance proprement philosophique du texte, il reste que les lieux de citation dessinent déjà une certaine lecture du Sophiste, au moins en ce que certains passages sont absents. Et même si la prudence est de rigueur, on est ici particulièrement tenté de donner au non-dit "un certain être".

Quant au dit, il faut en entendre les accents. Ceux que Proclus marque lui-même par les amplifications qui sont l'effet de son système ne peuvent, pour nous, se confondre avec les accents du texte de Platon. Car nous lisons aussi des éclaircissements, sans doute, mais souvent des déplacements (de sens ou

d'accents), qui sont de l'ordre du détournement. Tout le néoplatonisme est de cette veine, dira-t-on. Sans doute, et c'est pourquoi nous allons proposer à notre tour un mode de lecture de la lecture que fit Proclus de certains passages du Sophiste de Platon." (pp. 477-478, notes omises)

14. Cordero, Nestor-Luis. 1985. "Révélation et rationalité aux origines de la pensée grecque. L'héritage parménidien dans le Sophiste de Platon." École pratique des hautes études, Section des sciences religieuses. Annuaire no. 94:409-416.

"Cette année nous avons étudié l'héritage du parménidisme, ainsi que son « dépassement », dans le Sophiste de Platon. Nous avons donc voulu nous pencher tant sur la naissance que sur la « mort » de Parménide, car Platon, par la bouche de l'Étranger d'Élée, a bien voulu « tuer » le Philosophe de l'Être. D'où l'une des inconnues qui nous a amenés à entamer notre enquête : le crime, a-t-il vraiment eu lieu ?" (p. 409)

(...)

"En effet, ce qui déclenchera le mécanisme qui aboutira à la nouvelle conception du non-être est le paradoxe qui fera dire à Théétète que tout cela est « très bizarre » (mala atopon) (242c 2). Le paradoxe consiste à admettre que, malgré son inexistence, l'image existe réellement (ontôs) en tant qu'image. Cela va de soi que si l'image avait déjà eu une certaine forme d'existence, le fait de dire maintenant qu'elle existe pleinement ne constituerait pas un paradoxe. Il a fallu d'abord nier absolument (ontôs) l'existence de l'image pour pouvoir ensuite susciter le plus grand étonnement lorsqu'on affirmera que pourtant elle existe absolument (ontôs).

Une nouvelle conception de l'être (et, par conséquent, du non-être) est en train de naître. Selon l'ancienne conception, tout ce qui n'est pas vrai, n'existe pas ; dans la nouvelle conception, l'identité est la garantie de l'existence. Et comme chaque individu est identique à lui-même et différent des autres, identité et différence définissent son être. On ne peut pas nier que le Sophiste est un dialogue étrange : si Parménide est (peut-être) tué, Aristote est certainement né." (p. 415)

15. ———. 1985. "L'héritage parménidien dans le Sophiste de Platon." École pratique des hautes études, Section des sciences religieuses. Annuaire no. 94:409-416.

Le sujet des conférences portant sur la période octobre 1985 - janvier 1986 a été la suite presque évidente de celui de l'année précédente. En effet, les conférences sur « Révélation et rationalité aux origines de la

pensée grecque » avaient abouti à la naissance du premier essai de constitution d'une démarche rationnelle à partir de (ou en rapport avec) un univers chargé encore d'éléments mythiques et religieux, démarche

que nous avons située chez Parménide. Cette année nous avons étudié l'héritage du parménidisme, ainsi que son « dépassement », dans le Sophiste de Platon. Nous avons donc voulu nous pencher tant sur la

naissance que sur la « mort » de Parménide, car Platon, par la bouche de l'Étranger d'Élée, a bien voulu « tuer » le Philosophe de l'Être. D'où l'une des inconnues qui nous a amenés à entamer notre enquête : le

crime, a-t-il vraiment eu lieu ?" (p. 409)

"Élée était une colonie fondée par les Phocéens vers 540 pour remplacer une ancienne enclave grecque située au nord du promontoire de Palinure, en Lucanie (Grande Grèce).

C'est là que naquirent Parménide et Zénon, à une date difficile à préciser (dans le cas de Parménide, presque simultanément avec la fondation de la colonie, selon la chronologie d'Apollodore qu'adopte Diogène Laërce IX 23; vers l'année 515, selon la chronologie que l'on peut déduire des témoignages de Platon, Theaet. 183 E, Soph. 217 C, Parm. 127 B. Dans le cas de Zénon, entre 508 et 490, selon les mêmes sources). Plus d'un siècle après, entre 368 et 361, date probable de l'écriture du Sophiste, Platon fait état d'un ethnos éléatique (242 D) dans une liste des mouvements philosophiques qui l'ont précédé. La "philosophie éléatique" est devenue ensuite l'un des clichés dont les commentateurs dans un premier temps, et les historiens de la philosophie après, n'ont pas pu se passer. Nous voudrions analyser dans ce travail le rapport qui pourrait s'établir entre les deux philosophes nés à Elée ("éléates", donc) et le "système éléatique" tel qu'il a été canonisé par Platon dans le Sophiste." (pp. 93-94, notes omises)

(...)

"Il ne reste qu'à répondre à deux questions: (a) Platon a-t-il été le premier à regrouper les quatre philosophes [Xénophane, Parménide, Zénon, Melisse] pour inventer ex nihilo l' ethnos éléatique? (b) Pourquoi cette mise en scène a-t-elle lieu dans le Sophiste? A la première question on peut répondre oui et non. J. Mansfeld a démontré dans une étude récente et très exhaustive (89) que des systématisations thématiques étaient pratiquées au moins depuis la Sophistique, et il analyse le cas de l'Anthologie d'Hippias. Selon Mansfeld, dans le passage qui nous occupe, Platon aurait hérité une séquence intégrée par Musée, Orphée (les mystérieux initiateurs de l'école), Xénophane et Parménide (90) dans un schéma contenant des réponses sur la "quantité" des êtres. C'est très probable. Mais Mansfeld admet que Platon effectue aussi des «additions personnelles aux schémas préalables» (91). Il a raison en ce qui concerne le sujet de la liste platonicienne: il s'agit de réponses à la question «combien y a-t-il d'êtres (τα ὄντα [...] πόσα) (Soph. 242 c). Mais c'est Platon qui ajoute les noms de Zénon et de Mélissos à cette liste, qui expose les fondements conceptuels du groupe, qui justifie doctrinalement - mais à tort -

l'appartenance de Parménide à l'équipe, et surtout qui caractérise comme "issus d'Elée" ces "monistes"; il "invente" ainsi l'école éléatique.

La réponse à notre deuxième question a été avancée tout au long de notre travail. Dans le Sophiste, Platon doit se libérer d'une certaine conception de l'être: celle qu'il avait affirmée jusqu'aux dialogues de la période des "critiques". Le Parménide règle les comptes avec la théorie des Formes, mais surtout en ce qui concerne le rapport entre celles-ci et les individus. Dans le Sophiste, c'est la structure même de l'univers des Formes, ainsi que la constitution de chaque Forme, qui est en question. Jusqu'au Sophiste, l'héritage du père Parménide était la source de l'univers des Formes. La nouvelle conception du παντελως ὄν, en revanche, exige le parricide." (pp. 123-124)

"On cherchera en vain, dans le Sophiste, un rapprochement quelconque entre l'Étranger et la philosophie éléatique. C'est un philosophe, mais différent des compagnons de Parménide et de Zenon. C'est un bon connaisseur de la philosophie qui est née à Elée et qui s'est répandue, évidemment très modifiée (mais ceci est un autre problème) dans tout le monde grec. A la demande de son amphitryon, il entreprend de définir le métier de sophiste, et sa logique impitoyable l'amène à réfuter le système du père de l'éléatisme — il dit «le père Parménide» (241 d) et non pas «mon père Parménide» — , ce personnage qu'il a écouté dans son enfance et qui avait été aussi le créateur des

lois d'Élée. Si nous tenons compte de ces éléments, force nous est d'avouer que le crime, malgré son importance, a des véritables circonstances atténuantes." (p. 33)

19. ———. 1992. "Le procès de Parménide dans le Sophiste de Platon." École pratique des hautes études, Section des sciences religieuses. Annuaire no. 101:249-252.

"Nous pouvons affirmer avec certitude que nous ne trouvons pas chez Parménide ce que Platon lui critique : a) l'assimilation du faux au non-être (237a) ; b) une conception de l'être-Un (242d) associée littéralement à quelque chose de « spatial », voire à une sphère (244e). Ces deux affirmations découlent d'une perspective sur la réalité étrangère à celle de Parménide et que Platon résume comme une recherche sur « la quantité et la qualité des êtres » (242c), question qui n'est pas pertinente par rapport à

Parménide, dont les intérêts sont préalables à cette classification. Regardons maintenant les deux chefs d'accusation." (p. 250)

20. ———. 2000. "La participation comme être de la forme dans le Sophiste de Platon." In *Ontologie et dialogue. Mélanges en hommage à Pierre Aubenque avec sa collaboration à l'occasion de son 70e anniversaire*, edited by Cordero, Nestor-Luis, 33-46. Paris: Vrin.

"Le sujet de ce travail m'a été suggéré par une remarque de Pierre Aubenque à propos d'un passage du Sophiste de Platon. En effet dans le volume collectif *Études sur le Sophiste de Platon (2)* publié sous la direction de Pierre Aubenque, l'éditeur lui-même a écrit un article remarquable dans lequel il faisait état d'une sorte d'échec. Le titre du travail en témoigne : "Une occasion manquée. La genèse avortée de la distinction entre l'étant et le quelque chose". (p. 33)

(...)

"Je voudrais tout simplement réfléchir sur une affirmation qui fait partie de la conclusion de P. Aubenque. Il dit que Platon, dans le Sophiste, n'accepte pas de remettre en cause le primat de l'ontologie : et c'est dommage. car la remise en cause de ce

primat lui aurait permis de réfléchir sur le statut infra-ontologique de la temporalité et de la fausseté, mais peut-être aussi sur le statut supra-ontologique du premier principe, qui, selon la République, n'est pas une essence (ousía), puisqu'il est au-delà de l'essence (Rép. 509b) (op. cit. 384).

Je n'ai rien à dire sur la première partie de la conclusion de P. Aubenque en ce qui concerne le statut infra-ontologique de certaines réalités telles que le temps et la fausseté, ou ce que les Stoïciens appelleront les incorporels : et je n'ai rien à dire parce que ce que P. Aubenque a dit me semble tout à fait convaincant. En revanche, je m'interroge sur la pertinence de la deuxième partie de sa conclusion, car il me semble - et je ferai de mon mieux pour justifier mon point de vue - que Platon a bel et bien réfléchi, je n'ose pas dire sur un premier principe, mais sur la question d'une sorte d'être qui n'est pas assimilé à des ousiai. c'est-à-dire, dans son système, à des Formes et il me semble que non seulement il s'est posé la question, mais qu'il a aussi trouvé la réponse. Je voudrais montrer que Platon se demande, à une certaine étape de sa démarche philosophique, quel est le statut d'un être qui n'est pas ceci ou cela. S'agit-il de la question de l'être en tant qu'être, attribuée depuis toujours, pour la première fois à Aristote?

Pourquoi pas? En tout cas, ce n'est pas la réponse platonicienne qui pourrait être retenue, mais la question. S'il en est ainsi, Aristote - qui, lui non plus (et P. Aubenque l'a bien démontré) n'a jamais répondu à la

question - ne fera que suivre l'exemple de son maître." (pp. 33-34)

21. ——. 2005. "Du non-être à l'autre. La découverte de l'altérité dans le Sophiste de Platon." *Revue Philosophique de la France et de l'Étranger* no. 195:175-189.

"Le titre de ce travail suggère que nous avons l'intention de parcourir un chemin qui mène d'une notion (celle du non-être) à une autre (celle de « l'autre »). Mais il faut dire d'ores et déjà

que la notion de « chemin » n'engage, dans notre cas, que l'interprète (donc, nous-mêmes), et que les auteurs étudiés ici (notamment, Platon) seraient très surpris d'apprendre qu'ils ont « découvert » quelque chose qui est, pour nous, une sorte d'aboutissement d'une longue marche. En effet, il arrive souvent aux philosophes de partager l'expérience que l'on constate aussi chez les grands écrivains : la signification la plus profonde de leurs oeuvres leur échappe." (p. 175)

(...)

"Lorsque Parménide parle de « ce qui est » (to on), il fait allusion au « fait d'être ». C'est d'ores et déjà une notion « dynamique », et c'est pour cette raison que, lorsqu'il présente pour la première fois dans son Poème la notion de « ce qui est », il utilise le verbe « être » à la troisième personne, isolé : esti (fr. 2. 3). « On est » (esti, sans sujet) ; donc, il y a de l'être, dirait Parménide. Cette notion d'être, présente dans tout ce qui est, est très voisine, et même plus, de la Forme de l'être présentée par Platon dans le Sophiste. Platon lui-même dit qu'il ne s'est pas occupé de la question d'un non-être qui serait l'opposé de l'être, et, nous croyons, pour cause : parce que Parménide avait déjà dit ce qu'il fallait dire : qu'il faut être, ou ne pas être du tout (fr. 8. 11). Platon accepte le défi, et trouve des nuances (avant Aristote) dans le sens du mot « être » ; quoi qu'il en soit, en tant que Forme, il donne de l'être, même au non-être, représenté par l'altérité. On pourrait donc dire que Platon confirme et élargit ce que Parménide disait : il y a de l'être, et il y a aussi du non-être, qui, en tant que Forme (celle de l'Autre), occupe une place éminente. Maintenant tout est, même le non-être...

Mais cette Forme de l'être que Platon découvre n'admet pas une négation, et c'est pour cette raison que les Formes les plus importantes ne sont que cinq : repos-mouvement, identité-altérité, être.

La Forme de l'être ne peut pas admettre une Forme contraire...

L'être que Platon propose a le même caractère absolu et nécessaire que l'être parménidien." (pp. 188-189)

22. ——. 2007. "Il faut rétablir la version originale de Sophiste 240b 7-9." *Elenchos. Rivista di Studi sul Pensiero Antico* no. 28 (403):413.

"Si tout ouvrage écrit avant l'invention de l'imprimerie est devenu un "livre", c'est grâce à l'aide de toute une série de collaborateurs que les auteurs anciens ont eu la chance de rencontrer à titre posthume: les "éditeurs", des érudits qui ont mis de l'ordre à l'intérieur de la tradition manuscrite de ses ouvrages, qui ont établi des textes "bons à tirer", et qui dans la plupart des cas ont offert aux érudits modernes des possibilités de lecture non retenues, mais valables, dans les apparats critiques.

(...)

"Cependant, dans quelques occasions – les cas sont heureusement très peu nombreux – quelques éditeurs se sont laissés emporter par leur imagination, et des collègues plus respectueux du texte original ont dû faire des efforts titanesques afin que la voix authentique de l'auteur puisse s'écouter à nouveau, ou, simplement, pour rétablir un silence salutaire là où des conjectures malheureuses avaient détourné le sens d'un passage.

(...)

"Un cas beaucoup plus grave, car il s'agit de la transformation volontaire d'un texte clair et distinct transmis d'une manière unanime par la tradition manuscrite, est celui d'un passage décisif du Sophiste de Platon (240 B 7-10)." (pp- 403-404)

(...)

"L'étonnement sera le résultat d'un véritable paradoxe: l'admission de l'existence réelle de quelque chose qui n'existe pas. Pour sortir de l'impasse il faudra admettre, malgré ce que l'on croit d'habitude, que le non-être existe d'une certaine manière ($\pi\omega\varsigma$). Et, pour que l'étonnement soit authentique, c'est Théétète lui-même qui sera obligé de tirer cette conclusion à partir de la définition de l'image ($\epsilon\upsilon\kappa\acute{\omega}\nu$) que lui-même a proposé: une sorte de double d'un modèle mais qui, à la

différence de celui-ci, «n'est pas du tout vrai» (οὐδαμῶς ἀληθινόν, 240 B 2). Comme Théétète lui-même admet que ce qui est vrai est ce qui existe réellement (ὄντως ὄν, B 3) – qui est le contraire (ἐναντίον, B 5) de ce qui n'est pas vrai – l'Étranger tire la seule conclusion qui s'impose: «tu dis donc que ce qui est semblable (τοῦ ὅμοιου) n'existe pas, car tu affirmes qu'il n'est pas vrai». Mais comme Théétète a déjà admis que ce qui ressemble est «semblable» (ἀλλ' ὅμοιον, B 2), l'Étranger, dans la même phrase, ajoute: «Mais il existe» (B 8). Voilà le texte authentique de Platon." (p. 405)

(...)

"Toutes les éditions actuelles du Sophiste, en revanche, reproduisent la deuxième modification, aussi injustifiée que la précédente mais beaucoup plus grave, car nous n'hésitons pas à affirmer que la séquence de l'argumentation platonicienne a été tergiversé, et l'effet dramatique annulé. Le responsable a été C.F. Hermann, et la preuve du délit se trouve à la page 375 du volume premier de son édition (sans traduction) des dialogues de Platon (Teubner, Leipzig 1851)." (p. 407)

(...)

"Voici son texte, que l'on trouve, d'ailleurs, dans toutes les éditions et traductions actuelles du Sophiste 240 B:

7-8 – ÉTR. Tu dis donc que ce qui est semblable est un non-être [non] réel, si tu affirmes qu'il n'est pas vrai.

9 – THÉÉT. Mais il existe d'une certaine manière (πως).

10 – ÉTR. Non véritablement, tu dis.

Nous avons déjà dit que le texte que l'on trouve dans la totalité de la tradition manuscrite du passage (nous croyons avoir fait l'“autopsie” de tous les codices existants aujourd'hui), ainsi que dans les éditions antérieures à celle de 1851 (à l'exception de Schleiermacher) est celui que nous avons présenté plus haut. Les petites divergences (sur lesquelles nous reviendrons) concernent des adverbes ou des négations fournis par des sources manuscrites diverses, mais jamais un changement des

répliques ni du statut de l'adverbe πως. La modification de Hermann, par conséquent, ne se justifie pas; mais il donne cependant des arguments." (p. 408)

23. ———. 2011. "Une conséquence inattendue de l'assimilation du non-être à l'Autre dans le Sophiste." In *Plato's Sophist: Proceedings of the Seventh Symposium Platonicum Pragense*, edited by Havlíček, Aleš and Karfík, Filip, 188-198. Praha: Oikoymenh.
24. Cornea, Andrei. 2009. "Le Sophiste de Platon: cinq ou six «genres suprêmes» ? ." *Semitica et Classica*:43-49.

Résumé : "Il existe une ancienne interprétation (qu'on retrouve déjà chez Plotin) selon laquelle, dans le Sophiste, Platon aurait pris en considération seulement cinq «genres suprêmes»: le mouvement, le repos, l'être, le même et l'autre. Or, Platon admet aussi une certaine existence du non-être (à l'encontre du «père Parménide») qu'il définit comme «autre que l'être». Il s'ensuit, selon cette même interprétation, que Platon aurait identifié l'autre et le non-être. Cet article s'interroge sur le bien-fondé de cette interprétation et cherche à montrer que Platon distingue l'autre du non-être, de sorte que le nombre des genres suprêmes dans le Sophiste serait six et non pas cinq. La thèse est étayée de plusieurs sortes d'arguments.

Premièrement, Platon ne dit jamais que le nombre définitif des genres suprêmes est seulement cinq; au contraire, il laisse entendre que ce nombre est plus important.

Deuxièmement, il y a des raisons logiques qui s'opposent à ce que non-être et autre (celui-ci défini comme «autre que l'être») soient identiques. Par exemple, cela amènerait à confondre «l'autre que l'être» avec «l'autre», c'est-à-dire à confondre un sujet avec une relation.

Troisièmement, il s'ensuit une conséquence inévitable de la distinction entre l'autre et le non-être, étant donné que la théorie des Formes veut que tout sujet auquel on attribue une certaine propriété, participe de la Forme correspondante: cette conséquence est la «Forme des négations», distincte de la «Forme des relations». Or, cette «Forme des négations» est

mentionnée par Aristote dans deux passages de la Métaphysique, à côté de la «Forme des relations», lorsqu'il évoque les objections contre la théorie des Formes que l'on formulait au sein de l'Académie.

L'article soutient qu'il est vraisemblable que, après le Sophiste, Platon ait abandonné la théorie des six genres suprêmes, tout en explorant des solutions alternatives dans le Philèbe, le Timée et la «doctrine non écrite»."

Nouvelle édition Paris: Vrin 1963.

"Notre étude comprend donc cinq chapitres :

I. — Le rôle du concept de mouvement dans le Sophiste.

II. — La définition de TÊtre par la δύναμις.

III. — Le mouvement de l'ούσία.

— Le παντελώς ον.

V. — Le Communauté des Genres.

Enfin, dans notre Conclusion, nous résumerons brièvement les résultats de notre étude." (p. VI)

(...)

"Lors même que les Amis des Idées seraient des Platoniciens ou Platon lui-même, il n'en resterait pas moins que le Sophiste ne met pas, dans l'ούσία, autre chose que le mouvement passif qui résulte, pour elle, du fait d'être connue; il serait vrai encore que le παντελώς ον, en qui sont affirmés le mouvement, l'âme, la vie et la pensée, est le monde sensible et non pas l'idée

platonicienne; il serait démontré, autant que nous avons pu le faire, que la définition de l'Être par le pouvoir de pâtir et d'agir n'est pas la proclamation solennelle d'une théorie énergétique de l'Être et que l'essentielle nouveauté du Sophiste, la Communauté des Genres, n'est pas la conséquence de ce dynamisme. La théorie des Idées resterait tout aussi exempte de transformation que si la thèse combattue dans les Amis des Idées eût été celle des Mégariques.

Seulement il deviendrait étrange de voir Platon, auteur du Phèdre et du Phédon, lire et combattre rétrospectivement en ces dialogues une théorie de la réalité exclusive de l'ousia et de l'éternelle immobilité du Tout. La preuve d'une transformation de la théorie des Idées dans le Sophiste serait une présomption en faveur de l'identification des Amis des Idées aux Platoniciens classiques : si Platon a mis, dans les Idées, à partir du Sophiste, le mouvement et la vie consciente, il a pu, il a peut-être dû, de ce nouveau point de vue, traiter sa doctrine antérieure comme une doctrine d'immobilité.

Nous avons essayé de prouver que cette transformation n'est pas opérée dans le Sophiste. Nous savons, d'ailleurs, que bien des traits différencient le platonisme classique de la théorie soutenue par les Amis des Idées. Si d'autres sont forcés d'identifier ces Néo-Eléates et presque obligés par leur thèse à y comprendre Platon lui-même, nous avons, nous, le droit de confesser provisoirement notre ignorance et de maintenir seulement ces simples propositions : le Sophiste ne combat pas la théorie classique des Idées, le Sophiste ne transforme pas la théorie classique des Idées; le Sophiste ne combat pas, ne transforme pas Platon." (p. 133)

27. Dixsaut, Monique. 1987. "Platon et le Logos de Parménide (Sophiste, 241d-245e)." In *Études sur Parménide. Tome II. Problèmes d'interprétation*, edited by Aubenque, Pierre, 215-253. Paris: Vrin.

Repris dans M. Dixsaut, *Platon et la question de la pensée: études platoniciennes I*, Paris: Vrin 2015, Chapitre VI.

"Avant d'aborder l'examen critique des doctrines de l'être, l'Étranger adresse trois prières à Théétète. Dans la première, il

lui demande de se contenter «du peu qu'on pourra gagner, par quelque biais (πη) que ce soit, sur un logos aussi fort que celui de Parménide»; dans la deuxième, de ne point le regarder comme un parricide «s'il est contraint de mettre à l'épreuve le logos de son père Parménide»; dans la troisième, de ne pas l'accuser de manquer de mesure, de délirer, s'il «entreprend de réfuter ce logos», à supposer qu'il en soit capable (Soph. 241c-242a).

Du sens que l'on accorde à cette manière d'annoncer l'entreprise comme mise à l'épreuve d'un logos fort, paternel et sacré — et de l'importance que l'on attache (ou non) à cette manière de l'introduire, dépend toute la lecture du texte qui suit. La relecture de ce célèbre passage du Sophiste aura donc pour objet de déterminer sur quoi porte exactement la réfutation, comment et dans quel but elle se conduit." (p. 215)

28. ———. 1991. "La négation, le non-être et l'autre dans le Sophiste." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 165-213. Napoli: Bibliopolis.

Repris dans M. Dixsaut, *Platon et la question de la pensée: études platoniciennes I*, Paris: Vrin 2015, Chapitre VII.

"L'analyse de la négation suit l'examen, par l'Etranger, de ceux qu'on dit être les plus grands parmi les genres; elle aboutit à la définition du non-être comme Forme assurée de son être et de son unité, possédant sa nature propre. La finalité de toute cette partie du dialogue est explicite : ne pas être un homme sans culture et sans philosophie, donc tenir le λογος pour l'un des genres qui sont. Pour cela, il a fallu établir, contre les opsimathes, la communication des genres; elle suppose que, d'une certaine manière, l'être n'est pas. La manière qu'a l'être de ne pas être, c'est de ne pas être les autres : «autant de fois les autres sont, autant de fois il n'est pas» (257 A 4-5), d'être autre que tous ses autres. L'articulation des genres entre eux garantit la possibilité du logos. Réciproquement, affirmer que le non-être, sous un certain rapport, existe, et qu'il est comme l'être une Forme une, εἶδος εν, va permettre d'affirmer la réalité du logos, d'affirmer que, tout en n'étant pas l'être, il en participe, il

est. La réalité du discours a partie liée avec la différence de l'être et avec l'affirmation de l'être de cette différence.

De la pluralité et de la communauté des genres découle la nécessité d'attribuer le non-être et l'affirmation d'une pluralité infinie de non-étants (256 D-257 A 6). Cette attribution est !'œuvre de la nature de l'autre: l'existence de la différence, en différenciant les genres, les rend du même coup autres que l'être, donc, sous ce rapport, non étants. Ainsi, attribuer le non-être, c'est attribuer l'autre relativement à l'être. La réduction de la négation à l'altérité est-elle propre à ce seul terme, "non-être", ou ne fait-il que suivre la règle commune à toute expression et à toute attribution négative? C'est là l'objet d'un passage de transition, qui conclut le développement sur les cinq grands genres et introduit le morcellement de l'autre en "petites parties" [257 B 1-257 C 3]." (pp. 167-168)

30. ———. 2000. "Images du philosophe." *Kléos* no. 4:191-248.

"Le sophiste est un être difficile à capturer, mais le philosophe ne l'est pas moins; cependant, "en ce qui le concerne la difficulté est d'un autre ordre qu'en ce qui concerne le sophiste"(1). Si, pour ce dernier, elle tient à l'obscurité du lieu où il s'est réfugié (le non-être), le philosophe "au contraire est difficile à voir en raison de l'éclatante lumière de la région" où il réside. Les objets sur lesquelles il réfléchit portent tous la "marque" (idea) de l'être, cesont des réalités véritablement existantes et pleinement intelligibles. "Or les yeux de l'âme de la plupart sont incapables d'avoir la force de regarder vers ce qui est divin"(2). La plupart des hommes, donc, ont une âme impuissante à voir et à comprendre ce qui est. Pour eux, l'éclat divin propre à l'intelligible est indiscernable de l'obscurité de l'inintelligible, ils sont semblablement aveuglés

par l'excès de lumière et par son absence. C'est donc leur incapacité à saisir la nature des réalités dont s'occupe le philosophe qui entraîne leur méconnaissance de ce qu'est réellement un philosophe."

31. Dorion, Louis André. 2001. "Le destin ambivalent de la sixième définition du Sophiste : l'exemple d'Aristote et de Clément d'Alexandrie." In *Une philosophie dans l'histoire : hommage à Raymond Klibansky*, edited by Melkevik, Bjarne and Narbonne, Jean-Marc, 47-63. Québec: Presses de l'Université Laval.

"La sixième définition du Sophiste comporte donc à la fois un volet logique et un volet moral, la dimension logique étant toutefois clairement subordonnée à la dimension morale. Ce double aspect de l'elenchos ne sera pas nécessairement conservé par les auteurs qui s'inspireront de ce texte du Sophiste. Les dimensions logique et éthique, que Platon s'efforce de concilier et d'articuler en subordonnant la première à la seconde, peuvent être indépendantes l'une de l'autre, si bien que l'on peut souscrire uniquement à l'une ou l'autre. C'est précisément cette dissociation des aspects logique et éthique que j'aimerais mettre en lumière chez deux auteurs, Aristote et Clément d'Alexandrie s'inspirent l'un et l'autre, à des fins différentes, de la description de l'elenchos en Sophiste 230b-e. Comme je m'efforcerai de le démontrer, Aristote ne retient de cette description que le volet logique en faisant l'impasse sur la perspective pédagogique qui confère pourtant sa finalité à la réfutation dialectique. Quant à Clément d'Alexandrie, il semble ignorer la structure logique de l'elenchos, au point même que son elenchos ne se présente plus comme une réfutation dialectique, mais il demeure néanmoins fidèle à l'autre aspect de l'elenchos, puisqu'il en fait un instrument pédagogique au service d'une finalité morale, qui n'est toutefois pas identique, en dépit des apparences, à celle visée par Platon." (pp. 49-50)

Trad. it. "Ricerche sul logos da Omero a Plotino", Milano, Vita e Pensiero, 2005, pp. 104-115.

"C'est en remontant aux origines de la pensée grecque, représentée par la poésie d'Homère d'une part et par la philosophie d'Héraclite et de Parménide d'autre part, que l'on se propose de comprendre l'originalité de la pensée platonicienne du logos telle qu'elle a été élaborée dans le Sophiste. Ce retour aux origines revêt une importance capitale pour la compréhension du logos platonicien. En fait, il s'agit de montrer que l'utilisation platonicienne du logos n'est pas sans se référer indirectement au fonctionnement simultanément synthétique et analytique du verbe *legein* tel qu'il apparaît pour la première fois chez Homère. La notion de dialectique représente, selon nous, la thématization des deux fonctions synthétique et analytique déjà contenues dans le *legein* homérique. Platon se serait laissé guider par l'étymologie du verbe *legein* pour élaborer sa théorie philosophique et linguistique du logos et de la dialectique.

Compte tenu de cela, le logos du Sophiste ne serait pas non plus sans présenter certaines similitudes structurelles avec le logos d'Héraclite, qui semble pour sa part mettre l'accent sur l'idée de synthèse, et avec le logos de Parménide qui paraît fondé sur celle de l'analyse. Notre but étant de montrer, que malgré la valorisation des deux fonctions de la dialectique (Soph. 253 B-

E), Platon finit par privilégier le langage de la division en se rangeant plutôt du côté de Parménide." (p. 147)

Le problème de la prédication (251 a - 259 d) : une difficulté linguistique, logique et philosophique 45; 2. Les conditions de possibilité du discours vrai et du discours faux (259 d - 264 b) 65; Conclusion 81; Annexe : Une mise en perspective du logos platonicien 85; Bibliographie sélective 103-114.

"Le Sophiste représente un des sommets de la philosophie en général et de la pensée grecque et platonicienne en particulier. C'est dans le Sophiste que Platon élabore une théorie philosophique du langage qui est complète et achevée. Le présent ouvrage, destiné à un large public et qui est également susceptible d'alimenter la réflexion des spécialistes, se propose de montrer toute l'originalité de la pensée platonicienne en matière de langage. Il entend ainsi décrire l'itinéraire intellectuel et philosophique qui a conduit progressivement Platon à élaborer sa théorie de la proposition, et à réfléchir sur les conditions de possibilité du vrai et du faux dans les discours." 34. Frère, Jean. 1991. "Platon, lecteur de Parménide dans le Sophiste." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 125-143. Napoli: Bibliopolis.

"Bien que souvent négligé, le témoignage de Platon sur Parménide est sans aucun doute capital. Comment Platon lit-il Parménide avant de le discuter ?

Platon, certes, lorsqu'il a parlé de Parménide, quand il a mis en scène Parménide, n'a pas toujours été fidèle à Parménide. Dans le dialogue intitulé Parménide, ce que Parménide est censé envisager quant aux hypothèses sur l'Un (l'Un est un, l'Un est, etc.) constitue analyse platonicienne, non parménidienne. Quand, dans le Théétète, Platon évoque Parménide, c'est à

propos d'un thème parménidien, non d'un vers précis du Poème que se fait la discussion (180 D).

Dans le Sophiste, au contraire, Platon cite Parménide; ceci par trois fois: 237 A, 244 E, 258 D." (p. 127, note omise)

(...)

"Ainsi selon Platon dans le Sophiste y avait-il chez Parménide énoncés vrais, énoncés erronés, quant à l'Etant et quant aux étants. C'est le problème du bien-fondé de tels énoncés qui allait amener Platon à contourner Parménide énonçant de l'Etant son caractère d'inengendré et indestructible Englobant. «Il nous faudra nécessairement, pour nous défendre, mettre à la question la thèse de notre père Parménide» (Soph. 241 D). Au dialecticien rationaliste usant de mythes rationnels Platon, Parménide apparaissait, tels les autres Présocratiques, comme un abusif "conteur de mythes". «Ils m'ont tout l'air de nous conter des mythes, comme on ferait à des enfants» (Soph. 242 C)³¹• Mais, même si Parménide a intégré à son œuvre des figures mythiques, Parménide selon Platon n'a point vraiment "conté de mythes". Des pensées désormais incontournables ont été énoncées par Parménide.

Platon le sait et l'a écrit. Or Platon ne nous montre pas seulement en Parménide un penseur de l'Être un, mais aussi un penseur de l'Être-sphère et de l'Etant dont se peuvent énoncer avec certitude bien des qualifications et bien des négations essentielles." (p. 143)

35. Fronterotta, Francesco. 1995. "L'être et la participation de l'autre, une nouvelle ontologie dans le Sophiste." *Les Études Philosophiques*:311-353.

"Mais sur quelle base repose l'interdit de Parménide, selon l'analyse de l'Eléate ? Quels sont les paradoxes et les difficultés du non-être ?

C'est sur ce point que porte l'enquête menée dans la section qui suit (3)." (p. 312)

(...)

"Pour sortir de telles difficultés, il est nécessaire d'examiner le raisonnement de Parménide, pour vérifier s'il est possible de réfuter le caractère péremptoire de sa négation du non-être : c'est seulement démontrant que, sous certains aspects, le non-être est, et que par conséquent il peut être objet d'analyse et de discours, que l'on pourra éclairer l' « endroit d'accès difficile » où s'est réfugié le sophiste; en effet, si l'on songeait à discuter les paradoxes de la fausse opinion et des imitations, ou des arts qui les touchent, avant d'avoir analysé en profondeur la question du non-être, qui est à la base de ces paradoxes, on tomberait immédiatement en contradiction avec soi-même (4). C'est un point important, parce qu'il met en relation le problème de l'être et du non-être avec celui du discours vrai ou faux, opérant ainsi un renvoi du plan logique au plan ontologique, et établissant une connexion nécessaire et indiscutable." (p. 313)

(...)

"La discussion sur la nature de l'être et du non-être est introduite par l'analyse des doctrines philosophiques antérieures où ce problème est pris en compte. L'Eléate dresse d'abord la liste des différentes positions et des philosophes qui les ont défendues; mais leur interprétation est tellement difficile qu'il doit suggérer une autre approche : il vaudra mieux classer ces doctrines par groupes, en examinant la théorie de l'être qu'elles présupposent (1)." 36. ——. 2008. "La notion de δὐναμις dans le Sophiste de Platon : koinônia entre les formes et methexis du sensible à l'intelligible." In *Dunamis. Autour de la puissance chez Aristote*, edited by Crubellier, Michel, Jaulin, Annick, Lefebvre, David and Morel, Pierre-Marie, 187-224. Louvain-La-Neuve: Peeters.

"Prémisse. Le Parménide transmet aux dialogues qui le suivent deux problèmes fondamentaux dans la réflexion tardive de

Platon, 1° celui de la *κοινωνία των γενών*, évoqué d'une manière allusive en Parménide 129b-130a (qui annonce un programme de travail qui consiste en l'explication du *τέρας* extraordinaire de la distinction et de la conjonction des formes) (1) 2° celui de la *μέθεξις* du sensible à l'intelligible, tellement discuté qu'il représente la question essentielle examinée dans le Parménide. Ce dernier, cependant, ne lui donne pas de réponse définitive: si aucune des formes «ne se trouve chez nous», dans le sensible (*μηδεμίαν αὐτῶν εἶναι ἐν ἡμῖν*), «les choses sensibles n'ont pas plus d'efficace sur les humes que les formes n'en ont sur les choses sensibles. Au contraire, je lr répète, c'est sur elles-mêmes que les formes ont de l'efficace et c'est en relation avec elles-mêmes qu'elles existent; et pareillement les choses sensibles n'existent qu'en relation avec elles-mêmes» (<*τὰ εἶδη*> *αὐτὰ οὐ ἰὼν καὶ πρὸς αὐτὰ ἐκεῖνά τε ἔστι ... τα παρ'ἡμῖν ὡσαύτως πρὸς αὐτὰ*)(2). Mais les formes dans leur ensemble sont en même temps ce à quoi participent les choses sensibles, ce qui fait que ces dernières tirent justement de cette participation leur réalité propre, leurs qualités et leurs dénominations, d'où le problème de savoir si la participation entre les formes et les choses sensibles est compatible avec leur séparation réciproque, le fait de «se trouver chez nous» étant, pour les formes, contradictoire(3).

Une fois ces deux questions soulevées, si on admet que le Parménide précède de quelques années la composition du Sophiste, il est opportun de vérifier si le Sophiste se propose de leur donner une réponse. C'est précisément ce que je vais essayer de faire dans les deux parties qui composent cette étude." (pp. 187-188)

(1) Je parlerai dans cet article de formes (*εἶδη*) ou de genres (*γένη*) intelligibles, car le Sophiste emploie ces deux termes sans poser entre eux aucune distinction véritable. Sur l'interprétation de ce passage du Parménide, voir mon article Fronterotta [2001 a].

Avant ce passage du Parménide, il n'y a que très peu de références à la question de la participation des formes entre

elles dans les dialogues de Platon (Cratyle 438e 5-10; République V 476a 4-7; Phédon 104b 6-105a 5).

(2) Voir Parménide 133a -e. La traduction du Parménide est celle, légèrement modifiée, de Brisson [1999²] Platon. Parménide, GF-Flammarion, Paris.

(3) Concernant le «dilemme» de la participation des choses sensibles aux formes intelligibles, voir récemment Brisson [2005] «Come rendere conto della partecipazione del sensibile all'intelligibile in Platone», in Eidos-Idea. 37. ——. 2019. "Platon sur ONOMA, PHMA et ΛΟΓΟΣ : théories du ΣΗΜΑΙΝΕΙΝ en Sophiste 261d-262e." Methodos. Savoirs et textes no. 19:1-20.

Résumé : "Dans cet article, j'examine la conception platonicienne du λόγος, en Sophiste 261d-262e, en tant que succession (συνέχεια) « signifiante » de ὄνομα et ῥῆμα, par un commentaire du passage cité du dialogue. Je discute particulièrement les points suivants : 1. Pourquoi « les termes prononcés », dans les cas d'une succession de noms ou d'une succession de verbes, n'indiquent aucune action ni aucune inaction (οὐδεμίαν ... πράξιν οὐδ' ἀπραξίαν), aucune réalité qui est ni aucune réalité qui n'est pas (οὐδε ὀυσίαν ὄντος οὐδε μη ὄντος, 262c2-4) ? 2. Quelle est la différence entre « nommer » (ὀνομάζειν) et « dire » (λέγειν), en 262d4-6 ? 3. Quelle est la différence des constructions : λόγος περι + génitif et λόγος + génitif, en 262e-263a ? 4. Plus généralement : est-ce que le critère de vérité du discours établi en 263b-d est valide, rétrospectivement, pour toute forme de σημαίνειν, y compris le ὀνομάζειν ?"

38. ———. 2020. "Être, présence et vérité : Platon chez Heidegger (et à rebours)." *Studia Phaenomenologica* no. 20:167-189.

Abstract: "In this article, I wish to present and discuss some Heideggerian theses concerning the notions of "being," "presence" and "truth" in Plato's dialogues, taking as a point of departure Heidegger's course on Plato's *Sophist* given in Marburg in 1924–1925. My aim is to show that the fundamental philosophical link that unites them makes it possible to better understand seemingly obscure aspects of the Platonic conception of being and knowledge as it is presented in particular in the concluding pages of *Republic V*, to which this article is therefore essentially devoted."

39. Gaudron, Edmond. 1960. "Sur l'objet du Sophiste." *Laval théologique et philosophique* no. 16:70-93.

"L'étude des derniers dialogues platoniciens, depuis une soixantaine d'années, est généralement marquée des mêmes préoccupations : montrer que la théorie des idées, a subi, ou non, une transformation, — que Platon a finalement conçu, ou non, les idées comme des activités intellectuelles, des idées forces et même des esprits, — ou bien encore que de pareilles façons de concevoir les idées se retrouvent d'une certaine manière dans les dialogues écrits avant ceux qui ne laisseraient plus de doute sur la pensée de Platon.

(...)

Toutes les discussions qui se sont élevées autour de ce problème, ont cependant retenu l'attention des exégètes à ce point qu'il est permis de se demander si, pour édifier ou démolir une thèse ou même une hypothèse, on n'aurait pas fait passer au second plan des préoccupations auxquelles Platon lui-même donnait la première place. C'est ce que prètent à penser les analyses dont le *Sophiste*, par exemple, a été l'objet.

On a bien insisté sur l'objet de ce dialogue : essayer de penser le non-être et en déduire que Parménide avait tort de dire : « Jamais tu ne feras que le non-être soit ». Il y a du non-être, autrement l'erreur est impossible, puisque se tromper c'est

prendre une chose pour une autre, c'est dire qu'une chose est alors qu'elle n'est pas.

Mais il n'est pas facile de réfuter directement la thèse de Parménide.

Platon montre bien que le non-être échappe d'abord à toute définition et c'est ce qui le conduit à cette conclusion : peut-être ne savons-nous pas ce qu'est le non-être, parce que nous ignorons d'abord ce qu'est l'être lui-même. Et nous arrivons à ce long passage du dialogue (2) où Platon fait une revue sommaire des idées que se sont fait de l'être les présocratiques et les amis des idées."(p. 70)

(2) 2426-2546.

40. Gavray, Marc-Antoine. 2006. "La dunamis dans le Sophiste." Philosophie Antique. Problèmes, Renaissance, Usages no. 6:29-57.

Résumé : "En Sophiste, 247d8-e4, l'Étranger d'Élée pose un horos de l'étant comme « puissance d'agir et de subir (dynamis tou poiein kai tou pathein) ». L'objectif que se fixe cet article est d'envisager quel sens donner à cet horos et quelle valeur accorder à la dunamis dans ce dialogue. D'une comparaison avec d'autres occurrences dans le corpus platonicien (Phèdre et Théétète), il ressort que le Sophiste amène un double déplacement : d'une part il fait passer la question de la dunamis sur le champ de l'Être d'une manière inédite, d'autre part son protagoniste n'attribue plus la formule à Hippocrate ou à Protagoras, mais il la présente comme le moyen, qu'il s'apprête à défendre, de sortir d'une impasse. Par une lecture des arguments qui annoncent et qui suivent cet horos, il apparaît que celui-ci possède une grande efficacité pour la compréhension de la structure du dialogue et de l'évolution de son argumentation. En même temps qu'il sert à définir l'Être, il permet d'expliquer le fonctionnement de la koinonia des Genres et de jeter les bases de la théorie du non-être. En définitive, il se révèle être un truchement opérant pour dépasser définitivement la sophistique en lui substituant une véritable ontologie philosophique."

41. ———. 2007. *Simplicius lecteur du Sophiste. Contribution à l'étude de l'exégèse néoplatonicienne tardive*. Paris: Klincksieck.

Table des matières: Introduction 9; Chapitre : L'héritage néoplatonicien (Plotin, Proclus, Damascius) 13; Chapitre II: Les citations du Sophiste 35; Chapitre III: Simplicius lecteur du Sophiste 55; Conclusion 91; Traductions 95; Commentaire sur les Catégories 97; Commentaire sur la Physique 113; Commentaire sur le Traité de l'Âme 193; Annexe: Construction du Sophiste 203; Bibliographie 207; Index locorum 215; Index nominum 223; Index rerum 225-228.

"Pour les commentateurs contemporains, le Sophiste constitue un dialogue clé au sein de l'œuvre de Platon. La complexité de sa doctrine et son rôle dans l'ensemble, la rigueur de sa méthode et l'enjeu de ses réfutations, l'identité de ses personnages et le rapport à Parménide : autant de questions qui ne cessent d'alimenter les débats. Or, au lieu de les aborder frontalement, il est possible d'adopter un autre point de vue, consistant à interroger le rapport qu'entretenaient les Anciens avec le texte, en particulier les Néoplatoniciens. Et si Plotin et Proclus, les grands noms du néoplatonisme, ont fait l'objet de quelques études récentes, personne n'a encore abordé cette question à propos de Simplicius - bien qu'il se présente comme un lecteur assidu du Sophiste. Une telle entreprise enrichirait pourtant nos connaissances de l'histoire de l'interprétation et de l'étude de ce dialogue." (p. 9)

(...)

"Par sa méthode exégétique et par sa perspective de commentateur d'Aristote, Simplicius se démarque de ses prédécesseurs néoplatoniciens. Dès lors, nous commencerons par analyser leurs grilles de lecture respectives, car en décryptant leur approche du Sophiste et en cherchant l'objectif qu'ils se fixent, nous espérons dégager les traits propres à chacune. De cette manière, nous espérons rendre compte du fait que Plotin met en œuvre la dialectique qu'il définit dans ses *Ennéades*, afin d'aboutir à une déduction des Genres de l'Être; que Proclus systématise les Dialogues de Platon et les

rassemble dans une structure théologique où le Sophiste se voit accorder une place de choix par rapport au Parménide, malgré les apparences ; enfin, que Damascius, en raison de sa formation de rhéteur, retourne au texte original, mais que son regard varie si l'on observe son œuvre de philosophe ou bien celle de commentateur." (p. 10)

43. ———. 2021. "L'ousia dans le Théétète et le Sophiste." *Chôra. Revue d'études anciennes et médiévales* no. 18-19:41-71.

Abstract: "The *Theætetus* and the *Sophist* present in succession two "battles" regarding ousia. In so doing, ousia is placed at the heart of what is essential to both dialogues: in fact, ousia interconnects with the conditions of possibility, both physical and metaphysical, of logos and epistèmè.

However, each dialogue brings differing conceptions of discourse and science into play, and both articulate a different train of thought regarding being.

Ousia appears differently in the two dialogues and it is not the same thing as the notion of ousia, usually considered to be truly Platonic, presented in the central books of the *Republic*, which neither the Socrates of the *Theætetus* nor the Stranger of the *Sophist* put forward.

Both present ways out of the battles, each has its own middle course. Against the thesis of the non-immutability of ousia, the *Theætetus* establishes that there is not only motion. And, unlike the doctrine that reduces ousia to Forms excluding all motion, the *Sophist* shows that while there is not only motion, there is not only rest either. Such different orientations in the treatment of ousia, just below and just above doctrinal Platonism as it were, adjust to distinctions in the epistemological stakes: even if the *Theætetus* emphasizes that science proceeds from an activity of the soul bringing together

“commons”, it is not yet a question, as it will be the following day, of systematically getting epistèmè to intellectually grasp a set of eidetic relationships, nor of making

logos itself the elaboration of relationships. One needs to have left the field where those in favour of motion are challenged on their own ground, and in an albeit transformed field marked out by the partisans of eide which is not the field hierarchical metaphysics either, it will become possible to analyse the discourse itself as a relational framework that is consistent with the framework of ousia."

45. Hoekstra, Marieke, and Scheppers, Frank. 2003. "'Όνομα, ῥῆμα et λόγος dans le Cratyle et le Sophiste de Platon : analyse du lexique et analyse du discours." *L'antiquité Classique* no. 72:55-73.

"Cette étude concerne (i) les valeurs sémantiques des mots 'Όνομα, ῥῆμα et λόγος en grec classique (paragraphe 1), et (ii) la façon dont ces valeurs sont mises en œuvre dans le développement thématique de quelques passages chez Platon (Cra. 424e-425a et Soph. 261c-262e), passages qui sont important du point de vue de l'histoire de la linguistique (paragraphe 2 et 3). À ce propos, nous essaierons de décrire le fonctionnement de ces mots dans ces passages à partir de l'hypothèse que le vocabulaire de Platon n'est pas encore une terminologie spécialisée, mais puise dans les ressources du lexique commun de l'époque.

Le champ sémantique de la parole dans le lexique grec « commun » (non spécialisé) de l'époque classique est assez différent des champs lexicaux comparables dans les langues modernes; ainsi, il n'y a pas d'équivalents (sauf très approximatifs) en grec classique pour des termes

fondamentaux comme 'mot' ou 'phrase'; de plus, ce champ a connu une évolution diachronique importante entre les époques homérique et classique (évolution qui continue d'ailleurs ensuite). D'autre part, il y a eu une mutation profonde dans la conceptualité philosophique ou scientifique qui a donné lieu - après Platon - à des concepts tels que sujet, attribut, référence, etc., concepts qui n'existent pas encore à l'époque de Platon, mais qui déterminent la tradition grammaticale occidentale." (p. 55, notes omises)

Abstract: "Even though Parmenides doesn't use αὐτάρκης and any noun derived from this root, the Being is conceived by him as self-sufficient (v. 8,33). Plato, for its part, never uses this term concerning the intelligible reality; however, in the Sophist, he allusively challenges Parmenides self-sufficiency of Being and outlines an ontology that is conflicting with it. On the other hand self-sufficiency is explicitly ascribed by Plato to the human good (Philebus, 20d, 67a), to the divine world (Timaeus, 33d), and also to the virtuous man (Republic, 387d). This paper aims to demonstrate that these facets (theological or anthropological) of self-sufficiency are consistent with the supremacy of the idea of the Good in the Republic, which can be understood as a structural kind of self-sufficiency."

47. Ildefonse, Frédérique. 2021. "Quelques différences entre le Cratyle et le Sophiste." In *Plato's Cratylus. Proceedings from the Eleventh Symposium Platonicum Pragense*, edited by Mikes, Vladimir. Leiden: Brill.

A paraître.

Abstract : "In this contribution, I seek to propose an approach to certain aspects of Cratylus by combining two paths : an approach to Cratylus by the Sophist and an approach, enlightened by stoicism, of what both of the dialogues develop. I do not propose to consider what the Cratylus would anticipate from the Sophist in terms of language study, but rather what the Sophist will shift from the investigation of the name,

specific to the Cratylus. By reading the Cratylus closely, one can better see what operations the Stranger carries out in the Sophist : on truth, on the relationship between *legein* and *logos*, on *logos* and its parts, as well as on the interlacing between the question of truth and the distinction between *legein* and *logos*, as well as on the interlacing between the question of truth and the relationship between *logos* and its parts. I also propose, for some of their aspects, to read the Cratylus and the Sophist in the light of Stoicism, which, for these dialogues as for others, gives a particular light to the Platonic issues, but also allows us to understand the genesis of the Stoic concepts coming, for many of them, from a certain reading of Platonism."

"Parmi les érudits il y a pas mal de disputes concernant l'importance du passage sur la définition de l'être en tant que puissance d'agir ou de pâtir en 247e du Sophiste. Mais, même si cette définition ne possède pas une place centrale dans le dialogue, Aristote semble lui en attribuer une.

Il y a de fortes raisons exégétiques pour soutenir qu'Aristote non seulement prend au sérieux cette définition, mais que, en plus, il consacre une partie considérable des *Topiques* à sa réfutation. Nous argumenterons dans cet article en faveur de la thèse selon laquelle la réfutation d'Aristote est basée sur une ambiguïté du domaine des variables *p* et *q* dans des formules générales qui peuvent obtenir la paraphrase formelle suivante: "a est (soit *p*, soit *q*)" (1)." (p. 3)

(1) "a" est une variable d'objet général (d'un καθόλου). Ce n'est que par la suite que nous allons voir si la disjonction est exclusive ou inclusive, ainsi que quelle sorte de variables sont "p" et "q".

"Dans son étude sur le Sophiste de Platon [*], Moravcsik nous propose de comprendre l'expression τοῦ μη ὄν αὐτό καθ' αὐτό (238c10) comme signifiant le concept de Non-Existence qu'il identifie par ailleurs à une Forme platonicienne (3) Il analyse ensuite les trois arguments du Sophiste (237b10 -239a12) à l'aide de cette Forme-concept. Nous appellerons donc logique ou conceptualiste cette lecture de Moravcsik.

Par ailleurs, d'autres traductions ont été proposées et qui ne se recommandent pas de cette Forme-concept. Bluck traduit notre expression par: "that which is not all by itself, without any properties" (4), Cornford: "that which just simply is not" (5), Seligman: "that which is in no way whatever" (6), Diès: "le non-être en lui-même" (7), et D. Ross: "that which is not" (8). Nous appellerons ontologiques ces dernières lectures parce qu'elles invitent à comprendre les trois arguments sur le non-être en considérant celui-ci non pas comme un concept, mais comme le fait négativement contingent d'une "chose qui n'est pas". Nous

pensons que la lecture conceptualiste de Moravcsik impose au texte platonicien la notion analytique de "public concept" ou de "conceptual reality", et que cette notion est incompatible avec la conception platonicienne de la réalité, du langage et de la vérité." (pp. 41-43)

56. Lassègue, Monique. 1991. "L'imitation dans le Sophiste de Platon." In Études sur le Sophiste de Platon, edited by Aubenque, Pierre, 249-265. Napoli: Bibliopolis.

"Etudier l'imitation dans le Sophiste, c'est, semble-t-il, la condamner d'avance, puisqu'en ce dialogue le sophiste est celui qui imite et qu'il est aussi l'opposé du philosophe.

Les rares commentateurs qui ont étudié l'imitation dans ce dialogue ont souligné le caractère négatif du contexte dans lequel cette notion apparaît. Il faut se garder de prendre trop au sérieux, pensent-ils, la distinction entre la "copie" (eikon), fidèle à l'objet qu'elle imite et le "simulacre" (phantasma) qui ne ressemble pas au modèle. Cette distinction faite par l'Etranger en 236 A-B, n'empêche pas en 241 E d'affirmer: «on ne pourra guère parler de discours faux, ni d'opinions fausses, ni d'images, ni de copies, ni d'imitations, ni de simulacres», tant qu'on n'aura pas réfuté Parménide et rejeté son interdiction de poser le non-être de quelque façon que ce soit. Ainsi, qu'il s'agisse de "copie" ou de "simulacre", il semble bien que l'imitation tout entière rentre dans une classe unique et que tout y soit de la même façon marqué de fausseté. Comment alors ne pas condamner l'imitation?" (p. 249)

(...)

"Si on admet ces analyses, on sera conduit à conclure que la doctrine de l'imitation qui apparaît dans le Sophiste n'est pas une nouveauté platonicienne, et qu'elle permet d'écarter un certain nombre d'ambiguïtés présentes dans d'autres dialogues.

Le sophiste n'est pas l'imitateur par excellence, car ses modèles, comme ceux du peintre, sont des objets ou des êtres sensibles qui ne peuvent servir à produire de belles images. Le modèle n'est d'ailleurs pas seul en cause. Le sophiste n'a pas de bons modèles parce que ses intentions sont perverses, il veut séduire, donner à croire qu'il est savant alors qu'il sait ne l'être pas. Pour mener à bien son projet, il a besoin de l'imitateur véritable, celui en qui nous avons reconnu le philosophe.

Le philosophe se fait aussi ressemblant au modèle que possible et, passant du faire au dire, il tient un discours véridique, qui sans doute n'est pas identique à l'essence, mais lui demeure fidèle. Si, en cherchant le sophiste, on trouve d'abord le philosophe, il ne faut pas s'en étonner : on ne saurait trouver

d'image s'il n'y a pas de modèle. Le sophiste parodie le philosophe, ce n'est qu'un imitateur de pacotille, mais la vanité des images qu'il produit peut révéler pourtant, à sa façon, la valeur de l'image qui imite l'essence." (pp. 264-265)

57. Ledesma, Felipe. 2009. "Le logos du Sophiste : image et parole dans le Sophiste de Platon." *Elenchos.Rivista di Studi sul Pensiero Antico* no. 30:207-254.

Abstract : "The logos' question, one of the most important among the subjects that traverse the Plato's Sophist, has in fact some different aspects: the criticism of father Parmenides' logos, that is unable to speak about the not-being, but also about the being; the relations between logos and its cognates, phantasia, doxa and dianoia; the logos' complex structure, that is a compound with onoma and rema; the difference between naming and saying, two distinct but inseparable actions; the logical and ontological conditions that make possible to say the truth, or to lie or simply to joke; the necessity of a most flexible logos that allows us to speak about the not-being, and about the being, but at the same time is a logos dangerously similar to the sophist's one; finally, the identity between the power to produce "spoken images" and the very power to speak. The aim of the present article is giving a systematical view of the matter that grasps all these faces." (pp. 207-208)

58. ——. 2009. "Le sophiste et les exemples : sur le problème de la ressemblance dans le Sophiste de Platon." *Revue de Philosophie Ancienne* no. 27:3-39.

"Grâce à ce jeu de ressemblance et de dissemblance qui d'entrée leur semblait impossible à dire, non seulement parce que ceci est ce que le père Parménide a dit, mais aussi parce que le logos même le montrait en résistant fermement à dire que ce qui n'est pas toutefois est (85), Théétète et l'Étranger arrivent à rendre dicible qu'il y a des exemples, des images et des apparences sans renoncer à être d'accord avec eux-mêmes, c'est-à-dire sans être en désaccord à l'égard de ce qu'eux-mêmes disent (86). Cependant, ils n'arrivent aucunement à dire ce qu'est finalement la ressemblance ni la dissemblance ;

ils n'arrivent pas à dire ce qu'est finalement un exemple. Cela il faut le montrer.

Il faut d'ailleurs en donner des exemples. Ce qu'ils font en effet le jour suivant, l'Étranger et le jeune Socrate, quand ils nous proposent l'exemple d'exemple, mais sans avoir jamais renoncé à son emploi, sans s'être jamais passés des comparaisons, des ressemblances et de l'exercice. Il est vraiment difficile pour le logos d'en faire l'économie. Bien plus qu'arriver à rendre dicible sans désaccord qu'il y a des exemples, des ressemblances et de l'exercice." (p. 37)

Platon, *Le Sophiste*. Bibliographie des études en Français (M - Z)

Bibliographie

1. Malverne, Lucien. 1958. "Remarques sur le « Sophiste »." Revue de Métaphysique et de Morale no. 63:149-166.

"Comme tous les systèmes, la philosophie platonico-aristotélicienne du concept s'est posée en s'opposant. Elle avait à surmonter les difficultés inspirées aux Sophistes par la méditation des Présocratiques, et presque aucune de ses thèses ne fut forgée autrement qu'à l'occasion d'une polémique engagée contre la Sophistique ou l'Eristique issues des Eléates ou d'Héraclite. Dans le débat ainsi ouvert devant l'histoire, la philosophie occidentale à peu près tout entière s'est prononcée contre les Sophistes ou les Mégariques, en faveur de Socrate, Platon et Aristote. Devons-nous considérer cette cause comme entendue ? D'un précédent travail consacré aux réfutations de Zenon par Aristote (2), au contraire, nous avons cru pouvoir conclure qu'en ce qui concerne au moins le débat entre adversaires et partisans du changement, le choix demeurerait libre. Nous nous proposons aujourd'hui de reconsidérer la réfutation qu'opposa Platon aux néo-éléates de Mégare, selon lesquels l'impossibilité ontologique d'exprimer le non-être eût permis de nier l'erreur. Cette réfutation habite l'œuvre entière de Platon ; il n'est guère de dialogue qui n'en livre un aspect. Mais les seuls textes où Platon l'ait méthodiquement exposée sont la sixième hypothèse du Parménide, et surtout le Sophiste. Outre que le cadre du présent article nous l'interdirait, nous ne pouvons songer à isoler ici du Parménide le contenu de la sixième hypothèse, trop profondément mêlé au reste du

dialogue, et encore relativement extérieur à notre sujet : cette hypothèse constitue, en effet, moins une réfutation de l'éléatisme qu'une étude méthodologique de la δόξα comme statut ontologique du non-être. Nous nous bornerons donc à l'examen du Sophiste, ne pouvant d'ailleurs en retenir ici que ce qui concerne immédiatement le problème de la réalité du non-être." (pp. 149-150, notes omises)

3. Marcos de Pinotti, Graciela Elena. 1994. "Négation, fausseté et non-être dans le Sophiste." Revue de Philosophie Ancienne no. 12:153-170.

"Certes, la doctrine du non-être comme altérité ou différence est la clef de la solution platonicienne au problème de la fausseté.

C'est pourquoi, lorsque Platon conteste l'argument des sophistes grâce aux célèbres λόγοι sur Théétète, il n'hésite pas à caractériser l'énoncé faux comme celui qui dit "des choses autres que celles qui sont" ((ἕτερα τῶν ὄντων), Soph. 263b7).

Cette formule, comme on le sait, fait l'objet de nombreuses discussions. Dans ce travail nous tenterons d'en faire un éclaircissement à l'aide du Sophiste 257b-c, le passage où Platon, avant d'exposer la doctrine des "parties de la nature de l'autre", trace la distinction entre le non-être comme contrariété et comme altérité ou différence. Nous examinerons tout d'abord ce passage platonicien afin d'éclairer cette distinction signalée dans la plupart des études consacrées au Sophiste, mais dont la vraie signification demeure cependant

obscur. Ensuite, dans la seconde partie de notre travail, nous appliquerons le résultat de notre examen à l'interprétation de "Théétète, avec qui maintenant je dialogue, vole", l'exemple bien connu d'énoncé faux que Platon offre vers la fin du dialogue. Les deux passages correspondent, à notre avis, aux deux modalités de 'dire ce qui n'est pas', celle de la négation (Soph. 257b-c) et celle de la fausseté (Ibid. 263b-d).

Or, au-delà des différences entre ces deux textes, une lecture attentive montrerait quelle est l'exigence fondamentale que selon Platon tout énoncé doit remplir. D'après notre interprétation, il s'agit d'indiquer, d'exprimer ou de signaler ce dont on parle,

exigence qui concerne aussi bien la négation que l'affirmation, l'énoncé faux non moins que l'énoncé vrai. Cette condition remplie - c'est l'enseignement du Sophiste - il est possible de dire le non-être." (p. 154)

4. ———. 2005. "Platon, son « père Parménide » et l'héritage sophistique." In *La philosophie de Platon. Tome 2*, edited by Fattal, Michel, 237-268. Paris: L'Harmattan.

"La bataille que livre Platon contre le sophiste dans le dialogue qui porte son nom est en même temps une bataille contre l'ontologie de Parménide, dans laquelle s'enracine la thèse sophistique qui nie la possibilité de l'erreur et que notre philosophe se propose de réfuter.

En vertu de ce double affrontement, Platon se trouve contraint d'adopter des stratégies complexes d'argumentation qui, comme nous tenterons de le montrer, l'associent à l'ennemi et l'en rapprochent beaucoup plus que l'on ne pourrait le supposer. Pour ce qui est de sa polémique avec Parménide, une fois établie la réalité du non-être à titre d'altérité ou de différence, Platon proclame avoir réfuté le dictum paternel qui nie le non-être. Néanmoins, dans la mesure où son objectif ultime est de démasquer certains arguments sophistiques fallacieux qui dénaturent l'esprit de la philosophie de Parménide, sa recherche ne l'éloigne pas mais le rapproche plutôt des arguments présentés par celui-ci. Quant à sa polémique avec la sophistique, cible directe de l'attaque du

Sophiste, l'hostilité mutuelle n'empêche pas Platon de reconnaître que les occupations du philosophe et du sophiste se rejoignent sur certains points. Nous pourrions même dire qu'en vue de trouver une solution au problème du discours faux, Platon n'hésite pas à élaborer une conception du discours qui le rapproche dangereusement du rang de l'ennemi.

Nous examinerons dans ce travail quelques aspects de la polémique que notre philosophe entretient avec les deux courants, et au travers de laquelle ont certainement vu le jour nombre des doctrines positives que nous transmettent ses dialogues. Tous ces affrontements n'ont certes pas la même valeur, car dans un cas, il s'agit d'un prédécesseur illustre que Platon traite avec respect, et dans l'autre cas, d'un courant de pensée auquel sa philosophie est ouvertement hostile.

Toutefois, un examen attentif de certains passages du Sophiste met en évidence que dans les deux cas, derrière les critiques ouvertes de Platon, il existe également des appropriations, des héritages cachés permettant de détecter d'intéressants points de contact entre la philosophie platonicienne, celle de son « père Parménide » et certaines positions sophistiques. Ce que nous voudrions éclaircir ce n'est pas tant l'attitude de Platon envers d'autres courants de pensée que la possible incidence de ceux-ci sur sa propre philosophie, qui a dû en grande partie être le produit du rapprochement et du « dialogue » avec ses prédécesseurs et ses contemporains." (pp. 237-238)

5. Mattéi, Jean-François. 1983. *L'Étranger et le simulacre. Essai sur la fondation de l'ontologie platonicienne*. Paris: Presses Universitaires de France.

"Notre dessein naquit d'une première et déjà ancienne rencontre avec le Sophiste de Platon, dont une particularité de composition nous avait frappé, et dont nous sentions confusément qu'elle n'était pas étrangère à la chasse au faiseur de simulacres comme au détour ontologique par la communauté des cinq genres de l'être. Nous soupçonnions même que la forme du texte, ou plutôt la figure des personnages, pour parler avec Pascal, portait « absence et présence », et constituait le lien voilé qui rapproche, en leur perpétuel déchirement, Philosophie et Sophistique. Nous ne

pensions pas, alors, découvrir que cette figure avait été faite sur un chiffre, en son double sens que l'on ne réduira pas seulement au clair et au caché, et exprimait la vérité ontologique de l'acte de fondation. Il fallait donc lever le sceau et reconnaître chez Platon, chez d'autres penseurs aussi sans doute, cette reprise continue d'une parole à l'écoute de sa propre origine et qui se tourne vers l'être, au croisement du temps et de l'éternité. Nous fascinaient en effet la répétition du voyage du philosophe, à la recherche du royaume perdu, et sa volonté tranquille de sauver de l'anéantissement, face aux écueils symétriques d'un Parménide et d'un Gorgias - le langage, voué aux mirages de la Mimésis, tant qu'il n'a pas restauré sa droite filiation ; - l'être, dont le visage menace de se figer dans la paralysie éléatique ou de se dissoudre dans les convulsions sophistiques ; - le pouvoir enfin, qui conquiert sa légitimité en s'ancrant dans la parole du Maître, seul à dire l'être. Et certes, l'enjeu ultime de l'Odyssée du philosophe - la Maîtrise - semblera peu conforme au goût d'une époque qui a cru bon d'assujettir la pensée au désir de Rébellion, malgré ça et là quelques résurgences incertaines, à l'écho de Nietzsche, et qui ne partagent l'impeccabilité du penseur de l'Aurore que pour mieux atténuer l'éclat de la lumière platonicienne." (p. 5)

6. ——. 1985. "La symphonie de l'être dans le Sophiste de Platon." *Dialogue: Canadian Philosophical Review* no. 24:237-256.

Repris dans J.-F. Mattéi, *L'ordre du monde. Platon - Nietzsche - Heidegger*, Paris. Presses universitaires de France, pp. 25-47.

"La pensée platonicienne du Sophiste, comme celle des autres dialogues, révèle ainsi ce que j'appellerai, sur le modèle de l'onto-théologie heideggerienne, sa dimension onto-theo-cosmo-mytho-logique; elle unit en un même tout ces cinq déterminations majeures: (1) ONTO-: car la parole du philosophe est toujours en quête de l'« être »;(2) THEO-: comme l'être est assimilé au « divin » (254a8-9; 254b1), la formation du Tout est due à « une science divine émanée de Dieu » (265c9); (3) COSMO-: l'être et le Tout (249d4) sont identifiés à l'Ousia au centre du Monde; (4) MYTHO-: le Monde et les Dieux relèvent du muthos et non du logos, comme en

témoigne la vérité du mythe du Timée (26d-e); (5) LOGIQUE: enfin le logos trouve sa racine dans l'être dont nous sommes partis, et qui conduit en silence nos pas." (p. 255)

7. ———. 1989. "Feu et lieu : Platon et la modernité." In *L'ordre du monde. Platon - Nietzsche - Heidegger*, 119-141. Paris: Presses universitaires de France.

"Le principe de l'argumentation platonicienne, après que l'Etranger d'Elée a rappelé les doctrines de ses prédécesseurs relatives au nombre des êtres et à leur nature (242b6-249d5), consiste à emprunter à la tradition un couple de contraires irréductibles l'un à l'autre, puis à établir que cette dualité exige, pour être posée, la présence d'un troisième terme qui distingue les précédents tout en se distinguant d'eux. La

même argumentation va se reproduire à propos d'un second couple, appelé par le premier, dont on montrera la différence interne des éléments qui le composent et la différence externe avec le couple antérieur. L'articulation des deux couples à l'aide de leur élément commun - l'être - qui se trouve toujours en tiers parmi eux, permet d'affermir la Communauté des cinq genres de l'être (κοινωνία) en laquelle nombre d'interprètes ont pu voir « la clef de voûte de tout le système platonicien »(232)" (p. 130)

8. ———. 2005. "L'origine platonicienne de la métaphysique : la communauté des genres de l'être." In *Y a-t-il une histoire de la métaphysique?*, edited by Zarka, Yves Charles and Pinchard, Bruno, 27-44. Paris: Presses Universitaires de France.
9. ———. 2005. "Les genres de l'être chez Platon et le système aristotélicien des quatre causes." In *Cosmos et psychè. Mélanges offerts à Jean Frère*, edited by Vegleris, Eugénie, 183-202. Hildesheim: Georg Olms.
10. Mazzara, Giuseppe. 1991. "Quelques remarques sur Gorgias et les Gorgiens dans le Sophiste." *Argumentation* no. 5:233-241.

Résumé : "Le Sophiste de Platon est une oeuvre qui - comme on le sait - du moins à en croire son titre, n'est pas la première du genre: le Peri tñ Sophiston d'Alcidamas et le Katai tñ Sophistón d'Isocrate tout autant que la partie introductive (§§ 1-13) de son Eloge d'Hélène avaient déjà ouvert la voie.

A propos du sophiste : un doxomimète fallacieux qui invite le philosophe come imitateur "historique". Tout comme l'allusion que fait Platon la définition isocratienne du δημολογικός comme imitateur εἰρωνικός. L'auteur s'engage a démontrer ici, outre le developpement du concept d'ἰσότημη chez Platon et Gorgias, une influence possible d'Alcidamas et d'Isocrate sur la définition platonicienne du sophiste."

11. Milner, Jean Claude. 1966. "Le point du signifiant. Sur Platon: à propos du Sophiste." Cahiers pour l'Analyse no. 3:73-82.

"Qu'il y ait eu entre l'être et une computation un lien hérité, la doxographie antique suffirait à le manifester, qui, rapportant les opinions sur l'être, ne sait les énoncer que comme des dénombremments, et ne peut, pour en dresser la liste, que se conformer à la suite des nombres: "pour l'un (des anciens sophistes), relate par exemple Isocrate, il y a une infinité d'êtres; pour Empédocle, quatre ; pour Ion, seulement trois; pour Alcmeón, rien que deux; pour Parménide, un ; pour Gorgias, absolument aucun". (Isocrate, Or. XV, 268 ; cité à la page 345 de l'édition Diès).

Ce lien, que l'anecdote ici décrit, cerne bien cependant l'hypothèse qui supporte le mouvement de Platon, désireux dans le Sophiste d'établir ce qu'il en est du non-être: se plaçant dans la succession des opinions, puisqu'il entend la clore, - entre le "un" de Parménide, qui résume tous les comptes positifs, et l' "absolument aucun" de Gorgias, qui les efface tous, il ne peut faire qu'énumérer le non-être, en susciter l'émergence par une computation." (p. 73)

12. Miura, Kaname. 2015. "Quelques notes sur les critiques du pluralisme et du monisme dans le Sophiste de Platon." Kanazawa Journal of Philosophy and Philosophical Anthropology no. 6:69-84.

Il semble que la thèse selon laquelle le changement majeure de la métaphysique à la logique s'est accompli dans le Sophiste de Platon soit assez fondée.(1) Certains y ont vu une transformation ou un abandon même de la théorie des Idées exposée par Platon dans les dialogues dits de transition(2) En effet, ce dialogue a attiré l'attention d'un nombre considérable de chercheurs voulant y trouver les «anticipations logiques» de Platon.

(...)

Platon est-il vraiment obligé à réviser sa théorie dans le Sophiste? Les arguments qu'il énonce dans ce dialogue sont-ils à ranger uniquement dans le domaine de la logique? Il n'en est rien. Au contraire, nous pouvons dire que le Sophiste occupe une position cruciale dans toute la théorie des Idées au point de vue de son développement ontologique et épistémologique. Il faut alors que l'on remette à plat le rôle que jouent les critiques du monisme et du pluralisme 242C-245E dans ce développement aussi bien que dans le plan général du Sophiste, en dépit du diagnostic d'un «détour» par Diès(4)." 17. Narcy, Michel. 1991. "La lecture aristot licienne du Sophiste et ses effets." In * tudes sur le Sophiste de Platon*, edited by Aubenque, Pierre, 419-448. Napoli: Bibliopolis.

"En deux passages de la M taphysique, Aristote s'exprime au sujet du Sophiste de Platon. La premi re fois (E 2. 1026 b 14-15) il nomme Platon, et c'est pour l'approuver: «Platon, d'une certaine fa on, n'a pas eu tort d'assigner la sophistique au non- tre».

Une telle assignation, c'est bien la t che   laquelle s' vertue l'Etranger d'El e tout au long du Sophiste; ou du moins c'est celle   laquelle il se voit condamn    partir du moment o  sa pratique des divisions l'a conduit   situer le sophiste dans l'art de produire des simulacres (Soph. 235 A-236 c). Or, le second passage de la M taphysique dont nous aurons   nous occuper est une rigoureuse condamnation de la fa on dont l'Etranger arrive   ses fins: en se croyant confront    la «n cessit  de montrer que le non- tre est» (Metaph. N 2. 1089 a 5). C' tait l , juge Aristote, se laisser prendre   une difficult  archa ique ( πορῆσαι  ρχαϊκῶς, 1089 a 1-2).

On voudrait montrer ici que non seulement ces deux passages trouvent leur coh rence dans une conception du non- tre (et de l' tre) fondamentalement diff rente, chez Aristote, de celle de Platon (1), mais que dans cette fa on qu'a Aristote d'approuver d'un c t , de condamner de l'autre, est impliqu e une fa on de lire le Sophiste, allons jusqu'  dire une strat gie de lecture, qui p sera pour longtemps sur la compr hension de ce dialogue: Plotin en sera ici l'exemple." (p. 419)

18. Nercam, Nathalie. 2012. "«Topos» en question dans l'introduction du Sophiste (216a1-217a1)." *Plato Journal*:1-18.

Résumé : "Au début du Sophiste, Socrate demande au visiteur éléate ce qu'ont pensé des genres philosophe, sophiste et politique, « ceux qui sont de ce lieu-là ». L'article a pour but d'éclairer cette dernière expression et en particulier son mot clef « topos ». Il est montré que les significations de ce terme, dans son contexte, sont multiples et que cette diversité, loin d'apporter la confusion, permet au contraire et précisément d'ouvrir les diverses perspectives du dialogue."

"« Topos », mot crucial du problème posé par Socrate dans l'introduction du Sophiste (216a1-217a1) peut donc être interprété de façon plurielle. Il peut désigner : premièrement, une adresse géographique (le pays d'Elée), deuxièmement, une école philosophique (« l'école éléatique ») troisièmement, un classement rhétorique (la « classe » des spécialistes de la définition des genres) ou quatrièmement, un niveau d'intelligibilité (le seuil maximal d'une pensée discursive).

(...)

La polysémie de « topos » invite ainsi le lecteur à relativiser les propos de l'étranger de trois façons :

- En les considérant dans le cadre de l'action pédagogique conduite qui peut être caractérisée en comparaison avec celle de Parménide dans le dialogue éponyme et avec celle de Socrate dans le Théétète.

- En les rapportant à l'ensemble des discours rhétoriques ou sophistiques tenus sur le même sujet pour mesurer sur ce point les continuités et les ruptures proposées par le visiteur éléate.

- En les examinant enfin selon les critères socratiques du Phèdre, pour déterminer le sens accordé à « topos » au cours de l'exposé afin d'apprécier son degré relatif d'intelligibilité et de déterminer ses limites.

Socrate reformule immédiatement sa première question et réduit alors considérablement le problème (217a2-4). Mais il attend toujours une réponse de la part de « ceux qui sont et/ou s'occupent de ce lieu-là ». « Topos » reste donc un critère d'appréciation pertinent. Cet article n'avait pas pour prétention de l'éclairer complètement et définitivement, mais avait pour but de montrer que son étude permet d'ouvrir des perspectives interprétatives qui viennent compléter les exégèses plus classiques du dialogue." (pp. 17-18)

19. Nevsky, Alexandre. 2011. Voir le monde comme une image: Le schème de l'image mimétique dans la philosophie de Platon (Cratyle, Sophiste, Timée). Bern: Peter Lang.

Table des matières: Introduction 1; Partie I. Analyses; I. Le Cratyle: le schème de l'image dans la constitution du langage 33; Le déploiement du schème de l'image dans le Cratyle 39; Apories de l'interprétation 130; II. Le Sophiste: le schème de l'image dans la constitution du discours 159; III. Le Timée: le schème de l'image dans la constitution du monde 297; Partie II. Conclusions; I. Conclusions des dialogues 435; II. La conception de l'image chez Platon 473; Epilogue. Voir le monde comme une image selon Platon 503; Bibliographie 507; Index des noms 519; Index des textes anciens 523.

"Que veut nous dire Platon quand il nous invite à voir le monde comme une image ? De quoi est-il l'image et existe-t-il plusieurs images possibles de la même réalité ? A quel degré d'engagement ontologique exposons-nous quand nous acceptons, avec Platon, de redéfinir comme étant image le langage, le discours, le monde matériel et même le matériau de celui-ci ?

Ce travail propose une analyse approfondie de la conception de l'image de Platon dans ses trois dialogues clés. Il essaie de nous montrer que cette conception n'est pas une simple conséquence de la théorie des Idées, mais une solution philosophique originale au paradoxe de l'apparence archaïque et une étape préalable à la dialectique platonicienne.

Cette étude nous invite ainsi à revoir les fondements de la métaphysique occidentale, au moment où se produit la

naissance conceptuelle de la notion d'image, en mettant en évidence son originalité et son importance pour l'enquête philosophique sur la réalité."

20. O'Brien, Denis. 1991. "Le non-être dans la philosophie grecque: Parménide, Platon, Plotin." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 317-364. Napoli: Bibliopolis.

Repris dans: D. O'Brien, *Le non être. Deux études sur le Sophiste de Platon*, pp. 3-39.

Sommaire: I INTRODUCTION: LA PHILOSOPHIE ET L'HISTOIRE; II PARMÉNIDE. 1. L'être et la vérité 2. Le non-être et l'erreur des mortels; III PLATON. 1. Les deux sens du non-être 2. Le non-être et l'altérité; IV PLOTIN. 1. Les trois sens du non-être

2. Le non-être et la matière; V PARMÉNIDE ET PLATON. 1. L'existence des non-êtres 2. La question du parricide; VI PLATON ET PLOTIN. 1. "Réellement non-étant" 2. Le non-être et le contraire VII CONCLUSION : L'HISTOIRE ET LA PHILOSOPHIE.

"Cette étude du non-être permettra, je l'espère, de résumer en quelque sorte les recherches que nous avons menées en commun depuis plusieurs années sous l'intitulé général: *Recherches sur le vocabulaire de l'être dans l'Antiquité*. Comme le dit Hegel, comme le dit Heidegger, comme l'a dit aussi Platon : comment étudier l'être sans le non-être?" (pp. 119-120)

(...)

"Résumons, le plus simplement possible, les différents sens du non-être que nous avons repérés en examinant ces quelques textes de Parménide, de Platon, de Plotin.

- Parménide a parlé d'un non-être impensable et incommunicable.

- Platon a distingué le non-être qui serait comme le contraire de l'être et le non-être qui serait "autre" que l'être,

- Plotin a distingué: premièrement, le non-être absolu; deuxièmement, l'altérité du mouvement et du repos; enfin,

troisièmement, la "forme" du non-être qui est la matière.

Voilà la philosophie; où se trouve son histoire? A moins que l'on ne se pose la question inverse: voilà l'histoire, où se trouve la philosophie?" (pp. 349-350)

21. ———. 1991. "Platon et Plotin sur la doctrine des parties de l'autre." *Revue Philosophique de la France et de l'Étranger* no. 116:501-512.

Résumé : "La matière est-elle identique à l'alterité ? » Plotin se pose cette question au commencement du dernier chapitre de son traité *Sur la matière* (Enn., II 4 [12] 16). « Plutôt non », répond-il. « Elle est en revanche identique à cette partie de l'altérité qui s'oppose aux êtres proprement dits. » En s'exprimant de la sorte, Plotin fait allusion à un passage du *Sophiste* (258 E 2-3). Son allusion suppose pourtant l'existence d'un texte qui n'est pas attesté dans les manuscrits. Cette différence textuelle implique un changement fondamental de doctrine, dont les éditeurs modernes ne se sont pas avisés."

Sommaire: Avertissement XI-XII; Étude I: Le non-être dans la philosophie grecque: Parménide, Platon, Plotin 3; Étude II: Le non-être et l'altérité dans le *Sophiste* de Platon 43; Notes complémentaires 91; Index: I. Auteurs anciens 133; II. Auteurs modernes 139; III. Supplément bibliographique 151; English summaries: I. Non-Being in Parmenides, Plato and Plotinus 169; II. Non-Being and otherness in Plato's *Sophist* 176-181.

23. ———. 1996. "À propos du *Sophiste* de Platon." *Les Études Philosophiques*:375-380.

Dans une étude sur le *Sophiste* de Platon, parue récemment dans *Les Études philosophiques*, F. Fronterotta me reproche d'avoir mal interprété la doctrine des parties de l'autre, telle que la présente l'Étranger d'Élée dans sa critique de Parménide (*Soph.* 257 c5-258 c10) (1)" (p. 375)

(...)

"A la différence de la forme de l'être, à la différence de la forme du non-être, la forme de l'autre ne sera donc qu'unité « en quelque sorte» (cf. 257 c10: πον).

Cette différence est essentielle pour qui veut comprendre la différence qui sépare le non-être et l'autre. La science est divisée en une multiplicité de sciences, possédant chacune son nom propre. Il en va de même de la nature de l'autre qui, elle aussi, est divisée en une multiplicité de parties, dont chacune possède une appellation (appellation négative) qui lui est propre («non beau», « non grand», « non juste»). Mais il n'en va pas de même, ni de l'être, ni du non-être." (p. 379)

(...)

"Ainsi s'expliquerait l'erreur dans la thèse de Fronterotta. Cet exégète n'a pas en effet compris qu'en participant d'une « partie» (la forme du non-être), les autres parties de l'autre ne deviennent pas, de ce fait, les parties d'une partie. Il n'a donc pas compris que la forme du non-être ne peut pas être définie à la fois comme une partie de l'autre (258 a 11 -b 4) et comme «chaque partie de l'autre» (cf. 258e2-3). La doctrine de l'Étranger n'est pas à ce point contradictoire." (p. 380)

Pour la thèse de Fronterotta, voir surtout p. 159-166.

24. ——. 1999. "Théories de la proposition dans le Sophiste de Platon." In Théories de la phrase et de la proposition. De Platon à Averroès, edited by Büttgen, Philippe, Diebler, Stéphane and Rashed, Marwan, 21-41. Paris: Éditions Rue d'Ulm.

"Commençons par le Sophiste de Platon. Deux théories de la proposition s'y opposent : celle de l'Étranger d'Elée, porte-parole de Platon, et celle du sophiste. Pour étayer sa thèse, le sophiste se réclame de Parménide. S'opposeraient donc ici, par personnes interposées, Platon et Parménide. Or voilà, d'emblée, l'une des raisons pour lesquelles les exégètes se trompent dans leur interprétation du dialogue. S'ils ne comprennent pas le Sophiste, c'est parce qu'ils comprennent mal le poème de Parménide. Et s'ils comprennent mal le poème de Parménide, c'est parce que, cherchant dans les fragments du poème une proposition - proposition qui sera reprise par le sophiste de Platon —, ils gauchissent, sans le savoir, le point de départ du raisonnement parménidien.

Je m'explique. Toute proposition permet de distinguer ce dont on parle de ce qu'on en dit. Cette distinction, fondamentale, ne s'applique pourtant pas aux deux énoncés formulés par la déesse au début de son discours : ἔστιν ("est", fr. 2.3), οὐκ ἔστιν ("n'est pas", fr. 2.5). Aucun de ces deux verbes, prononcés sans sujet ni complément dans le contexte immédiat du poème, ne permet de distinguer ce dont on parle de ce qu'on en dit(1)." (p. 21)

(...)

"L'Étranger rétablit de la sorte une contrariété du vrai et du faux, sans pourtant revenir sur son refus d'une contrariété de l'être et du non être(4). D'où l'ambivalence dont fait preuve la déclaration "des non êtres sont" au cours de son raisonnement. Dans un premier temps, cette formule établit l'existence des objets, des nombreux objets, dont on parle, renversant de la sorte la thèse moniste de Parménide. Dans un deuxième temps, la même formule, revêtue d'un sens nouveau et différent, rétablit la vérité ou la fausseté de ce qu'on en dit, autorisant, enfin, la définition du sophiste comme pourvoyeur d'erreurs et de mensonges." (p. 41)

(1) I "Il faut que tu sois instruit de toutes choses, à la fois du cœur de la vérité persuasive [...: ainsi la déesse à Parménide (fr 1.28), quand ce dernier aura franchi les portes du Jour et de la Nuit. Pour apprendre à son disciple la vérité, la déesse

commence par distinguer deux "voies de recherche, les seules que l'on puisse concevoir" (fr. 2.2). Ces deux voies sont les deux énoncés cités ci-dessus ("est", fr. 23, "n'est pas", fr. 2.5)

(4) "Le vrai serait le contraire du faux : cf. Sophiste, 240 b 5 ; 240 d 6-7. Le non-être, tel que le définit l'Étranger, ne serait pourtant pas le contraire de l'être : cf. Sophiste, 258 e 6-259 a 1."

25. Pasqua, Hervé. 1996. "L'Être comme πολλά chez Platon. Les enseignements du «Parménide» et du «Sophiste»." *Revue Philosophique De Louvain* no. 94:7-18.

Résumé : "L'Être est l'Un. Tel est l'héritage que Platon reçoit de Parménide. Non pas l'Être est un, mais : l'Être est l'Un. Autrement dit, l'Un n'est pas prédicat ni accident de l'Être, il en constitue l'essence. Quand l'Éléate affirme : l'Être est, le non-Être n'est pas, Platon comprend : l'Un est, le non-Un n'est pas. Dès lors, le sens du parricide que va commettre l'Étranger dans le Sophiste sera non pas, comme on l'entend traditionnellement : l'Être n'est pas, le non-Être est, mais l'Un n'est pas, le non-Un est. En refusant l'identification parménidienne de l'Être à l'Un, Platon révèle son véritable dessein, à savoir, montrer que l'Être, le réellement réel, le ontôs on, c'est le Plusieurs (les Idées)."

26. Pellegrin, Pierre. 1991. "Le Sophiste ou de la division. Aristote-Platon-Aristote." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 391-416. Napoli: Bibliopolis.

"Depuis quelques années notre approche de la critique par Aristote de la méthode platonicienne de division a été profondément renouvelée, notamment par une relecture du versant biologique de cette critique. Le premier effet qu'on en peut signaler n'est anodin qu'en apparence : la diairesis qui est critiquée dans les textes logico-métaphysiques d'une part et biologiques d'autre part du corpus aristotélicien semble bien être la même." (p. 391)

(...)

"Comme les grands dialogues de la période antérieure, le Sophiste et le Politique sont eux aussi consacrés à la dialectique platonicienne, mais c'est la dialectique qui a changé.

Ainsi se résolvent certaines des difficultés de la diairesis.

Comme la relation d'altérité, par exemple, n'est pas une simple relation d'exclusion, on comprend ce que signifie la règle qui prescrit de couper un genre en deux parties à peu près égales : tous les oiseaux sauf les grues ne forment pas "l'Autre des grues". L'hypothèse de la contemporanéité de la méthode diérétique et du Sophiste se trouve ainsi singulièrement renforcée.

Il ressort de tout cela l'image contrastée d'une diairesis à la fois fondamentale et invalide. Car même le dévoilement du fondement ontologique de la diérétique platonicienne ne la guérit pas de son essentielle impuissance. Quand l'objet à définir, comme dans le cas du pêcheur à ligne, ne subit pas la concurrence de rivaux suspects, la diairesis va droit au but.

Mais quand surgissent les questions «grosses d'embarras, aujourd'hui comme hier et comme toujours» du «paraître et sembler sans être» (Soph. 236 E), on s'aperçoit que la nouvelle dialectique platonicienne n'a pas à elle seule les moyens de lever une difficulté qui a été un des prétextes originaires de l'entreprise philosophique de Platon." (p. 412)

27. Rizzerio, Laura. 1999. "Dialectique et art dans la République et le Sophiste de Platon." *Revue Philosophique de Louvain* no. 97:231-252.

Résumé : "Cet article étudie le rapport que Platon établit entre la beauté, la mesure, et la production artistique aux fins de prouver que le philosophe athénien n'est pas un véritable «ennemi» des arts, à tout le moins qu'il ne peut être considéré comme un ennemi de la beauté des œuvres «sensibles», qu'elles soient naturelles ou produites par l'homme. Grâce à l'analyse de quelques extraits du Sophiste et de la République, cette étude veut montrer que la distinction de l'art d'imitation en deux «sections» différentes, «art de la copie» et «art de l'illusion», proposée par Platon dans le Sophiste, n'est pas simplement un expédient auquel le philosophe athénien a recours pour parfaire ses diaireseis et «capturer» la définition tant recherchée. Cette distinction trouve sa justification dans le rôle important que Platon confie à la «mesure» là où il s'agit de

la saisie du beau. C'est par cette notion de « mesure » qu'il en vient effectivement à rejeter un type d'art d'imitation, « l'art d'illusion », et à en accepter un autre, « l'art de la copie », en comparant ce dernier au travail du dialecticien. Or, il est fort probable que Platon prononce son jugement sur l'art d'imitation en ayant présente à l'esprit la production artistique de son temps. Soumis à condamnation serait alors l'art basé sur les techniques de l'illusion et du trompe-l'oeil, un art qui en était venu à s'imposer à son époque grâce à l'utilisation d'une proportionnalité capable de reproduire la réalité d'une manière vraisemblable, mais qui ne fabriquait qu'illusion, était loin de la vérité et se révélait incapable de saisir le beau. La production artistique reconnue comme respectable, voire utile à l'acquisition de la science, serait au contraire l'art qui s'était développé autour du canon de Polyclète dont les productions étaient fondées sur le respect absolu d'une « mesure » objective et d'une proportionnalité rigoureuse, mathématiquement représentables."

28. Rougier, Louis. 1914. "La correspondance des genres du Sophiste, du Philèbe et du Timée." *Archiv für Geschichte de Philosophie* no. 27:205-334.

"La correspondance des genres du Sophiste, du Philebe et du Timée est un des problèmes fondamentaux de la philosophie de Platon. Suivant les conceptions qu'on s'en fait, cette philosophie prête aux interprétations les plus divergentes. Dans une première partie, nous exposerons la thèse que nous adoptons; dans une seconde, nous en vérifierons les détails par l'examen critique des théories opposées les plus représentatives: celles de M. Lachelier, Zeller, Rodier, Brochard. Sans prétendre apporter une solution définitive de cette redoutable question, nous en fournirons, peut-être, une approximation plus exacte." (p. 305)

"Dans une étude précédant (3) j'ai examiné quelques aspects fondamentaux de la critique de Plotin à la doctrine aristotélicienne sur les catégories. Je voudrais aborder maintenant quelques points concernant la conception plotinienne des genres de l'intelligible exposée en VI 2, traité qui peut être lu presque comme un commentaire (4) des passages du Sophiste où Platon présente la doctrine des *μεγιστα γενε*, que Plotin va situer au niveau de la deuxième hypostase, l'intelligence. J'essayerai seulement de tracer les grandes lignes de la doctrine plotinienne des genres de l'intelligible et de signaler les principaux points de divergence avec la conception platonicienne des *μεγιστα γενε*. Malgré sa prétention de fidélité à Platon, Plotin n'adopte pas d'une façon stricte les genres du Sophiste pour les situer dans l'intelligence, mais il les interprète du point de vue de son propre système et en fait un libre emploi pour développer sa propre théorie. L'exégèse de Plotin n'est pas une reprise de l'analyse conceptuelle du Sophiste et de son enlacement dans le domaine de l'intelligence. Lorsqu'il caractérise la nature et la fonction des genres, Plotin s'écarte des affirmations et même des suggestions de Platon.

Etant donné que chez Plotin le monde intelligible est une réalité de deuxième ordre et dérivée, dont la source, l'Un, est au-delà de l'être et de la pensée, les genres de l'intelligible ne peuvent avoir du point de vue ontologique ainsi que du point de vue de la prédication ni la même portée ni la même importance que chez Platon, pour qui ils appartiennent à la région plus élevée de la réalité. L'interprétation du Sophiste sur les cinq genres ne prend sens qu'à l'intérieur d'un système métaphysique donné, celui de Plotin" (pp. 105-106, deux notes omises)

33. Soulez, Antonia. 1987. "Aux sources grecques de la tradition sémantique : le thème platonicien des "liaisons premières". " *Archives de Philosophie* no. 50:371-401.

Résumé : "Il s'agit dans cet article de retracer la filiation sémantique qui permet d'enraciner la tradition de la « proposition en soi » à partir de Bolzano dans les anticipations «

logiques » que représentent les premiers efforts de certains philosophes de l'antiquité grecque pour penser les conditions de l'unité de la composition d'un sens. Pour cela il fallait remonter, au-delà de ceux que Bolzano lui-même cite comme ses propres sources, jusqu'au Sophiste de Platon. De quelle façon Platon s'est-il posé la question de l'unité sémantique de l'énoncé, et quelle réponse il a apportée à cette question ? Tels sont les points sur lesquels la démonstration cruciale de l'existence du discours faux dans le Sophiste apporte la lumière, en révélant le nerf verbal de l'articulation des parties d'énoncé en une « liaison » douée de sens, qu'elle soit vraie ou fausse. L'examen de la signification des phrases fausses découvre par là-même le rôle d'opérateur que joue la négation sans la fonction assertive de laquelle l'unité des complexes de parties ne saurait être mise à jour. La négation s'offre ici pour expliquer une sorte de mystère à la fois syntaxique et sémantique qu'Aristote devra à son tour considérer. Toutefois, ce sera plutôt à renoncer à le percer qu'Aristote invitera en proposant d'axer la solution sur l'unité de la chose signifiée par une interprétation ontologique de la référence. La conséquence de ce nouveau traitement du problème est l'obscurcissement du motif originaire des « liaisons premières » chez Platon, et son recouvrement par le thème prédicationniste de l'énoncé de l'être. Ce qui s'observe dès lors est un véritable glissement de l'intérêt logique de ce qui constitue le socle de l'inférence à l'étude formelle de ses lois."

34. ——. 1991. La grammaire philosophique chez Platon. Paris: Presses Universitaires de France.

"Axé sur la confrontation de la méthode dite de nos jours « analytique » avec l'histoire de la philosophie, ce travail donne une large place à une lecture qui a été menée, il y a une trentaine d'années outre-manche,

sur un grand dialogue de Platon : le Sophiste, par un philosophe à la fois connaisseur de la pensée grecque ancienne et logicien professionnel. Il s'agit d'une lecture « logique » originale entr'autres d'une partie du Sophiste consacrée aux genres dits « suprêmes » et à leur mélange ainsi qu'à la définition du logos(1). L'intérêt de ces passages est parfois

discuté parce que à cet endroit du dialogue il semblerait qu'il y ait plutôt une pause qu'un développement vraiment central. L'auteur de cette lecture est Gilbert Ryle(2), philosophe logicien d'Oxford" (p. 6)

(...)

"En plus d'articles spécialisés dans ce domaine, dont certains seront mentionnés dans ce travail, il est pourtant l'auteur d'un livre : *Plato's Progress* (1967) et d'une contribution importante sur Platon dans la fameuse *Encyclopedia of Philosophy* éditée par Paul Edwards (1967)." (p.6)

(...)

"En dehors du plaisir que j'ai personnellement ressenti à lire le philosophe Ryle, dont le style est à la mesure d'une pensée frondeuse et volontiers démarquée, j'ai trouvé un double intérêt à son interprétation des dialogues de Platon, en particulier les dialogues qu'il appelle « logiques » tels le *Parménide* ou le *Sophiste*. D'abord, Ryle a vraiment cherché à dégager chez Platon ce qu'il vaudrait mieux appeler une « sémantique catégoriale » pour des raisons que j'explique plus bas, qu'une « philosophie du langage », et une « sémantique » qui, bien qu'articulée à la doctrine des Idées, nous parle à nous, aujourd'hui. Cependant, il ne s'est pas contenté de déterrer une approche séduisante pour le contemporain. Sa lecture engage un choix méthodologique. C'est ce choix qui m'a paru, non pas le plus plausible, mais le plus important en raison des conséquences qui en résultent pour l'exercice de la philosophie et sa conception." (pp. 8-9)

(1) Il s'agit des passages 251 a - 264 a du *Sophiste* (coll. Budé).

(2) Cf. « *Letters and syllables in Plato* », *Ph. Rev.*, vol. LXIX, 1960. [repris dans G. Ryle, *Collected Papers. Volume I. Critical Essays*, London: Hutchinson 1971, Essay III pp. 57-75.]

35. ——. 1991. "Le travail de la négation: l'interprétation du *Sophiste* par Gilbert Ryle." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 215-246. Napoli: Bibliopolis.

"Tout porte à croire, dans ce qu'on peut appeler le "détour sémantique" du Sophiste consacré de 260 A 5 à 264 B 8 à la définition du logos, que le non-être dont l'Etranger avec Théétète a découvert qu'il était un «genre déterminé parmi les autres genres» (260 B) (1), a décidément une "forme" (eidos) (2) vraiment exceptionnelle. C'est ce que la chasse au genre du sophiste a permis de découvrir non sans mal. Cependant, arrivés à ce point où le non-être se révèle fractionné le long de la série des êtres (ibid.), l'Etranger et Théétète n'ont parcouru que la moitié du chemin." (p. 217)

(...)

"Le Parménide, dialogue donc à la fois auto-critique et marqué par des préoccupations formelles, s'inscrit dans l'histoire des recherches logiques s'il ne l'inaugure pas. D'après Ryle, le Parménide est une discussion d'un problème de logique, comme le sont une partie du Théétète et la majeure partie du Sophiste:

«Non que Platon dise: "détournons-nous de l'Ethique, de la Métaphysique, de l'Epistémologie et de la Physique pour considérer quelques questions qui sont du ressort de la Logique"»

car, dit Ryle, «ces titres n'existaient pas. Cependant les questions et les arguments qu'il énonce dans ce dialogue, nous devrions les ranger dans le même domaine que celui auquel appartiennent par exemple la théorie aristotélicienne des catégories, la séparation kantienne des concepts formels et non-formels, la théorie russellienne des types et les théories de la syntax logique de Wittgenstein et Carnap» (8).

(1) Dans la traduction de Diès adoptée ici sauf mention contraire. Cfr. plus haut dans le dialogue le passage 258 B 10 où le non-être est dit «posséder sa nature propre (τῆ ἑαυτοῦ φύσιν ἔχον), et, dans les lignes qui suivent, la façon dont sa nature d' "autre" permet de comprendre comment son eidos (258 D 6) se distribue sur toute la chaîne des êtres dans leurs relations mutuelles.

"Dans cette communication, je voudrais examiner comment Proclus a interprété cet autre dialogue dans lequel on trouve un exposé scientifique de la théologie, le Sophiste. S'il est loin d'avoir l'importance du Parménide, la doctrine qui y est développée constitue néanmoins, selon les mots mêmes de Proclus, "une préparation (προτέλεια) aux mystères du Parménide.(4)" (p. 51)

(...)

"Ce qui l'intéressait dans le Sophiste, ce n'était pas sa théorie de l'être, son ontologie, mais la doctrine de l'Un qu'on trouve dans la discussion des thèses pluralistes et unitaires (242 c - 245 e). C'est par cette discussion hénologique que le Sophiste a pour lui une signification théologique.

Je me limiterai donc ci-dessous à présenter l'interprétation proclienne de cette seule section du dialogue, sans oublier pour autant que le Sophiste était également important pour la théorie de la dialectique et pour le statut de la négation (question capitale dans la théologie négative).(10) Dans mon exposé, je distinguerai trois parties. D'abord je présenterai l'interprétation que Proclus donne de la section 242 c -245 e, pour autant qu'on puisse la reconstruire en s'appuyant sur des informations dispersées dans son œuvre. (En effet, on n'a pas gardé de commentaire sur le Sophiste, et il est même probable que Proclus n'en a jamais composé). Ensuite, j'examinerai l'apport du Sophiste à l'interprétation du Parménide. Enfin, je relirai le Sophiste à la lumière du Parménide, ce qui nous fera découvrir d'autres doctrines théologiques." (p. 52, note omise)

37. Strycker, Émile de. 1979. "Notes sur les relations entre la problématique du Sophiste de Platon et celle de la Métaphysique d'Aristote." In Études sur la Métaphysique d'Aristote. Actes du VI Symposium aristotelicum, edited by Aubenque, Pierre, 49-67. Paris: Vrin.

"L'objet de la Métaphysique aristotélicienne est la recherche et la construction de la science la première et la plus universelle. Nous voudrions, dans la présente communication, préciser quelques-unes des relations que ce traité entretient avec le Sophiste de Platon. Pourquoi ce seul dialogue, et non tel ou tel autre? D'abord parce qu'il faut se limiter, ensuite parce que les sujets qui y sont débattus s'apparentent d'assez près à certains thèmes centraux de la Métaphysique et que certaines formulations dont Platon s'y sert paraissent avoir directement influencé divers passages d'Aristote. Nous n'avons évidemment pas l'intention de présenter ici une confrontation générale des philosophies spéculatives d'Aristote et de Platon ni de nous demander si l'une est supérieure à l'autre. Notre but est beaucoup plus modeste et s'inspire directement du programme du présent Symposium. Nous voudrions seulement, en partant du Sophiste, contribuer à mieux délimiter, sur quelques points, ce qu'Aristote a voulu réaliser dans sa Métaphysique. Assurément, le plan et la méthode de ce traité sont profondément originaux et il peut sembler que les rencontres avec Platon soient peu nombreuses et d'un intérêt médiocre. Peut-être, néanmoins, notre exposé réussira-t-il à montrer que les rapports sont plus étroits qu'il n'y paraît à première vue. S'ils ne se manifestent pas d'emblée, c'est parce qu'Aristote a si radicalement repensé les problèmes qu'ils prennent chez lui une tout autre figure que chez son maître. C'est moins le cas dans les livres M et N, consacrés à la polémique contre les doctrines de l'Académie, que dans ceux où Aristote poursuit

son propre projet, c'est-à-dire AB T EZHOI. Nous ne ferons mention qu'une seule fois du livre A, dont la problématique et la méthode, du moins dans les chapitres 6-10, sont en un sens plus proches de celles de Platon, mais qui semble avoir été rédigé sans relation littéraire directe avec le groupe des livres centraux.

Les re

38. Sun, Yu-Jung. 2018. "À quoi sert la discussion sur l'opinion fautive dans le Théétète de Platon ?" *Philosorbonne*:61-76.

"L'interprétation défendue ici est la suivante : dans le Théétète, surtout dans le passage sur l'opinion fautive, ainsi que dans le Sophiste, Platon cherche à mettre au jour l'importance d'un savoir d'intermédiaire ou d'une science d'intermédiaire, alors que, sans ce savoir d'intermédiaire, il est impossible d'interroger l'essence du savoir et la nature de la fausseté sans tomber dans l'aporie. Dans le Théétète, Platon montre la conséquence d'une interrogation de la nature du savoir sans prise en compte du rôle des relations dans la connaissance. C'est pourquoi le Théétète ne présente que des arguments qui, en définitive, échouent. Le Sophiste fait suite à ce questionnement du Théétète et apporte une solution à l'aporie partagée par ces deux dialogues, en expliquant ce qui est nécessaire mais absent dans les arguments sur l'opinion fautive du Théétète." (p. 62)

40. Teisserenc, Fulcran. 2007. "Consonnes et voyelles: les fonctions de l'Être et de l'Autre dans le Sophiste de Platon (251a-259e)." *Dialogue: Canadian Philosophical Review* no. 46:231-264.

Résumé : "Le but de cet article est de comprendre les fonctions que dans le Sophiste l'Étranger attribue à la forme de l'Être et à celle de l'Autre. À la différence d'une interprétation de type linguistique, qui vise à déceler dans le texte une distinction entre les emplois du verbe «être», nous mettons en évidence le rôle ontologique assigné aux très grands genres dans

l'entrelacement des formes. Exploitant l'analogie des voyelles, nous montrons que l'Être est un connecteur, qui rend actuelles les participations entre formes, tandis que l'Autre est un séparateur, qui rend actuelles leurs différences. Cette analyse permet d'éclairer les procédés dialectiques décrits dans le dialogue en termes très abstraits et de résoudre le problème controversé de l'auto-prédication sans avoir besoin de recourir à l'auto-participation."

41. ——. 2008. "Platon a-t-il distingué différents emplois du verbe « être » ? : note sur un passage controversé du Sophiste 255c-d." *Philosophie Antiqua. Problèmes, Renaissance, Usages* no. 8:153-188.

Résumé : "Contrairement à ce que présupposent certaines lectures contemporaines du Sophiste, l'Étranger ne cherche pas à conférer au verbe « être » des sens différents selon le type d'énoncé dans lequel il figure, qu'il s'agisse d'un énoncé d'identité, prédicatif, ou encore existentiel. L'analyse précise d'un passage fréquemment sollicité à cet effet (255c-d), analyse qui tient compte également de l'ensemble de la partie centrale du dialogue, fait apparaître que l'Étranger n'a pas un besoin crucial d'une telle distinction et qu'elle n'est pas non plus implicitement présente dans ses autres arguments. Quant au texte litigieux de 255c-d, il se lit bien mieux comme opérant une séparation quasi catégorielle entre termes absolus et termes relatifs. Cette dernière distinction, attestée par l'Ancienne Académie comme authentiquement platonicienne, se trouve enrichir le tableau des relations entre genres que l'Étranger esquisse dans son exploration partielle de la *συμπλοκη των ειδων*."

42. ——. 2008. "Puissance, activité et passivité dans le Sophiste." *Philosophie* no. 96:25-45.

"Quand l'Étranger d'Élée passe en revue dans le Sophiste les diverses théories de l'être que la philosophie de son temps a pu produire, la gigantomachie qui met aux prises les Fils de la Terre et les Amis des Idées retient particulièrement son attention. Dans ce combat, les premiers accordent spontanément le monopole de l'être aux réalités corporelles (et

accessoirement tangibles) tandis que les seconds n'admettent pour véritables οὐσία que les réalités intelligibles et incorporelles. Entre « matérialistes » et « idéalistes », l'Étranger recherche une sorte de dénominateur commun qui puisse les mettre d'accord. Il propose alors de caractériser l'être par la puissance (247 d-e)." (p. 25)

(...)

"Nous nous proposons de reprendre ces deux questions : après avoir rappelé les textes concernés, nous mettrons en lumière certains aspects de l'argument développé en 248 c-e qui laissent à penser que l'Étranger engage délibérément le débat sur une fausse piste, dont le bénéfice attendu est indirect. Piste qu'il abandonne d'ailleurs juste après pour revenir à des considérations plus familières sous la plume de Platon.

Quant à l'importance et la signification du « critère » de la puissance, elles dépendent en grande partie du mode et de la mesure selon lesquels il est utilisé dans la suite du dialogue. S'il se trouve en effet, comme l'a relevé F. Fronterotta, [*] sollicité dans les analyses centrales sur les très grands genres, c'est toutefois, verrons-nous, moyennant des aménagements conceptuels considérables qui confèrent à l'Être comme genre voyelle un rôle charnière de premier plan que ne pouvait laisser entrevoir le seul passage de 247 e." (p. 27)

43. ———. 2012. *Le Sophiste de Platon*. Paris: Presses universitaires de France.

"Le présent travail est un commentaire suivi du Sophiste. J'ai profité pour sa rédaction de certains de mes travaux antérieurs qui portaient déjà sur ce Dialogue, mais n'en abordaient que des parties ou des aspects singuliers. Ce livre s'en distingue par le souci de restituer au parcours dans lequel l'Étranger entraîne le jeune Théétète toute sa complexité et sa cohérence. La tradition du commentaire est en France peu pratiquée, du moins dans les études platoniciennes, alors qu'elle est

florissante outre-Manche. Nos spécialistes ont préféré pour la plupart fournir des Dialogues des traductions amples et informées, nanties de substantielles préfaces, ou bien se consacrer à éclairer tel point du texte, tel concept ou tel élément de doctrine. Mais l'analyse pas à pas du texte, de son argumentation, et de ses silences comme de ses équivoques, est un exercice qui a pratiquement disparu du paysage académique français.(1) Je souhaite proposer une lecture attentive d'une œuvre pourtant déjà surchargée d'interprétations, mais qui pour la plupart ne portent que sur certains passages, toujours les mêmes. On sait pourtant qu'avec un auteur aussi intelligemment retors que Platon, il n'est possible d'offrir quelque clarté supplémentaire sur un texte si saturé et raturé qu'en le mettant en mouvement, ce qui veut dire : le situer dans une progression qui n'est pas nécessairement progrès, le rapprocher d'autres textes dont les perspectives peuvent être différentes tout en étant consonantes, le faire entendre enfin dans ses variations de ton et de visée." (p. 7)

(1) Exception faite du remarquable ouvrage de Sylvain Delcomminette consacré au Philèbe (Le Philèbe de Platon. Introduction à l'agathologie platonicienne, Leiden/Boston, Brill, 2006) qui, à lui tout seul, en a renouvelé le genre.

45. Vanohutte, M. 1948. "Note sur la communauté des genres dans le « Sophiste »." Revue philosophique de Louvain no. 46:177-187.

Sommaire : "Le passage du Sophiste (253d5-253e2), où l'on a cru que Platon devait décrire soit les deux opérations de la dialectique, συναγωγή et διαίρεσις, soit la seule συναγωγή, soit toutes autres relations de concepts, ne peut nullement être interprété dans ce sens. Il semble, dans le cadre même du dialogue, qu'il s'agisse plutôt de quatre conceptions différentes de la communauté des genres, qui résument succinctement les positions historiques adoptées par Platon lui-même, les Pluralistes, les Amis des Formes et Parménide."

46. Vasiliu, Anca. 2001. "Dire l'image ou la parole visible chez Platon (sur le Sophiste, 216a-241e)." *Dionysius* no. 19:75-111.

"Le Sophiste introduit dans le discours philosophique un riche vocabulaire qui désigne des copies et des ressemblances de toutes sortes, des simulacres, des apparitions et des phantasmes qui ouvrent une brèche entre être et non-être, un écart à travers lequel s'insinue dans le discours de l'Étranger la multiplicité d'expressions et de définitions possibles de l'image - alors que le philosophe (mais est-ce bien le point de vue de Platon ?) ne visait pas le rôle de l'image dans la connaissance, mais la distinction tranchée entre le vrai et le faux, à travers la complémentarité des définitions de l'être et du non-être." (p. 75)

(...)

"L'analyse que nous proposons part du déploiement lexical à travers lequel l'Étranger tente de nommer et donc de circonscrire par/dans la langue l'image « ontique », instrument favori du sophiste. Mais dès l'abord le rapport entre l'image et la parole s'avère ici conflictuel, et il demeurera d'ailleurs sous le signe d'une impossibilité de la rencontre parfaite, voire sous le signe d'une inadéquation ou d'une inappropriation du discours à l'égard du visible : l'image glisse, fugace et furtive comme des reflets sur l'eau, à peine saisis par la rétine, et le langage n'arrive pas à la contenir, ou bien elle se laisse définir, s'adapte même à la définition (tantôt ceci, tantôt cela), et lui échappe aussitôt que l'on croit pouvoir arrêter la « chasse ». De fait, l'image ne peut se dire que par un dédoublement à l'intérieur même de la langue, dédoublement qui reprend, calque la nature même de l'image, sa nature double, sa réflexivité. Le moyen le plus adéquat de l'exprimer serait peut-être celui de la tautologie ou de la « double négation » - en un mot, l'astuce, la mécanique d'une sorte de miroir placé dans un interstice choisi de la langue, une brèche réfléchissante opérée dans son intimité. D'où le recours ardu et néanmoins révélateur au non-être, et par-delà le non-être, au mouvement et au temps, notions étrangères de prime abord à l'image, impropres en apparence à en définir la nature." (pp. 2-3)

47. ———. 2008. *Dire et voir. La parole visible du Sophiste*. Paris: Vrin.

"Au lecteur inquiet de savoir à l'avance ce qu'il aurait à gagner en parcourant ces pages, nous lui livrons un raccourci : ce livre cherche dans la lecture d'un texte particulier de la philosophie grecque classique réponse à l'étonnement suscité par ce manque de précision apparente de la part de l'expérience la plus commune et la plus souvent évoquée de toutes les expériences diurnes. Il s'adresse, par conséquent, à ceux qui voudraient apprendre à regarder le visible à la manière dont les Anciens en parlent, c'est-à-dire dans la patience d'une vision qui traverse la parole et s'enrichit de l'épaisseur des mots. Mais, si l'objet d'étude de ce travail est un texte historiquement déterminé, le Sophiste de Platon en l'occurrence, notons tout de suite que le regard au sujet duquel est formulée la question de départ, est, lui, un acte indéterminé historiquement. On pourrait définir ce regard, simplement, comme l'acte de recevoir de manière réfléchie le visible en tant que visible. Précisons donc, d'emblée, que cette définition basique du regard est notre définition, tout autant que la lecture du texte platonicien est notre lecture, sans autre but que de répondre à la question du regard et à la nécessité de définir le statut du visible pour la pensée." 50. Villela-Petit, Maria. 1991. "La question de l'image artistique dans le Sophiste." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 55-90. Napoli: Bibliopolis.

"Si, avec Stanley Rosen, nous admettons que dans le Sophiste Platon met en scène «le drame de l'original et de l'image»(1), nous devons aussitôt constater qu'il y fait jouer à l'image artistique un rôle clef. De quelle expérience du monde grec et

de son art un tel "rôle" porte-t-il la trace? Comment se fait-il, en effet, que Platon choisisse tantôt l'art du peintre, tantôt l'art du sculpteur (et nous verrons que cette différence n'est pas insignifiante) comme l'analogon le mieux à même de faire saisir non seulement le sophiste et son activité mais aussi la distinction entre le sophiste et le philosophe ?

Pour déployer ce genre de questionnement nous sommes certes redevables à la tradition déjà longue constituée par ceux qui, frappés par l'abondance d'allusions à l'art dans les dialogues, ont essayé d'éclairer, à partir d'une confrontation entre le corpus et les autres documents disponibles, le rapport de Platon à l'art, ou plutôt aux arts, en particulier à la peinture et à la sculpture." (p. 55)

51. Wolff, Francis. 1991. "Le chasseur chassé. Les définitions du sophiste." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 19-52. Napoli: Bibliopolis.

"On se propose d'analyser ici la structure et l'objet des "définitions" initiales du Sophiste dans le dialogue homonyme (222 A-232 a). Quelle est leur fonction dans l'économie du dialogue, voire dans celle de la trilogie inachevée (Sophiste, Politique, Philosophe) ? Qui définissent-elles et comment ? Sont-elles des définitions et pourquoi ? En revanche les problèmes liés à la méthode de la division (son principe et son but, son rapport avec les autres "méthodes" platoniciennes, sa place dans l'évolution de la dialectique, dans "l'histoire de la logique" etc...) seront largement laissés de côté: ce sont eux qui ont généralement retenu l'attention des rares commentateurs du Sophiste qui se soient arrêtés à ce texte." (p. 19)

(...)

"Nous revoilà face à nos trois genres suprêmes et leurs gardiens: le Sophiste du Non-Etre, c'est-à-dire de l'Autre, le Politique du Même, le Philosophe de l'Etre. Leur compétence universelle leur est aussi mutuellement nécessaire que celle des

trois genres maximes - qui se mêlent à tous les autres - est nécessaire à tout "dire".

Concernant le Politique et le Philosophe, rappelons seulement que le Philosophe est dit explicitement avoir l'Être pour résidence (254 A); et que dans le Politique, mais surtout dans la République, le rôle architectonique du Politique, par rapport à toutes les autres pratiques, consiste dans le fait qu'il est le garant de l'identité du tout par la pureté des parties. Quant au Sophiste, on sait qu'il habite le Non-Être (254 A), et on ne manque pas de nous rappeler (258 B) que c'est à cause de lui qu'on cherche ce Non-Être. Mais d'une manière plus générale, n'est-ce pas la leçon de tout le dialogue de montrer que le Non-Être est possible d'une part, qu'il est nécessaire d'autre part : il est possible comme Autre, genre suprême, il est nécessaire pour que le "contredire", et donc aussi le "dire", soient possibles. De la même façon, de toute compétence, si générale soit-elle, s'origine une pratique sophistique. Derrière tout politique ou tout philosophe, il y a sans doute un sophiste. Car le Sophiste est le genre même qui redouble tous les autres et son être (comme celui du Non-Être) n'est rien d'autre que d'être l'Autre de tous les autres. Qui sait même si l'intention de la trilogie n'était pas de montrer cette nécessité où se trouvent le Politique comme le Philosophe de leur Autre, le Sophiste, pour que chacun d'eux soit ce qu'il est, c'est-à-dire pour que chacun soit, tout court." (pp. 51-52)

52. Zaks, Nicolas. 2014. "Être et non-être dans la République (livre V) et dans le Sophiste " Zetesis - Ζήτησις : Actualités scientifiques en philosophie ancienne et sciences de l'Antiquité no. 4:1-16.

Résumé : "À la fin du livre V de la République, Socrate démontre patiemment à Glaucon, porte-parole désigné des amateurs de spectacles, que seuls les objets de la connaissance sont pleinement, alors que ceux de la doxa participent à l'être et au non-être. Dans le Sophiste, l'Étranger, pour capturer le sophiste, se voit dans l'obligation, contre Parménide, de reconnaître l'être, d'une certaine manière, du non-être, dans la mesure où chaque Forme, étant autre que n'importe quelle Forme, n'est pas cette Forme. Les analyses du Sophiste

viennent-elles bouleverser la conception de l'être établie dans la République ? Après avoir présenté une interprétation du texte difficile et controversé de la République, interprétation dégageant du texte les critères de détermination et d'identité à soi comme caractérisant les objets de la connaissance, on démontre la compatibilité de ces enseignements avec les analyses ontologiques menées dans le Sophiste : la participation à l'Autre et au non-être ne nuit pas à la pleine détermination d'une Forme, mais au contraire y contribue, et elle ne trouble pas l'identité à soi de cette Forme, car elle implique une altérité non pas par rapport à soi-même mais par rapport aux autres."

53. ——. 2016. "À quel logos correspond la συμπλοκῆ τῶν εἰδῶν du Sophiste ?" *Revue de Philosophie Ancienne* no. 34:37-59.

Résumé : "Cet article est consacré au problème du rapport entre l'entrelacement des genres (συμπλοκῆ τῶν εἰδῶν) et le logos dans le Sophiste. Après avoir brièvement présenté le problème, je discute, dans la première partie, différentes solutions proposées par les commentateurs. Je cherche à montrer qu'aucune de ces solutions n'est pleinement satisfaisante.

Dans la deuxième partie, je propose une nouvelle solution au problème de la συμπλοκῆ τῶν εἰδῶν fondée sur une distinction entre deux types de logos, le logos dialectique et le logos doxique. Dans la troisième partie, je cherche à justifier textuellement cette solution en recourant à la fois au texte du Sophiste lui-même et à la dernière partie du Théétète. Dans ma conclusion, je suggère que la distinction entre logos dialectique et logos doxique correspond à une différence qui traverse toute l'œuvre de Platon, à savoir la différence entre connaissance et opinion."

54. ——. 2017. "Science de l'entrelacement des formes, science suprême, science des hommes libres : la dialectique dans le Sophiste 253b-254b." *Elenchos. Rivista di Studi sul Pensiero Antico* no. 38:61-81.

Abstract: "Despite intensive exegetical work, Plato's description of dialectic in the Sophist still raises many questions. Through a close reading of this passage that contextualizes it in the general organisation of the Sophist, this paper provides answers to these questions. After presenting the difficult text, I contend that the "vowel-kinds" are necessary (but not individually sufficient) conditions for the blending of kinds. Then, I interpret the "cause of divisions" mentioned by the Stranger as the kinds responsible of the dichotomous division in the first half of the dialogue. In the next part, I show that 235d5-e2 does not describe a procedure of "meta-division" as some commentators have it, but that it describes the method of division itself. Finally, I connect the difficulty and the obscurity of the passage to the fact that dialectic is the supreme science and I explain why dialectic is the science of free men."

Platon: Sophistes. Studien in Deutsch

Bibliographie

1. Abbate, Michele. 2021. "Der Sophist als mimêtês tôn ontôn (Sph. 235a1 f.). Ontologische Implikationen." In *Platonic Mimesis Revisited*, edited by Julia Pfefferkorn and Spinelli, Antonino, 211-224. Sankt Augustin: Academia Verlag.
2. Alván León, Alexandra V. 2021. "Wolf im Hundepelz: Mimesis als Täuschung in der Kunst des Sophisten." In *Platonic Mimesis Revisited*, edited by Julia Pfefferkorn and Spinelli, Antonino, 225-248. Sankt Augustin: Academia Verlag.
3. Apelt, Otto. 1895. "Platons Sophistes in geschichtlicher Belenchtung." *Rheinisches Museum für Philologie* no. 50:394-452.

"Unsere Abhandlung verweilte etwas lange bei trockenen logischen Fragen. Aber vielleicht trägt sie doch etwas bei zu der Erkenntnis, wie innig diese logischen Quisquilien - als welche sie manchen erscheinen dürften - mit den höchsten Problemen des Denkens zusammenhängen, wie wichtig und entscheidend also für den ganzen Verlauf der Geschichte der Philosophie sie sind.

Aristoteles lässt sich nicht ungestraft umgehen: die Gesetze des Reflexionsvermögens haften unserer Erkenntnis als unbequem mitgaben an und lassen sich durch keine intellektuelle Anschauung oder vermeintliche höhere Logik bei Seite schieben. Die Rückkehr von aristotelischer zu platonischer Abstraktionsweise war ein Anachronismus. Wir halten fest an der selbständigen Geisteswelt Platons in Gestalt

des Kantischen transzendentalen Idealismus. Darin sah Platon viel weiter als Aristoteles. Dafür sah dieser weit schärfer in der Nähe. Seinen Belehrungen in Sachen der Logik müssen wir treu bleiben, wenn wir die Grundlagen gesunden Denkens nicht aufgeben wollen." (s. 452)

4. Bechtle, Gerald. 2002. "Dihairesis, Definition, Analysis, Synthesis: Betrachtungen zu Jamblichs Skopos-Lehre und zur Interpretation des platonischen Sophistes (253d1 - e5)." Wiener Studien: Zeitschrift für Klassische Philologie und Patristik no. 115:175-218.

"Es mag manchem gewagt erscheinen, einen Aufsatz zu Jamblich und seinem Verhältnis zu dem platonischen Dialog Sophistes verfassen zu wollen. Diese Zweifel sind zunächst deshalb berechtigt, weil uns die Spätantike insgesamt nur sehr spärliche und indirekte Zeugnisse der Interpretation des platonischen Sophistes hinterlassen hat. Die Bedeutung dieses Dialogs scheint somit - vor allem von der Überlieferungslage her gesehen - hinter der solch zentraler Dialoge wie Parmenides, Timaeus oder auch Philebus zu verblasen, zu welchen wir ja direkte und wesentlich reichhaltigere Zeugnisse und oft sogar noch ganze Kommentare besitzen." (s. 175)

(...)

"Damit sind zwei der weiteren, über die Teilrekonstruktion der Philosophie Jamblichs hinausreichenden Ziele dieses Beitrags bereits umrissen. Zum einen geht es um die Ergänzung eines historischen Bausteins im notwendigerweise stark lückenhaften Gebäude der Geschichte der Sophistes Interpretation, zum anderen um einen eher systematischen Baustein im Bereich der weniger erforschten spätplatonischen Methodologie/Logik und Methodenphilosophie. Die meisten bisherigen Arbeiten zum Einfluß Sophistes in der spätantiken Philosophie verfolgten andere Schwerpunkte, wenn auch klar sein muß, daß die angesprochenen Probleme immer teilweise miteinander verknüpft sind. Dies gilt umso mehr, als man nie die Tatsache aus den Augen verlieren darf, daß gerade für die späten Plato Interpreten immer der gesamte Dialog - also sogar mit den heute oft philosophisch irrelevant erscheinenden

Teilen - relevant war und vom σκοπός erfaßt wurde bzw. auf ihn bezogen werden konnte." (ss. 176-177)

5. Bordt, Michael. 1991. "Der Seinsbegriff in Platons Sophistes: eine Untersuchung zu 242b6-249d5." Theologie und Philosophie no. 66:493-529.

Abstract: "The article provides, first, a survey of the scholarly debate about the meaning of 'to be' in Plato's Sophist, starting from Cornford, centering on Michael Frede and Owen, and leading up to the present day discussion. Then, Plato's criticism of dualism, monism, idealism, materialism (Soph. 242b6-249d5) is given detailed analysis. The scope of this analysis is to substantiate the hypothesis that Plato distinguishes two types of propositions in Sophist, i.e., those of predication and a particular kind of identity. Each type uses 'is' differently. However, even when criticizing traditional ontologies, Plato does not use 'is' to mean 'exists'."

8. Buchheim, Thomas. 2013. "Megista genê und Weisen der Gemeinschaft in Platons Sophistes 249d-259e." Zeitschrift für Philosophische Forschung no. 67:538-565.

"Noch immer gibt es in der Forschung keine allgemein akzeptierte und hinreichend präzise Auffassung darüber, was Platon mit dem Lehrstück über, größte Gattungen' (μέγιστα γένη) im Herzen des Dialogs Sophistes genau genommen hat ausrichten wollen." (s. 538)

(...)

"Meine Argumentation stützt sich vor allem auf zwei bisher wenig in Erwägung gezogene Punkte des Textes: Zum einen wurde kaum beachtet, was Platon selbst als über Parmenides hinausgehenden Gewinn an logischer Befähigung nennt, der sich ergibt, wenn man die betreffenden Gattungen

unterscheidet (259c – d). Zum anderen ist der innere Zusammenhang der Lehre von den fünf Gattungen mit dem wie eine Abschweifung wirkenden Passus über Philosophie als dialektische Wissenschaft in der Mitte des Abschnitts (253b – 254b) nicht genügend erkannt und für die Klärung des Gedankengangs herangezogen worden. (s. 539)

9. Colloud-Streit, Marlis. 2004. "Warum gibt es keinen Mythos im Sophistes?" Plato Journal no. 4:1-17.

"Der vorliegende Beitrag möchte zeigen, dass das Fehlen respektive das Vorhandensein eines Mythos mit Platons Verständnis von Dialektik zu tun hat. In einem ersten Schritt wird versucht, die Bedeutung von Dialektik im Politikos respektive im Sophistes zu beleuchten. Dann werden in einem zweiten Schritt die Figuren Theaitetos und Jung-Sokrates vorgestellt, und es wird eine Antwort auf die Frage gewagt, weshalb der Eleat nur einem von beiden einen Mythos erzählt.

Zweck dieses Artikels ist, eine Antwort vorzuschlagen, welche die Anwesenheit des Mythos im Politikos beziehungsweise dessen Abwesenheit im Sophistes erklärt. Die folgenden Überlegungen sind bei weitem nicht abgeschlossen und der Artikel ist als Anregung für eine vertiefte Forschung gedacht."

11. Dürr, Karl. 1945. "Moderne Darstellung der platonischen Logik. Ein Beitrag zur Erklärung des Dialoges Sophistes." Museum Helveticum no. 2:166-194.

"§ 1. Der platonische Dialog "Sophistes" erscheint uns heute in manchen seiner Teile merkwürdig spröde, während andere Stellen des Werkes durch eine Fülle von Sätzen, die zu tieferer Forschung anregen, ausgezeichnet sind.

§ 2. Friedrich Schleiermacher war wohl der erste, der darauffaufmerksam machte, daß innerhalb des Dialoges zwei wesentlich verschiedene Teile, ein äußerer und ein innerer, zu unterscheiden sind (vgl. SchP Bd. II,2, S. 13lff.). An dieser

Grundauffassung ist späterhin von denen, welche eine Analyse des Dialoges gegeben haben, stets festgehalten worden; und gerne bezeichnete man von nun an den äußeren Teil als die Schale, den inneren als den Kern des Ganzen. Doch kommt in dieser Bezeichnungsweise eine Wertung zum Ausdruck, die Schleiermacher selbst nicht gebilligt hätte; denn er hebt ausdrücklich hervor, daß in dem Dialog nichts ist, was als bloße Schale wegzuwerfen wäre (ibid. S. 134, Z. 20-21)."

12. Ebert, Theodor. 1998. "Wer sind die Ideenfreunde in Platons Sophistes?" In *Amicus Plato magis amica veritas*. Festschrift Wolfgang Wieland zum 65. Geburtstag, edited by Enskat, Reiner, 82-100. Berlin: Walter de Gruyter.

"In der Diskussion philosophischer Lehren, die Platon im Sophistes durch den Mund des Besuchers aus Elea im Gespräch mit dem jungen Theaitetos vortragen läßt, kommt es an einer Stelle (246 a ff.) zur Schilderung eines „Gigantenkampfes“ zwischen zwei entgegengesetzten und sich bekämpfenden Lagern. Ihr Streit geht um die ονοία, um das Sein, genauer um die Frage, wem eigentlich überhaupt der Charakter des Seins zukommt. Auf der einen Seite stehen, etwas vereinfacht gesagt, die „Materialisten“, von denen es heißt, daß sie alles aus dem Himmel und dem Unsichtbaren auf die Erde herunterziehen (246 a 8 –9), daß sie, wie der eleatische Besucher sagt, mit ihren Händen Steine und Bäume umklammern. Nach ihnen gilt als seiend nur das, was körperlich ist (246 b 1 -2). Ihnen gegenüber stehen die Ideenfreunde (οί των ειδών φίλοι 248 a 4 –5), die sich, wie es heißt, „von oben herab aus dem Unsichtbaren“ verteidigen (vgl. 246 b 7). Sie lassen als das wahre Sein nur die „denkbaren und unkörperlichen Eide“ zu (νοητά ἄττα και ασώματα είδη 246 b 7 –8). Beide Positionen werden von dem Besucher aus Elea einer kritischen Prüfung unterzogen." (s. 82)

13. Eckl, Andreas. 2011. *Sprache und Logik bei Platon: Zweiter Teil: Ideenlogik und Logik der grammatischen Form im Sophistes*. Würzburg: Königshausen & Neumann.

"Mit dem Dialog „Sophistes“ liegt nicht nur die späteste Fassung der Platonischen Ideenlehre vor, sondern auch die reflektierteste. Am Beispiel der Bestimmung des Begriffs des „Sophisten“ lässt Platon darin seine Gesprächspartner verschiedene Varianten von Begriffs- und Ideentheorien durchgehen und entwickelt kritisch-selbstkritisch eine Theorie der Grundlegung des Logos allen Seins. Die Argumentation zeichnet sich dadurch aus, dass sie überall auf das Faktum und die Notwendigkeit des sprachlich-logischen Ausdrucks der Begriffe oder Ideen rekurriert. Die Ideenlogik wird insofern in den Zusammenhang einer Theorie eingebettet, die Sprache und Logik umfasst, in Beziehung zueinander setzt, und die Platon von der sprachphilosophischen Seite her schon im Dialog „Kratylos“ behandelt hat. Die Begründung des Logos im Dialog „Sophistes“ kann deshalb aber doch nicht sprachanalytisch, sondern muss logisch-begrifflich erfolgen: in einer reflektierten, selbstbegründenden Theorie der Synthesis der Logoi. Diese Theorie führt am Ende zu einem „Geflecht“ „wichtigster Begriffe“, die alle den Status von Bedingungen der Möglichkeit des Logos beanspruchen. In Form von Gegenbegriffen treten sie auseinander und bestimmen so jeweils verschiedene Dimensionen ihrer möglichen Verbindung oder wechselseitigen Durchdringung. Für die systematische Theorie der Gegenwart ist dieses Modell von besonderem Interesse, weil es seine eigene dynamische Veränderung rechtfertigt. Das Buch setzt den vorliegenden ersten Band „Sprache und Logik bei Platon I“ fort und schließt die Arbeit am Zusammenhang von „Sprache und Logik bei Platon“ ab."

"Ich habe Verständnis dafür, daß mancher auf meine 'Sophistes'-Interpretation zunächst mit Abwehr reagiert. Wir bemühen uns nicht allein aus guten Gründen darum, das Eine und Wichtige zu fassen, das Platon uns zu sagen hat, sondern in der Verehrung für den großen Mann lassen wir es gelten, daß er seine Lehre in den langen Jahren seines Lebens mehr und mehr 'entfaltet' hat, nicht dagegen, daß er ein eigenes Lehrstück eines Tages zugunsten einer besseren Einsicht fallen gelassen hat. Gerade dies aber zeigt, wie mir scheint, der 'Sophistes' demjenigen, der sich auf eine subtil unterscheidende Interpretation einzulassen

gewillt ist, die alle Teile des Dialogs miteinander in Beziehung setzt. Sieht man Platon so, dann wird er kein unfehlbarer Kirchenvater mehr sein, sondern ein menschlicher' Denker, der im Dialog mit anderen um seine Probleme gerungen hat wie wir und dabei nicht immer nur geradeaus gegangen ist. Sieht man ihn so, dann wird man zwar nicht den 'Entwicklungsgedanken' und das bloß historische Interesse für das 'Werden der Persönlichkeit' wieder ausgraben, man wird aber auf historische Differenzierungen nicht mehr gar zu allergisch reagieren, vielmehr historische Forschung und systematisches Denken zu vereinigen trachten, wie es doch auch sonst das Geschäft des Philosophen ist.

Meine prinzipielle These zur Platonforschung lautet also: Wir sollten nicht allein den Entwicklungsgedanken, sondern auch das - diesem Gedanken verwandte - Entfaltungsdogma verabschieden." (S. 244)

26. Koch, Anton Friedrich. 2010. "Was meint ihr eigentlich, wenn ihr 'seiend' sagt? Überlegungen zu Platons Sophistes." Philosophical Inquiry no. 32:69-83.

"Die Kunst des Sophisten ist eine hervorbringende, menschliche, bildnerische, trugbildnerische, nachahmende, meinnungsnachahmende, ironisch sich verstellende und in kurzen Reden sich artikulierende Kunst.

Unter den vielen philosophischen Errungenschaften, die dieser Dihairesis zugrunde liegen, seien zwei zum Schluß noch einmal eigens hervorgehoben. (1°) Piaton hat gegen den eleatischen Monismus ein Verfahren der Ausdifferenzierung des Seienden entwickelt, das theoretisch anspruchsvoller ist als die entsprechende anti-eleatische These seines Schülers Aristoteles, daß das Seiende keine Gattung sei, sondern auf unhintergebar viele Weisen ausgesagt werde. (2°) Piaton hat das Sein, das mit dem Logos ausgesagt bzw. beansprucht wird, als ein propositional gegliedertes Der-Fall-Sein erkannt und ipso facto gegen das Sein dessen profiliert, was der Noesis zugänglich ist, also das Sein der Ideen. Auf diesem Weg ist Aristoteles." (S. 83)

"Im Folgenden will ich die Aufmerksamkeit auf ein Detailproblem aus dem Kosmos des platonischen Spätdialoges Sophistes lenken, auf die Frage, welche genuin philosophische Bedeutung der Gruppe der ersten fünf Dihairesen zugeordnet werden muß, die das Wesen des Sophisten erfolglos zu bestimmen versuchen.

Trotz der thematischen Eingrenzung scheint es nötig zu sein, vorweg auf die Fülle der Interpretationsprobleme des Gesamtdialoges, die typologisch sehr verschiedenartig sind, wenigstens aufmerksam zu machen, ganz einfach, weil all diese Probleme - gut platonisch - so ineinander verschlungen sind,

daß die Erörterung eines einzigen von ihnen sich unvermeidlich im Kontext aller bewegt." (S. 329)

29. ———. 1997. Platons Sophistes: Theorie des Logos und Dialektik. Würzburg: Königshausen & Neumann.

"Die vorliegende Studie ist dem Vorhaben verpflichtet, den Sophistes systematisch und argumentativ zu rekonstruieren. Dies soll durch einen fortlaufenden philosophischen Kommentar erreicht werden. Damit das Untemehmen auf solidem Boden steht, muß der Gang des Dialogs Schritt für Schritt nachvollzogen werden. Um die Gefahr zu vermeiden, daß die historische Distanz zum Text unreflektiert übersprungen und das Auszulegende einer sprachlichen und sachlichen Überformung unterworfen wird, werden zentrale Termini sowohl im griechischen Original als auch in deutscher Übersetzung wiedergegeben. Der Leser soll die Möglichkeit des Vergleichs und der Kontrolle haben. Auch wenn es unvermeidlich ist, daß die Eleganz der Darstellung unter den Textreferaten leiden wird, so erscheint es doch mit Blick auf die außerordentlichen Schwierigkeiten des Sophistes geboten, diese Vorsicht walten zu lassen. Die ausführliche Würdigung der Forschung findet in einem abgetrennten Literaturanhang statt, um von der ruhigen Entfaltung des epochemachenden platonischen Gedankens nicht ständig durch Hinweise auf die Kontroversen in der Forschung ablenken zu müssen. Dort werden auch die Hauptthesen zu jedem Abschnitt in bündiger Form wiederholt.

Zu welchem Ergebnis eine Rekonstruktion führt, hängt trivialerweise von dem philosophischen Standpunkt des Interpreten ab, der sie durchführt. Die Vielfalt der Deutungen, die der Sophistes erfahren hat, liefert den besten Beweis dafür, bis zu welchem Grad das jeweilige Verständnis von den mitgebrachten systematischen Positionen präformiert ist. Deshalb werden wir uns bemühen, den Verstehenshorizont, der hinter der vorliegenden Interpretation steht, in seinen Grundzügen jeweils zu explizieren und dem Leser verfügbar zu machen. Dadurch läßt sich zwar das Risiko einer Fehlinterpretation nicht verringern, aber immerhin die Wahrscheinlichkeit erhöhen, daß unausgesprochen wirksame

Interpretationsvoraussetzungen aus der unmittelbaren Auslegung ausgeschlossen bleiben." (S. 18)

"Um im Sophistes kein Flickwerk sehen zu müssen, sollte jedoch die Einheit hinter Inhalt und Struktur des Dialogs gesucht werden.

Zunächst möchte ich anhand einer Analyse beider Methoden zeigen, daß sie für Platon erst zusammengenommen hinreichend für die Untersuchung der Beziehungen zwischen den Gattungen (Ideen) und damit adäquates Werkzeug des Dialektikers sind (Kapitel I und II dieses Aufsatzes).

Im Anschluß daran werde ich die These entwickeln, daß in der Aufspaltung des Sophistes in Mittelteil und Eckteile - mit jeweils unterschiedlicher Problemstellung und Untersuchungsweise - eine Differenzierung der Dialektik gegenüber derjenigen des Parmenides strukturell abgebildet wird. Die Methode war dort noch einheitlich, führte jedoch bei der Untersuchung der Ideen in Aporien (Kapitel III). Die sehr interessante nicht-aporetische Lesart Meinwald[*] erweist sich nach kritischer Diskussion als nicht haltbar (Kapitel IIIa). Erst im Sophistes löst Platon die Aporien des Parmenides. Die Verknüpfung beider Methoden über den gemein" (S. 237)

Abstract: "Prima facie there is a tension between a principle upheld by the Friends of Forms, 'Whatever is real is omnitemporally stable', and a conclusion into which they are driven, 'Some things are real, and yet they change in becoming

the objects of cognition'. The paper argues that we should stop looking for a faulty premiss in the argument that leads to this conclusion but rather seek a way of reconciling principle

and conclusion. Frege and Russell can help us to see that the principle only disallows intrinsic change and that the conclusion only requires extrinsic change. There is some evidence that Plato himself was very well aware of this option."

"Wir haben es hier mit einer Untersuchung zu tun, die in Platons Werk ganz einzigartig dasteht und die mit Recht auch heute als ein unerläßlicher Bestandteil der Prolegomena zur Logik angesehen werden darf. Kein Wunder also, daß diese Untersuchung gerade in neuerer Zeit, in der sich Probleme der Logik wieder größerer Aufmerksamkeit erfreuen, das Interesse vieler Interpreten gefunden hat, wengleich deren Darstellung den logisch entscheidenden Partien bei Platon meist nur unvollkommen gerecht wurde. Diesem Mangel hoffen wir mit einem neuen Vorschlag zur Interpretation der fraglichen Textstellen abzuhelfen.

Es soll gezeigt werden, daß Platon — allerdings in der Sprache der Ideenlehre — über wahr und falsch im wesentlichen nicht anders denkt, als man es heute tut. (S. 113)

Abstract: "In his reading of the Sophist, Heidegger unfolds Plato's late thought concerning the dialectics of the correctness of statements. This dialectics is described as gathering into one genus and dividing of the same genus, as dialectics of the community of ideas, and as the being-able-to-be-with-one-another of mind and idea. Hence, Plato's solution of the question of truth is dialectical. He looks at the ideas through statements and conforms his mind to the ideas through the same statements. Thus the question arises: If one and the same statement represents both the manifestness of an idea and the conforming of the mind to this idea, how are we able to judge, whether our statement conforms to the idea? Plato answers: If the idea of sameness is present in a judgment, then a thing is said as it is, i.e. it is judged to be the same with itself. This solution is both richer and poorer than the description of truth in the parable of the sun in the Republic: It is poorer, because it leads further away from unconcealedness or the truth of things; it is richer, because it unfolds truth as a relation to the whole truth in the community of ideas, not as a relation to this or that singular idea."

39. Meissner, David. 2015. "Überlegungen zum platonischen Seinsbegriff." Philosophisches Jahrbuch no. 122:3-23.

Abstract: "In Plato's Sophist (247e), the Eleatic Stranger seems to propose to define being by means of the notion of dynamis. Although some recent papers have claimed that his dynamis-proposal should be taken seriously (at least as an explication of

Plato's concept of being, if not as a definition in the strict sense) it is still far from clear what this claim amounts to – especially in the case of the being of the forms.

This paper shows that, regarding forms, a modal and a formal interpretation of the dynamis-proposal is possible. While the latter interpretation is preferable on philosophical and hermeneutical grounds, it seems to conflict with the principle that a form is a being by participating in the form of being. By distinguishing between direct and indirect participation in the form of being, the paper resolves this conflict, concluding that the formal interpretation of the dynamis-proposal can indeed be read as a philosophically attractive holistic explication of Plato's concept of the being of forms."

"Nicht nur die Authentizität, sondern auch die eminente Bedeutung des Dialogs 'Sophistes' für das platonische Denken ist heute nahezu unbestritten(1) , wengleich bisweilen immer noch Stimmen laut werden, die diesem Dialog als Episode(2) im Sinne einer transeunten Verirrung nur eine untergeordnete Rolle zuerkennen, um nicht an den Fundamenten eines sonst harmonischen Platonbildes rühren zu müssen.

Abgesehen davon, daß selbst eine Episode stets ein integratives Moment eines Denkens bilden und somit für dieses Denken - in welcher Hinsicht auch immer - konstitutiv sein dürfte, erlaubt gerade der 'Sophistes', ihn als grundlegendes Werk Platons zu betrachten. Damit verkehren sich die Vorzeichen: Ein als bloße

Episode deklariertes Dialog gewinnt prädominierende Relevanz - eine umwertende Aufwertung, die nach Rechtfertigung verlangt, dies um so mehr, als der Dissens selbst zwischen denen, die sich der Bedeutung dieses Dialogs gewiß sind, nicht größer sein könnte.

Worin seine Bedeutung aber besteht, läßt sich aus einer Betrachtung der immer noch Probleme aufwerfenden platonischen Sprachphilosophie ermitteln. Der 'Sophistes' ist insofern Platons wichtigster Dialog zur Theorie der Sprache, als nach Hinweisen auf die Hypothese im 'Phaedon'(3), nach der Wörterlehre im 'Kratylos' und aporetisch endenden Reflexionen über den Satz im 'Theaetet'(4) der Logos selbst(5) thematisiert wird. Im Folgenden soll diese Thematisierung selbst thematisiert, sollen die spätplatonischen Einsichten zum Logos, zur Sprache in ihrer Differenziertheit, analysiert und zugleich weiterweisende Grenzen dieser Sprachtheorie bedacht werden." 44. ———. 1999. "Der Dialog als sechste wichtigste Gattung in Platons Sophistes." Bochumer Philosophisches Jahrbuch für Antike und Mittelalter no. 4:41-48.

Abstract: "In his late dialogue *The Sophist*, Plato intends to show that the universal contents <motion>, <rest>, <being>, <identity> and <difference> differ from and yet intermingle with each other. Plato develops this theory using the universal content <motion> as an example, whereas the present essay concentrates on <dialogue> as a further universal content linked with all the other contents. It thereby aims to deepen the understanding of Plato's late theory of ideas, arriving at the conclusion that for Plato the possibility of philosophy is due to the possibility of the relational community of the universal contents. Plato, however, does not investigate the possibility of possibility itself - an issue which can indeed be seen as the principle of the very possibility of universal contents and their relation."

45. ———. 2001. "Das Verschiedene als Nicht-Seiendes in Platons *Sophistes*." In *Umbrüche: Historische Wendepunkte der Philosophie von der Antike bis zur Neuzeit*, edited by Kahnert, Klaus and Mojsisch, Burkhard, 1-9. Amsterdam: B. R. Grüner.

Abstract: "Plato's dialogue *The Sophist* highlights the commonality of the most important genera: rest, being, identity, difference and dialogical thinking are necessarily implicated in movement. This essay explores how difference combines as not-being with these other genera.

It concludes that not-being makes possible the commonality of the genera in the first place, that dialogical thinking alone justifies the thought of motive not-being and, finally, that not-being allows of conceiving the idea of being as also not-being, as in motion and as mediated through language. In sum: In Plato's late philosophy, not-being is the most important of the most important genera."

46. Mouroutsou, Georgia. 2010. *Die Metapher der Mischung in den platonischen Dialogen Sophistes und Philebos*. Sank Augustin: Academia Verlag.

Zusammenfassung: "Der in den späteren platonischen Dialogen zentrale Begriff der Mischung wird zunächst in die ganze Übertragung der *Methexis* eingeordnet: von der Ebene der Teilhabe des Wahrnehmbaren an der Idee zu der innerideellen

Teilhabe aufsteigend und von daher zu der Teilhabe der zwei platonischen Prinzipien. Einerseits wird die Beziehung der μέγιστα γένη untereinander, andererseits diejenige zwischen der Grenze und der Unbegrenztheit im Philebos als Mischung bezeichnet (Teil I). Daraufhin wird ihr Wesen als Metapher behandelt und rehabilitiert, nämlich als Transformation eines sinnlichen Bildes in ein philosophisches (Teil II). Zur Leitfrage unserer Ausführung wird: Warum kann die im Rahmen des Dialogs Sophistes eingeführte Mischung der größten Gattungen miteinander als ein besserer Kandidat als derjenige der Teilhabe gerechtfertigt werden? Die Mischung wird als eine wohlbegründete Verwandlungsform der Teilhabe in den ideellen Zusammenhängen der gleichursprünglichen größten Gattungen betrachtet (Teile III–IV). Bei unserer die umstrittene Einheit des Philebos wiederherstellende Interpretation wird aufgezeigt, wie der Philosoph Platon die schönen Phänomene rettet: Die vierfache Einteilung des Ganzen (Phil. 23–27)

wird als Ort der Genese der schönen Erscheinungen interpretiert. Ihnen wendet sich der Philosoph nach dem Aufstieg zum σύμφυτον der zwei platonischen Prinzipien zu, nicht länger sie als “zwischen dem Sein und dem Nicht-Sein herumschweifend” degradierend (Resp. 479d), sondern als “Zeugung” würdigend (Teile V–VII).”

"In einem kürzlich in dieser Zeitschrift erschienenen Aufsatz(1) hat A. Gómez-Lobo es dankenswerter Weise unternommen, die Stenzelsche(2) Deutung dieser Stelle als unhaltbar zu erweisen

und durch eine neue zu ersetzen. Zwar ist Stenzel das Verdienst des Bahnbrechers in dem schwierigen Gelände der spätplatonischen Dialektik nicht abzusprechen, aber nachdem seine Interpretation 60 Jahre lang beherrschend war, ist es an der Zeit, ihre Einseitigkeiten und Fehler zu erkennen und sie durch eine bessere abzulösen. Nach der Interpretation von Gómez-Lobo sind die Dunkelheit und Lückenhaftigkeit des Textes nicht zufällig, sondern von Platon beabsichtigt; er habe Ergebnisse, die er erst später erarbeitet, vorwegnehmen wollen; er verschlüssele, was er wirklich meine(3).

Gegen diese Deutung möchte ich Widerspruch anmelden. Es wäre befremdlich, Platon hier in den Noten eines schlechten Regisseurs zu sehen, der zu Tricks greifen muß; allerdings wird man vielleicht diese Interpretation annehmen müssen, wenn sich keine bessere finden läßt. Die Frage stellt sich so: Ist die seit Stenzel an unserer Stelle festgestellte Dunkelheit nur aus der verschlüsselten Vorwegnahme des folgenden zu erklären?

Ich bin anderer Meinung; Gómez-Lobo hat sich nicht ganzlich vom Einfluß Stenzels freimachen können, in einigen wesentlichen Punkten hat er sich von ihm auf eine falsche Bahn locken lassen, so daß er eine reichlich unwahrscheinliche Lösung versuchen mußte, ohne doch zu voller Klarheit gelangen zu können, wie er selbst zugibt(4). Ich möchte meinen, wenn eine Stelle dunkel ist, soll man nicht diese Dunkelheit für gewollt erklären, sondern sie möglichst aufhellen. Das halte ich für möglich, und ich möchte es hier versuchen, ohne die Schwere der Beweislast zu verkennen, die ich damit übernehme." (S. 241)

Abstract: "Plato, in his dialogue *The Sophist*, tried to disprove the thesis of Parmenides, according to which the contrary of the *eivai* would be the nonexistent *μη εφvai*. Plato maintained instead that *μη εφvai* is not the contrary of *εφvai* but its otherness (*το ετερον*). Plato's argument has seemed impeccable and constructive, and has had notable resonance and a sound approval through the history of the philosophy. Really, the deep structure of Parmenides' nominalized *μη εφvai* was a predicate. Plato replaced the universal notion of «being (*eivai*) with an *εφvai* assumed as a determined «thing. Besides he transformed the negative meaning of *μη* into the arithmetic meaning of less». So that *μη slum* → - *eivai*», and the wholeness of the «things», from which *εφvai* was subtracted, became the wholeness less to be, viz. the. Such an argument is actually a

paralogism, according to Aristotle who says exactly: «it is not the same thing to affirm not to be absolutely and to affirm not to be in a determined sense and about a determined thing (Soph. elench. I67 a 4). Then, Plato simply committed the well known paralogism which consists in changing a statement «a dicto simpliciter ad dictum secundum quid»."

4. Berti, Enrico. 2004. "Elementi di ontologia nel Parmenide e nel Sofista." In Platone e l'ontologia. Il Parmenide e il Sofista, edited by Bianchetti, Matteo and Storace, Erasmo, 15-22. Milano: Albo Versorio.

"È possibile ricavare degli elementi di ontologia da entrambi i dialoghi e credo di aver trovato un passo del Sofista (c. XXXII, 244 b-245 e) in cui, a proposito di tematiche ontologiche, sembrano essere contenuti riferimenti al Parmenide. Mi rendo conto che questa affermazione è molto audace e azzardata." (p. 15)

(...)

"Ebbene, il passo del Sofista che ho preso in considerazione contiene, a mio giudizio, alcuni riferimenti a quelle che tradizionalmente sono chiamate le prime due ipotesi del Parmenide." (p. 15)

(..-)

"In conclusione mi sembra che, in questo passo del Sofista, si trovi una conferma di ciò che è detto nel Parmenide. Ciò significa che il Parmenide non è un dialogo aporetico, come molti affermano, ma è un dialogo costruttivo, sia pure in senso dialettico, cioè come confutazione dell'eleatismo.

Credo che sia aporetica, effettivamente, la prima parte del Parmenide, cioè tutta la discussione sulle idee. Quanto alla seconda parte, non credo che essa sia un mero esercizio dialettico, ma penso che essa contenga un nucleo di ontologia, il quale, tuttavia, non emerge con chiarezza nel Parmenide, ma emerge, invece, nel Sofista, se è vero che il Sofista contiene questo riferimento alle prime due ipotesi del Parmenide." (P. 22)

"Questo volume raccoglie le riflessioni di autorevoli studiosi, che si sono espressi e confrontati sulla questione dell'ontologia in Platone e a partire da Platone, nonché sulla stessa possibilità di parlare di ontologia

in riferimento ad un autore vissuto circa duemila anni prima che tale termine fosse coniato.

La scelta di questi due dialoghi non è stata casuale, ma guidata dalla volontà di approfondire, all'interno della ricchezza di temi e spunti dell'intera produzione platonica, proprio quel che, interpretato forse attraverso la lente deformante della posterità, appare più interessante per comprendere lo spazio e la possibilità in cui situare il dire filosofico in generale e la problematica ontologica in particolare." by Lisi, Francesco Leonardo, Migliori, Maurizio and Monserrat-Molas, Josep, 47-58. Sankt Augustin: Academia Verlag.

"Il nesso fra legge e opinione è posto esplicitamente nella prima parte del Teeteto, che affronta la dottrina protagorea." (p. 47)

(...)

"Il seguito del Teeteto e il Sofista si concentrano sull'opinione nell'anima individuale. Validò però il parallelismo singolo-città, la ricerca sulla doxa dovrebbe servirci anche per la polis e la sua legge. Dato questo particolare punto prospettico, la nostra indagine sull'opinione, tema che nella trilogia è di fatto onnipresente, si concentrerà specificamente sulla dimensione psicologica della doxa, ovvero sulla sua posizione e sul suo ruolo rispetto alla natura dell'anima nel suo complesso. Per capire infine come l'intreccio doxa-legge sia ripreso e rielaborato nelle ultime pagine del Politico, consentendovi di impostare la questione del rapporto e dell'interazione fra la città tutta e le sue componenti, anche singolari." (pp. 48-49)

8. Botter, Barbara. 2016. "Enti inesistenti: phantasmata in Platone." *Archai* no. 18:113-149.

Estratto: "Una delle questioni problematiche attorno alle quali ruota il dialogo Sofista di Platone è la distinzione fra originale e immagine, più precisamente, la distinzione fra originale, immagini vere e immagini false. È per giustificare questa classificazione che il filosofo si impegna nella dimostrazione del non-essere e gioca, sin dalle prime battute del dialogo, con il dualismo realtà-apparenza. Scopo del presente articolo è di intrecciare le nozioni di non-essere e apparenza, tali quali sono definite nel Sofista, per giustificare l'esistenza di enti che sono, pur non essendo reali né veri, i phantasmata, i quali si distinguono da altre forme di immagine per il fatto di essere, per natura, ingannevoli."

"È singolare, ma anche rivelativo, come, tra i non molti passi platonici i quali presentano serie possibilità di riferirsi

allusivamente o polemicamente ad Antistene, il solo, forse, il cui riferimento al Socratico

sia stato accettato pressoché unanimemente da una tradizione storiografica antica(1), e dura a morire, sia un luogo del Sofista platonico, che, invece, alle dottrine e alla persona di Antistene non può in alcun modo fare riferimento." (p. 381)

(...)

"Il passo, celebre, del Sofista, che già in quella sede [*] osservai non potersi riferire ad Antistene, perché il suo contenuto, anziché concordanze, rivela opposizioni e contraddizioni gravissime con le dottrine logiche del Socratico, è 251 B-C" (p. 382)

(...)

"Ma chi sono allora, una volta escluso il Socratico, gli ὄψιμαθεῖς [qualcuno che impara tardi nella vita] di cui parla Platone? A mio parere si tratta di Eutidemo e Dionisodoro, a noi noti dal dialogo che Platone ha intitolato al primo dei due, ove la fisionomia dei due sofisti è delineata con una serie di tratti che il passo del Sofista riecheggia con precisione." (p. 386)

Con il Sofista di Platone nella traduzione di Ermidio Martini.

Presentazione "Problemi e motivi de Il Sofista platonico sono all'origine di innumerevoli ricerche della filosofia contemporanea. Basti pensare, per rammentare il caso più celebre, all'esergo di Essere e tempo di Martin Heidegger. Spesso, però, quest'incontro si è realizzato attraverso una forzata attualizzazione del testo platonico, come provano soprattutto i trattamenti cui esso è stato sottoposto nelle indagini delle scuole filosofiche d'ispirazione analitica. Diversa è l'intenzione del presente commento. Esso non si propone, infatti, di interrogare e sollecitare Il Sofista, per rinchiuderlo nell'orizzonte dei problemi attuali della filosofia. Al contrario, esso vuole rimettersi all'ascolto del testo platonico, per prolungare innanzi tutto le sue stesse domande. In questa lettura, insomma, è Platone a interrogare la nostra attualità, mentre l'esegesi si pone come l'onda di risonanza del testo, ovvero, in termini figurativi, come una sua "icona". Il commento vorrebbe così rendere giustizia all'idea di filosofo che nutre il dialogo platonico, ponendo la sua differenza dal sofista. Per quest'idea, la filosofia è musica, pura voce accordata sull'essere, mero tramite del suo risuonare."

"Quello che qui vorrei mostrare è che (...) Platone costruisce il suo discorso sul difficile crinale della differenza tra una duplice discendenza da Parmenide: da un lato i sofisti, che su Parmenide fondano, sempre nell'interpretazione platonica, la loro negazione del falso basandosi sulla negazione del non essere; dall'altro Platone stesso, che, a sua volta "interpretando", su Parmenide fonda la netta distinzione tra verità e falsità, concedendo una realtà al non essere. Questa operazione, che esaminerò per quanto detto nel Sofista, è comunque condotta con la piena coscienza della sua

problematicità, che traluce anche nella stessa impostazione stilistica e linguistica del dialogo." (p. 25)

(...)

"Concludendo, l'orizzonte parmenideo, nella sua tesi centrale della coincidenza tra realtà e verità, qui nel Sofista, viene riaffermato ma non dimostrato, perché la differenza tra discorso vero e discorso falso non è

questione di differenza logica, od ontologica, ma etica, o politica. E Platone lo sa bene, ed anche in questo dialogo ci sono tutti gli indizi di questa sua consapevolezza: ma è discorso che qui non posso affrontare.

Ma quella che resta comunque, sempre, anche in questo dialogo, e non sullo sfondo, bensì rivendicata esplicitamente, è la centralità del logos e della dialettica, del discorso in quanto costitutivo della filosofia (260a) e dell'unica "scienza degli uomini liberi" (253c-d): la quale, se è vero che appartiene non genericamente al filosofo, ma "a colui che filosofa con purezza e giustizia" (253e), non può però procedere se non confutando, essendo la confutazione la massima delle purificazioni, tanto che chi non è stato mai confutato, fosse pure il Gran Re, non essendo purificato nelle cose più importanti, è privo di educazione e brutto nell'anima (230d-e)." "In un discusso passo del Sofista (247 D-E) Platone fornisce una caratterizzazione di ciò che è in termini di δύναμις ποιεῖν και πάσχειν. Tale caratterizzazione sarà destinata (nonostante la sua oscurità

per gli interpreti del testo platonico) ad una straordinaria fortuna nella storia della filosofia attraverso l'idea che l'efficacia causale possa costituire un criterio di esistenza.(1)

Le note qui proposte sulle espressioni che compaiono nella formulazione dello ὄρος di Soph. 247 D-E (δύναμις τοῦ ποιεῖν και πάσχειν:crxnv) hanno lo scopo di riesaminare tale caratterizzazione nel suo

complesso, cercando di valutarne la possibile portata qualora la si intenda, se non come una conclusiva definizione dell'essere, per lo meno come espressione di un nucleo teorico non meramente provvisorio.

Alcuni passi dei *Topici* di Aristotele sembrano fornire materiale utile per la discussione." (p. 415)

- Abstract: "La tesi centrale dell'articolo è che ci sia una relazione tra la definizione dell'essere come dynamis nel Sofista di Platone e la discussione coeva sulle grandezze incommensurabili, mostrando come alcuni degli argomenti che Platone usa per affermare l'insostenibilità della definizione quantitativa dell'essere (Uno, molti) sono riconducibili all'argomento sulla decomposizione del pari e del dispari con cui si dimostra l'irrazionalità della diagonale del quadrato. Come conseguenza, l'articolo cerca di mostrare che la definizione dell'essere come dynamis è necessaria al fine di "salvare le differenze", ovvero far sì che l'uno non sia uguale al due, come accade secondo Platone nelle tesi dei monisti e dei pluralisti, un collasso logico e ontologico che sarebbe anche conseguenza della negazione dell'irrazionalità della diagonale."

- "Introduzione. Dopo sei tentativi insoddisfacenti di definire il sofista con il metodo diairetico, nella settima classificazione dicotomica Platone lo descrive come 'produttore di immagini'. Tale caratterizzazione si scontra con le difficoltà sollevate dal 'paradosso del falso', l'argomentazione che cerca di provare

l'inesistenza del falso. L'ampio excursus centrale del Sofista (236d5-264d9) affronta e risolve una delle versioni del paradosso del falso. Platone riconduce la fallacia dell'argomentazione a un'errata valutazione dei rapporti tra negazione ed esistenza, e corregge lo sbaglio mediante una minuziosa analisi del significato della particella 'non'.

La versione del paradosso del falso studiata nel Sofista può essere presentata, a meno di qualche inessenziale semplificazione, come un'argomentazione che esclude la falsità degli enunciati singolari affermativi: perché un enunciato singolare affermativo sia falso, bisogna che ciò che non è P sia detto essere P ('P' termine generale arbitrario), e quindi bisogna parlare di ciò che non esiste; ma è impossibile parlare di ciò che non esiste; di conseguenza, un enunciato singolare affermativo non può essere falso. Il passaggio critico di questa argomentazione si fonda sull'assunzione che la negazione predicativa implichi l'inesistenza: se x non è P, allora x non esiste.

Platone ritiene (giustamente) che tale assunzione sia errata, e adotta la strategia di svelare, e quindi confutare, il ragionamento sofistico che sta a fondamento di essa. A suo avviso, tale ragionamento muove dal presupposto che la particella 'non' indichi contrarietà: dato che la copula ha portata esistenziale, la verità di un predicato nominale 'è P' rispetto a un oggetto x richiede (tra l'altro) l'esistenza di x; se il 'non' indica contrarietà, la verità rispetto a x del predicato nominale negativo 'non è P' richiede la soddisfazione di condizioni contrarie (ossia antitetiche, il più possibile lontane) rispetto a quelle che garantiscono la verità di 'è P', e quindi richiede (tra l'altro) l'inesistenza di x. Pertanto 'non è P' è vero solo di ciò che non esiste, e la negazione predicativa implica l'inesistenza.

Platone demolisce tale ragionamento attaccandone il presupposto: il 'non' non indica contrarietà, ma solo diversità. Più precisamente: la verità del predicato nominale negativo 'non è P' rispetto a un oggetto x richiede 'solo' che x sia diverso da ciascuno degli oggetti dei quali è vero il predicato nominale

'è P', ossia (poiché la predicazione ha portata esistenziale) che x sia diverso da ciascuno degli oggetti che esistono e partecipano della proprietà significata dal termine generale 'P'.

Ora, però, niente vieta che tra gli oggetti diversi da tutti quelli che esistono e partecipano della proprietà significata da 'P' ve ne siano di esistenti. Pertanto 'non è P' può essere vero anche di ciò che esiste, e la negazione predicativa non implica l'inesistenza. L'assunzione sulla quale si fonda il paradosso del falso è confutata.

Platone non si limita a demolire il paradosso del falso, ma propone anche un'analisi della falsità degli enunciati singolari nella quale mette a frutto i risultati dello studio della negazione: 's è P' è falso quando s (l'oggetto del quale 's è P' parla) non è P, ossia quando s è diverso da ciascuno degli oggetti che esistono e partecipano della proprietà significata dal termine generale P.

La versione del paradosso del falso studiata nel Sofista non dipende da uno scambio tra gli usi 'esistenziale' e 'predicativo' del verbo 'einai' ('essere'), ma da un errore nel modo d'intendere il 'non'. Ciò spiega perché la soluzione suggerita da Platone non si concentri sulla distinzione tra gli usi 'esistenziale' e 'predicativo' di 'einai' (un fatto, questo, che mette in crisi varie accreditate interpretazioni del dialogo): la distinzione tra gli usi di 'einai' non avrebbe colpito l'errore che sta alla radice del paradosso esaminato da Platone. Il problema logico più profondo studiato dal Sofista non riguarda i sensi o usi di 'einai', ma i rapporti fra negazione ed esistenza." (pp. 11-12)

30. De Petris, Alfonso. 2005. *Del vero e del falso nel Sofista di Platone. Con un saggio sul Cratilo*. Firenze: Olschki.

"In aderenza al testo, si rivisita la speculazione platonica sul vero e sul falso.

Nel Cratilo, contro chi nega che il falso sia in quanto dice il non-essere, Socrate – posta la corrispondenza tra originale e copia, categorizzato che suoni e colori rinviano alle cose reali, essendo linguaggio e pittura imitazioni – correla il discorso all'essere delle cose, che in sé hanno sostanza, di per sé sono.

La scoperta dell'oggettività degli enti è anche alla base del Sofista: non più sul piano logico-glottologico ma su quello ontologico, nella ricerca di una dialettica risolutiva delle aporie di una diairesi ad ambito formale. Superata la negazione parmenidea del non-essere, presupposta l'inoppugnabilità del non-essere, «in qualche modo» il falso è, perché partecipa del non-essere relativo. Platone estende al logos umano questa acquisizione teorica.

Postulato che ragionamento e opinione partecipano del non-essere relativo, dimostra che vero e falso ricorrono anche nel discorso: vero, se dice l'essere com'è; falso, se predica il diverso dall'essere. Si pongono i fondamenti dell'analisi logica quale intesa fino all'Ottocento. Si evidenzia la rilevanza filosofico-linguistica di un epocale studio scientifico della compiuta articolazione del discorso umano.

Si delinea la figura del sofista: opinimitatore, che non sa, nella categoria della parvenza. In seconda rappresentazione, dalla copia egli riproduce ciò che «pare»."

31. Di Iulio, Erminia. 2020. "Á rebours: Dal Sofista a Parmenide. Platone tra «corrispondenza» e «identità»." *Rivista di Filosofia Neo-Scolastica* no. 112:111-125.

Abstract. "This paper aims to develop an answer to a twofold question: in the Sophist, what does the aporetic notion of falsehood amount to, from a theoretical point of view? And, consequently, how can be theoretically defined the concept of truth Plato is rejecting in order to provide a new account of truth (and falsehood)? The two questions are, in fact, deeply related. Thus, the strategy will be as follows: firstly, the Plato's «not-being as difference» account employed to solve the

«ontological falsehood» puzzle will be recalled and its consequences examined; secondly, an analysis of the correspondence theory of truth Plato seems to endorse in the Sophist will be provided; finally, a suggestion concerning the theoretical nature of Eleatic account of truth – i.e. the account Plato is questioning – will be made."

34. ———. 2019. "« Homologia » e dialettica in Platone." *Antiquorum Philosophia* no. 13:23-44.

Abstract: "According to the Republic (books VI and VII) and the Cratylus, homologia, in neither of its meanings - i.e. agreement on the one hand, and formal coherence and consistency on the other, - can be identified with philosophical knowledge (episteme), that is, with dialectic. The reason is that homologia represents a hypothetical procedure unable to reach an anhypothetical principle, and therefore to acquire certainty and truth. However, in Plato's dialogues there are numerous examples of homologia within philosophical and dialectical sections: in some cases it is fallacious homologia, which leads to unacceptable consequences (Parmenides); in other cases, instead, Plato seems to admit the existence of dialectical homologia, that is, of an agreement on a nonhypothetical principle (Sophist). Moreover, dialectic seems to display a degree of coherence superior to that of the other disciplines (i.e. mathematical sciences). The conclusion is that homologia (agreement and coherence) cannot be considered foreign to dialectic."

35. Ferro, Antonio. 2011. *Il problema della predicazione tra antichi e moderni. Il Sofista platonico e la sua fortuna nella filosofia contemporanea*. Bologna: CLUEB.

"In questa prima parte, la trattazione sarà prevalentemente diretta a una preparazione preliminare sullo state of the art nella letteratura contemporanea sul problema [della predicazione], che possa metterci in grado di valutare più accuratamente le ragioni dell'attacco davidsoniano all'autore del Sofista – il fatto che si tratti del caratteristico «uomo di paglia» non toglie che un esame della strategia di Davidson possa rivelarsi assai istruttivo." (p. 32)

(...)

"L'utilità di queste (lunghe) considerazioni preliminari dovrebbe risultare con chiarezza nel terzo capitolo, ragione per cui la lettura degli ultimi due capitoli, dotati di una certa autonomia, e senz'altro di maggiore interesse per gli antichisti, può essere fatta precedere a quella del primo, in cui, a partire da una disamina delle posizioni di logici e filosofi del linguaggio contemporanei si cerca di sistematizzare i diversi requisiti per una buona teoria della predicazione.

Sono proprio questi requisiti a spiegare alcuni scrupoli teorici che informano la trattazione offerta nei capitoli finali: sulla scorta di un principio di carità interpretativa minimale, abbiamo preferito non attribuire a Platone tesi filosofiche sulla predicazione banalmente false, assurde, non sufficientemente generali, o particolarmente controverse agli occhi di un filosofo contemporaneo.

Questo non significa ovviamente che abbiamo proceduto a retrodatare al IV sec. a.C. sofisticate teorie contemporanee della predicazione: piuttosto, all'unico scopo di raggiungere il massimo grado di chiarezza, ci è parso legittimo e sensato proiettare sul dialogo – in particolare, su quei passi "linguistici" dell'opera che solleciterebbero l'attenzione anche di un filosofo moderno – requisiti di adeguatezza basilari e preoccupazioni teoriche anche più tarde, ferma restando la priorità assoluta per lo storico (cioè, per chi scrive) di leggere il dialogo privilegiando temi e problemi che sembrano suscitare l'interesse di Platone." (p. 32)

Introduzione di Giovanni Reale. Traduzione, note e apparati di Andrea Le Moli.
Libro secondo, Capitolo XXVI: Sofista, pp. 975-1014.
"Sappiamo che il compito di chiarire il significato dello pseudos (la falsità, l'inganno, la menzogna) impegnò Platone sin dai suoi esordi come filosofo. Tale compito non è un interesse particolare derivato da un problema logico di difficile soluzione. Esso lo occupò perché (per parlare nel linguaggio concreto del Sofista) in questa oscurità e confusione si nasconde ogni sofistica e ogni eristica - tutto ciò, in altre parole, che è ostile alla filosofia e che, a causa della sua pericolosa somiglianza con quella, minaccia la reputazione della filosofia e la vita del filosofo. Persino una delle prime opere platoniche, l'Ippia minore, si rivolge al problema dell'inganno, volontario e involontario, sofistico e socratico. In seguito, con il Cratilo, il linguaggio diviene strumento dell'illuminazione positiva. Già lì (Cratilo, 431 BC; cfr. 385 BC) il discorso è descritto come «composizione» [Zusammenstellung] di nome e verbo. Nel Sofista esso è !'«intreccio » dei due e questo cambiamento è più di una semplice differenza di espressione. (p.1012)

39. ——. 2004. "Pensare la differenza. Statuto dell'essere e definizione del diverso nel Sofista di Platone." In Platone e l'ontologia. Il Parmenide e il Sofista, edited by Bianchetti, Matteo and Storace, Erasmo, 39-64. Milano: Albo Versorio.
"È certamente vero che il Sofista affronta per la prima volta nel suo insieme il problema della partecipazione o della comunicazione fra i generi ideali, per fornirgli una soluzione che Platone sembra considerare in qualche modo definitiva. Abitualmente, si tende a dire che la soluzione del problema consiste nell'elaborazione del genere del diverso, come pure nell'elaborazione del genere del diverso consisterebbe la soluzione dell'altra grande aporia che il Sofista si propone di

risolvere, quella relativa al non essere, alla sua pensabilità e alla sua dicibilità. In realtà, le cose non stanno propriamente così. Di per sé, l'elaborazione del genere del diverso, il diverso come tale, non risponde affatto né al problema della κοινωμία dei generi né al problema del non essere, perché, di per sé, il diverso non coincide con il non essere (e non lo rende perciò pensabile e dicibile) né si pone come l'esclusiva chiave di volta per la comprensione della struttura e della composizione della κοινωμία dei generi. Non a caso, la lettura del testo indica chiaramente che la soluzione di questi due problemi risiede piuttosto in quella che lo Straniero di Elea, che conduce la discussione, individua come la totale "compenetrazione" di essere e diverso, per tre volte a breve distanza ribadita." (pp. 39-40 due note omesse)

(...)

"Ciò significa senza dubbio, a mio avviso, che una corretta comprensione dei fondamentali problemi affrontati nel Sofista, con la loro eventuale soluzione, dipende precisamente dai due termini, essere e diverso, di cui il dialogo afferma, argomenta e dimostra ripetutamente l'unione e la mescolanza.

Cercherò in quanto segue di presentare alcune riflessioni intorno allo statuto e alla definizione di questi due termini, lasciando invece da parte - se non per servirne come occasionale punto di partenza dell'esame i delicati problemi del non essere e della κοινωμία dei generi cui essi sono chiamati a dare risposta nel Sofista." (p. 41)

"Ci si deve forse rassegnare a riconoscere la complessità irriducibile del metodo e l'assenza di un obiettivo univoco e ben definito, perché, se la dialettica fornisce nella sua applicazione (1) la mappa, parziale o totale, delle relazioni fra i generi ideali, con il fine di far emergere quali generi comunichino e quali non comunichino con quali altri, disegnando così (2) la rete di

significati di cui sono intessuti il pensiero e il discorso, e perciò in generale il sapere e il giudizio, potremo anche ricavare per questa via (3) il Λόγος definitorio relativo a ciascun genere e l'insieme di tali λόγοι avrà (4) un tratto indubbiamente classificatorio." (p. 167)

41. ———. 2015. "Il non essere e la strategia dello Straniero di Elea. Deduzione o rimozione." *Rivista di Storia della Filosofia* no. 70:143-162.

Abstract: "In this paper the Author examines the problem of not-being in Plato's *Sophist*. "Notbeing" is closely connected in Plato's *Sophist* with the notion of the "other" or "difference" since not-being can be understood as "not-being something", that is, as "different from" something. In fact, what "is not" beautiful, for example, is not only what is "contrary" to beautiful but also what is "different" from beautiful. Thus, the "other" introduces and explains the notion of a relative "not-being" as "different" from what it is. The Author puts this idea at the center of the analysis in an attempt to verify its coherence and legitimacy and establish some connections with two contemporary thinkers, Meinong and Frege, who clearly depend on Plato's reflections on this point."

Abstract: "In this note I discuss Pierre-Marie Morel's article L'argomento della 'venerabilità dell'essere' e la sua fortuna published in this same volume (see pp. 11-16) on *Soph.* 248e-249a, trying to develop his interpretation of this passage and the conception of being it implies. I also examine Morel's reconstruction of some steps of the exegetical history and reception of this passage in the history of Ancient Platonism, with reference to Aristotle and Plotinus."

43. ———. 2020. "Panteles zōion e pantelōs on: Vita, anima e movimento intellegibile nel *Timeo* (e nel *Sofista*)." In *Plato's Timaeus: Proceedings of the Tenth Symposium Platonicum*

Pragense, edited by Jorgenson, Chad, Karfík, Filip and Špínka, Štěpán, 49-69. Leiden: Brill.

Abstract. "In this article, I try to propose some reflections about the nature and status of the intelligible in the *Timaeus*, particularly with respect to its features of a properly being and above all vital reality. The attribution of "life" and "vitality" to the intelligible certainly has an analogical character, that is, it depends on the consideration of the sensible: since the cosmos is a sensible living being and is a copy of an intelligible model, then the intelligible model must be configured as an intelligible living being. Now, to be "living", for a sensible reality, means to have a soul that animates a body, that is a soul which is embodied; but this seems to apply only in the case of the sensible. What does it mean, then, and what does it entail, to be "living" for an intelligible reality? Some interpretative hypotheses on this point are examined here and a possible overall explanation is suggested."

Abstract: "In *Sophist* 228a7–8 the reading of Plato's manuscripts *διαφορᾶς διαφορῶν* is defended on the basis of a reconsideration of the Galenic passages of *De placitis Hippocratis et Platonis* (V 2, p. 302, 18–19 and V 3, p. 310, 26 De Lacy) usually advanced in order to maintain that it is corrupt and is to be changed into *διαφορᾶς διαφορῶν*. The analysis of several other passages of the Platonic corpus concerning *στάσις* and *νόσος*, and the comparison with Plutarch's *De Stoicorum repugnantibus* 1041b, which shows a textual history very similar to the considered passage of Plato's *Sophist*, further support the reading in the manuscripts."

Abstract: "A little mystery is contained in the prologue to the Sophist. It is not completely clear why Plato mentions Homer. The Homeric quotations that are employed appear rather poorly chosen given that, while attempting to grasp the essence of the philosopher, to which they refer, they seem to bring it to a disquieting proximity with the essence of the sophist. More specifically, in the Republic Plato sharply criticizes Homer: "Then let no poet ... say that "The gods, in the likeness of strangers from foreign lands,/ Adopt every sort of shape and visit our cities"" (Rep. 381d1-4). The same quotation, which comes from Odyssey 17, 485-486, is used in the prologue to the Sophist to define philosophers—not faked philosophers, but rather authentic ones. What has happened meanwhile? Has Plato changed his mind? Or is it the case of a different use of the same quotation? And, in this hypothesis, why could the very same quotation apply equally well to the sophist (or the poet) as well as to the philosopher?"

50. Licata, Gaetano. 2002. "Il vero e il falso in Platone." *Studium Philosophicum* no. 1:107-128.

"Nel Cratilo, aprendo la confutazione del convenzionalismo proposto da Ermogene, Socrate domanda al proprio interlocutore: "Chiami qualcosa dire il vero e dire il falso (ἀληθῆ λέγειν καὶ ψευδῆ)?" (385b 2) (1); esiste qualcosa il cui nome è "dire il vero" e qualcosa il cui nome è "dire il falso"?"

Naturalmente il senso effettivo della domanda riguarda la differenza: in cosa consiste la differenza fra il discorso vero e il discorso falso? Risponde Ermogene: "il discorso vero è quello che dice le cose come stanno, il discorso falso è quello che dice

le cose come non stanno" (385b 2-8) (2) La risposta platonica lega la verità dell'espressione linguistica alla relazione con la realtà, ma il modo in cui debba attuarsi tale relazione, come vedremo, è problema di non facile soluzione. In questa ricerca tenteremo di chiarire i rapporti fra le due diverse soluzioni - l'una nel Cratilo, l'altra nel Sofista - che Platone appronta per questo problema, al fine di determinare meglio il concetto platonico di *Àoyor*, e per confrontare due atteggiamenti teorici nei confronti del problema della rappresentazione linguistica della realtà che ancora oggi si mescolano e si oppongono in semantica e in filosofia del linguaggio." (p. 107)

(1) L'edizione critica di riferimento utilizzata per i dialoghi di Platone è *Platonis Opera, recognovit brevique adnotatione critica instruxit J. Burnet, Oxford, 5 voll., 1900-1907*.

Secondo Schofield l'argomento del vero e del falso (385 b2-d1) non può essere la confutazione della tesi di Ermogene, per cui andrebbe spostato e posto fra 387c 5 e 387c 6; M. Schofield, *The Dénouement of the Cratylus*, in *Language and Logos: Studies Presented to G.E.L. Owen*, edited by M. Schofield and M. Nussbaum, Cambridge 1982: PP. 61-81.

(2) A. Soulez rinviene nell'argomento del vero e del falso il punto iniziale dell'analisi platonica della contrapposizione fra i sostenitori della stabilità dell'essenza e quanti pensano al divenire come ad un flusso continuo che non permette né una conoscenza stabile né una nominazione vera e propria:
"L'important était de mettre d'abord en lumière que la distinction entre le vrai et le faux, sur laquelle sans le savoir Hermogène s'appuie lorsqu'il prétend 'avoir raison' en matière de Justesse, présuppose que la dénomination est ontologiquement garantie. 'Dire vrai' est une chose et 'dire faux' en est une autre parce que le logos s'applique à de l'être stable."
A. Soulez, *La grammaire philosophique chez Platon*, Paris 1991, pp. 52-3.

51. ——. 2002. "Nome e conoscenza in Platone." *Studium Philosophicum* no. 1:9-22.

"1. Nome e idea

In che modo, a parere di Platone, i nomi si riferiscono alle cose? In che modo, problema per Platone molto più importante, i nomi ci fanno, o ci farebbero conoscere le cose? La risposta a questi interrogativi, a nostro modo di vedere, è da ricercare nel Cratilo - nella sterminata confutazione di Ermogene e nella prima sezione della confutazione di Cratilo (384c 9-433 b 7) - , ma anche nella teoria della definizione delineata nel Sofista. I diversi punti di vista espressi da Platone sul concetto di nome devono essere sottoposti ad una considerazione che tenga conto dell'esigenza di dare unità e coerenza alla spiccata complessità concettuale dell'idea platonica di ὄνομα; questo perché, all'epoca in cui scrisse le Leggi, quasi sicuramente l'ultimo fra i dialoghi(1), il filosofo aveva in mente un concetto sufficientemente determinato, e sufficientemente unitario, di nome. Il nostro tentativo, è bene puntualizzarlo fin d'ora, non ci darà, pronta per l'uso, l'essenza del nome: la ricerca dell'essenza infatti non ha termine. Dal momento però che è stata nominata diciamo subito che, in Platone, la ricerca dell'essenza è molto vicina alla ricerca del nome: il nome e l'essenza, nella loro vicinanza, rimandano ad una irraggiungibilità che è stata intesa come segretezza; come se il nome rivelasse l'essenza con lo stesso movimento col quale la mantiene segreta." (p. 9, una nota omessa)

53. Maggi, Claudia. 2017. "Il 'qualcosa' in Soph. 237c e in Enn. VI 6." In *Platone nel pensiero moderno e contemporaneo*, edited by Muni, Andrea, 17-28.

"IL TI E L'ON IN SOPH. 237C. Obiettivo di questa nota sarà, a partire da una proposta di lettura relativa a una breve sezione del Sofista, sondare la ridefinizione semantica del τῖ e dell'ὄν nel trattato plotiniano *Sui numeri*. La mia indagine esula, ovviamente, da una più vasta considerazione del dominio dei due termini nella riflessione dei due filosofi; intendo, più

semplicemente, provare a verificare come la costellazione lessicale che gravita attorno all'ὄν possa mutare nel momento in cui si ammetta, con Plotino, che la sua natura intrinsecamente molteplice rinvia a una unità originaria che la fonda e la precede metaontologicamente." (p. 17)

54. Magri, Elisa. 2015. "Holon e Heteron. Osservazioni per un collegamento fra il Teeteto e il Sofista." *Journal of Ancient Philosophy* no. 9:34-66.

Abstract "It is noteworthy that both in the Theaetetus and in the Sophist Plato aporetically introduces the notion of holon. The author argues that it is possible to outline a connection between the two dialogues by focusing on the methodological relevance of holon and heteron. Several hints contained in the Theaetetus suggest that Plato conceives of holon as a method of dialectical thinking, underlying the process of soul's reasoning. The Theaetetus presents this notion ex negativo due to the lack of distinction between difference (heteron) and negation (not being). By contrast, the Sophist shows that heteron is the read thread guiding the dialectics of forms as well as the communication between the soul and the eidetic sphere. Accordingly, the Sophist entails that the process of soul's reasoning is correlative to the eidetic horizon in so far as they both rely on a holistic methodology that is activated by the quest for the difference."

55. Marrucci, Elia. 2020. "Filiera tessile e dialettica conoscenza tecnica ed impieghi analogici nella seconda tetralogia platonica." *Dialogues d'histoire ancienne* no. 46:105-121.

Abstract: "Nel presente contributo ho intenzione di mostrare la continuità tra l'impiego paradigmatico della filiera tessile nel Sofista e nel Cratilo e l'impiego che Platone ne fa nel Politico. Nella prima parte di questo contributo evidenzierò la perfetta conoscenza da parte di Platone delle singole procedure in cui si articola la filiera e la sua diffusa presenza all'interno del corpus. Nella seconda parte, attraverso l'analisi e l'intreccio di passi provenienti da Cratilo, Teeteto, Sofista e Politico, tenterò di dimostrare l'esistenza nella seconda tetralogia di un filo rosso legato all'impiego paradigmatico della filiera tessile e

necessario all'illustrazione della natura e dei campi applicazione dell'arte dialettica. In conclusione di contributo tenterò di dimostrare come la scelta della filiera tessile come paradigma del metodo dialettico da parte di Platone dipenda dalla cosciente ripresa da parte del filosofo di un arcaico paradigma tecnico-artigianale della produzione poetica, in linea con le intenzioni didascaliche della sua riflessione filosofico-politica."

56. Meo, Oscar. 2016. "Lo statuto ontologico dell'immagine in Platone." In *In cammino verso la casa della sapienza*, edited by Ross, Paolo Aldo and Li Vigni, Ida, 161-191. Aicurzio: Gruppo Editoriale Castel Negrino.

"L'indagine di Platone intorno allo statuto ontologico dell'immagine è poliprospectica. Nei testi fondamentali per lo studio della questione, la prima parte del Libro X della Repubblica (ma, come si vedrà, un rilievo non marginale lo hanno anche la fine del Libro VI e l'inizio del VII) e il Sofista¹, alcune fra le maggiori difficoltà si incontrano sul piano dell'approccio semasiologico, giacché egli utilizza per designare l'immagine diversi termini, che si alternano e si sovrappongono semanticamente nella prima opera, mentre – sia pure con qualche oscillazione – appaiono abbastanza differenziati nella seconda: eikón, eídolon e phántasma." (p. 161, a nota omessa)

57. Migliori, Maurizio. 1999. "Verso il Filosofo: dialettica e ontologia nel Sofista Platone." *Rivista di Filosofia Neo-Scolastica* no. 91:171-204.

"Dovendo affrontare un tema così vasto e un dialogo tanto complesso, vorremmo limitarci a svolgere la nostra analisi sulla base di tre domande:

- a) perché proprio nel Sofista troviamo questa specifica trattazione sull'essere?
- b) ci sono altre trattazioni analoghe a questa?
- c) che cosa Platone pensava dell'essere?

A tali domande cercheremo di rispondere sulla base di tre riflessioni:

1. il senso della collocazione del Sofista; crediamo infatti che l'Autore ci abbia offerto una vera e propria indicazione di lettura, che brilla per la sua 'unicità'; seguendola, è possibile comprendere meglio la specificazione del dialogo e la stessa struttura dell'opera;

2. l'indicazione dialettica che in questo quadro emerge; infatti, non solo lo stesso inserimento del dialogo nel contesto delle altre opere obbedisce a uno schema diairetico, ma la dialettica è, a un tempo, un tema da sviluppare e lo strumento per chiarire gli argomenti affrontati in questo blocco di dialoghi;

3. la metafisica che emerge dalla trattazione centrale dell'opera; crediamo infatti che occorra mostrare il peso, in verità molto relativo, che Platone attribuisce alla tematica dell'essere e del non essere. (pp. 171-172, note omesse)

58. ——. 2004. "Non è l'ontologia il vero cuore del Parmenide e del Sofista." In Platone e l'ontologia. Il Parmenide e il Sofista, edited by Bianchetti, Matteo and Storace, Erasmo, 65-94. Milano: Albo Versorio.

"Premetto subito due chiarimenti: a) uso il termine "ontologia" nel suo senso pregnante, come teoria dell'essere; b) questo articolo, come indica il titolo, indaga il "cuore teoretico" dei due dialoghi, cioè la questione centrale sul piano della concezione della filosofia e della visione del reale che Platone propone." (p. 65)

(...)

"La domanda che propongo è quindi se ci sia in Platone, e in particolare in questi due dialoghi, una centralità dell'ontologia o se questo appaia in tanta letteratura secondaria come frutto di una sorta di fenomeno proiettivo.

Per tentare di dimostrare tale assunto, devo necessariamente cercare di rispondere in modo adeguato a due domande:

Quali sono i passi di Platone che giustificano la mia affermazione?

Qual è allora il centro teoretico dei due dialoghi in questione?" (p. 65)

59. ———. 2007. *Il Sofista di Platone. Valore e limiti dell'ontologia*. Brescia: Morcelliana.

"Due sono stati negli ultimi decenni i modelli interpretativi della filosofia platonica: un modello, ispirato a Schleiermacher, ha privilegiato l'interpretazione cronologica dei dialoghi, l'altro, proprio delle scuole di Tubinga e Milano, ha reinterpretato tutto Platone alla luce delle «dottrine non scritte». Come per sottrarsi a unilaterali ermeneutiche, l'autore di questo volume legge «il corpus platonico come un vero e proprio "protrettico" che propone filosofia per costringere il lettore a trovare soluzioni sulla base di poche indicazioni, il che implica la proposta di difficoltà crescenti che via via nello svolgimento delle opere selezionano i "veri filosofi". Platone appare convinto socraticamente che la filosofia è lavoro comune e scoperta. Ciò dà luogo a un insegnamento che, sempre, ma soprattutto nella forma scritta, avvicina al vero senza rivelarlo, comunica informazioni vere che non sono tout court la verità, ma che richiedono la partecipazione, l'elaborazione e lo sviluppo da parte del lettore». Un modello messo qui alla prova nella disamina del Sofista: ad assumere inaspettati significati sono i suoi punti più controversi (la dialettica come esercizio diairetico, il parricidio di Parmenide, la scoperta del non-essere in quanto "diverso")."

60. Mignucci, Mario. 1989. "Esistenza e verità nel Sofista di Platone." *Atti della Accademia di Scienze Morali e Politiche di Napoli* no. 100:267-281.
61. Morel, Pierre Marie. 2018. "L'argomento delle "venerabilità dell'essere" e la sua fortuna (Aristotele e Plotino, eredi di Platone, Sofista, 248c-249a)." *Antiquorum Philosophia* no. 12:11-26.

Abstract: "In a famous passage of Plato's *Sophist* (248e-249a), The Stranger addresses the question of the activity of the perfect being: is it deprived from change, life, soul and understanding? Does it stand immutable, holy and solemn (semnos), devoid of intellect? There is an issue about whether this text is to be taken seriously. The present article analyses how this passage (and especially the word semnos) has been

read after Plato, mainly by Plotinus but also by Aristotle (and hypothetically by Epicurus). In particular, it is argued that, despite its obscurity, the idea of solemnity plays a major role in Plotinus, but with different purposes, depending on the context, and in an ambiguous way. Generally speaking, the legacy of Plato's passage is much more a question (is it possible to deprive that which is perfectly real from activity?) or even an aporia than a positive claim regarding the properties of being. This is probably the best way to read the passage, and to take it seriously."

64. ———. 1991. *Apparenze essere e verità: commentario storico-filosofico al Sofista di Platone*. Milano: Vita e Pensiero.

"L'adesione convinta al nuovo paradigma ermeneutico degli scritti di Platone [*] non mi è servita da comoda scorciatoia per evitare la serie infinita di problemi che, come tutti sanno, un qualunque dialogo platonico suscita (specialmente se si tratta di un dialogo "sistematico" o, se preferiamo dir così, "critico-dialettico"). Piuttosto, il nuovo paradigma mi ha offerto un quadro unitario di riferimento entro cui collocare le varie dimensioni teoriche che percorrono il testo. In realtà, è il testo stesso, almeno in un punto davvero cruciale, che subordina la dottrina metafisico-ontologica dei generi sommi alla dottrina metafisico-protologica dei principi. Né l'Essere né l'Identico sono l'Uno, ma partecipano dell'Uno, e, analogamente (si dovrebbe dire), né il Non-Essere né il Diverso sono essi stessi la Diade indefinita, il principio di molteplicità, ma rappresentano soltanto alcune delle sue prime "concretizzazioni" ideali.

In questa visuale interpretativa, la lettura del Sofista richiede, per così dire, un'attenzione e un impegno bivalente: uno negativo ed uno positivo. Per un verso, bisogna rinunciare a privilegiare il nostro dialogo, e in particolare l'exkursus

ontologico sui generi sommi, quasi fosse il depositario della dialettica globale e della verità filosofica integrale di Platone.

(Per parte sua, come sappiamo, Hegel, probabilmente anche a motivo di un "incidente" filologico, [**] giungerà a porre il Sofista, col Filebo, addirittura al di sopra del Parmenide, nella misura in cui, come egli crede, il nostro dialogo tematizza esplicitamente l'unità dialettica degli opposti). Per un altro verso, bisogna minuziosamente esplorarlo in ogni sua piega più riposta, per evidenziare tutti i suoi (notevolissimi) contributi teorici.

In ogni caso, la lettura qui proposta àncora saldamente allo spessore metafisico della dottrina delle idee (e dei principi) i vari tipi di approccio al testo che sono stati effettuati e ai quali ho cercato di prestare la massima attenzione critica possibile. Mi riferisco, in particolare, all'approccio dialettico-epistemologico, incentrato sul problema della diairesi e delle tecniche e sulla componente etico-politico-retorica del dialogo, nonché all'approccio logico-linguistico, con le connesse interpretazioni intensionali ed estensionali della dottrina delle idee da un lato, e le analisi della funzione sintattica e del contenuto semantico dei "nomi" associati ai sommi generi dall'altro." (pp. 31-32)

[* Il "nuovo paradigma ermeneutico" è quello della scuola di Tubinga-Milano (Krämer, Gaiser, Reale, Szlezák)]

[** Berti documenta anche che il tentativo di Hegel (cfr. Lezioni di Storia della filosofia, trad. di E. Codignola e G. Sanna, II, Firenze 1964, pp. 220 ss.) di ridurre l'elenchos platonico alla contraddizione dialettica dipende da un errore di traduzione di 259 D I s. (rilevato, peraltro, già da Campbell, L. Campbell, [in *The Sophistes and Politicus of Plato, with a Revised Text and English Notes by L. C.*, Oxford 1867 (rist. 1973)], pp. LXXXIX e 166) e risalente a Marsilio Ficino.] (p. 421)

Il riferimento ad Enrico Berti è: "Hegel la ritrova [la dialettica] nel Sofista, dove non ci sono più le complicazioni del Parmenide, cioè lo sviluppo di ipotesi opposte, ma c'è anzi, secondo Hegel, l'affermazione diretta dell'identità di essere e

non essere, anzi addirittura di identico e diverso. Naturalmente questa interpretazione è possibile solo al prezzo di ignorare le reiterate affermazioni, da parte di Platone, del p.d.n.c. [principio di non-contraddizione], ed al prezzo di un almeno apparente errore di traduzione, dovuto probabilmente all'influenza del neoplatonico Marsilio Ficino, grazie al quale si fa dire a Platone che ciascuna cosa è insieme identica e diversa « sotto il medesimo riguardo», mentre Platone dice esattamente l'opposto.(80)"

(80) G. W. F. Hegel, *Lezioni sulla storia della filosofia*, trad. di E. Codignola e G. Sona, Firenze 1964 2 edizione, II, pp. 220-223. Su ciò abbiamo già richiamato l'attenzione nel capitolo su Platone (v. sopra, p. 98). Va detto, in ogni caso, che il testo di Michelet [delle *Lezioni sulla storia della filosofia*] su cui si basa la traduzione non è attendibile, perciò non si può imputare l'errore senz'altro a Hegel.

In *Formal Structures in Plato's Dialogues: Theaetetus, Sophist and Statesman*, edited by Lisi, Francesco Leonardo, Migliori, Maurizio and Monserrat-Molas, Josep, 72-83. Sankt Augustin: Academia Verlag.

Abstract: "Sono note le figure storiche dei matematici – appunto Teodoro, Teeteto e Socrate il Giovane - deuteragonisti nei dialoghi indicati: si può perciò, per tale aspetto, riferirsi alla letteratura classica relativa (fra gli altri E. Sachs, Th. Heath). Accogliendo però la recente ipotesi ermeneutica di E. Ostenfeld, che tutti i personaggi dei dialoghi in qualche modo e misura "parlino per Platone", è interessante e utile esaminare il

ruolo filosofico problematico ivi svolto da tali matematici. Va chiarita anzitutto la ragione per cui proprio costoro siano, volta a volta e in modo certo disomogeneo, interlocutori adeguati rispettivamente di Socrate e dello Straniero per il problema centrale discusso nelle tre opere e se tale ragione resti poi costante, per ognuno di tali personaggi, da una all'altra di esse. Vanno approfondite in particolare le ragioni del lusinghiero giudizio pronunciato – nel Teeteto e nel Sofista - sul giovane matematico ateniese (che farebbe, seppur nella bruttezza, da “specchio” allo stesso Socrate e che è simile, per alcune doti ascrittegli, perfino al filosofo-re della Repubblica); va chiarito il senso filosofico del suo allenamento a “raccolgere in uno” e a “bipartire” poi i materiali aritmetico-geometrici, procedura che lo avvicina alle pratiche dialettiche della sunagoghè e della diàiresis; va discusso il motivo per cui, nel primo dialogo, proprio lui discuta con Socrate una teoria dell'αἴσθησις di stampo protagoreo più adeguata forse, storicamente, al suo maestro, il Cireneo Teodoro. Va delineato il compito specifico anche di tale autorevole figura nel Teeteto (capacità di giudicare la virtù e saggezza delle anime) e nel Sofista e quello di Socrate il Giovane, solo citato nei primi due dialoghi e chiamato invece, nel Politico, a sostituire Teeteto quale deuteragonista. Sempre tenendo presente ed evitando di banalizzare e forzare gli specifici contesti drammatici dei tre testi, va indagato infine se siano i loro contenuti filosofici complessi (la conoscenza e i limiti del relativismo, il falso e il non essere, la figura del politico) o piuttosto il metodo dialettico ormai maturo in essi impiegato a legittimare o forse perfino ad esigere dei matematici quali interlocutori di un Socrate ormai vecchio, al quale però già nel secondo dialogo subentra, quale protagonista, un significativo e non meno problematico Straniero di Elea."

69. O'Brien, Denis. 1992. "Il non-essere e la diversità nel Sofista di Platone." Atti della Accademia di Scienze Morali e Politiche di

Napoli no. 102:271-328.

Versione francese in: D. O'Brien: *Le non être. Deux études sur le Sophiste de Platon*, pp. 43-165.

"Platone [nel Sofista] non intende confutare Parmenide: questa tesi sembrerà, sulle prime, paradossale ed anche un po' assurda. All'inizio della sua analisi del non essere (237 A), lo Straniero di Elea non ha forse citato dei versi in cui Parmenide condanna il non essere (nostro fr. 7 .1-2), e alla fine della sua analisi (258 D) non ha forse citato una seconda volta gli stessi versi, e affermato al tempo stesso (258 C6-10) di essersi « molto allontanato » dalla condanna pronunciata da Parmenide? Come dunque, esprimendosi in questo modo, egli non avrebbe confutato l'insegnamento espresso nei versi citati?

Notiamo tuttavia che nelle due pagine che seguono la prima citazione di Parmenide (237 B7-239 C8), Teeteto e lo Straniero convengono sul fatto che, conformemente alla dottrina enunciata nei versi appena citati, non si può concepire « ciò che non è in nessun modo » (το `μηδαμῶς ὄν , 237 B7-8), il « non essere in se stesso » (το `μη ὄν αὐτο` καθαὐτό, 238 C9). Se lo Straniero ritenesse di aver « confutato » Parmenide, ci si dovrebbe aspettare di trovare in qualche luogo, nello svolgersi del dialogo (239 C9 sgg.), una ritrattazione - da parte dello Straniero e di Teeteto - della condanna di questo non essere per così dire « assoluto ».

Ora, una simile ritrattazione non si trova in nessuna parte del dialogo; tutt'al più si troverà, nelle linee che seguono la seconda citazione dal poema parmenideo, una distinzione: lo Straniero afferma di aver dimostrato l'esistenza di una « forma » del non essere (258 D5-E3), ma afferma anche, nella stessa pagina (258 E6-259 A1), che non « osa » minimamente parlare di un non essere che sarebbe il contrario dell'essere.

Ci si domanda allora: di questi due « non esseri » qual è quello condannato da Parmenide? È quello che lo Straniero chiamerà la « forma » del non essere? O quello che chiamerà il contrario dell'essere?" (p. 272)

70. ———. 2005. "La forma del non essere nel Sofista di Platone." In *Eidos - Idea. Platone, Aristotele e la tradizione platonica*, edited by Fronterotta, Francesco and Leszl, Walter, 115-159. Sankt Augustin: Academia Verlag.

"«Una forma che è, di ciò che non è». La definizione platonica del non essere (Soph. 258d6-7) è volutamente paradossale. Ma ciò che si trova nella maggior parte delle storie della filosofia greca non è un paradosso, ma un pasticcio che rasenta la sciocchezza. E questo perché la presentazione che gli storici moderni forniscono della forma platonica del non essere è basata su una serie di errori.

Il lungo e complesso argomento che conduce alla definizione di una forma del non essere nel Sofista platonico si conclude, nella maggior parte delle edizioni moderne del dialogo (258e2-3), con una sequenza di parole che non si trova in nessuno dei nostri manoscritti. Anche nel primo volume rivisto delle opere di Platone, recentemente pubblicato presso Clarendon Press a Oxford, si trova stampato, al posto delle parole unanimemente riportate dai nostri tre migliori e più antichi manoscritti, una lezione che è data soltanto da Simplicio nella seconda di due citazioni di questa parte del Sofista contenute nel suo commento alla *Fisica* di Aristotele. La definizione di una forma del non essere, così come appare nella seconda delle due citazioni di Simplicio, non è di per sé priva di senso, ma appare completamente fuori luogo nel contesto del dialogo platonico. E questo perché la sequenza di parole che Simplicio riporta qui come tratte dal Sofista è stata chiaramente adattata in modo tale da rendere la definizione platonica del non essere compatibile con la ben diversa concezione del non essere avanzata da Plotino nelle *Enneadi* (1).

Ma questo è soltanto uno degli errori. Il portavoce nel dialogo di Platone è uno Straniero di Elea. Quando si propone inizialmente di indagare la natura di 'ciò che non è', lo Straniero deve confrontarsi con la spiegazione del non essere fornita oltre cento anni prima in un poema in cui Parmenide, anch'egli di Elea, affermava di riportare le parole di una dea situata oltre le porte della Notte e del Giorno. Al principio della

sua analisi del non essere, lo Straniero di Platone cita dal poema di Parmenide le parole: «le cose che non sono, sono» (237a8). Grazie a lunghe citazioni di Simplicio dal poema originale di Parmenide, sappiamo che, nel loro contesto (fr. 7.1), quelle parole intendevano fornire il contraddittorio resoconto di ciò che la dea afferma essere il mondo illusorio del movimento e della pluralità che noi ‘mortali’ crediamo di vedere e di sentire intorno a noi. Lo Straniero del dialogo platonico ci dice che quelle stesse parole, soltanto al singolare (237a3-4: «ciò che non è, è»), costituiscono «ciò che Parmenide ἀπεμαρτύρατο». Se si cerca il verbo ἀπεμαρτύρομαι nel Greek English Lexicon, pubblicato a Oxford in successive edizioni per ben oltre un secolo e mezzo, si trova che il significato indicato, con specifico riferimento al nostro passo del Sofista, è ‘asserire risolutamente’(2) L’affermazione dello Straniero, allora, deve essere che Parmenide «asseriva risolutamente» che «ciò che non è, è». Ma nel contesto del poema parmenideo il senso che il termine deve avere è esattamente l’opposto. La dea del poema parmenideo nega che le cose che non sono, siano. Il senso del verbo nel dialogo di Platone non è dunque ‘asserire risolutamente’, ma ‘negare recisamente’.

Gli errori che caratterizzano la lettura del dialogo platonico sono piuttosto seri. Ancor più disastrosi sono gli errori che insidiano la moderna comprensione di ciò che Parmenide intendeva nel poema che Platone ha posto come punto di partenza della propria analisi. I commentatori attribuiscono comunemente alla dea di Parmenide, al principio del suo argomento (fr. 2), due proposizioni: ‘l’essere è’ e ‘l’essere non è’. Talvolta, essi modificano la seconda proposizione, in modo che a essere negato è il soggetto e non il verbo. Le due proposizioni sono in tal caso: ‘l’essere è’ e ‘il non essere è’(3). La variazione è abbastanza straordinaria. Come è possibile che studiosi diversi diano due significati così differenti (‘l’essere non è’, ‘il non essere è’) alle stesse parole greche? Ma ciò che appare ancor più straordinario è che entrambe le traduzioni sono false. La dea, al principio del suo argomento, non dice che ‘l’essere non è’ ($\exists \sim x$, dove x è l’essere) né che ‘il non essere è’ ($\exists \sim x$) e neanche dice che ‘l’essere è’ ($\exists x$). Ognuna di queste traduzioni è falsa. Peggio

ancora, queste false traduzioni impediscono di comprendere come lo Straniero di Elea, nel Sofista di Platone, possa trovarsi sia in accordo sia in disaccordo con Parmenide. Esse impediscono dunque di comprendere come lo Straniero giunga infine alla definizione paradossale di una «forma che è, di ciò che non è»." (pp. 115-116)

71. Palumbo, Lidia. 1990. "Sulla nozione di phántasma nel Sofista platonico." Atti della Accademia di Scienze morali e politiche della Società nazionale di Scienze, Lettere ed Arti di Napoli no. 101:23-42.
72. ——. 1994. Il non essere e l'apparenza. Sul Sofista di Platone. Napoli: Loffredo Editore.

"In questa prospettiva tenteremo di dimostrare che la " questione tecnica", intorno alla quale ruota l'intera opera, è la distinzione tra originale e immagine, che su questa distinzione vengono per così dire ricalcate le distinzioni tra essere e non essere, tra realtà e apparenza, tra discorso vero e discorso falso, dunque tra filosofo e sofista. Proveremo a mostrare come, guardando all'intero dialogo come al "luogo" platonico ove si affronta il problema della definizione dell'apparenza, tutti i passi dell'opera si rivelino profondamente collegati in un'unica tensione speculativa che attraversa orizzontalmente il testo dal principio alla fine e ne costituisce la dialettica interna.

Il punto chiave della nostra lettura del Sofista, che ci permetterà di interpretare alcuni passi del dialogo, non ultimo quello del famoso "parricidio", in una nuova luce, è proprio la nozione di μη ὄν, che la critica è orientata ad identificare con οὐ ἕτερον. Noi non accettiamo questa identificazione tra il «non essere» e il «diverso», perché riteniamo che in 258d5-e3 Platone stabilisca tra il genos ἕτερον e l' eidos μη ὄν un rapporto di tutto a parte: la natura del non essere non si

identifica con la natura del diverso, ma con «quella parte di essa che è contrapposta all'essere di ciascun ente».

Non si tratta, come vedremo, di una questione marginale: la comprensione del tipo di relazione che intercorre tra la natura del non essere e la natura del diverso - per cui il non essere è una parte del diverso, e precisamente quella parte che è contrapposta all'essere di ogni ente - è di fondamentale importanza per la comprensione della definizione platonica dell'apparenza che, come dicevamo sopra, impegna il filosofo per l'intero dialogo.

Noi tenteremo di dimostrare che il non essere rappresenta per Platone proprio tale dimensione dell'apparire, che il discorso falso, per la sua "comunicazione" con il non essere, è propriamente un discorso apparente, esattamente nello stesso senso in cui il sofista, a causa del suo "commercio" con τὸ μὴ ὄν, è un non filosofo, una falsa immagine di filosofo, un filosofo soltanto in apparenza.

Il "luogo testuale" in cui, a nostro avviso, Platone pone le basi ontologiche della identificazione tra l'idea del non essere e la specie dell'apparire, è propriamente quello della discussione sulla κοινὸν τῶν γενῶν, ma noi tenteremo di dimostrare che i termini del problema - che troverà una soluzione appunto solo in quella discussione - vengono posti fin dalle prime pagine del dialogo e si ritrovano nelle ultime battute dell'opera, quando viene data la settima definizione del sofista, cosicché esso appare essere non uno tra gli argomenti dibattuti, ma l'argomento dell'intero lavoro, quello alla cui corretta impostazione e soluzione concorrono tutti gli altri." (pp. 21-22, note omesse).

74. ——. 1995. "Realtà ed apparenza nel Sofista e nel Politico." In *Reading the Statesman, Proceedings of the III Symposium Platonicum*, edited by Rowe, Christopher J., 175-183. Sankt Augustin: Academia Verlag.

"Quanto ci proponiamo di dimostrare, facendo perno su alcuni passi del Sofista e del Politico (come è noto questi due dialoghi nella finzione drammatica presentano lo sviluppo di una discussione che è cominciata nel Teeteto), è che uno dei problemi di fondo della speculazione platonica di questo periodo, quello di individuare i fondamenti ontologici del falso; viene affrontato dal filosofo passando attraverso la questione del non essere inteso non come semplice differenza, ma come apparenza.

Proprio all'inizio della sezione aporetica del Sofista, quando, dopo alcuni tentativi di definire l'oggetto della ricerca - appunto il sofista - ci si è imbattuti nell'ipotesi che questi altro non sia che 'una specie di stregone, un imitatore delle cose che sono (ὅτι τῶν γοήτων ἐστὶ τις, μιμητὴς ὧν τῶν ὄντων, 235 a 1), 'un rappresentante del genere degli illusionisti' (235 b 5), nell'ipotesi che la più corretta denominazione dell'arte sofistica sia quella che la presenta come τέχνη φανταστική, 'arte di produzione delle apparenze' (cfr. 236 c 4), lo Straniero ha annunciato a Teeteto: 'Beato ragazzo, è realmente un ambito di ricerca estremamente difficile quello in cui siamo. Infatti, che una cosa appaia e sembri, ma non sia il dire qualcosa, ma che non sia vero, tutto ciò è pieno di difficoltà sempre, tanto in passato quanto ora. In che modo si debba parlare per dire di opinare che il falso è realmente, e senza che questa asserzione comporti una contraddizione, è una cosa assolutamente difficile da mostrare' (236 d 9 - e 6).

La difficoltà dell'indagine - chiarisce lo Straniero in questo luogo del Sofista - è tutta nella 'audacia di porre come ipotesi che il non essere sia; in nessun altro modo, infatti, il falso potrebbe venire ad essere' (237 a 3-4)." (p. 175)

76. ——. 2018. "La nozione di immagine in Platone, Soph. 240." In ὁδοὶ νοήσαι – Ways to think. Essays in Honour of Néstor-Luis Cordero, edited by Spangenberg, Pilar and Pulpito, Massimo, 395-402. Bologna: Diogene Multimedia.

Abstract: "Questo contributo è un commentario della lettura di Cordero di Platone, Sofista 240. Nel dialogo lo Straniero si meraviglia dell'esistenza del non essere.

La parola chiave dell'argomento è eidolon (immagine). L'esistenza dell'immagine, infatti, comporta l'esistenza del non essere, perché l'immagine è μη ἄληθινοῦ, ἐναντίον ἀληθοῦς (240b5). L'immagine è qualcosa di non vero, di contrario del vero. L'immagine dovrebbe non esistere, eppure essa esiste.

Questa sezione del dialogo è molto aporetica: sebbene molti studiosi ne hanno modificato il testo, Cordero difende la lettura dei manoscritti."

77. ——. 2021. "Mimêsis teorizzata e mimêsis realizzata nel Sofista platonico." In *Platonic Mimesis Revisited*, edited by Julia, Pfefferkorn and Spinelli, Antonino, 193-210. Sankt Augustin: Academia Verlag.

Abstract: "This paper aims at discussing Platonic examples of mimesis in the Sophist, by trying to identify the mimetic figures that show to the reader, in a vivid way, what the characters of the dialogue abstractly theorize. All Platonic dialogues are mimetic, but the Sophist is a privileged point of observation of their "mimeticity" because in the Sophist one of the characters explains what mimesis is, how it works. In addition, such a character does not simply explain this abstractly, but puts mimetic figures in front of the eyes of his interlocutor, just as Plato does with his reader. The question of difference is linked to that of mimesis and plays a crucial role in the Sophist. This question, too, is not only discussed at length but is also presented in front of the eyes of the reader thanks to the figure of the Eleatic Stranger who embodies the difference and makes it visible, just as the Sophist makes visible the misleading nature of not-being. This dialogue, with the aporiai of diairesis, stages the difficulty of drawing the figure of the sophist, who is never staged as a character, but always faced as a problem."

78. Palumbo, Lidia, and Casertano, Giovanni. 1994. "Discorso e realtà nel Sofista platonico." *Atti dell'Accademia di Scienze Morali e Politiche* - Napoli no. 105:281-296.

"Possiamo guardare al Sofista come al supremo sforzo di Platone di concettualizzare la possibilità stessa del discorso e della scienza, nella consapevolezza di tutte le difficoltà che comporta la teoria delle idee (quindi nel tentativo di raffinarla, correggendola e dialettizzandola, esplicitandone tutte le potenzialità e le complicazioni), ma ancora nella profonda convinzione che soltanto essa conserva la possibilità di costruire un «discorso migliore» sulla realtà; non solo, alla maniera di Protagora, da un punto di vista etico e politico, ma anche, alla maniera di Aristotele, da un punto di vista logico e gnoseologico. In questa direzione lo sforzo massimo di Platone è appunto quello di definire il più correttamente possibile: 1) il rapporto che lega il nostro discorso sulla realtà alla realtà che nel nostro discorso viene "rispecchiata"; 2) il significato profondo, e nello stesso tempo le modalità, del nostro «costruire» il discorso: non solo cioè stabilire in generale che cosa è un λόγος, quando possiamo parlare correttamente dell'esistenza di un λόγος, ma anche le regole del λόγος corretto senza le quali il "τὶ" che costituisce l'oggetto del nostro discorso rimane, nonostante tutte le parole che usiamo e che sprechiamo, estraneo alla nostra comprensione ed alla nostra comunicazione (ed è chiaro che questo è il tentativo platonico di superare le difficoltà sollevate da Gorgia); 3) i diversi livelli ai quali dobbiamo porci per capire, e quindi per fissare, le norme per una corretta comunicazione del discorso (e questo era necessario appunto dopo il περί του μη ὄντος. di Gorgia), per fissare che cosa sono «l'essere» ed «il non essere» (τὸ ὄν e τὸ μη ὄν). Questo terzo aspetto nel Sofista è quanto mai importante, non solo perché comporta una riflessione ulteriore sulla teoria delle idee elaborata dal Fedone e dalla Repubblica fino al Parmenide, ma anche perché esprime il più alto e consapevole sforzo di Platone di utilizzare, incorporandole nel vivo del suo pensiero, le riflessioni di un Parmenide, di un Eraclito, di un Protagora, di un Gorgia. Questi autori, infatti, implicitamente od esplicitamente, sono presenti, in tutta l'importanza e la complessità delle loro proposte, nel nostro dialogo." (pp. 281-282, note omesse)

79. Perazzoli, Giovanni. 1999. "Il Nulla e la Chimera. Il Sofista di Platone e la distinzione tra essere della copula e essere

dell'esistenza." Novecento.

"Il rilevamento della presenza o dell'assenza di una chiara delineazione della distinzione tra l'essere come mera «congiunzione» e come «predicato», è stato, soprattutto in ambito neopositivista, l'obiettivo della gran parte dei commentatori del Sofista platonico. L'assunto fondamentale di queste interpretazioni è che la «confusione» logico semantica dei sensi della predicazione, oltre ad essere all'origine dell'aporia centrale del Sofista, l'aporia del nulla, sia in realtà l'errore costitutivo delle indagini filosofiche sull'essere.(1) Le pagine dedicate da Platone alla delineazione dell'aporia del nulla in forza anche della drammatica e disorientante sospensione del rapporto del linguaggio con la logica che vi si realizza, hanno costituito, perciò, un problema molto attraente per tutte quelle concezioni, che attribuiscono ai miraggi del linguaggio i «paradossi» e, in generale, gli stessi problemi della filosofia speculativa." (p. 2)

(...)

"L'indagine, dunque, è rivolta ad esaminare, nella teoria della distinzione dei sensi dell'essere, il senso e la possibilità della distinzione tra il senso dell'«essere» come semplice «copula» e quello dell'«essere» come «predicato». Al contempo, si tratterà di esaminare, in particolari occorrenze testuali, le posizioni di quegli interpreti, ma soprattutto di quei filosofi, che, incontrando in modo più o meno opportuno e felice il problema platonico del «nulla», hanno ritenuto di avere in mano la soluzione del bimillenario «guazzabuglio mentale intorno all'«esistenza'»(3) (secondo la definizione di Russell). L'indistinzione tra l'«essere copulativo» e l'«essere esistenziale» è stata considerata, con varie differenze, come la conseguenza dell'indistinzione «arcaica» tra parola e cosa, tra piano logico e piano ontologico.

In realtà, benché dotata di un'apparente irrefragabile evidenza e di un'enorme fortuna, la distinzione della predicazione copulativa ed esistenziale risulta coinvolta, ben più di quanto immediatamente non appaia, in difficoltà e paradossi ed è ben lungi dal risolvere il problema posto da Platone; e non

risolvendolo entra in crisi essa stessa nella sua ambizione di costituirsi come prospettiva ontologica." (p. 3)

(1) Un esempio di questa tesi si può trarre da Jon Stuart Mill, il quale scrive nel *System of Logic, ratiocinative and inductive: being a connected view of the principles of evidence and the methods of scientific investigation* (London, Longmans, Green, Reader & Dyer, 18728, I, p. 86): «many volumes might be filled with the frivolous speculations concerning the nature of Being, [...] which have arisen from overlooking this double meaning of the word to be; from supposing that when it signifies to exist, and when it signifies to be some specified thing, as to be a man, to be Socrates, to be seen or spoken of, to be a phantom, even to be a nonentity, it must still, at bottom, answer to the same idea; and that a meaning must be found for it which shall suit all these cases. The fog which rose from this narrow spot diffused itself at an early period over the whole surface of metaphysics».

80. Perriello, Ricardo Lucio. 2010. "La metafisica del Sofista nell'orizzonte della protologia (prima parte)." *Salesianum* no. 72:423-444.

Abstract: "In this article I propose to afford an interpretation of the metaphysic of the five genus of the platonic Sophist, on the base of the last hermeneutic paradigm, concerning the studies of the school of Tubinga-Milano. The last hermeneutic paradigm of the platonic thought concentrates the attention on the "unwritten doctrines" and on their metaphysic nucleus, the prothology, doctrine of the supreme principles of the One and the Diades. The One, principle of unity and the Diades, principle of multiplicity, found the being, understood as synthesis of unity and multiplicity. On the base of this general statement of platonic thought and of the articulated metaphysic system, which is founded on this interpretation, I try to interpret the five great genus of Sophist: the being, the same, the different, the movement and the quiet, searching to prove

the transcendence of the being, of the same and of the different on other two genus and their deep valence about the platonic System and about a renovated metaphysic proposal in the actual age."

89. Russo, Nicola. 2011. "Nichilismo del lógos. Il "veramente falso" nel Sofista di Platone." In *Logon didonai. La filosofia come esercizio del rendere ragione. Studi in onore di Giovanni Casertano*, edited by Palumbo, Lidia, 615-627. Napoli: Loffredo.

"... le brevi considerazioni che seguono non hanno lo scopo di "difendere" Platone dall'accusa di nichilismo, ammesso e non concesso che di un'accusa possa trattarsi, né di emendare quelle vulgate, la cui inconsistenza è stata già più volte dimostrata. Il ritorno al testo platonico, invece, risponde a esigenze teoriche, a quelle esigenze suscitate proprio dalla riflessione intorno alla questione del nichilismo.

Una questione che nasce essenzialmente dal problema della verità, decisivo in Nietzsche come in Platone, e che si sviluppa verso l'ontologia in maniera consequenziale, poiché il luogo della verità è proprio il nesso ontologico, l'unità di λόγος e ὄν riconosciuta fin dai suoi primi inizi dalla filosofia greca, quell'equazione parmenidea intorno a cui Platone non si è mai stancato di interrogarsi e che nelle pagine centrali del Sofista considera proprio in riferimento al vero e al falso, all'ente e al non ente. Pagine in cui mostra di avere una consapevolezza molto lucida di quanto andava maneggiando teoricamente e di cosa vi fosse in gioco, tanto che non è infondato il sospetto, che almeno a lui «l'essenza del nichilismo» non fosse affatto «occulta». È allora tramite una breve lettura di alcuni passi di quel dialogo acrobatico – in senso greco –, che cercheremo di saggiare la sostanza del "nichilismo platonico". (p. 614)

90. Sasso, Gennaro. 1991. L'essere e le differenze. Sul Sofista di Platone. Bologna: Il Mulino.

"Poiché, oltre che storiografica, questo libro ha natura teoretica, e anzi proprio quest'ultima apparirà a qualcuno come la sua più autentica, desidero dichiararne subito, o specificarne, l'intento e la tesi. Ho scritto questo libro per far vedere che, malgrado la sua importanza, e lo straordinario acume con il quale l'analisi dell'eleatismo e, in particolare, di Parmenide, vi è stata condotta fino alle estreme conseguenze, il Sofista culmina nella dichiarazione, non però nell'autentica dimostrazione, della «differenza». Ho scritto questo libro perché, convinto come sono che da nessuno la questione della differenza sia stata posta e discussa con altrettanta lucidità, ritengo tuttavia che, pur dopo il tentativo platonico di risolverla, questa resti, per la filosofia, aperta. Ho scritto questo libro, non per risolverla, tale questione; ma piuttosto per mostrare, in forma implicita (e,

qualche volta, esplicita), perché quella tracciata da Platone sia una via che, dopo essere stata seguita fino in fondo, deve tuttavia, con decisione, essere abbandonata. L'ho scritto, infine, per far vedere quante difficoltà la consapevolezza del «fallimento» platonico riveli nel fondo della questione, e quanto lungo, aspro e disagiata sia il cammino che resta, o resterebbe, da percorrere." (Prefazione, 7)

91. Sini, Carlo. 2004. "Il significato politico dell'ontologia di Platone." In *Platone e l'ontologia. Il Parmenide e il Sofista*, edited by Bianchetti, Matteo and Storace, Erasmo, 115-120. Milano: Albo Versorio.

" "Ontologia di Platone" è un'espressione impropria. Essa sembra suggerire che esista una "storia dell'ontologia" in qualche modo presupposta e in sé entro la quale sia possibile e legittimo collocare Platone, come poi Tommaso, Spinoza, Hegel e così via. Penso invece che il Sofista e il Parmenide, cioè i dialoghi ai quali si fa qui espresso riferimento, costituiscano, caso mai, la soglia e la premessa a partire dalla quale qualcosa come l'ontologia si mette in movimento e si rende intelligibile e disponibile nella storia della tradizione filosofica. Non esiste, come se fosse cosa ovvia, una scienza dell'ente, della quale Platone rappresenterebbe un capitolo; al contrario, è con Platone che si inaugura un nuovo senso di ciò che si dice "realtà" e un nuovo senso dell'"essere reale"; è a partire dal gesto inaugurale di Platone che la riflessione filosofica comincia a immaginare e, per così dire, a "sognare" qualcosa come un'ontologia: invenzione di Platone che anche noi moderni non smettiamo di perseguire e di sognare." (p. 115)

92. Sirianni, Filippo. 2020. "ΣΤΑΣΙΣ e ΔΙΑΦΘΟΡΑ. Nota a Sofista 228a7-8." *Elenchos. Rivista di Studi sul Pensiero Antico* no. 41:141-155.

Abstract: "Passage 228a7-8 of Plato's Sophist has been the object of a broad debate by reason of a number of subtle interpretative problems. The present work attempts to take stock of this passage and to put forward a satisfying solution from both a philological and an exegetic perspective. I seek to show that the reading cited by Galen and adopted in the

editions of the Sophist (τῆν τοῦ φύσει συγγενοῦς ἕκ τιος διαφορᾶς διαφορᾶν) cannot be preferred to the variant found in the manuscripts of the dialogue (τῆν τοῦ φύσει συγγενοῦς ἕκ τιος διαφορᾶς διαφορᾶν). As for the interpretation, both readings stand out as problematic. I propose to reconsider the interpretation of the syntagma τοῦ φύσει συγγενοῦς and to translate it as “the natural kinship” rather than as “what is naturally kindred”.

The paper continues with an analysis of the role played by kinship in Plato’s philosophy, showing how its sundering can be identified with stasis.

93. Valle, Manuela. 2016. Un'antica discordia. Platone e la poesia: Ione, Simposio, Repubblica e Sofista. Napoli: Paolo Loffredo iniziative editoriali.

“Vi è un’antica discordia tra filosofia e poesia”: così si esprime Socrate nel X libro della Repubblica e possiamo convenire che tale controversia certamente antica sia, almeno per Platone. Lungo l’intero arco della sua vita da filosofo e da scrittore filosofico, Platone si pose il problema del confronto con la poesia e i poeti. Ione, Simposio, Repubblica, Sofista costituiscono quattro momenti fondamentali in cui tale confronto si è articolato ed è ad una loro analisi, insieme contenutistica e formale, che questo libro è dedicato. Più che ad una discordia, l’impressione è che si assista ad una ripetuta insoddisfazione rispetto ai risultati raggiunti nelle indagini sulla poesia, ancora una volta sfuggente. La diaphora è allora, in fondo, una “distanza”, oltre che antica, salutare, perché è là che si origina l’esigenza di una nuova ricerca.”

94. van Eck, Job. 2007. "L'analisi platonica del falso. Una vetta nella storia dell'analisi logica." Rivista di Storia della Filosofia no. 62:635-646.

Traduzione dall'inglese di Mauro Bonazzi.

"Eppure rimangono dei testi non ancora adeguatamente compresi. Un esempio significativo è la parte centrale del Sofista (237-264), dove Platone affronta il problema del falso. L'obiettivo di fondo del dialogo è descrivere il sofista

imbrigliandolo in una definizione. I due personaggi principali, Teeteto e uno 'Straniero di Elea', intendono presentare il sofista come un illusionista che crea false opinioni. Ma il sofista non cade facilmente nella rete replicando che il concetto di falso è problematico. Chi ha una falsa opinione o pronuncia una falsa asserzione crede o dice qualcosa che non è. Ora, ciò che non è non esiste.

Ma come possono un'opinione o un'asserzione rappresentare qualcosa che non è, vale a dire qualcosa di cui non si può dare una rappresentazione? Come possono un'opinione o un'asserzione essere false? Di questo problema si discuteva nella seconda metà del V sec. a.C. in un contesto segnato dallo scetticismo e dal relativismo tipici del movimento sofistico del tempo. L'idea che nessuno possa pronunciare una falsa asserzione e che contraddire sia impossibile è attribuita a Protagora (490-420 a.C.), l'esponente di spicco della sofistica, e ben si adatta al soggettivismo da lui professato: non c'è una realtà oggettiva, esiste soltanto il mondo dell'esperienza soggettiva di cui non si danno affermazioni con validità oggettiva. Tutto ciò che appare ad ognuno, ogni percezione e ogni opinione possiedono la stessa validità soggettiva. Le opinioni di ciascuno sono per ciascuno vere: 'L'uomo è la misura di tutte le cose'. Il problema del falso e l'idea che non si possa distinguere tra asserzioni false e vere era alla radice di una diffidenza generale circa la possibilità della conoscenza scientifica, cioè oggettiva; questo problema aggiungeva benzina al fuoco dello scetticismo circa la possibilità che il pensiero e le argomentazioni funzionassero come mezzo per arrivare a dei giudizi in grado di pretendere validità oggettiva.

Ecco perché risolvere questo problema era importante non soltanto da un punto di vista logico." (p. 636)

95. Vegetti, Mario. 2004. "Struttura e funzioni della dicotomia nel Sofista." In Platone e l'ontologia. Il Parmenide e il Sofista, edited by Bianchetti, Matteo and Storace, Erasmo, 95-104. Milano: Albo Versorio.

Ristampato in: Gastaldi, Silvia, Calabi, Francesca, Campese, Silvia and Ferrari, Franco (a cura di), Dialoghi con gli Antichi,

Sankt Augustin: Academia Verlag 2007, pp. 123-131.

"Per avvicinarci a una comprensione in positivo della natura e del senso della dialettica dicotomica, è bene considerare il modo con cui essa viene delineata nel disegno dialogico del Sofista. Si tratta, come è ben noto, di dare la caccia al personaggio omonimo, che a sua volta è un cacciatore, di seguirne le tracce (ichne), di afferrarlo e chiuderlo in una rete: come ha osservato Bernadete, il linguaggio della caccia - che comporta una valenza euristica - appare dominante nel dialogo. Ma come condurre questa caccia a una figura di cui è noto soltanto il nome?"

Il primo aspetto saliente del dialogo è che il procedimento che verrà seguito risulta introdotto senza formulare alcuna regola metodica, per la quale occorre attendere il riepilogo - a cose fatte - delineato alla fine del dialogo (264d-e). Poiché nella finzione dialogica il Sofista precede il Politico, e non è lecito d'altra parte presumere che lo Straniero di Elea avesse assistito alla conversazione fra Socrate e Fedro sulle rive dell'Ilisso (su cui dovremo tornare), nel contesto del dialogo viene presentato un esperimento privo sia di regole sia di precedenti, e come tale esso andrà qui rapidamente riconsiderato." (p. 97)

96. Vitiello, Vincenzo. 2004. "Incontro sul Parmenide e il Sofista." In Platone e l'ontologia. Il Parmenide e il Sofista, edited by Bianchetti, Matteo and Storace, Erasmo, 107-114. Milano: Albo Versorio.

"Mi fermerò in particolare sul Parmenide che costituisce da sempre - e ancora - un problema aperto." (p. 107)

(...)

"Qualche parola ancora sul Sofista - solo a smentire la falsa convinzione che con questo dialogo Platone scioglie le "contraddizioni" del Parmenide, trasforma l'aporia in euforia, la via bloccata in strada di passaggio.

Fermiamoci sulla koinonia ton genon. Bene, cosa dice questa comunione di generi? Che essere non è diverso, ma si partecipa del diverso - fosse il medesimo che diverso, non potremmo dire che l'identico "è". E lo stesso va ripetuto per moto e quiete. Ma

... , ma per parteciparsi a moto e quiete, a identico e diverso, moto e quiete, identico e diverso in qualche modo debbono già "essere". Come, se già non fossero, essere potrebbe ad essi parteciparsi?

E non si dica che solo perché essere si partecipa ad essi, identico e diverso, quiete e moto sono. Perché se identico è solo dopo che essere gli si partecipa, allora essere conferisce ad identico con l'essere l'identità, e così al diverso, alla quiete e al moto. In entrambi i casi all'essere che è diverso dagli altri quattro generi s'aggiunge altro essere che è - in qualche modo - tutti i generi, non essendoli. In qualche modo: in quale? In quello che Platone ci ha detto nel Parmenide. Al modo dell'essere non essendo, del disdire disdicentesi." (p. 112)

Platón: Sofista. Bibliografía comentada de estudios en Español

Bibliografía

1. Aguirre, Javier. 2010. "El Sofista de Platón y la concepción aristotélica del ser." Revista aguna:53-62.

Resumen: "En el capítulo M4 de la Metafísica, Aristóteles critica la dialéctica practicada por Sócrates achacándole su falta de «vigor dialéctico». Asimismo, en N2, Aristóteles critica la dialéctica practicada por «los dialécticos» imputándoles el modo arcaico en que se plantean el problema del ser. Hay numerosos indicios que apuntan que con el término «dialécticos» Aristóteles se está refiriendo a Platón y a los platónicos, y de que es a ellos a quienes atribuye el «vigor dialéctico». Aristóteles es consciente, por consiguiente, de los méritos y de las deficiencias de la dialéctica platónica, y más concretamente la practicada por Platón en el Sofista. En el desarrollo de su propia concepción del ser (to on) en los libros centrales de la Metafísica, Aristóteles tiene presente el contenido de este diálogo y trata de superar tanto las dificultades planteadas por los eléatas como las propias deficiencias en el modo platónico de entender el ser."

2. Aguirre Sala, Jorge Francisco. 1994. "La falsedad en el pensamiento y en el discurso. Comentarios al Sofista 259b al 265e." Revista de Filosofía (México) no. 27:432-434.

"En el presenta artículo nos proponemos elaborar una digresión sobre uno de los temas más controversiales en Filosofía: las relaciones entre el ser y la falsedad. Queremos asimismo tomar lo más directamente posible el texto de Platón

porque no queremos perder a nuestro autor entre sus miles de comentaristas." (p. 432)

3. ———. 2001. "La ontología platónica de los géneros supremos I." *Analogía (Filosófica) Revista de filosofía*, México no. 15:121-156.

Segunda parte: *Analogía (Filosófica) Revista de filosofía*, México, 15, 2001, pp. 123-137.

"Con Platón y acompañado de sus múltiples comentaristas e intérpretes se nos ofrece, al menos, dos modos de abordar el mundo; tarea que todo humano debería hacer de vez en cuando, pero si por oficio se es filósofo, nunca debe despreciarse ni tomar demasiado a prisa tan atractivo ofrecimiento. Uno de estos modos parte desde los arquetipos - esas instancias inventadas por Platón para explicarse, precisamente, el mundo- y tiende hacia las cosas, el mundo físico tal y cual lo percibimos en nuestra experiencia cotidiana. Este camino podríamos denominarlo como la "vía deductiva". El otro derrotero, en el mismo sentido y propósito, pero en dirección contraria, va desde las cosas hacia sus arquetipos, esas instancias pretendidamente justificadoras, fundadoras que nos hacen inteligible el mundo. A esta vía podríamos denominarla el "camino fenomenológico", en el sentido de que lo primero que nos aparece es un "acontecer", es "lo que sucede", lo que la cosa "manifiesta" en el plano inmediato." (p. 121)

4. Álvarez, Lucas. 2008. "El Sofista como pseudorgós: sus posibles sentidos." *Circe de clásicos y modernos* no. 12.

Resumen: "En Sofista, Platón alcanza simultáneamente la definición más acabada y la crítica más severa a propósito de la figura del sofista.

Éste aparece allí como un pseudorgós. Mediante el uso de eídola legómena los sofistas pretenden demostrar que pueden producirlo todo para así engañar a jóvenes desorientados.

Hasta aquí la letra platónica pero, ¿qué otro sentido se puede pensar respecto de este título de 'hacedor de falsedades'? Teniendo en cuenta la concepción del lenguaje propia de la

sofística es posible entender ese mote como un indicador del estatuto propio no sólo del lógos demiúrgico sino también de la pólis hecha por y para sus palabras."

5. ———. 2014. "Las figuras del justo y del injusto en República II como antecedentes del sofista y del filósofo en Sofista de Platón." *Nova Tellus* no. 32:9-43.

Resumen: "Teniendo en cuenta la construcción de personajes o figuras realizada por los interlocutores de los diálogos platónicos, aquí nos ocuparemos de estudiar la de los sujetos justo e injusto (efectuado por Glaucón y Adimanto en República II) y la del sofista (consumada por el Extranjero de Elea y Teeteto en el diálogo Sofista), sin perder de vista la singular presentación que se hace del filósofo en este último diálogo. Establecidas esas cuatro figuras, buscaremos explicitar las relaciones que hacen de las primeras antecedentes de las últimas. Finalmente, destacaremos las consecuencias que se derivan de dichas relaciones para la comprensión de la interpretación platónica del filósofo y de su principal adversario, el sofista."

6. ———. 2016. "La función propedéutica del sofista y la emergencia del filósofo. División, dialéctica y paradigmas en el diálogo Sofista." *Areté* no. 28:337-366.

Resumen: "El propósito de este trabajo es examinar la cuestión de los objetivos planteados por Platón en el diálogo Sofista. En primer lugar, procuramos echar luz sobre el objetivo general que se estaría trazando en el prólogo de la obra, allí donde el Extranjero de Elea comienza a demostrar su estatus filosófico. En segundo lugar, nos ocupamos de ubicar la caracterización del sofista en el marco de ese objetivo, interpretando el resultado de dicha caracterización como un παράδειγμα implícito que prepara la ejecución de la dialéctica y anticipa los rasgos de un objeto clave de esa ciencia."

7. ———. 2017. "El no-ser como diferencia y el sofista como diferencia: hallazgos ontológicos y estrategias refutativas en el diálogo Sofista." *Hypnos* no. 39:238-257.

Resumen: "En este trabajo, nos ocuparemos de dos cuestiones vinculadas al concepto de lo diferente, el gran hallazgo del diálogo Sofista. En primer lugar, intentaremos aclarar el estatus específico que adquiere el no-ser relativo, en la medida en que es posible leer dicho no-ser como la diferencia tout court o como una parte de esa diferencia, debido a una aparente oscilación del texto platónico. En segundo lugar, iluminaremos la particular caracterización del sofista que, al ser entendido como lo diferente del sabio, termina funcionando como un modelo a pequeña escala que anticipa de forma proléptica aquel no-ser relativo."

8. ———. 2019. Platón frente al sofista. Buenos Aires: Teseopress.

5. Los objetivos del diálogo Sofista 195; 6. El filósofo platónico: su método y sus objetos 225;

Conclusiones 335; Abreviaturas 343; Bibliografía 347-388.

"Blanco preferido de los ataques platónicos contra dichas formas de sabiduría (o, en realidad, de pretendida sabiduría) es el sofista quien resulta severamente cuestionado a lo largo de todo el corpus platonicum. En este trabajo, nos ocuparemos del punto culminante de ese cuestionamiento alcanzado en el diálogo Sofista. Según intentaremos mostrar, en esa obra de su etapa tardía, Platón logra articular su crítica más aguda contra ese adversario con la postulación de una renovada ontología, y todo ello a través de la noción de alteridad.

Nuestro estudio, de hecho, gira en torno a esa noción; gira, más precisamente, en torno a dos modalidades específicas de la alteridad. Hablamos, en principio, de la doble alteridad que comporta el propio sofista a los ojos de los interlocutores, pues

siendo lo otro del filósofo, es, en simultáneo, aquel que hace siempre de otro, pero además de la alteridad que implica el no-ser equiparado, en el marco de una novedosa propuesta ontológica, a la Forma de la Diferencia." (p. 11)

9. Álvarez, Lucas M. 2014. "Platón: el filósofo y el sofista a la luz del paradigma teatral." In *El filósofo y sus adversarios en los escritos de Platón y Aristóteles*, edited by Marcos, Graciela Elena and Díaz, María Elena 50-69. Buenos Aires: Editorial Rhesis.
10. Anchepe, Ignacio Miguel. 2017. "¿Existen los fantasmas? Sobre imagen (eidolon) y conocimiento en el Sofista de Platon." *Praxis Filosófica* no. 44:37-58.

Resumen: "En el Sofista, Platón revé algunos puntos clave de su teoría del conocimiento, tales como la teoría de las Formas y la noción de imagen (eídolon). Según algunos intérpretes (Ringbom, Palumbo, Deleuze, Audouard), este diálogo contendría la decisiva novedad de que entre conocimiento verdadero y conocimiento falso hay una notable paridad: ambos recurren a imágenes, el verdadero al eikón y el falso al eídolon (según diálogos anteriores, la imagen está reservada a las formas inferiores de conocimiento, lindantes con lo apariencial y lo falso). En este trabajo me propongo discutir estas interpretaciones. No hay duda de que el Sofista revisa el estatuto de las imágenes falsas, no obstante creo que no llega a establecer la aludida equiparación entre ambos tipos de conocimiento. Incluso en este diálogo —argumentaré— el conocimiento verdadero continúa funcionando de un modo cualitativamente distinto respecto del falso, sin recurrir a imágenes o haciéndolo lo menos posible."

11. Bossi, Beatriz. 2011. "¿Por qué Platón no refuta Parménides en el Sofista?" In *Formal Structures in Plato's Dialogues: Theaetetus, Sophist and Statesman*, edited by Lisi, Francesco Leonardo, Migliori, Maurizio and Monserrat-Molas, Josep, 180-192. Sankt Augustin: Academia Verlag.
12. Carrasco Campos, Ángel. 2007. "Reinterpretación del proyecto filosófico de Platón: una lectura del Sofista." *Revista Bajo Palabra* no. 2:43-55.

Resumen: "En este ensayo nos proponemos analizar las figuras del sofista y del filósofo a partir de una lectura del Sofista de Platón. Para ello haremos uso del concepto de sabiduría de Giorgio Colli, con el fin de ver el clásico debate entre filósofos y sofistas como una lucha, con auténticas implicaciones filosóficas y sociales, por la herencia del rol del sabio arcaico en el nuevo contexto de la polis griega."

16. Cordero, Nestor-Luis. 2013. "El extranjero de Elea, "compañero" de los parmenídeos ... desde 1561." *Méthexis* no. 26:51-58.

Abstract: "From 228d of the *Sophist* Plato deals with diseases of the soul, and argues that the most serious is ignorance (agnoía). And in a completely unusual way, he presents the sophist as someone who would be able to purify the soul and cure it of ignorance. The method used by the sophist seems even in its most precise details the activity of the "Platonic Socrates". Since the context of the *Sophist* is exclusively ontological (the subtitle of the dialogue is *About Being*), as Socrates was not interested of "Being" (as nor the sophists), not should wonder that Plato assimilate Socrates to them, even if he is considered a sophist "of noble lineage".

"Ha llegado el momento de hacer lugar a nuestro tema en esta presentación: la autocrítica que (¿quizá?, ¿seguramente?) encontraremos en cierto momento en la producción de Platón. Para que la noción de autocrítica pueda aplicarse a un filósofo de la Antigüedad, deben tenerse en cuenta circunstancias materiales y conceptuales. Desde el punto de vista concreto, el autor en cuestión tiene que haber escrito más de un trabajo (6) y debe conocerse, con un margen mínimo de error, el orden cronológico de la escritura de sus obras.(7) Platón cumple con ambos requisitos.(8)

Las circunstancias conceptuales que permitirían aplicar la noción de autocrítica dependen de la manera o del tipo de filosofar del autor. Utilizamos la fórmula "tipo de filosofar" en vez de la esperada categoría de "filosofía" porque, en el caso de Platón, el hecho de evitar expresarse mediante tratados(9) nos invita a privilegiar la actividad filosófica que resulta del diálogo, con idas, venidas, juego de caracteres, incluso rasgos de humor, en desmedro de un eventual "sistema" que, a nuestro juicio, no existe en Platón. Y bien: este tipo de filosofar, propio de Platón, ¿admite la autocrítica? Evidentemente. Que la autocrítica se lleve a cabo, es otro problema (y, si el lector persiste y llega hasta la conclusión de este trabajo, se convencerá de que realmente se produjo). (pp. 15-16)

(6) Los partidarios de la existencia en Platón de "doctrinas no escritas" encuentran natural que en sus escritos se critique. Es el caso de Maurizio Migliori (1990: 155), quien escribió: "No nos extraña [...] La presentación escrita de la mayor parte de la filosofía de Platón es sustancialmente insuficiente".

(7) Esta condición, ausente en el caso de Aristóteles, explica la interminable discusión respecto de la evolución (o no) de su pensamiento. Un caso ideal, en cambio, es el de Plotino, cuyo discípulo Porfirio ordenó sus tratados por orden a la vez temático y cronológico.

(8) La cronología generalmente aceptada en la actualidad se basa en el estudio estilométrico del filólogo polaco Wincenty Lutoslawski (1897: *passim*). Otro especialista de la cuestión, Leonard Brandwood (1990: 2), no duda en afirmar que el “greater consensus” que existe hoy respecto de la cronología se debe al éxito del método estilométrico.

(9) Las conocidas críticas de Platón a la escritura son más bien críticas a los tratados filosóficos: véase Fedro 275d y Carta VII 344c.

18. ———. 2017. "El extraño purificador del alma del Sofista de Platón (228d-231b)." *Nova Tellus* no. 35:83-95.

Resumen: "A partir de 228d del Sofista, Platón se ocupa de las enfermedades del alma y sostiene que la más grave es la ignorancia (agnoía). De manera totalmente inusual, presenta al sofista como alguien que sería capaz de purificar el alma y de curarla de la ignorancia. El método utilizado por el sofista reproduce hasta en sus detalles más precisos la actividad del “Sócrates platónico”.

Dado que el contexto es exclusivamente ontológico (se subtitula *Sobre el ser*), como Sócrates no se ocupó “del ser” (ni los sofistas), no debe extrañar que Platón lo asimile a ellos, si bien se trata de un sofista “de buen linaje”.

19. ———. 2019. "El extraño no-ser descubierto por Platón en el Sofista." In *Nunc est Bacchandum. Homenaje a Alberto Bernabé*, edited by Piquero, Juan, de Paz, Pablo and Planchas, Soraya, 223-230. Madrid: Guillermo Escolar Editor.

"No caben dudas de que la frase principal del Sofista es la siguiente: "Cuando hablamos de lo que no es, no hablamos de algo contrario a lo que es, sino sólo de algo diferente (héteron)" (257b)."

(...)

"La lectura que ya propusimos hace años en nuestras traducciones al español y al francés, héteron, se encontraba sin duda en el ejemplar griego que poseía Marsilio Ficino, quien, en 1482, tradujo "Eleatem quidem natione, longe vero alterum ac dissimilem a Parmenide et Zenone suis aequalibus", y otro tanto puede decirse de la fuente utilizada en 1552, en Lovaina, por Petreio Tiara, un médico frisio, en su traducción latina: "itemque alterum quendam Parmenidis Zenonisque familia". Por último, podemos recurrir a la autoridad de H. Estienne, en cuya edición de 1578 se lee también la lectura héteron. Inexplicablemente, estos códices que yo cito en apoyo de héteron, que ya habían sido utilizados por A. Diès en 1925, no fueron tenidos en cuenta en la nueva edición de Oxford de 1995, a cargo de D.B. Robinson.

(...).

En nuestra comunicación nos vamos a ocupar de esta noción de héteron, central en el Sofista, la cual le permite a Platón justificar la existencia del no-ser, en realidad de "cierto" no-ser, un no-ser un tanto extraño que, como intentaré demostrar, influyó, con su intrusión en el ámbito de las Ideas, nada menos que a la noción de ser, esa también extraña idea tou óntos que Platón presenta en la página 254a8." (pp. 223-224)

20. ——. 2020. "Parménides y la concepción ante-predicativa de la verdad." Archai. As origens do pensamento ocidental no. 30:1-21.

Resumen: "Platón sostiene que, para confirmar que el sofista es un fabricante de ilusiones (Sph.262d8), hay que refutar la tesis de Parménides que afirma que sólo existe – según Platón lo interpreta – el ser absoluto. Muy probablemente un eco de esta tesis se encuentre en Antístenes, a quien Platón parece aludir en el Sofista, para quien "lo que es, es verdadero". Esta

concepción de la verdad se conoce como “ante-predicativa” u ontológica, y, según Heidegger, sería originaria. No es así. Desde Homero y hasta Parménides, la verdad (o falsedad) fue siempre atribuida a un discurso o a un pensamiento, jamás a un ente. La concepción “ante-predicativa” de la verdad fue una creación de la filosofía, que probablemente comenzó con Parménides y continuó con Antístenes. Cuando Platón la refuta, en la segunda parte del Sofista, no hace sino regresar al pasado, pues hace del discurso el “lugar” de la verdad.”

21. ———. 2021. "Acerca del Sofista de Platón." Parerga. La Revista de la SFPA no. 3:7-49.

"1. El lugar del Sofista en la trayectoria filosófica de Platón.

El conjunto de soluciones que ha propuesto cada pensador como respuesta a las cuestiones filosóficas fundamentales, y que la posteridad denomina, a veces abusivamente, su “sistema”, es, en la mayoría de los casos, el resultado de un largo camino, incluso de una cierta “evolución”. La cumbre de esta evolución coincide, en algunos filósofos, con sus últimas obras; en otros casos, se alcanza durante cierta etapa de su carrera filosófica, y sus posteriores obras son sólo aclaraciones o retoques de lo que ya expuso; finalmente, estamos ante el caso de los autores que, después de haberlo dicho todo, encuentran fisuras en los sólidos cimientos que habían construido y que no dudan en analizar el origen de esas flaquezas y en emprender nuevos enfoques. Este es el caso de Platón." (p. 7)

22. ———. 2021. "Segun Platon los 'mortales' de Parmenides son los antepasados de los sofistas." Eidos no. 36:397-419.

Resmen: "¿Por qué cuando Platón quiere justificar su definición del sofista como un «fabricante de imágenes» (Sofista, 236c), se apoya sobre dos versos auténticos de Parménides (fr. 7.1-2) que aluden, sin duda alguna, al camino recorrido por los «mortales que nada saben» (fr. 6.4)? ¿Quiere acaso sugerir que esos «mortales», que son en realidad «fabricantes de opiniones» (doxaí), son un antecedente de los sofistas, que son «fabricantes de imágenes»?"

25. Di Camillo, Silvana Gabriela. 2007. "El problema del lógos falso en el Eutidemo y su solución en el Sofista." *Hypnos* no. 13:1-15.

Resumen: "El problema del discurso falso en Platón se plantea en el diálogo Eutidemo pero encuentra su máxima elaboración en el Sofista. En este trabajo intentaremos mostrar que Platón no podía, a la altura del Eutidemo, resolver el problema del discurso falso, puesto que la solución implicaba operar un cambio profundo en su ontología, que se haría efectivo recién en el Sofista. Allí él concibe al lógos como combinación de nombres que se corresponde, pero no se identifica con la combinación que se da en la realidad. La distinción entre lógos y prágma constituye una de las claves para que el problema del discurso falso reciba una solución definitiva."

26. Echaury, Raúl. 1996. "Ser y no ser en el Sofista de Platón." *Sapientia* no. 51:327-334.

"El ser y lo diferente penetran todos los géneros, y éstos son en la medida en que participan del ser, pero no son cuando participan de lo diferente, ya que, al hacerlo, resultan distintos del ser y, debido a ello, no son. En tal sentido, las cosas «en muchos casos son, y, en muchos otros, no son»(26).

El no ser se mezcla también con el juicio y con el discurso (X6yoQ). Si no fuera así, no habría juicios, ni discursos falsos, los cuales expresan lo que no es. Pero «nadie piensa — argumenta el sofista— ni dice lo que no es: pues el no ser no participa en modo alguno de la realidad (οὐσία)»(27).

Por su parte, la realidad (οὐσία) resulta expresada por dos tipos de sonidos: el verbo, que indica las acciones, y el nombre, que señala el sujeto que las ejecuta. En el discurso verdadero,

ambos se combinarán a fin de expresar algo acerca de lo que los seres son, y en el falso, manifestarán cosas diferentes de las que son. Aunque no sea quizás el objetivo principal del diálogo, éste tiene como «fin confesado —escribe Diés al respecto— resolver el problema del error; para establecer la posibilidad del error, se trata de demostrar la existencia del no-ser»(28). (p. 333)

27. Flórez, Alfonso. 2012. "Entre la semejanza y la apariencia. La reflexión sobre la imagen y la captura del sofista en el Sofista de Platon." *Pensamiento* no. 68:357-371.

Resumen: "En el diálogo el Sofista de Platón el tema de la imagen ocupa un lugar central. En efecto, la captura del sofista que se proponen los interlocutores puede llevarse a cabo sólo en la medida en que el sofista, hábil constructor de imágenes, pueda ser apresado en una de las clases de la imagen.

Para ello en el diálogo se recurre a diversas imágenes habladas que deben entenderse según las propias determinaciones del diálogo sobre la imagen, por lo que el resultado del diálogo puede alcanzarse sólo gracias a la reflexión de él sobre sí mismo en el ámbito de la imagen."

28. Forciniti, Martín. 2014. "Erótica de las estatuas y retórica de los fantasmas. Una contraposición entre las producciones miméticas del filósofo y el sofista en Platón." *Hypnos* no. 33:259-282.

Resumen: "En este trabajo comparo el vínculo erótico entre el filósofo y su joven amado, tal como es descrito en Fedro 249b-256b, con la relación retórica que el sofista establece con el pueblo, según Sofista 232b-236d y 265a-268d.

Postulo que se trata de dos casos estructuralmente análogos de producciones miméticas. El primero da como resultado un ágalma, ("estatua sagrada"), mientras que el segundo genera un phántasma ("simulacro"). Identifico las semejanzas y

diferencias entre los elementos que participan de cada producción, para concluir poniendo en cuestión la pretendida inocuidad de la erótica filosófica, así como la supuesta nocividad de la retórica sofística."

29. Gómez-Lobo, Alfonso. 1979. "Platón, Sofista 256 e 5-6." *Crítica* no. 11:3-13.

"En este trabajo me propongo contribuir a dilucidar el sentido de dos líneas del Sofista de Platón.(1) En la primera parte presento una sumaria interpretación del contexto en que se encuentran. En la segunda, las cito en el original y examino críticamente la interpretación de G. E. L. Owen procediendo luego a proponer una interpretación diferente." (P. 3)

(1) He utilizado el texto del Sofista establecido por J. Burnet, *Platonis Opera*, Vol. I, Oxford: Clarendon Press, 1905. Este trabajo presupone la pequeña revolución copernicana en la interpretación de este diálogo que tuvo lugar hacia fines de la década del 60. La línea interpretativa desplazada es la de F. M. Cornford, *Plato's Theory of Knowledge*. London: Routledge, 1935 (hay traducción al castellano de N. L. Cordero y M. Ligatto, Buenos Aires: Paidós, 1968). La línea interpretativa que ha terminado por imponerse entre un número creciente de estudiosos es la introducida por M. Frede, en *Prädikation und Existenzaussage*, Göttingen: Vandenhoeck und Ruprecht, 1967 y por J. Malcolm, "Plato's analysis of to on and to me on in the Sophist", *Phronesis* 12 (1967) 118-129.

30. ———. 1979. "Platón Sofista 244 b 6 - d 12." *Diálogo* no. 10:131-137.

"En un valioso artículo publicado por *Diálogos*, Año VII, 19 (1970) 73-82 el profesor O. N. Guariglia interpreta un pasaje del Sofista de Platón (244 b 6- 245 e 2) en que se formulan dos argumentos contra la tesis eleática de que sólo lo uno existe. El artículo, invirtiendo el orden del texto, trata primero el segundo argumento que, como nos muestra muy claramente Guariglia, se basa en la ley de la transitividad de la identidad, sin mencionarla.

Me veo obligado a disentir en cambio respecto a la interpretación de la primera argumentación (244 b 6 · d 12, expuesta en las pp. 75-82 del artículo)." (p.131)

(...)

"Mis objeciones apuntan básicamente a lo siguiente: (a) Platón no posee una teoría de la predicación lo suficientemente desarrollada como para que sea razonable pensar que dentro de un mismo argumento opere conscientemente con ella y luego pase a su semántica habitual de "denominación".

En esto me parece que puedo contar con el consenso del Prof. Guariglia (p. 78, 4º aparte), (b) Interpretando de una y la misma manera la relación palabra-objeto se puede dar un buen sentido a ambas partes del texto; y (e) Parménides 142 b 5. e 5 no posee la misma estructura que el argumento en discusión." (p. 132)

31. González Ruiz, Oscar Leandro. 2016. "Más allá de presupuestos ontológicos: la posibilidad de la falsedad en el Sofista de Platón." Saga: Revista de Estudiantes de Filosofía no. 17:52-63.

Resumen: "Es un lugar común de la interpretación de la teoría platónica del conocimiento, el verla como sostenida bajo la presuposición de dos 'órdenes ontológicos' distintos: el mundo de las apariencias y el mundo de las ideas. A dichos 'mundos' corresponden distintas características que, a su vez, determinan dos posibilidades del conocimiento. Así, en el llamado 'mundo aparente', solo sería posible la opinión (doxa); en efecto, al estar referida a los objetos de un mundo de apariencias en constante devenir, la doxa se hace intrínsecamente pasible de falsedad. Este ensayo no tiene como propósito entrar a discutir directamente si la distinción platónica, entre doxa y episteme, efectivamente tiene como fundamento dicho dualismo. Más bien, indagaré las razones por las cuales se considera que la doxa es pasible de falsedad en el Sofista, con el objetivo de mostrar que –contrario a la interpretación precedente– Platón no vincula necesariamente dicha falsedad al hecho de que la doxa esté circunscrita a un

supuesto 'mundo aparente' esencialmente falso. Con ello, tendremos elementos de juicio para poner en cuestión, de manera preliminar, la tesis según la cual a distintas formas de conocimiento (episteme y doxa), se debe hacer corresponder distintos órdenes ontológicos (mundo de las ideas y aparente, respectivamente)."

32. Guariglia, Osvaldo. 1970. "Platón, Sofista 244b6-245e2: la refutación de la tesis eleatica." Diálogos no. 7:73-82.

"Dentro de la revisión sumaria de las antiguas teorías sobre el ser (242c - 251a), que sirve de conclusión a la primera parte del Sofista y al mismo tiempo de transición al próximo tema -a saber: el problema de la predicación y el de las proposiciones negativas (251a - 259d), donde el diálogo alcanzará uno de sus puntos culminantes, filosóficamente hablando, Platón nos ofrece una breve discusión de la teoría eleática, que consta de dos argumentaciones, una que comienza en 244b6 y termina en 244d13 y una segunda que comienza inmediatamente a continuación (244d14) y terminará en 245d11." (p. 73)

(...)

"Se advertirá de inmediato que en este planteo hay de hecho dos cuestiones envueltas : (1) ¿a qué llaman ser los eleatas? y (2) ¿qué están realmente afirmando cuando dicen que 'el Todo es uno'?" (p. 74)

33. Iglesias, Mercedes. 1994. "La alteridad en el Sofista de Platón." Revista de Filosofía (Venezuela) no. 19:1-19.

Resumen: "Él presente trabajo trata del concepto de participación en El Sofista de Platón.

El propósito fundamental del texto es epistemológico; pero, sin embargo, toca la dimensión ontológica.

Hay tres tipos de participación: 1) Participación de las Ideas entre sí, 2) Participación del alma a las Ideas y 3) Participación de los elementos sensibles a las Ideas. La participación es posible por cuanto el Ser no es más Absoluto. El Ser es y no es; el no-ser no es y es. El No-Ser o Diversidad será otra forma de ser del no-ser.

Identidad y Diversidad participarán con todas las demás formas."

Abstract: "In Sophist 237b-239c Plato presents three puzzles designed to show that nothing can be thought or said about the not-being: what is not in any way ("to medamos on") cannot even be unthinkable or unsayable. This paper argues that these puzzles involving the not-being are parallel to those raised with respect to falsehood, which are exploited by Plato in order to prove that false statement is possible. While "what is not in any way" cannot be denied, because this negation forces us precisely to what we are trying to deny-the being of not-being, in denying the falsehood, the Sophist is bound to accept that the false in some respect is ("einai pos")."

37. ——. 1993. "Συμπλοκή en el Sofista de Platôn. Su posibilidad y alcance." Cuadernos de Filosofía no. 24:55-71.

"What Plato means by «combination» in the Sophist is extremely difficult to establish. In this paper, I try to elucidate the point by considering the concept of συμπλοκή in the light of the Platonic argument in support of the claim that there must be a combination. Firstly, I examine the several verbs used to express the notion of combination in the dialogue. Secondly, I analyse the arguments by which Plato proves that there is a συμπλοκή (251e-252e), to show that the denial of combination is rejected on linguistic and specifically ontological grounds. The conclusion brings out useful consequences concerning Plato's theory of συμπλοκή των ειδων."

38. ———. 1995. Platón ante el problema del error: la formulación del Teeteto y la solución del Sofista. Buenos Aires: Fundec.

Prefacio de Nestor-Luis Cordero.

39. ———. 1997. "Discurso y no ser en Platón (Sofista 260a-263d)." *Synthesis* no. 4:61-83.

"El problema de la falsedad enfrentó a Platón con los sofistas de su época e indirectamente con el "padre Parménides", de cuya ontología derivaba la tesis sofística de la imposibilidad de lo falso. Si no hay no ser y es imposible pensarlo o decirlo -argüía el sofista apelando, hábilmente, a la autoridad del fundador del eleatismo- es imposible pensar o decir algo falso, ya que la falsedad no es otra cosa que pensar o decir "lo que no es" (το μη ὄν). A combatir este argumento se consagraron los esfuerzos de Platón en el Sofista, uno de cuyos principales logros es brindar una solución definitiva al problema. Al cabo de una ardua investigación que ocupa buena parte del diálogo, Platón consigue por fin demostrar que el discurso (λόγος) no es forzosamente verdadero sino que puede, en ocasiones, ser falso, al consistir en una combinación de nombres por cuyo medio nos es dado reproducir lo que es tal como es, pero también como no es." (p. 61)

41. ———. 2001. "Platón, el sofista y el "padre Parménides". Sobre la legitimidad del parricidio." Congreso Nacional de Filosofía no. 10:151-153.
42. ———. 2004. " Filosofía versus sofística en el Sofista de Platón." In Diálogo con los griegos. Estudios sobre Platón, Aristóteles y Plotino, edited by Santa Cruz, María Isabela, Marcos, Graciela E. and Di Camillao, Silvana G., 77-92. Buenos Aires: Colihue Universidad.

"En lo que sigue, teniendo en cuenta que filósofo y sofista plantean una dificultad similar, aunque por razones bien distintas, y que cuando uno de los dos se muestre, presumiblemente, "el otro se mostrará de la misma manera"(4) me serviré de la definición platónica del sofista como productor de imágenes habladas, fabricante de apariencias en el dominio de los discursos, para echar alguna luz sobre la actuación del filósofo en ese mismo terreno. Cuando se sirve del lenguaje para comunicar verdades, el filósofo construido por Platón se acerca peligrosamente a las filas enemigas." (p. 78)

(4) Cf. Sof. 250e 8-251 a 1. La afirmación del Extranjero se refiere en rigor al ser y al no-ser, que según 253e 7-254b 1 son dominios respectivos del filósofo y del sofista, por lo que resulta aplicable a estos últimos. En cuanto a la dificultad de percibir con claridad tanto al filósofo como al sofista, en un caso se debe a la luminosidad, en el otro caso a la oscuridad del ámbito en que se actúa.

43. ———. 2006. "La crítica platónica a oradores, poetas y sofistas. Hitos en la conceptualización de la mimesis." Estudios de Filosofía no. 9:34-28.

Resumen: "Este trabajo se ocupa de la crítica de Platón a oradores, poetas y sofistas. Su propósito es mostrar que independientemente de las características que singularizan una batalla de vasto alcance librada por el filósofo en tres frentes distintos, la noción de imitación (mimesis) proporciona un hilo conductor que permite vincular esos diferentes enfrentamientos y arrojar luz sobre la reacción de Platón ante quienes identifica, peyorativamente, como imitadores. La

práctica adulatoria del orador en Gorgias, no menos que el quehacer del poeta puesto en tela de juicio en República y el del sofista en el diálogo homónimo tendrían, en efecto, una naturaleza mimética. Esto no impide reconocer, junto a los puntos de continuidad, diferencias significativas en los tratamientos de la mimesis que ofrecen los tres diálogos aquí considerados."

44. ———. 2013. "Platón vs. Gorgias. El itinerario del Sofista a la luz de la sección gnoseológica del tratado Sobre el no ser." In El filósofo griego frente a la sociedad de su tiempo, edited by Cordero, Nestor-Luis, 152-167. Buenos Aires: Editorial Rhesis.
45. Marino López, Antonio. 1997. "Argumento, silencio y acción en la distinción de filósofo y sofista." Tópicos.Revista de Filosofía no. 12:19-41.

Abstract: "A detailed analysis of the dialogue Sophist shows that the distinction between philosopher and sophist sketched there by Plato is possible by tracing a distinction between dialogue and argument, in which the difference between the recourse to appearance and the demand of objectivity plays an important role.

This distinction, on the other hand, is supported by some main ideas of later Plato's ontology."

46. Martin, José Pablo. 1991. "El Sofista de Platón y el platonismo de Filón de Alejandría." Méthexis no. 4:81-99.

Resumo: "El marco general de esta investigación es el de la historia del platonismo. Esta historia comienza de una manera problemática, en cuanto no tenemos noticias coincidentes sobre la primera recepción de la enseñanza platónica, ni sabemos cómo se iniciaron los primeros desplazamientos que habrían de conducir dicha historia hasta Plotino o hasta Agustín de Hipona. En tales desplazamientos actúan decenas de autores de varios tiempos y lugares, cuya documentación ha quedado oscurecida, en la mayoría de los casos, por los repliegues del tiempo. En algunos casos, aunque gozamos de un conocimiento aceptable de los textos de un autor, no se ha logrado todavía darle una ubicación mayoritariamente

aceptada por los historiadores del platonismo. Uno de estos casos es Filón de Alejandría"

47. Másmele, Carlos. 1997. "Copia y simulacro en el Sofista de Platón." *Tópicos. Revista de Filosofía*:163-173.

Abstract: "Within the Sophist, Plato establishes a clear distinction between two types of mimetic art: the copy and the simulacrum.

Such a distinction avoids reducing the image to the faithful reproduction of a sensitive model. The present article aims at making visible the fact that the phantasma (simulacrum), and not the copy, constitutes the starting point of artistic creation."

48. ———. 2006. *Dialéctica de la imagen: una interpretación del "Sofista" de Platón*. Rubí: Anthropos.

"El libro destaca la concepción dialéctica de la imagen en contraste con las interpretaciones esquemática (Kant), fenomenológica (Husserl) y hermenéutica (Gadamer), así como con la actualidad de la pregunta por la imagen (Gottfried Boehm). Intenta confrontar estas interpretaciones con base en la exposición platónica de la imagen en el Sofista, específicamente en la esencial distinción entre la imagen icónica y la imagen fantasmal. La mayoría de comentaristas de Platón resaltan la prioridad del icono sobre el fantasma. El libro, por el contrario, muestra que una comprensión icónica de la imagen sólo puede comprenderse a partir de la técnica de una imagen fantasmal. Cuestión que se aborda en las tres partes de la obra: en la primera, se expone el significado de los dos tipos de imagen; en la segunda, se presenta un análisis pormenorizado del concepto de dialéctica en el Sofista; y en la tercera, se elabora una dialéctica del fantasma con base en la otredad."

49. Mié, Fabian. 2004. *Dialéctica, predicación y metafísica en Platón. Investigaciones sobre el Sofista y los diálogos tardíos*. Córdoba: Ediciones del Copista.

"A las investigaciones sobre la filosofía platónica tardía está reservado actualmente un amplio espectro de legítimos objetivos, intereses y metodologías conforme a las perspectivas

filosóficas privilegiadas. A un estudio como éste, que persigue examinar la validez de la versión ofrecida por el “platonismo” contenido en la “metafísica de los dos mundos”, que está asociada a una restringida interpretación de la teoría de las ideas, se ofrece hoy una amplia gama de aportes críticos como herramienta de trabajo. Las siguientes investigaciones pretenden identificar componentes fundamentales de la filosofía de los diálogos platónicos tardíos sobre cuya determinación no está permitido pactar nada de antemano a fin de poner en cuestión esa base de preconcepciones que, a lo largo de la inmensa historia de la recepción de la filosofía platónica, operan como peligrosos “sobrentendidos” especulativos.” (Introducción, p. I)

50. Monserrat Molas, Josep. 2013. "Figuras de la filosofía en el Teeteto y en El sofista de Platón." La Torre del Virrey: revista de estudios culturales no. 14:53-56.

"En esta escena inicial de El sofista se define el papel del filósofo como parecido al de la divinidad: mirar (observar) el mundo desde las alturas. La referencia socrática a la comedia aristofánica Las nubes parece plausible. De algún modo, la filosofía es algo que presenta este aspecto de estar en las nubes. En la Apología, el acusador más antiguo que Sócrates trae a colación es, sin ninguna duda, Aristófanes; recordemos además cómo aparece ridiculizada la figura del filósofo en el centro del Teeteto.

A la luz de las escenas iniciales del relato de Teeteto y de El sofista, vemos, pues, que la escena inicial de El político retoma la voluntad socrática de examinar a los jóvenes discípulos atenienses del extranjero Teodoro, que este examen es un intento de corrección de la sabiduría aparente que el maestro de geometría enseña a sus discípulos, y que los caracteres de los jóvenes están dibujados con ciertas aptitudes y ciertas deficiencias para el ejercicio al que Sócrates les quiere someter. Pero Sócrates cede su posición al Extranjero." (p. 55)

51. Mouján, Raimundo Fernández. 2020. "No existe la separación. Algunas continuidades entre el poema de Parmenides y el Sofista de Platón." Signos Filosóficos no. 22:8-33.

Resumen: "En varios pasajes de su poema, Parménides identifica al no ser con la separación: "No podrás obligar a lo que es a separarse de lo que es". No es posible no ser significa así que no existe corte o franja al interior de lo que es por la que pase el no ser. No existe separación ontológica. Platón apoya esta idea: en el Sofista dice que la separación es a-filosófica, y consecuentemente define al ser como capacidad de relación. ¿No hay acaso una suerte de "deducción" a seguir, una que va del es parmenídeo a la dúnamis koinonías platónica, pasando justamente por la imposibilidad de la separación ontológica como dato central? ¿Y no podemos identificar gracias a esta continuidad una prevención fundamental contra todo sustancialismo, contra toda concepción según la cual el mundo estaría hecho de sustancias separadas entre sí? Me propongo pensar esa continuidad para analizar cómo la lectura conjunta del poema de Parménides y el Sofista de Platón permite hablar de un rechazo fundamental de toda filosofía sustancialista."

52. Muriete, Matías. 2020. "A pesar de existir realmente: sobre la reivindicación del arte en Sofista y su inexorable destino en Leyes." In Simposio AAFA IV - Educación, arte y política en la filosofía antigua. Actas del IVº Simposio Nacional de la Asociación Argentina de Filosofía Antigua-AAFA, edited by Suñol, Viviana and Berrón, Manuel, 377-384. Santa Fe: Asociación Argentina de Filosofía Antigua.

Resumen: "En el presente trabajo se analizará cómo la redefinición ontológica de Sofista 247d8 afecta directamente al esquema político del arte que Platón plantea en República II y X y lo conduce al que se ve en Leyes II. En estos últimos dos diálogos, la intención es establecer una serie de lineamientos que guíen el rol social y político del arte. Dado que entre ambos se sitúa el Sofista y, en particular, el pasaje 247d8,

veremos en este trabajo cómo en Leyes no hay una argumentación de tipo onto-gnoseológica basada en la cadena imitativa desde la verdadera realidad hacia la obra de arte para justificar la censura de ciertos artistas. Es precisamente a causa de que se ha reestructurado la noción de "ser" (tò ón) y el andamiaje ontológico que los lineamientos políticos y morales hacia el arte en Leyes tienen la posibilidad de cobrar

aún más vigor, aún más sentido, y estar aún más justificados que antes."

53. Nova, Ana Bertha. 1992. "Ciertas cuestiones sobre el εἶδωλον." *Tópicos*. Revista de Filosofía no. 2:139-152.

"Los diversos problemas suscitados por el εἶδωλον en la filosofía de Platón no nos habían parecido tan importantes. Sin embargo, cuando se analiza qué papel tiene en su gnoseología vemos que nos remite a cuestiones fundamentales, que requieren una explicación. Por una parte, se le ve como un intermedio entre el mundo sensible y la realidad a que pretende remitirnos y, por otra, tiene peculiaridades que hay que reconocer para acercarnos a su naturaleza y las consecuencias que implica. Esta es la diferencia más obvia que hay en el nivel inmediato de su comprensión, pero parece que la manera como está en el Sofista se encamina a mostrar la implicación de problemas más complejos." (p. 139)

54. Palazzo, Ana Julia Fernández. 2020. "Una relectura a partir del curso sobre el Sofista de la crítica de Heidegger al pensamiento de Platón en torno a la cuestión del ser." *Hybris*. Revista de Filosofía no. 11:175-185.

Resumen: "En el presente trabajo nos proponemos analizar la crítica de Heidegger al pensamiento de Platón en torno a la cuestión del ser con el objetivo de mostrar que, si bien esta varía a lo largo de los años en sus puntos de vista, las objeciones son las mismas que ya aparecen en el curso sobre el Sofista. A su vez intentaremos definir la naturaleza de la relación entre ambos pensadores, es decir, si lo planteado por Platón en torno a la cuestión del ser estaba, dada la valoración general eminentemente negativa que Heidegger realiza de su filosofía, efectivamente alejado de la postura del autor de *Ser y Tiempo* o si, por el contrario, Heidegger pudo haber encontrado en él una fuente de inspiración gracias a la cual habría desarrollado los conceptos fundamentales de su propia filosofía."

55. Pascual, Fernando. 2015. "Educación y comunicación en el Sofista de Platón." *Alpha Omega* no. 18:23-60.

"Introducción

Estudiar a Platón permite profundizar numerosos temas de gran importancia para la filosofía y para tantos otros ámbitos de la vida humana, especialmente aquellos que se refieren al mundo educativo.

En la línea de una serie de artículos publicados en los años pasados, el presente estudio quiere recoger y sintetizar ideas y reflexiones sobre la educación y la comunicación que podemos encontrar a través de una lectura analítica del Sofista de Platón. El esquema adoptado es el siguiente: tras una sección dedicada a la presentación de los datos esenciales de este diálogo platónico, se analizan aquellos contenidos que más tienen que ver con nuestro argumento, para luego ofrecer algunas reflexiones conclusivas sobre la teoría dialógica que podemos encontrar en este texto." (p. 23)

56. Pedrero, Rosa. 1995. "Comentario a Platón, Sofista 261 d ss." In *De Homero a Libanio: estudios actuales sobre textos griegos*, edited by López Férez, Juan Antonio, 273-280. Madrid: Ed. Clásicas.
57. Pino Posada, Juan Pablo. 2006. "La caza del filósofo: Comentarios al Sofista de Platón." *Estudios de Filosofía* no. 33:123-141.

Resumen: "El siguiente pasaje del Sofista ilustra el asunto de este ensayo: "¿O acaso inadvertidamente hemos caído, por Zeus, en la ciencia de los hombres libres, y, buscando al sofista, corremos el riesgo de haber encontrado primero al filósofo?" (253c5-10). Que el extranjero de Elea se tope sorpresivamente con el filósofo en una conversación que pretende ofrecer una definición del sofista, insinúa lo poco inadvertida que resultaba para Platón la cercanía entre el "hombre libre" y su imitador. En el Sofista, el interés platónico se centra en poner de manifiesto esta cercanía y a la vez definir sus límites haciendo que el primero cace al segundo. El presente artículo explora el sentido de la caza atendiendo a las singularidades de 1) el procedimiento formal que sigue; 2) la pregunta que la gula; 3) la cualidad de espíritu que demanda; 4) las palabras con que los

interlocutores la nombran; y 5) la "noble" presa que termina encontrando. "

58. Ramírez Vidal, Gerardo. 2008. "El Sofista y el filósofo en Platón." Revista de Filosofía de la Universidad de Costa Rica no. 46:49-59.

Resumen: "En sus orígenes el término σοφιστής se empleó como el sustantivo del adjetivo σοφός o como sinónimo de ó σοφός. Asimismo, en el siglo V. aquel sustantivo se empleó, en general, para designar a grandes pensadores anteriores y contemporáneos indistintamente, pero también se utilizó, sobre todo en Aristófanes, de manera irónica, para ridiculizar a maestros como Sócrates, que era un 'sofista' en el sentido que entonces se daba a esa palabra. A su vez, φιλόσοφος se empleaba como sinónimo de σοφιστής. Platón modificó el sentido y las relaciones estructurales de los tres términos. Es decir, llevó a cabo operaciones de resignificación y de disociación: reformuló los sentidos de los términos φιλόσοφος y σοφιστής haciéndolos antitéticos. Como puede observarse en los diálogos, la resignificación se realizó de manera paulatina, y la oposición entre los términos no fue completa sino vacilante. Platón prefirió llamarse a sí mismo φιλόσοφος y σοφισταί a sus adversarios. Fue así como se crearon los nuevos conceptos y nació la filosofía."

59. Segura, carmen. 1994. "Analítica del logicismo platónico." Anuario filosófico no. 27:461-481.

Abstract: "Is Plato a logicist? A comparative study between The Republic and The Sophist shows at one side how Plato maintains the transcendence of Good over the rest of the Ideas conserving it in this manner not just like a form but as that which made possible the Ideas and the intelligibility of all that is. On the other hand one notices in The Sophist that being which Plato is talking about is surely the being (and not being) of propositions. Being is for Plato like an Idea, but this doesn't imply logicism because in his thought there's a place for a Foundation, a Principle -the Good- which transcends all the forms: which made possible also "the seen" and seeing itself."

60. Soares, Lucas. 2002/2003. "Sobre el epígrafe de Ser y tiempo." *Espacioid de critica y producción* no. 29:58-64.

"Hay una parte del Ser y tiempo que suele pasarse de largo. Me refiero puntualmente al epígrafe que enmarca esta obra. Allí Heidegger cita un breve pasaje del Sofista de Platón [244a] como antecedente del hilo conductor que recorre todo su tratado: la

pregunta que interroga por el sentido del ser.

(...)

"Este epígrafe al comienzo de Ser y tiempo nos abre un horizonte de interrogantes: ¿cuál es el tema del Sofista? ¿Qué afinidades guarda este diálogo tardío de Platón con la problemática fundamental que atraviesa Ser y tiempo? En una palabra: ¿cuál es el propósito de Heidegger al iniciar su tratado con dicho epígrafe?" (pp. 58-59)

61. ——. 2013. "Los paradigmas políticos de República a la luz de las técnicas miméticas del Sofista." *Méthexis* no. 26:59-82.

Abstract: "Of all the themes running through the Sophist, in this paper I am interested in focusing on the definitions, particularly on the seventh of these, as in its attempt to hunt the sophist and distinguish his own particular activity, Plato may therein make important references to the "technique of producing images" (eidolopoiike techne). It is in the context of this seventh definition of the sophist as a 'wizard' (goes) and 'imitator' (mimetes), belonging to the "genre of the illusionists" who perform illusions in their discourses, where Plato mentions the examination of such a productive human technique of an imitative nature (mimetike) and, what interests me, the explanation of its potential divisions (eikastike and phantastike) in order to include the sophist in one of these. The drama of the original and the image that the Sophist stages, and whose inclusion leads to a new reworking in the domain of mimetics, will allow us, in making it extensive in the specific case of poetic mimesis, to corroborate from another perspective the counterpoint between poetic paradigms (traditional and

platonico) which can be deduced from books II, III and X of The Republic."

62. Sonna, Valeria. 2017. "Ouk éstin antilégein: Antístenes tras la máscara de Parménides en el Sofista de Platón." Eidos no. 27:15-38.

Resumen: "El tema principal de este trabajo es la posición que suele atribuirse a Antístenes de que es imposible contradecir (ouk éstin antilégein) o decir falsedades (pseúdesthai) y su vinculación con el problema metafísico central del Sofista, el del No Ser. La imposibilidad de contradecir es presentada como la posición opuesta a la de la sofística entendida como contradictor (antilogikós) en Sof., 232b y ss., cuyo relativismo es asociado con la figura de Protágoras, más específicamente con su tesis de que sobre cualquier cuestión hay dos argumentos opuestos entre sí. Nos proponemos argumentar a favor de la hipótesis de que esta posición que en el diálogo es atribuida a Parménides es la de Antístenes, discípulo de Sócrates y rival teórico de Platón."

63. Spangenberg, Pilar. 2004. "Acerca de la relación entre ser y lógos en el Sofista." In Diálogo con los griegos. Estudios sobre Platón, Aristóteles y Plotino, edited by Santa Cruz, María Isabela, E., Marcos. Graciela and Di Camillao, Silvana G., 93-110. Buenos Aires: Colihue Universidad.

"A fin de comprender el planteo conra el cual Platón elabora su prueba de la falsedad en el Sofista, en la sección I me referiré a los argumentos presentados en el Eutidemo, a través de los cuales el sofista negaba la posibilidad del discurso falso. Tales argumentos, a mi entender, representan la postulación más clara y mas completa de la paradoja de lo falso, y por eso contribuyen a esclarecer la formulación del problema en el Sofista. En la sección II analizaré brevemente la concepción del discurso de Sofista 261d 1-263a 11, pasaje en el cual Platón introduce la distinción entre nombre y verbo de la que se servirá con el objetivo de dar cuenta de la posibilidad de lo lo falso. Un análisis del tratamiento de la falsedad en la sección III permitirá un examen de la relación que establece Platón entre ser y lógos. Una vez aclarada tal relación a partir de la

consideración del enunciado falso, en IV me referiré a otro aspecto de la relación entre ser y lógos, enfocando esta vez no el enunciado, sino el nombre en su relación con el ser. Asimismo, me referiré allí a las interpretaciones que consideran que Platón se hizo eco sin más de la adhesión sofística entre ser y nombre, interpretaciones que serán discutidas en la sección V a partir del análisis de un nuevo sentido de "ser" introducido por Platón. Tal sentido permitiría dar razón de objetos que no cuentan con una existencia efectiva al margen del discurso, pero que sin embargo son. Finalmente, ofreceré algunas conclusiones." (pp. 93-94)

64. ———. 2018. "Lenguaje y acceso al ser en el Sofista." In *ὄδοι νοῦσαι – Ways to think. Essays in Honour of Néstor-Luis Cordero*, edited by Spangenberg, Pilar and Pulpito, Massimo, 385-394. Bologna: Diogene Multimedia.

Resumo: "El trabajo analiza las razones que pudieron conducir a Platón a equiparar el algo (ti) y el ente (on) en el marco del Sofista e intenta exhibir que es la primacía conferida al lenguaje como vía privilegiada de acceso al ser una de las razones fundamentales de tal equiparación. Sirviéndose de algunas tesis de Cordero en relación con la concepción del ser como forma relacional, muestra la emergencia de una concepción de ser de alcance universal en el Sofista: el acento, según se intenta mostrar, no está puesto en este diálogo en una consideración vertical del ser atada a una fundamentación, sino en una horizontalidad plena determinada por el lenguaje."

65. ———. 2020. "Dialéctica y refutación en el Sofista de Platón." *Plato Journal* no. 20:7-20.

Abstract: "The dialectic exhibited in Plato's dialogues assumes different characters throughout the corpus. Nevertheless, it remains always linked to refutation. In this way, like dialectic, refutation assumes different characteristics. The aim of this work is to show how refutation takes a key role in the Sophist, even with unique features: far from facing an opponent of flesh and blood as in Socratic dialogues, the Eleatic Stranger faces hypotheses, and instead of examining consistence within the opponent's beliefs, he draws upon a radical mechanism that

focuses in the conditions of possibility of the (opponent's) discourse."

66. Spangenberg, Pilar. 2017. "Antecedentes de algunos lineamientos de la estrategia de Aristóteles frente al negador del principio de no contradicción en el Sofista de Platón." *Elenchos. Rivista di Studi sul Pensiero Antico* no. 38:83-105.

Abstract: "The purpose of this paper is to show that in the Sophist Plato develops a dialectical strategy that appeals to necessary conditions of language as a fundamental step toward establishing some principles of his ontology. This strategy constitutes a clear antecedent of the elenctic refutation offered by Aristotle in *Metaphysics Gamma 4* against the denier of the principle of noncontradiction and could be described as transcendental because it refers to conditions without which there wouldn't be any speech. The paper aims to show that such a strategy is used both by Plato and Aristotle to deal with radical adversaries whose refutation allows the establishment of basic theses of their own philosophies."

67. Spinassi, Miguel Angel. 2014. "El extranjero de Elea y la « Sofística de noble linaje » (Platón, *Sofista* 230 E5-231 B8)." *Exemplaria Classica* no. 18:29-46.

Resumen: "El siguiente artículo tiene que ver con el famoso pasaje de *Sofista* 230e5-231b8.

Mi hipótesis fundamental sostiene que no sería el sofista quien aparece en la sexta definición como practicante del élenkhos, sino el verdadero filósofo, representado en el diálogo por la figura del Extranjero de Elea."

68. Tonti, Silvia Liliana. 1999. "La crítica del « Gorgias » a la retórica sofística y su relación con la primera definición de sofista en el diálogo homónimo." *Synthesis*:115-135.

"Tratar de dilucidar cuál es el objetivo que persigue la retórica, es uno de los problemas que ha preocupado a Platón en el *Gorgias*." (p. 115)

(...)

"Con tal propósito, examinaré la crítica a la retórica sofística que procura el Gorgias al tiempo que procuraré establecer una conexión con la primera definición de sofista que Platón brinda en el diálogo homónimo." (p. 116)

(...)

"En el caso del Sofista, exhibiré aquellos aspectos metodológicos, particularmente aquellas cuestiones que tienen que ver con el procedimiento definicional por divisiones dicotómicas. Sugeriré, a propósito de la cuestión, que en el Gorgias pueden rastrearse los indicios del procedimiento por división dicotómica desarrollado en diálogos posteriores, dado que hay un intento por establecer -aunque prematuramente- aquellos requisitos necesarios que debe satisfacer una definición, a través de la clasificación sistemática de los significados involucrados en el término que se busca definir." (p. 116)

69. ———. 2001. "La alteridad y el problema del status de los mégiſta géne en el Sofista de

Platon: principales con Enéada III 6 y VI 2,." Congreso Nacional de Filosofía no. 10:174-176.

70. ———. 2002. "La doble función de la alteridad, su aporte y su relevancia en el terreno metodológico del Sofista de Platón." Revista de Filosofía y Teoría Política, no. 34:337-349.

En este trabajo me ocupo de la doble función de la alteridad en el terrenometodológico del Sofista de Platón. Este examen supone precisar, por una parte, (I) cómo juega el no ser así entendido en el procedimiento de división dicotómica (Sof. 218 b-231 e5), que pone en práctica la búsqueda de la definición. Dicho mecanismo definicional es novedoso con relación a los diálogos tempranos y de madurez. En este caso, si bien Platón apela a este procedimiento sin haber demostrado aún la existencia del no ser como alteridad, esta concepción parece estar en germen. En este contexto, intentaré mostrar, se exhibe una función "diferenciadora" de la alteridad en el terreno metodológico.

Por otra parte, (II) advierto igualmente de manera anticipada otro rol decisivo de la alteridad en la caracterización platónica de la dialéctica, como ciencia de la combinación de los géneros-formas inteligibles (Sof. 253 d4-e2). En este caso, mostraré que una función “combinativa” de la alteridad permite inferir indirectamente -ya que toda combinación reposa sobre la base de la diferenciación- cuál es la capacidad de relación mutua entre los géneros-formas.

Finalmente, si se acepta mi interpretación, las conclusiones destacarán un papel decisivo de la alteridad en el terreno metodológico. Pero, además, doble sería la función que cumple el no ser así entendido en el terreno mencionado." (pp. 337-338, notas omitidas)

71. Villar, Francisco. 2020. "No-ser, falsedad y contradicción: la segunda demostración erística del Eutidemo y el problema de lo falso en el Sofista." Revista de Filosofía no. 58:11-37.

Resumen: "Este trabajo lleva a cabo una lectura de Eutidemo 283c-288b a la luz del problema de la falsedad en el Sofista. Mi hipótesis será que la segunda demostración erística del Eutidemo puede ser interpretada como una representación de Sofista 236d-239b: mientras que allí es el Extranjero el que evoca lo que el sofista diría para defenderse de la séptima definición, donde se le acusa de producir falsedades, en el Eutidemo son dos sofistas quienes emplean las nociones de no-ser y falsedad para refutar dicha acusación. La exposición tendrá tres partes. En la primera analizaré Sofista 236d-239b y lo contextualizaré en el marco de la séptima definición. En la segunda me concentraré en la caracterización de Eutidemo y Dionisodoro en tanto sofistas.

En la tercera analizaré los tres argumentos que organizan la segunda demostración del Eutidemo, intentando dar cuenta de su estructura y su rol en la economía dramática del diálogo."

Platão, *Sofista*. Bibliografia dos estudos em Português

Bibliografia

1. Alves, Alexandre. 2021. "Método e discurso filosófico no diálogo O Sofista de Platão." *Princípios: Revista de Filosofia* no. 28:131-142.

Resumo: "Por sua discussão da questão do não-ser e por sua intenção de fundamentar o discurso filosófico, o diálogo Sofista ocupa uma posição central na história da filosofia. O objetivo deste artigo é relacionar o método de definição empregado por Platão no diálogo Sofista (a diérese) com sua concepção do discurso filosófico. As diferentes definições para o sofista propostas no diálogo não são somente parte da polêmica de Platão contra a sofística, mas fundamentam a própria concepção platônica do filósofo e do discurso filosófico. Enquanto a dialética seria o método empregado pelo filósofo para chegar ao conhecimento e à sabedoria, a sofística seria apenas imitação do verdadeiro conhecimento e da verdadeira sabedoria."

2. Arêas, James Bastos. 2013. "O estatuto ontológico da imagem no Sofista de Platão." *Tríade: Revista de Comunicação, Cultura e Mídia* no. 2:399-411.

Resumo: "A análise da mimesis, no Sofista de Platão, nos conduz, como em um círculo, da linguagem à imagem, da "linguagem imagem" à imitação; da possibilidade da imitação à afirmação do "ser" do não-ser e à realidade do falso. O exame do estatuto ontológico da imagem requer, portanto, a análise desses três principais problemas que a imitação pressupõe. A

imagem traz consigo, por sua índole, um turbilhão de questões; desdobra, em sua fulguração, intermináveis impasses."

3. Barbosa Dias, José Ricardo. 2010. "O Ser no "Sofista" de Platão." *Kalagatos: Revista de Filosofia* no. 7:58-75.

Resumo: "Platão, no "Sofista", busca melhor determinar os gêneros do ser e a relação entre eles a fim de capturar o não-ser como sendo. Em nosso artigo visamos, em meio a essa busca de Platão, a sua tese sobre o ser.

Com isso enfatizamos a relação de entrelaçamento do ser com o não-ser como "lugar" no qual essa tese se dá. Para tanto, nos mantemos num triplo movimento como constituindo o todo do diálogo platônico em questão: O Sofista e o não-ser; Platão e Parmênides; e Ser e discurso. Somente então apontamos para o que consideramos essencial na tese em questão: o caráter de ambigüidade e primazia do ser."

4. Bocayuva, Izabela. 2014. "Entre o Parmênides e o Sofista de Platão." *Anais de Filosofia Clássica* no. 16:62-72.

Resumo: "A teoria platônica das ideias sofreu uma crítica contundente, em primeiro lugar, pelo próprio Platão. Isso fica mais do que claro no diálogo Parmênides, onde uma personagem homônima evidencia as aporias inevitáveis de uma suposta dicotomização da realidade e da proposta da participação como uma saída para o relacionamento entre os dois polos criados pela metafísica platônica. No âmbito da primeira aporia que vem à tona na primeira parte do Parmênides, encontra-se a questão da possibilidade, ou não, da ideia de coisas desprezíveis tais como cabelo, lama e sujeira, questão essa que nos incomoda e exige investigação. Arriscamos a hipótese de que na segunda parte do diálogo Parmênides e ainda na inaugural proposta ontológica contida no Sofista podemos perceber uma saída para esse passo aporético."

5. Borges de Araújo Junior, Anastácio. 2007. "Heidegger e o Sofista de Platão." *Revista de Estudos Filosóficos e Históricos da Antiguidade* no. 22/23:31-45.

Resumo: "Entre os vários pensadores que, no panorama filosófico atual, retomaram a Antigüidade, Martin Heidegger, seguramente, ocupa uma posição de destaque. Ainda que muitas de suas interpretações acerca do pensamento antigo sejam controversas entre os especialistas, parecem incontornáveis muitas de suas lições e seminários. Nosso trabalho tomará como tema as lições de Heidegger, ocorridas durante o semestre de inverno [1924 – 1925], acerca do diálogo Sofista de Platão. O Mestre de Fribourg deixa explícito na sua exegese do diálogo Sofista, e isto parece aplicar-se a suas interpretações dos textos da tradição filosófica em geral, que ele não tem uma intenção histórica, na medida em que ele parece não se preocupar em reconstituir o pensamento platônico, mas antes, seguir o trabalho do pensamento, desobstruir suas tendências imanentes, pensar ao lado do texto e assim tentar elucidá-lo. Nosso trabalho procurará caracterizar a exegese heideggeriana acerca do Sofista de Platão, a partir de uma dupla perspectiva: por um

lado, mostrar que suas interpretações acerca do pensamento antigo parecem, do ponto de vista daquilo que estudamos e investigamos na história da filosofia, discutíveis, para não dizer inaceitáveis, e, por outro lado, essas mesmas interpretações, do ponto de vista filosófico, parecem revigorar os textos antigos ao atualizar seus conceitos."

6. Braga da Silva, André Luiz. 2011. "Dificuldade e beleza em um parricídio que não há (Platão, Sofistam 236e-237a)." *Hypnos* no. 26:146-159.

Resumo: "Trata-se de investigar acerca da relação do Estrangeiro de Eléia, personagem do Sofista, com o filósofo Parmênides de Eléia, a quem ele chama de "pai". O foco desta análise é a idéia de refutação ou "parricídio" do último nas mãos do primeiro. Tal refutação diria respeito ao reconhecimento que faz o Estrangeiro de certa realidade do não ser, a qual havia sido totalmente interdita pelo mestre eleata. O estudo defenderá a idéia de inexistência de refutação, ou parricídio do filósofo eleata, por parte de seu discípulo."

7. Cavalcante Brígido, Anúzia Gabrielle. 2016. "O cão versus o lobo ou qual a diferença entre Platão e Górgias?" Phaine. Revista de Estudos Filosóficos e Históricos da Antiguidade no. 1:17-23.

Resumo: "Não raras vezes os chamados "sofistas" são interpretados a partir da caracterização presente nos diálogos de Platão e esta mesma caracterização não é de todo abandonada, ainda quando essas interpretações se propõem a partir diretamente dos textos dos "sofistas" - estabelecidos em séculos bem mais próximos de nós que deles - na tentativa de reabilitar suas imagens ou discordar de Platão. Parece-nos que, a despeito disso ou exatamente por isso, existe um certo consenso em torno do conceito de "sofista" ser uma criação platônica e de não podermos nos fiar em sua caracterização se quisermos chegar a uma compreensão mais adequada do pensamento de determinado "sofista". Partindo disso, o presente trabalho pretende esboçar alguns questionamentos sobre o significado dessa caracterização e caça ao "sofista" efetuadas por Platão. Mais especificamente, usaremos a imagem de Górgias criada por Platão para sugerir que Platão parece não só não estar interessado simplesmente em interpretar e criticar as teses "sofísticas" em nome de um saber pretensamente desinteressado, como muitas vezes se utiliza das mesmas estratégias discursivas dos "sofistas"."

8. da Silva, José Lourenço Pereira. 2001. "A definição da imagem no Sofista de Platão." Cadernos de Atas da ANPOF (Associação Nacional de Pós-Graduação em Filosofia):71-78.

"A noção de imagem, no Sofista, guarda as mais desconcertantes dificuldades." (p. 71)

(...)

"Tudo isso implica a fundamental distinção entre o ser e o não-ser pros ti, que faz com que o ser em um certo sentido não seja (ser uma certa determinação equivale a não ser uma outra) e o não-ser de algum modo seja (não ser uma certa determinação equivale a ser uma outra). Atinando, assim, à polisse-mia do ser, antes mesmo de Aristóteles, Platão pôs as condições de

possibilidade do não-ser e, por consequência, da falsidade. Não porém do não-ser como contrário do ser, o medamos on, que foi abandonado já no começo da discussão, mas do não-ser como diferente (do ser), de sorte que falar o falso, embora seja enunciar o que não é, não consiste na absurda enunciação de nada, mas simplesmente na afirmação de um fato, estado ou ação que não é o caso presente, mas outro." (p. 77-78)

9. ——. 2019. "O problema do um múltiplo ou de como Platão se liberta das injunções eleáticas no Sofista." *Revista de estudos Filosóficos e Históricos da antiguidade* no. 34:23-35.

Resumo: "Neste artigo, procuro mostrar como a colocação do problema do um e do múltiplo e a hipótese da participação mútua das Formas para respondê-lo no Sofista significam um decisivo afastamento por parte de Platão da ontologia e lógica eleática. Rejeitando a noção do ser absoluto e o princípio de identidade intransigente de Parmênides, que não permitiam afirmar senão tautologias, o Estrangeiro trata do problema do um e do múltiplo no plano do inteligível para mostrar que a concomitância do um e do múltiplo que nossos discursos expressam se apoia no fato de que as próprias Formas, que na ontologia do Banquete, República e Fédon foram concebidas tal como o ser de Parmênides, mantêm relações mútuas que torna cada qual, ao mesmo tempo, una e múltipla. O reconhecimento do fenômeno da relação como inerente à constituição dos verdadeiros seres só foi possível mediante o rompimento com a lógica e a ontologia eleática e sua crença no ser absoluto que a tudo pretendia imobilizar na

sua unidade e auto-identidade. O Estrangeiro libertou o ser das amarras que impossibilitavam o contato com o Outro. Reconhecendo o modo de ser em relação (pros allo), compatível com o modo de ser em si (kath auto), o diálogo Sofista não só superou as injunções parmenideana, mas também refinou a ontologia das Formas que Sócrates havia defendido."

10. da Silva, José Wilson. 2021. "Elenchos e educação moral no Sofista de Platão." *Argumentos. Revista de Filosofia* no. 13:43-53.

Resumo: "Uma das características marcantes de Sócrates é o seu modo de examinar. Através da investigação apoiada em uma série de perguntas intercaladas por respostas de um interlocutor, Sócrates segue um caminho de negação das teses que lhes são apresentadas até chegar a um total impasse nesta busca. Sócrates chama de elenchos (refutação) ao seu procedimento habitual e ficou bem conhecido pelo o que nos é apresentado nos primeiros diálogos de Platão. Por outro lado, há no diálogo Sofista, na sexta definição, a associação do elenchos à atividade sofística e, ainda, é apresentado como um método educacional. Estes dois casos são matéria de debate entre os estudiosos, que consideram que o elenchos nesta passagem do Sofista não é o mesmo método dos primeiros diálogos de Platão, principalmente, por ser considerado um método educacional; já o elenchos dos primeiros diálogos serviria apenas para mostrar que o interlocutor sustenta opiniões conflitantes sobre os assuntos morais. Pretendemos, portanto, mostrar que Platão não está apresentando uma nova compreensão do elenchos e, ainda, que já era pensado como um método educacional em diálogos anteriores."

11. ——. 2021. "Sobre valor moral e correção intelectual no Sofista de Platão." *Trans/Form/Ação* no. 4:149-176.

Resumo: "Platão, no diálogo Sofista, argumenta que a vergonha tem a capacidade de fazer que um indivíduo mude sua opinião. Além disso, a vergonha não opera apenas uma mudança qualquer, mas o abandono de uma opinião falsa, retirando-a do caminho que leva ao conhecimento. Contudo, é argumentado que o erro intelectual é corrigido pelo ensino e não por um valor moral. Pretendese explicar como a vergonha pode ter essa função de uma positiva mutação mental, contribuindo desta forma para a obtenção do conhecimento. A interação entre valor moral e capacidade cognitiva é possibilitada pelo conceito de imagem e fealdade."

12. de Aguiar Menezes Neto, Nelson. 2013. "Uma leitura do prólogo do Sofista de Platão." *Calíope Presença Clássica* no. 30:48-62.

Resumo "O Sofista é um diálogo dramático. De modo semelhante a outros diálogos platônicos, a obra começa com a cena em ação, em discurso direto, dispensando o papel de um narrador e o uso de terceira pessoa.

Provavelmente por conta de seu estilo, os passos iniciais da obra (216a a 218b) são comumente tomados como "prólogo", sendo entendidos como uma introdução ao diálogo como um todo, cuja investigação filosófica propriamente dita se iniciaria apenas a partir do passo 218b, com a busca pela definição do sofista através do método das dicotomias. Fazendo referência às noções de "prólogo" e de "proêmio", buscamos conferir aos passos iniciais do Sofista um sentido e uma função para além de uma mera introdução. Neles, não se apresenta apenas o projeto de enquadramento do sofista, como também se pode encontrar, de algum modo já esboçado, a sua própria definição. A proposta deste trabalho é desvencilhar-se de uma leitura em passant dos passos iniciais do Sofista, pretendendo uma interpretação que evidencie o seu caráter ao mesmo tempo literário e filosófico."

13. de Souza, Eliane Christina. 1997. " Sobre a teoria da participação da Formas no Sofista de Platão." *Hypnos* no. 2:81-88.

"O objetivo desta apresentação é fazer algumas observações sobre a teoria da participação das formas exposta no Sofista de Platão, abordando especificamente como esta teoria procura resolver o problema da predicação. Neste diálogo, a possibilidade do discurso predicativo é ameaçada por um argumento conhecido como "argumento de Antístenes", segundo o qual é impossível predicar, já que a predicação implica na identificação de duas coisas diferentes. Esta ameaça ao discurso predicativo é, na verdade, uma ameaça à própria possibilidade do discurso filosófico, visto que ela representa um dos pólos de um confronto entre filosofia e sofística com relação ao uso do discurso." (p. 81)

14. ——. 1998. "Platão e Parmênides: notas sobre o « parricídio »." *Letras Clássicas* no. 2:27-38.

Resumo: "O "parricídio" que Platão apresenta no Sofista não pretende ser uma negação completa da ontologia de Parmênides, mas a crítica do princípio de não-contradição postulado por Parmênides em seu

Poema, que interdita a união entre ser e não-ser. Após a exposição das dificuldades discursivas a que esta interdição conduz, Platão admite uma ontologia que associa ser e não-ser do mesmo modo como eles estão associados no plano discursivo."

15. ——. 2009. Discurso e Ontologia em Platão. Um Estudo Sobre o Sofista. São Paulo: Unijui.

Resumo: "Este livro apresenta um exame das condições de possibilidade do discurso informativo sobre o ser esboçadas no Sofista de Platão e da reformulação ontológica sugerida no diálogo para satisfazer estas condições. Ao entender a concepção sofística de discurso como uma ameaça ao caráter informativo da linguagem, o Estrangeiro de Eléia se vê obrigado a reconhecer Parmênides como um forte aliado do sofista contra sua própria compreensão de discurso filosófico: um dizer o que as coisas são. A tarefa do Estrangeiro de Eléia será, então, preservar o caráter objetivista da concepção de discurso de Parmênides e reformular as noções de ser e não-ser e a relação entre ser e discurso, de modo a garantir que a ontologia forneça o fundamento para que o discurso diga o ser."

16. ——. 2010. "Negação e diferença em Platão." Trans/Form/Acao.Revista de Filosofia no. 33:1-18.

Resumo: "Platão, ao tratar da negação no diálogo Sofista, afirma que sempre que enunciamos o que não é, não enunciamos algo contrário ao que é, mas algo diferente. A negação significa cada parte da natureza da diferença em antítese ao que é. Tal tratamento da negação resulta da necessidade de resolver alguns problemas colocados pelo eleatismo. Propõe-se indicar esses problemas e examinar o tratamento que Platão dá ao não-ser como diferença."

17. Engler, M. R. 2021. "Comentário a "Pressuposto ético da alteridade na hermenêutica filosófica a luz do Sofista de

Platão": platonismo militante." *Trans/Form/Ação* no. 44:277-286.

"No artigo de Rohden e Kussler (2021), a associação entre Gadamer e Platão pressupõe o raro e admirável reconhecimento do elemento antitirânico do platonismo, contra todo o ranço conservador com o qual Platão ainda é lido, em especial no Brasil. Isso faz com que a história de Quíon nos venha inevitavelmente à mente. Os dados que os autores usam para mostrar esse fato são outros, todavia, sua conclusão é a mesma, a saber, que o platonismo implica profundo respeito à diferença, e que tal respeito pode ter sido absorvido na hermenêutica de Gadamer através de um processo de transformação dos princípios do Sofista em noções como alteridade e identidade. No fim, talvez devamos dizer: "Sob o signo de Platão, mas não pelo militarismo prussiano, caro Herr Moellendorff, e sim contra toda a tirania, do passado e do presente!" (pp. 283-284)

(8) Trata-se de famosa afirmação de Wilamowitz-Moellendorff (1920, *Nachwort*, tradução nossa), no prefácio à sua obra sobre Platão: "Combaterei, sob o signo de Platão, enquanto respirar". Como a análise de Vegetti (2010, p. 114) demonstra, porém, essa luta era em prol de uma versão bastante militarizada da Prússia da época.

18. Flaksman, Ana. 2015. "Notas sobre Heráclito no Teeteto, Banquete e Sofista." *Archai* no. 15:87-95.

Resumo: "Este artigo, partindo da leitura da primeira parte do Teeteto e de passagens do Banquete e do Sofista, busca examinar de que forma Platão interpretou e transpôs o pensamento de Heráclito. O texto sustenta que Platão não transmitiu de Heráclito a imagem de um mobilista radical, nem dissociou a tese do fluxo de outras teses do Efésio, como a tese da unidade dos opostos, mas, ao contrário, distinguiu as teses de Heráclito das opiniões extremadas de seus adeptos e apresentou uma imagem bastante rica, complexa e multifacetada de seu pensamento."

19. Floriano, Rodrigo César, Franco, José Henrique Fonseca, and Oliveira, Richard Romeiro. 2020. "O problema do erro

(pseûdos), a possibilidade do discurso predicativo e a questão ontológica no Sofista de Platão." *Investigação Filosófica* no. 11:27-38.

Resumo: "O presente artigo analisa as relações entre discurso e ser, estabelecidas de maneira dialética por Platão em seu diálogo tardio Sofista. Como se sabe, os sofistas defendiam a impossibilidade de provar a falsidade ou verdade de qualquer discurso. Tais pensadores basearam-se no interdito ontológico de Parmênides de Eleia, que asseverava a existência de uma correspondência estrita entre dizer e ser, de modo que seria, portanto, impossível dizer algo que não é, isto é, um não-ser. Contrariamente a essa perspectiva e fazendo uso do método da "diaíresis" - no qual os seres são caracterizados por suas diferenças mais fundamentais -, o Sofista se desdobra revisitando e pondo à prova as teorias ontológicas de seu tempo, a fim de explorar uma nova maneira de pensar a relação entre os seres. Com isso, Platão garante a possibilidade de análise qualitativa do discurso predicativo e, conseqüentemente, define o erro (pseûdos) como desarmonia entre dizer e ser. No intuito de levar a cabo tal empreendimento, o filósofo explica como ocorre o entrelaçamento entre ser e não ser em suas relações básicas, as quais são mediadas pelas seguintes categorias fundamentais: Ser, Mesmo, Outro, Movimento e Repouso. A partir disso, a dialética é finalmente constituída como a técnica correta de diferenciação dos predicados em suas possibilidades de comunicação com cada sujeito. Graças aos resultados filosóficos alcançados por meio desses procedimentos, desenvolveram-se novas reflexões que levaram Aristóteles a instrumentalizar a análise da linguagem."

20. Huguenin, Rafael. 2008. "Sobre alguns empregos do verbo grego ser no Sofista de Platão." *O que nos faz pensar* no. 24:47-58.

Resumo: "O objetivo deste artigo é oferecer uma breve análise de algumas ocorrências do verbo grego 'ser' no Sofista de Platão. Em um primeiro momento, (I) discutiremos algumas abordagens tradicionais de algumas ocorrências do verbo na parte central do Sofista. Depois, (II) faremos uma breve

exposição da tese de Jaakko Hintikka acerca da suposta ambiguidade do verbo. Para concluir, (III) mostraremos como o texto pode ser interpretado sem atribuir tais ambiguidades às ocorrências do verbo."

21. Iglesias, Maura. 2003. "A relação necessária entre a primeira parte e a parte central do Sofista de Platão." *Boletim do CPA* no. 15:143-156.

"A importância capital das discussões realizadas na segunda parte; sua posição central, literalmente encravada no desenvolvimento do tema explícito do diálogo; a nítida quebra temática entre as duas partes, apesar da continuidade formalmente bem construída entre elas, tudo isso levou Th. Gomperz a uma célebre comparação: a primeira parte seria a casca, a segunda o fruto (citado por Diès na Notice da ed. do Sofista da Collection Budé, Belles Lettres)." (p. 144)

(,...)

"Quando, na primeira parte do diálogo, o Estrangeiro acusou o sofista de ser produtor de imagens no discurso, a sugestão parecia ser que haveria um discurso que não seria imagem. Mas o desenvolvimento das questões levantadas pelo não ser acaba revelando o próprio discurso verdadeiro como imagem, i.e., algo cujo ser consiste em não ser aquilo a que ele se refere, mas que ele faz aparecer por uma relação natural de semelhança entre a tessitura que ele estabelece entre onoma e rhema com a tessitura da coisa de que ele fala, e que ele próprio não é. Diferente do caso das figuras geométricas, o discurso jamais poderia ser entendido como uma imagem de um modelo que seria produto de abstração, uma vez que a coisa dita necessariamente pre-existe ao discurso, sendo um tipo de ser que é intuitivamente reconhecido como independente do discurso que a diz.

Assim, fixando o ser do discurso como essencialmente imagem –algo que não é aquilo que faz aparecer– Platão consegue não só provar que há imagens –o que é essencial para sua ontologia, que afirma o sensível como imagem do inteligível–, mas torna o discurso verdadeiro um instrumento de investigação da tessitura do real." (p. 155-156)

22. Machado, Alexandre N. 1999. "Enunciado Falso e Não-Ser no Sofista de Platão." *Barbarói* no. 11:81-109.

"O presente artigo consiste numa breve reconstrução do problema sofista a respeito da possibilidade de enunciados falsos e da solução que Platão pretende ter dado a este problema. A solução de Platão é dependente de considerações sobre o ser e o não-ser, dada a sua definição de enunciado falso como aquele que enuncia o não-ser (aquilo que não é). Devido a isso, as considerações de Platão sobre o ser e o não-ser, que são relevantes para a solução do problema do não-ser, também são apresentadas sumariamente. A abordagem dos temas procura seguir a ordem expositiva de Platão." (pp. 82-83)

23. Marques, Aurelio Oliveira. 2019. "A noção de opinião falsa à luz de uma interpretação do não-ser: um problema entre o Teeteto e o Sofista de Platão." *Griot: Revista de Filosofia* no. 19:122-134.

Resumo: "Embora o Teeteto nos coloque num cenário interpretativo completamente à parte da teoria das Formas, não nos é permitido admitir seu total esquecimento. Conceitos como 'racionalidade' contraposto à percepção sensível, e a 'imprescindibilidade do logos' enquanto discurso que perfaz o conhecimento verdadeiro, são extremamente caros ao Teeteto. Desconsiderar a pertinência e a similaridade do significado destes conceitos desde a maturidade até à velhice, colocar-nos-ia em situação de grande dificuldade explicativa acerca do conhecimento. Assim, é importante destacar que optamos por uma perspectiva intermediária, que por um lado reconhece a ausência de uma argumentação calcada na clássica teoria das Ideias, mas que compreende a obra platônica sob a tutela de uma interpretação sistemática e holística, segundo a qual Platão não abandona os pressupostos metafísicos das Formas

inteligíveis. Longe de uma ruptura com o que foi dito anteriormente na maturidade, o Teeteto serve como complementação teórica acerca da ontologia e da epistemologia, embora no Teeteto não haja uma menção direta às noções presentes nos diálogos anteriores e boa parte do tema se apresente por meio de estilo de escrita e vocabulário inusitados. Por fim, mas não menos importante, será feita uma breve análise de alguns trechos dos momentos finais do Sofista com o objetivo de compreender em que medida o aspecto epistemológico, proposto por Platão no Teeteto, pode ser lido à luz de questões relacionadas ao Ser e ao Não-ser, já que a pergunta pelo 'o que é conhecimento' nos remete também a uma discussão ontológica."

24. Marques Kussler, Leonardo. 2018. "Alteridade no Sofista: ecos platônicos oculto na proposta ricoeuriana." *Problemata. International Journal of Philosophy* no. 9:61-69.

Resumo: "No Sofista, Platão já desenvolve princípios argumentativos acerca dos conceitos de identidade e reconhecimento, mesmidade e alteridade. Ao traçar limites entre o que se caracteriza por ser, não ser e a possibilidade de estas grandezas relacionarem-se, Platão explicita, pela voz do estrangeiro, o mesmo e o outro, modos de compreender os entes. Ricoeur, por sua vez, elabora uma teoria tangente ao reconhecimento e à alteridade, do si-mesmo como um outro, uma vez que insiste na necessidade de um outro para a formação e o reconhecimento da identidade. O objetivo, aqui, é remontar alguns aspectos da filosofia ricoeuriana à teoria anteriormente proposta por Platão, enfatizando e defendendo que a) a ideia de alteridade mostra-se presente já no Sofista, dependendo do modo como se interpreta o conceito de ἕτερος [héteros] e b) quais as principais distinções da proposta de Ricoeur com relação à tese platônica, não referenciada diretamente em sua obra. Assim, abriremos o diálogo entre as tradições supracitadas com o fito de alimentar a discussão sobre a possibilidade de defender traços de alteridade ao identificar as definições platônicas e em que medida elas ecoam na proposta hermenêutica e literária de Ricoeur."

26. ———. 2001. "Imagem e aporia no Sofista de Platão." *Classica*, Sao Paulo no. 13-14:189-204.

Resumo: "É no contexto da série de aporias relativas à possibilidade de dizer o não-ser, numa perspectiva eleata, aporias derivadas da posição inicial do problema da produção de imagens, que o Estrangeiro e Teeteto formulam uma definição da imagem que, por sua vez, se apresenta como uma aporia do não-ser. Meu propósito é compreender o problema da imagem no Sofista articulando-o aos temas da produção (dimensão antropológica) e da aporia (dimensão lógico-ontológica)."

27. ———. 2005. "Phantasia em Platão." *Tópicos* no. 28:57-82.

Resum: "Neste artigo, interrogo a noção de phantasia (aparição, representação imagética, simulacro), a partir das ocorrências do termo no corpus platônico: uma na República, duas no Teeteto, quatro no Sofista e uma no Timeu. De um modo geral, me interessam como objeto de pesquisa as modalidades do "aparecer" nos diálogos de Platão, na medida mesma em que questiono preconceitos e lugares comuns com relação a aparência e o aparecer. Como introdução, me limitarei a alguns comentários a propósito de um clássico."

28. ———. 2006. *Platão, pensador da diferença: uma leitura do Sofista*. Belo Horizonte: Editora da UFMG.

"Que conclusões tirar quanto ao que concerne aos objetivos, do Sofista? O desafio proposto no Parmênides é o de demonstrar o entrelaçamento das formas entre si, entrelaçamento que torna possível a unidade de sua multiplicidade, evitando e superando as ameaças de contradição. A partir do Teeteto, deve-se pensar na busca de uma ciência que ultrapasse os dados de la percepção sensível e da opinião, levando em conta a diferença entre os seres.

A reflexão epistemológica aporética exige que se aprofunde na compreensão do que é o lógos propriamente dito: como pensá-

lo para que ele possa ser tanto verdadeiro, quanto verdadeiramente falso. O Político indica o coração aporético do Sofista, que é a impossibilidade e a inevitabilidade de se pensar o ser da imagem, justamente aquele ser que é o que não é; sua posição exige que se possa estabelecer o ser do não-ser." (p. 21)

(...)

"Obtenho, assim, os elementos que estruturam meu percurso de leitura do Sofista, em três planos - antropológico, lógico-epistemológico e ontológico: os cidadãos em suas relações (ações e produções) na cidade, seus discursos e argumentos enquanto modos de agir e os gêneros maiores ou as formas inteligíveis como objectos de conhecimento que determinam decisivamente seus discursos e ações. A diferença entre os seres humanos e, em particular, a diferença entre o sofista e o filósofo; a diferença essencial com relação ao ser do lógos às contraposições entre lógoi; e, finalmente, a diferença enquanto parte da alteridade inteligível, condição para o entrelaçamento das formas que determina a significação dos discursos, sua verdade e sua falsidade.

Posso, assim, dizer que a diferença se revela como a pedra de toque da dialéctica, tal como ela é visada no Sofista: uma ciência humana (dos homens livres), da diferenciação e da divisão (nos discursos) dos seres, seguindo os gêneros (as formas)." (p. 22)

Tradução de Plato on the Rhetoric of Philosophers and Sophists.

30. Mesti, Diogo Norberto. 2020. "Marques ilustrando as imagens do Sofista de Platão." Voluntas: Revista Internacional de Filosofia no. 11:134-149.

Resumo: O objetivo deste artigo é retomar a leitura de Marcelo Marques do conceito de imagem do Sofista de Platão, tendo como recorte o capítulo sobre a "Aporia" do livro Platão, pensador da diferença. Além de retomar essa leitura, pretende-se reconstruir as pontes sugeridas pelas epígrafes que o

comentador retirou de Faulkner e de Guimarães Rosa para ilustrar o estatuto paradoxal das imagens, que são definidas no diálogo platônico como um tipo de ser que é, mas que não é aquilo que é. Com isso, pretende-se avaliar algumas imagens literárias utilizadas para falar de imagens na teoria filosófica de Platão."

31. Oliveira, Claudio. 1999. "Um outro « lógos », um outro sofista: variações em torno de Platão." Kléos no. 2-3:73-83.

"Trata-se, em Platão, de distinguir o sofista do filósofo? Ou talvez, melhor, de distinguir o filósofo do sofista? A diferença é sutil, mas importa.

Qual dos dois, na verdade? Platão não deixa dúvida e ainda menos toda tradição filosófica que segue seus passos: trata-se, muito mais, do segundo caso. O caso: um filósofo atormentado, às voltas e em busca de um princípio que possa distingui-lo do sofista." (p. 73)

32. Oliveira, Lethicia Ouro de. 2014. "A εἰκαστική no Sofista de Platão." Archai: The Origins of Western Thought no. 13:53-60.

Resumo: "No diálogo Sofista de Platão, os personagens Estrangeiro e Teeteto estão à caça da definição do sofista.

Ambos concordam em que o sofista produz imitações, ficções.

Seguindo o método dialético, será preciso responder: que tipo de imitação é produzido pela sofística? Para isso, o Estrangeiro divide a mimética em εἰκαστική e φανταστική. Essa divisão, feita sem grandes explicações, gerou, contudo, bastante controvérsia na tradição comentarista. Nesse texto analisaremos a leitura de diferentes comentadores sobre o sentido de um desses gêneros miméticos, a εἰκαστική. Esta análise permitir-nos-á posicionarmos-nos entre as vertentes interpretativas e compreender o texto do Sofista com maior acuidade. Por fim, novos direcionamentos serão abertos para apreender o que é a própria filosofia tal como realizada nos diálogos platônicos."

33. ——. 2018. Da Mimesis Divina à Humana: um breve estudo sobre as noções de pintura e escultura nos diálogos Sofista,

Timeu e Leis de Platão. Rio de Janeiro: Casa da Editora PUC-Rio.

"Finalizamos assim a expressão de nossa percepção sobre as noções de pintura e escultura nos diálogos Sofista, Timeu e Leis. Nosso intuito foi de construir uma imagem fidedigna, um discurso icástico, mas sempre corremos o risco de nos deixarmos enganar por uma ou outra simulação, artimanha ou brincadeira com palavras e imagens tão do gosto de Platão. Como uma pintura, este estudo é também inacabado e cumprirá seu fim ao despertar o desejo por mais pesquisas e investigações sobre o que são pinturas, esculturas e quais seus poderes na filosofia platônica. E se estas são exemplos claros do que são imagens em geral, uma investigação, por fim, sobre si mesma, dado o caráter imagético do discurso, pelo qual nos arriscamos a conhecer e divulgar o real no perigo de nos percebermos sofistas e/ou filósofos, dadas todas as variáveis históricas e políticas de ambas as posições." (p. 208)

Síntese: "Indicação de tópicos do prólogo de o Sofista considerados relevantes, sob o ponto de vista propedêutico, para o estudo do diálogo na perspectiva do processo diairético. Observações sobre as implicações entre o método, os temas e a estrutura do diálogo."

35. Pereira, Viviane Magalhães. 2013. "Uma concepção hermenêutica de Filosofia: pensar com o Sofista de Platão e a Metafísica de Aristóteles." XII Semana Acadêmica do PPG em Filosofia da PUCRS:3-10.

Resumo: "Quem trabalha com Filosofia em algum momento se deparou com a dificuldade de defini-la. Mesmo ante as indicações daqueles elementos que caracterizariam a unidade da Filosofia, vemos que a nossa concepção pormenorizada do que ela seja depende da teoria filosófica na qual apoiamos nossas teses. Para defender isso, utilizaremos neste artigo o exemplo de dois textos clássicos que nos influenciam até hoje, a saber, o Sofista de Platão e a Metafísica de Aristóteles. Mostraremos como estes escritos apresentam o exemplo da

unidade da Filosofia e da multiplicidade de suas teorias. O que está por trás desses argumentos, no entanto, é uma concepção hermenêutica de Filosofia, segundo a qual principalmente as questões filosóficas são dependentes da linguagem daqueles que com ela estão envolvidos."

36. Rocha, Thomas. 2016. "Saussure: leitor de Platão." *Letrônica. Revista Digital do Programa de Pós-Graduação em Letras da PUCRS* no. 9:126-143.

Resumo: "Neste trabalho, propomo-nos a fazer um estudo que coloca em relação a teoria da alteridade, elaborada por Platão no diálogo *Sofista*, e a teoria do valor linguístico apresentada no Curso de linguística geral (CLG) de Ferdinand de Saussure. Partimos da hipótese levantada por Oswald Ducrot de que, ao desenvolver a noção de valor linguístico, Saussure aplica ao estudo da linguagem o que Platão disse sobre as Ideias. Profundo conhecedor da filosofia clássica, Ducrot encontrou, na teoria do valor linguístico, a fundamentação que o lançou na pesquisa linguística e que hoje conhecemos pelo nome de *Semântica Argumentativa*. Segundo Ducrot, na teoria da alteridade concebida por Platão encontramos a origem filosófica da teoria saussuriana do valor. Nossa intenção é, partindo de um estudo minucioso do diálogo *Sofista* e do CLG, circunscrever a concepção de diferentes conceitos que, por sua vez, pertencem a diferentes campos do conhecimento: a filosofia e a linguística. Dessa forma, é de uma perspectiva epistemológica que nos colocamos. Foi através desses textos que Ducrot pode relacionar a ideia de alteridade com a noção de valor, ao encontrar, em ambas, a ideia de "oposição" como constitutiva das entidades a serem analisadas. De modo que, ao investigar e aprofundar a noção de valor, tentamos explicitar as influências filosóficas que fundamentaram o conceito desenvolvido pelo linguista genebrino."

37. Rodrigues Pimenta, Danilo. 2013. "Ontologia, linguagem e techné no *Sofista* de Platão." *Plêthos* no. 3:8-16.

Resumo: "O presente texto pretende discorrer sobre a ontologia e a linguagem no *Sofista* de Platão. Seguiremos os passos do diálogo entre o Estrangeiro de Eléia e Teeteto, a fim de melhor

compreender a questão proposta. Portanto, nosso objetivo é acompanhar os passos do Sofista com a finalidade de investigar a real problemática do diálogo, o problema do discurso falso."

38. Rohden, Luiz, and Kussler, Leonardo Marques. 2021. "Pressuposto ético da alteridade na hermenêutica filosófica a luz do Sofista de Platão." *Trans/Form/Ação* no. 44:257-276.

Resumo: "A teoria filosófica de Gadamer comporta a proposta da hermenêutica filosófica enquanto um projeto ético. Embora o autor não tenha focalizado essa relação, de forma sistemática, almeja-se, aqui, explicitar e aprofundar a noção de alteridade como pressuposto ético fundamental da hermenêutica gadameriana, à luz do Sofista de Platão. Para tanto, na primeira seção, abordam-se a estrutura e as formas de interação do conceito de outro, tal como apresentado por Platão, no Sofista, que trata de aspectos da identidade, da diferença, da coexistência do eu e do outro enquanto princípios metafísicos. Em um segundo momento, propõe-se uma percepção possível da apropriação de Gadamer relativamente aos conceitos platônicos os quais dialogam entre si, por meio da dialética, a partir da subjetividade moderna. Dessa maneira, justifica-se que os traços fundamentais da ética hermenêutica têm base em princípios não autoexcludentes, visto que não se exige o assujeitamento do outro como condição da formação e da manutenção identitária de si. Por fim, reconduz-se a hipótese de que o outro hermeneuticus é tão importante quanto o eu hermeneuticus para a compreensão de si e do mundo, em uma relação copartícipe, a qual não nega diferentes modos de ser para se afirmar com significativas implicações pessoais e sociopolíticas."

39. Salles, Lucio Lauro Barrozo Massafferri. 2016. "As faces do Sofista de Eleia." *Anais de Filosofia Clássica* no. 10:1-22.

Resumo: "Apresento aqui a hipótese de que Platão pode ter usado aspectos da filosofia e do estilo de Alcidas na composição poética dos personagens Estrangeiro de Eleia e Palamedes Eleático. Para compartilhar essa hipótese, farei uma leitura onde examino e comparo determinadas passagens do

Sobre os Sofistas, de Alcidamante, com o Sofista e com o Fedro, de Platão."

40. Santos, Barbara Helena de Oliveira. 2021. "Unidade e Multiplicidade no método diairético de Platão no Sofista." Archai no. 31:1-27.

Resumo: "Ao colocar a diairesis em comunhão com a dialética, Platão rompe com a estrutura dicotômica-unívoca parmenídica; no Fragmento 2 do Poema Da Natureza, a deusa estabelece que há apenas dois caminhos para a verdade, um que é e outro que não é. Desses dois caminhos, Parmênides nega o segundo, afirmando que é impossível conhecer o que não é: para o filósofo préssocrático conhecer algo está relacionado ao é, logo, para ele, é impossível conhecer o que não é. De maneira que há, em Parmênides, uma cisão entre "ser" e "não-ser". O desafio, ao qual nos propomos neste artigo, é explorar as implicações, para a diairesis no Sofista de Platão, quanto à afirmação parmenídica sobre a impossibilidade cognoscível a respeito do não-ser."

41. Santos Lima, Jorge dos. 2008. "A dialética presente na estrutura textual d'O Sofista de Platão." Saberes, Natal – RN no. 1:71-83.

Resumo: "O objetivo deste artigo é resolver uma simples pergunta: como é possível apresentar a trama filosófica que se desenvolve no Diálogo O Sofista de Platão sem subtrair a dialética, mobilidade e fluidez dinâmica de seu texto? Com esse intuito, pressupõe-se de imediato que há uma trama filosófica no Diálogo e que é dialética. Assim, optou-se por seguir seis passos que, metodologicamente, estruturam este estudo e resumem, ao mesmo tempo, esse escrito de Platão: o primeiro é a introdução responsável pela delimitação deste estudo; depois se descreve em conjunto, a introdução que Platão faz à obra e as primeiras tentativas de definição do sofista; em seguida mostra-se como Platão interpreta as discussões existentes na história acerca do ser e não-ser e os resultados dessa interpretação; logo adiante, enfatiza-se a retomada de Platão do debate sobre ser e não-ser que culmina na afirmação do não ser como alteridade no contexto da

linguagem; depois, expõe-se as conclusões que Platão escreve sobre o autêntico sofista para, por fim, assinalar algumas considerações sobre o caráter dialético e móbil da trama ou idéias principais desse Diálogo."

42. Santos, Maria Carolina Alves dos. 2001. "A demarcação platônica de novas fronteiras epistêmicas para o discurso filosófico um estudo sobre o Sofista." *Trans/Form/Ação* no. 24:273-299.

Resumo: "No Sofista, mediante os circuitos do procedimento ontológico-binário das divisões dialéticas, Platão busca não somente chegar à verdade das coisas em si, mas, também, a sua correta expressão. A superação das aporias relativas à natureza da linguagem por um tratamento metódico rigoroso, que minimiza suas limitações e inadvertências e a instala numa dimensão transcendente, entre os gêneros do Ser, assegura-lhe o estatuto de discurso filosófico, capaz de dizer aquilo que é como ele é."

43. Severo Buarque de Holanda, Luisa. 2014. "A parte e o todo: atomismo e linguagem no Sofista." *Anais de Filosofia Clássica* no. 16:49-61.

Resumo: "O atomismo de Leucipo e Demócrito é utilizado implicitamente, em não poucos diálogos de Platão, como um importante paradigma científico a ser problematizado, criticado ou reempregado. Interessa-me, aqui, analisar a contribuição do atomismo para a Filosofia da Linguagem platônica presente no Sofista. A hipótese a ser desenvolvida é que o cerne das reflexões linguísticas encontradas em tal diálogo se inicia com uma importante crítica à doutrina do atomismo."

44. Trindade Santos, José. 1998. "Do Crátilo ao Sofista: a descoberta da linguagem." *Atti della Accademia di Scienze morali e politiche della Società nazionale di Scienze, Lettere ed Arti di Napoli* no. 109:55-67.
45. ———. 2011. "Notas sobre o estatuto do não-ser no Sofista." In *Logon didonai. La filosofia come esercizio del rendere ragione. Studi in onore di Giovanni Casertano*, edited by Palumbo, Lidia, 591-600. Napoli: Loffredo.

46. ——. 2018. "Metamorfoses do logoi: do não predicativo ao predicativo." *Archai* no. 24:179-206.

Resumo: Este texto aborda alguns usos filosóficos de logoi em Platão, em especial os associados a contextos lógico-epistemológicos contrastantes. Contraposta a vagas concepções 'não-predicativas', a teoria 'predicativa' do enunciado (*Sofista* 261-264) culmina a pesquisa sobre o logoi, desenvolvida nos diálogos. Da obra "socrática", retira o pedido de resposta à pergunta "O que é?" por meio de um logoi, correspondida, no *Fédon* e na *República*, pela exigência de logon didonai como prova do saber. Noutro plano, exemplificando usos sofisticados do logoi, são expostas três concepções infalibilistas e não-referencialistas de logoi, avançadas no *Eutidemo*, no *Teeteto* e no *Crátilo*. Depois de analisar três casos de logoi não-predicativo, o texto defende que, com a teoria predicativa do logoi, Platão visa a habilitar o discurso para o conhecimento de "o que é".

47. Veloso, Cláudio William. 2001. "Dicotomia e imitação no *Sofista* de Platão." *Cadernos de Atas da ANPOF (Associação Nacional de Pós-Graduação em Filosofia)* no. 1:121-126.

"Tempos atrás, eu decidira nunca mais me ocupar de Platão. Eu achava impossível —pelo menos para mim— dizer algo de sensato —e, ao mesmo tempo, de não óbvio— acerca desse autor. Como ouvi dizer de Luc Brisson uma vez, Platão é perverso. E diante de um perverso só consigo constatar a sua perversidade, onde por perversidade entendo o fato de se afirmar algo e se negar esse algo ao mesmo tempo. Levado, porém, pelo entusiasmo de uma discussão com Monique Dixsaut e Marcelo Pimenta no III Simpósio Nacional de Filosofia Antiga (Itatiaia (RJ), Abril de 2000), deixei-me convencer a apresentar um trabalho neste encontro. Na verdade, logo me arrependi. Platão não é, como se costuma dizer, minha especialidade. Embora leitor interessado dos diálogos, confesso que sou muito ignorante da Bibliografia crítica. Mesmo assim, atrevo-me a expor-lhes algumas minhas reflexões." (p. 121

48. Wolff, Francis. 1996. "Dois destinos possíveis da ontologia a via categorial e a via física." *Analytica* no. 1:179-225.

"Os gregos são tidos como tendo falado do Ser. Falar do Ser, certamente, mas o que dizer do Ser? Que ele é, mas isso não diz nada. Para instituir a possibilidade de um discurso sobre o ser, é preciso começar pensando e dizendo também que ele não é. Um discurso é então possível, mas é ainda sobre o ser? Pode ser que, ao invés de nos ter mostrado como o discurso sobre o ser é possível ou necessário, o pensamento grego tenha esboçado, de uma vez por todas, três figuras de sua impossibilidade.

Três figuras, as únicas possíveis, nas quais se abisma necessariamente toda "ontologia": a quem do discurso "ontológico", há a tautologia vazia; além, há uma física ou há uma lógica." (p. 179)

(...)

"A ontologia institui-se, dizíamos, no curto momento que separa Parmênides de Aristóteles ou de Epicuro. Antes, ela não é ainda possível, por não pensar o não-ser; depois, não é mais possível, o ser não devendo mais ser pensado como tal. Ela institui-se também na estreita via que separa a lógica da física e abisma-se necessariamente em uma ou em outra se quiser verdadeiramente pensar o discurso

ou o movimento. Tudo isso é natural. Pois querer uma ciência universal do ser obriga o pensamento a escolher. Em que pensa ela? Neste mundo em que evidentemente nos encontramos, ao qual temos uma relação imediata (aisthesis), este mundo que vemos e tocamos e no qual nos movemos não menos evidentemente?

O mundo-visto? Ou neste mundo no qual a linguagem (logos) nos joga, mediante a qual temos uma relação possível com todos os seres que falam e no qual falamos infinitamente das coisas e aos outros? A linguagem-mundo?" (p. 225)

The subject matter of Aristotle's Metaphysics. Ancient and Modern Interpretations

Introduction

Aristotle gives four definitions of what is now called metaphysics: wisdom, first philosophy, theology and science of being *qua* being.

The purpose of this page is to present some of the most important interpretations, ancient and contemporary, of the definition of a science of being *qua* being.

The main points that will be developed are the following:

A panorama of current interpretations;

A discussion of the authenticity of the Book K (XI) of Aristotle's *Metaphysics*;

Citations from the most important Greek and Latin Commentators about Aristotle's definition of a science of Being qua Being;

A brief presentation of the theory of reduplication (qua-theory):

An annotated bibliography of contemporary research.

Why Aristotle does not simply say that ontology is the theory of being? Is there any difference between 'theory of being' and 'theory of being *qua* being'? In brief, the problem is deciding whether the two expressions 'the theory of being' and 'the theory of being *qua* being' are equivalent. If they are, the functor '*qua*' does not seem to play any interesting role. On the contrary, if the two expressions are different -- that is to say, if there is a difference between the theory of

being (*simpliciter*) and the theory of being *qua* being -- we should study the role played by the functor of reduplication ' *qua*'.

For an introduction to the problem of reduplication see Roberto Poli, "Qua-theories", in Liliana Albertazzi, (ed.), *Shapes of Forms*, Dordrecht: Kluwer 1998, pp. 245-256.

It should be noted that the functor of reduplication is massively used by Aristotle in his theory of mathematics (see in particular *Met.*, books XIII and XIV). Reduplication is the tool Aristotle uses for avoiding the pitfalls of Platonism.

ARISTOTLE'S TEXTS ON BEING QUA BEING

The sentence ὄν ἢ ὅν (Being *qua* Being) is used only in the books IV, VI and XI of the *Metaphysics*.

References are made to: Aristotle, *Metaphysics. Text and Commentary*, Edited and translated by William David Ross, Oxford: Oxford University Press 1924, corrected edition 1953.

ARISTOTLE'S METAPHYSICS IN A NUTSHELL

"What were Aristotle's metaphysical contentions, and what is Aristotle's *Metaphysics*? The latter question is the easier. The work, as we now have it, divides into fourteen books of unequal length and complexity. Book Alpha is introductory: it articulates the notion of a science of the first principles or causes of things, and it offers a partial history of the subject. The second book, known as "Little Alpha," is a second introduction, largely methodological in content. Book Beta is a long sequence of puzzles or *aporiai*: possible answers are lightly sketched, but the book is programmatic rather than definitive. Book Gamma appears to start on the subject itself: it characterizes something which it calls "the science of being qua being" -- and it then engages in a discussion of the principle of non-contradiction. Next, in book Delta, comes Aristotle's "philosophical lexicon": some forty philosophical terms are explained and their different senses shortly set out and illustrated. Book Epsilon is brief: it returns to the science of being qua being, and also passes some remarks on truth. Books Zeta, Eta and Theta hang together, and

together they form the core of the *Metaphysics*. Their general topic is substance: its identification, its relation to matter and form, to actuality and to potentiality, to change and generation. The argument is tortuous in the extreme, and it is far from clear what Aristotle's final views on the subject are -- if indeed he had any final views. The following book, *Iota*, concerns itself with the notions of unity ('oneness') and identity. Book *Kappa* consists of a resumé of *Gamma*, *Delta*, and *Epsilon* and of parts of the *Physics*. In book *Lambda*, we return to the study of beings and of first principles: the book contains Aristotle's theology, his account of the 'unmoved movers', which are in some sense the supreme entities in his universe. Finally, Books XIII and XIV turn to the philosophy of mathematics, discussing in particular the ontological status of numbers." (pp. 66-67)

From: Jonathan Barnes (ed.), *Cambridge Companion to Aristotle* Cambridge: Cambridge University Press 1995. Chapter 3: *Metaphysics*, by Jonathan Barnes.

"Aristotle can fairly be said to be the founder of metaphysics as a separate discipline, as well as one of the most influential theorists of metaphysics. (...) Aristotle was not the first philosopher to concern himself with metaphysical issues, but he was the first to study metaphysics systematically and to lay out a rigorous account of ontology. (...) In the *Metaphysics* Aristotle subjects to scrutiny his own metaphysical principles. Our word 'metaphysics' itself derives from the expedient of early editors of Aristotle who, not knowing what to call his books on first principles, called them META TA PHYSIKA, the material after the physical enquiries. Whether the fourteenth books of the *Metaphysics* are a unity or a collection of disparate treatises is a matter of serious debate. Aristotle clearly recognizes a special study corresponding to metaphysics which he calls variously wisdom, first philosophy, and theology.

But the books of the *Metaphysics* seem to present different conceptions of what metaphysics is. In Book I Aristotle identifies wisdom with knowledge of the ultimate causes and principles, which he identifies as the four causes. Book IV makes metaphysics an enquiry into the causes of being qua being, an enquiry made possible by the fact that all senses of being are related to a single central

notion, the notion of substance. Book VI argues that the highest science must study the highest genus of substance, which is the divine, and hence this science must be theology. Of course, it is not surprising that metaphysics should take in studies of causation, of ontology (the study of the basic entities in the world), and what was later called special metaphysics (the study of special kinds of beings, e.g. God and the soul); but precisely how these enquiries were related in Aristotle's mind remain obscure." (vol. I, pp. 50-52)

From: Hans Burkhardt & Barry Smith (eds.), *Handbook of Metaphysics and Ontology*, München: Philosophia Verlag 1991, entry *Aristotle*, by Daniel W. Graham.

AN HYPOTHESIS ABOUT THE TITLE METAPHYSICS

In an essay published in 1954 (1), Hans Reiner proposed a new interpretation of the origins of the title of Aristotle's book.

His hypothesis is summarized by Takatura Ando in: *Metaphysics. A Critical Survey of Its Meaning*, The Hague: Martinus Nijhoff 1963, pp. 4-5.

"According to Reiner, it would have been a quite arbitrary procedure to christen the science, which Aristotle himself called the first philosophy, and Theophrastus the first theology, with a name derived by chance from the mere editorial sequence of the work. The interpretations of this book by Alexander of Aphrodisias and by Asclepius, on which modern scholars like Brandis, Zeller, and Bonitz base the above mentioned hypothesis [that the title is due to Andronicus of Rhodes], tell us in reality that the book was called *ta meta ta fisica*, because it came after the physical sciences. Rather than mentioning anything about its origin from Andronicus' arbitrary arrangement, Alexander and Asclepius said that the order was taxix proz hmaz. Anyone who has learned a little about Aristotle's philosophy must know that prox emax usteron is the contradictory opposite of prox emax proteron, which on its side, is the contrary of fusei proteron. Metaphysics is posterior to physical sciences in the order in which we learn things, and this is consistent with calling metaphysics *prote filosofia*, first philosophy, i.e. prior in the order of being. (...) The name metaphysica, Rainer proceeds,

cannot be found even in Diogenes Laertius, the oldest catalogue of Aristotle's works. The first person to use this title is Nicolaus of Damascus, who lived in the latter half of the first century B.C. In a commentary on Theophrastus metaphysics -- this book had also originally another name -- we find that Nicolaus of Damascus wrote a book on Aristotle's *meta ta fusica*. (...) Though as we have already said we cannot find it [metaphysics] in the list of Diogenes Laertius, it seems very probable that it was included in an earlier list -- that of Hermippus (ca. 200 B.C.) -- and was by some chance dropped from the list of Diogenes. According to Howald, Ariston of Ceus who was master of the Peripatetic school from 228-5 B.C. made a list of philosophical works before Hermippus and Diogenes presumably used this when he made his list. The origin of the name metaphysics, thus traced back to one century after Aristotle's death, might be safely conjectured to reflect the sequence which Aristotle himself followed. (...) Eudemus, Aristotle's immediate disciple, the author of the History of Theology, and the first editor of his teacher's works, is supposed by Reiner to have invented the name *ta meta ta fusica*."

THE DEBATE ABOUT THE EVOLUTION OF ARISTOTLE'S THOUGHT

"For most of this century, Aristotelian scholarship was dominated by a single question: how might Aristotle's intellectual development be used to shed light on his philosophical doctrines? Opinions differed widely as to how this growth might be charted; eventually, a reaction

to the whole enterprise set in. The past thirty years have seen the question lose its prominence as scholars returned to studying the corpus without Aristotle's development as a primary concern.

Recently, the question of the Aristotle's philosophical development has been reopened. Two books in particular, Daniel Graham's *Aristotle's Two Systems* (Oxford, 1987) and John Rist's *The Mind of Aristotle: A Study in Philosophic Growth* (Toronto, 1989), have advanced comprehensive developmental accounts of the whole of Aristotle's thought. Together they may signal a renewed interest in developmentalism, and offer philosophers an opportunity to assess the problems and prospects facing any such revival. (...) For fifty years after it was first raised, to little notice by Oxford professor Thomas Case (Case 1910), then resoundingly by Werner Jaeger in a groundbreaking study two years later (Jaeger 1912), scholars devoted themselves to the question of Aristotle's growth as a thinker. Jaeger's 1912 study concentrated on the development of Aristotle's *Metaphysics*; in 1923, he furnished a comprehensive account of the whole of Aristotle's growth, which revolutionized the study of the philosopher (Jaeger 1923; all references are to the 1948 second English edition except as noted). The main points of his thesis are familiar (though perhaps no longer familiar enough: see Code 1996). Aristotle began his philosophical career as a follower of Plato and only later, after a long transitional period, emerged into philosophical maturity as the opponent of Platonic forms and the investigator of empirical nature and living things. Much of Jaeger's evidence for the early Aristotle came from fragments of the literary remains, many of which had been regarded as spurious before his work. He then turned to works often regarded as assemblages of independent lectures or smaller pieces (the *Metaphysics* and *Politics* in particular) and to the three ethical treatises that have come down to us under Aristotle's name. Using these works he constructed a picture of Aristotle's development in which Aristotle moved toward an increasing independence from Plato. He then sought parallels with doctrines in other works not held to be internally inconsistent. So, for instance, his contention that Aristotle's empiricism came late in his career led to his assigning the biological works to the Lyceum period.

Almost immediately, the genetic question came to dominate Aristotelian scholarship (see Chroust 1963, also A. Mansion 1927). (...) Cherniss (1944) argued forcefully that, given Aristotle's constant revision of his lectures until the end of his life and the clear programmatic connections between many of them, interpreters are compelled to take his doctrines as a unified whole. Others sought to dismiss Jaeger's approach as being simply the product of positivist or historicist dogmas popular in Germany at the turn of the century.

Gradually, Jaeger found himself with fewer and fewer supporters for his version of the developmental thesis. Probably the decisive challenges came in the work of Düring and Owen. During (1956, 1966a, 1966b) argued that Aristotle was from the beginning opposed to Plato and his transcendental view of reality. His growing interest in natural science developed, in turn, under the influence of Aristotle's own gifted pupil and eventual successor, Theophrastus. Owen's analysis (1960, 1965) was yet more influential. Owen argued that early in his career Aristotle issued an uncompromising rejection of Platonic metaphysics and the corresponding master science of dialectic. Later, a pivotal insight into how we refer to one thing by means of another -- the now famous doctrine of 'pros hen equivocity' of 'focal meaning' -- prompted him to make room for a universal science of Being after all. In effect 'the Platonism of Aristotle' was more complex than Jaeger had pictured it (and perhaps more so than Owen thought -- see Code 1996)." (*Introduction* by William Wians, pp. IX-XI.)

From: William Wians (ed.), *Aristotle's Philosophical Development: Problems and Prospects*, Lanham: Rowman Littlefield Publishers 1996.

"Turning to Aristotle's own works, we immediately light upon a surprise: Aristotle began his extant scientific works during Plato's lifetime. By a curious coincidence, in two different works he mentions two different events as contemporary with the time of writing, one in 357 and the other in 356. In the *Politics* (V 10, 1312b10), he mentions as now (nun) Dion's expedition to Sicily, which occurred in 357. In the *Meteorologica* (III 1, 371a30), he mentions as now (nun) the burning of the temple at Ephesus, which occurred in 356. To save his hypothesis of late composition, Zeller

resorts to the vagueness of the word "now" (nun). But Aristotle is graphically describing isolated events and could hardly speak of events of 357 and 356 as happening "now" in or near 335. Moreover, these two works contain further proofs that they were both begun earlier than this date. The Politics (II 20) mentions as having happened lately (*neosti*) the expedition of Phalaeucus to Crete, which occurred towards the end of the Sacred War in 346. The Meteorologica (III 7) mentions the comet of 341. It is true that the Politics also mentions much later events, e.g., the assassination of Philip, which took place in 336 (V 10, 1311b1-3). Indeed, the whole truth about this great work is that it remained unfinished at Aristotle's death. But what of that? The logical conclusion is that Aristotle began writing it as early as 357, and continued writing it in 346, in 336, and so on till he died. Similarly, he began the Meteorologica as early as 356 and was still writing it in 341. Both books were commenced some years before Plato's death; both were works of many years; both were destined to form parts of the Aristotelian system of philosophy. It follows that Aristotle, from early manhood, not only wrote dialogues and didactic works, surviving only in fragments, but also began some of the philosophical works that are still parts of his extant writings. He continued these and no doubt began others during the prime of his life. Having thus slowly matured his separate writings, he was the better able to combine them more and more into a system, in his last years. No doubt, however, he went on writing and rewriting well into the last period of his life; for example, the recently discovered Athenaion Politeia mentions on the one hand (c. 54) the archonship of Cephisophon (329-328), on the other hand (c. 46) triremes and quadriremes but without quinqueremes, which first appeared at Athens in 325-324; and as it mentions nothing later it probably received its final touches between 329 and 324. But it may have been begun long before and received additions and changes. However early Aristotle began a book, so long as he kept the manuscript, he could always change it. Finally, he died without completing some of his works, such as the Politics, and notably that work of his whole philosophic career and foundation of his whole philosophy -- the Metaphysics -- which, projected in his early criticism of Plato's philosophy of universal forms, gradually developed into his positive philosophy of individual substances, but remained unfinished after all.

On the whole, then, Aristotle was writing his extant works very gradually for some thirty-five years (357-322), like Herodotus (IV 30) contemplated additions, continued writing them more or less together, not so much successively as simultaneously, and had not finished writing at his death.

There is a curious characteristic connected with this gradual composition. An Aristotelian treatise frequently has the appearance of being a collection of smaller discourses (logoi), as, for example, K. L. Michelet has remarked.

This is obvious enough in the *Metaphysics*: it has two openings (Books A and α); then comes a nearly consecutive theory of being (B, Γ, E, Z, H, Θ), but interrupted by a philosophical lexicon Δ; afterwards follows a theory of unity (I); then a summary of previous books and of doctrines from the *Physics* (K); next a new beginning about being and, what is wanted to complete the system, a theory of God in relation to the world (Λ); finally, a criticism of mathematical metaphysics (M, N), in which the argument against Plato (A 9) is repeated almost word for word (M 4-5). The *Metaphysics* is clearly a compilation formed from essays or discourses; and it illustrates another characteristic of Aristotle's gradual method of composition. It refers back to passages "in the first discourses" (*en tois protois logois*) -- an expression not uncommon in Aristotelian writings. Sometimes the reference is to the beginning of the whole treatise; e.g., *Metaph.* B 2, 997b3-5, referring back to A 6 and 9 about Platonic forms. Sometimes, on the other hand, the reference only goes back to a previous part of a given topic, e.g., *Metaph.* Θ 1, 1045b27-32, referring back to Z 1, or at the earliest to Γ 2. On either alternative, however, 'the first discourses' mentioned may have originally been a separate discourse; for Book Γ begins quite fresh with the definition of the science of being, long afterwards called 'Metaphysics,' and Book Z begins Aristotle's fundamental doctrine of substance." (vol. 2 p. 506-507)

"This book, being at once treatise and monograph, demands a brief word of explanation.

It does not seek to give a systematic account, but to analyse Aristotle's writings so as to discover in them the half obliterated traces of his mental progress. Its biographical framework is intended merely to make more palpable the fact that his previously undifferentiated mass of compositions falls into three distinct periods of evolution. Owing to the meagerness of the material the picture that we thus obtain is of course fragmentary; yet its outlines constitute a distinctly clearer view of Aristotle's intellectual nature and of the forces that inspired his thinking. Primarily, this is a gain to the history of philosophical problems and origins. The author's intention is, however, not to make a contribution to systematic philosophy, but to throw light on the portion of the history of the Greek mind that is designated by the name of Aristotle.

Since 1916 I have repeatedly given the results of these researches as lectures at the universities of Kiel and Berlin; even the literary form, with the exception of the conclusion, was established in essentials at that time. The literature that has since appeared is not very important for Aristotle himself anyhow, and I have noticed it only so far as I have learnt something from it or am obliged to contradict it. The reader will look in vain for the results even of earlier researches so far as they concern merely unimportant changes of opinion or of form; such matters have nothing to do with development. Still less has my purpose been to analyse all Aristotle's writings for their own sake and to complete a microscopic examination of all their stages. The aim was solely to elucidate in its concrete significance, by means of evident examples, the phenomenon of his intellectual development as such." (Preface to the German edition (1923))

From: Werner Jaeger, *Aristotle. Fundamentals of the History of His Development*, Oxford: Clarendon Press 1948.

"It can be shown, however, that even the earlier version of the introduction (K 1-8) is not the original form of the *Metaphysics*. We have seen that in K 1-8 *metaphysics* is described as the science of that which is unmoved and eternal and transcendent. We also find there, however, the definition of it as the science of being as such (ὄν

ἢ ὄν), though not developed, as it is in the later version, into a science of the manifold meanings of being including the perceptible being of movable nature. This combination of the two definitions in K 1-8 is a serious difficulty, and becomes only too painfully obvious in the later version of E, which in its present revised form is meant to introduce the science of the manifold meanings of being. Since the earlier and the later versions do not differ in this respect, but only in the extension that they assign to the notion of being, we shall not fall into error if we use them both together in what follows.

In E 1 (= K 7) Aristotle explains what he understands by a science of being as such. All sciences inquire into certain causes and principles of things. As examples he mentions medicine and gymnastics, and to take one with a more developed method mathematics, i.e. the examples usual in Plato's theory of science and method. Each of these sciences marks off systematically a definite sphere of reality and a definite genus and studies the resulting limited complex of facts. None of them discusses the being of its object; they all either presuppose it on the ground of experience, as do natural science and medicine; or, like mathematics with its axioms, they start from particular definitions. Their demonstrations, which differ from each other only in degree of accuracy, deal solely with the properties and functions following from these definitions or from facts evident to sense. The metaphysician, on the other hand, inquires about being precisely as being. He examines the presuppositions of these sciences, of which they themselves are neither willing nor able to give an account.

Aristotle supplements this explanation at the beginning of Book E 1 (= K 3), where he brings out even more fully and clearly the distinction between first philosophy as universal science and the special sciences, between being as such and its particular realms. Here he treats being not as a sort of object separate and distinct from others, but as the common point of reference for all states, properties, and relations, that are connected with the problem of reality. As the mathematician, according to him, looks at all things solely from the point of view of quantity, so the philosopher studies everything that belongs to being as such, whereas the physicist, for example, considers it only as in motion. Many things 'are' only because they are the affection or the state or the motion or the

relation of some one being they derive from something that 'is' simply. (...) To Plato dialectic was as such ontology. To Aristotle it was rather a practical and historical question whether this whole logic of being was under all circumstances to be included in first philosophy. His original metaphysics was theology, the doctrine of the most perfect being; it was hard to combine abstract dialectic with this once the Ideas were gone. But he tried to link them up by means of their common relation to being as such." (pp. 214-216)

From: Werner Jaeger, *Aristotle. Fundamentals of the History of His Development*, Oxford: Clarendon Press 1948.

"According to Werner Jaeger, the ὄν ἢ ὅν has two different meanings, depending on whether it is considered as found in the more ancient books or in parts which would have been added to the collection of the Stagirite's *Metaphysics* in the last-period.

In 'the last' stage the theory of the ὄν ἢ ὅν, according to Jaeger, would signify a sort of 'ontological phenomenology,' that is, 'an enumeration and description of the various meanings of being' in which a place would be found for all the forms of being, while transcendent being will not hence forward be the center of interest itself. Thus understood, the ὄν ἢ ὅν permits Aristotle to unify the two preceding conceptions of Book K Λ E 1; one in which the predominant interest concerns the supersensible and transcendent substance, the other, Books Z Θ, in which the interest in sensible substance and immanent entelechy or immanent form predominates. In fact the ὄν ἢ ὅν comprehends both the pure *energeia* of divine thought and the αἰσθητη οὐσια of the physical world which is subject to generation and corruption insofar as both are 'being.'

This conception of the ὄν ἢ ὅν, as we said, would be contained only in the last additions, insertions, and articulations, chiefly in the second, the third, and the fourth chapters of Book E. In Book K, where according to Jaeger the object of first philosophy is indicated in 'a clear way and without exception' as being the immobile and eternal realities, the ὄν ἢ ὅν also appears close to this perspective, but here the ὄν ἢ ὅν *is not developed yet*, as it is in the later version, *into a*

science of the manifold meanings of being, including the perceptible being of movable nature. The same ought to be said of the meaning of ὄν ἢ ὅν in Books Γ and E 1, which, on this account, are not even distinguished from Book K by means of 'the different scope with which it treats the concept of being. 'By excluding the doctrine of ὄν ἢ ὅν from K, Γ, and E 1 as having the meaning of an ontological phenomenology, as it will, on the contrary, be present in E 2-4, Jaeger only explains rather vaguely what it does signify in that first group of writings. With respect to Book Γ he writes: 'Here he treats being not as a sort of object separate and distinct from others, but as the common point of reference for all states, properties, and relations that are connected with the problem of reality. It would seem, therefore, that Jaeger considers it as a kind of general ontology, in the sense of a universal theory of being.' (Jaeger, - Aristoteles - p. 289, Robinson trans. p. 215)". (pp. 138-139 notes omitted)

From: Giovanni Reale, *The Concept of First Philosophy and the Unity of the Metaphysics of Aristotle*, Albany: State University of New York Press 1980.

CONTEMPORARY INTERPRETATIONS: METAPHYSICS AS GENERAL ONTOLOGY

The general science of causes is general ontology.

Gamma 1 begins with the assertion that there is a science that studies 'that which is' qua 'thing which is' and what belongs to 'that which is' intrinsically, or per se. (1) By virtue of its generality this science is contrasted with the departmental sciences that cut off merely some part of 'that which is' and study the properties that are unique to that part. To study 'that which is' qua 'thing that is' is not to study some special object called 'that which is qua thing that is'. The 'qua' locution is here used to indicate the respect in which this science studies its subject matter, and indicates that it deals with those ubiquitous truths that apply to each 'thing that is'. The metaphysician must both state the general (propositional) principles that apply to 'that which is' as such and treat of their properties or features. An example of a metaphysical principle that belongs to beings as such is the principle of non-contradiction (PNC). To study

what belongs to 'that which is' per se also involves a study of the terms that apply to 'things that are' as such (for instance, 'same' and 'one'), and to investigate truths about them.

This concept of general ontology is further clarified by the way in which Aristotle proceeds to deal with issues raised by four puzzles stated in B 1 about the nature of the metaphysical enterprise itself. These are four of the first five items on the list, and they concern the characterization of the universal science that deals in the most general way possible with the causes and starting points of all things. The second puzzle (995b6-10), for instance, assumes that this science will at the very least deal with the principles of substance, and inquires whether it will also deal with the common axioms those principles 'from which everybody makes proofs'. Does it, for instance, study the PNC? I 3 solves this puzzle by showing that the science of substance is the science that studies the common axioms. Gamma also provides answers to at least portions of the other puzzles, though without explicitly referring back to them. For instance, after Book B has queried whether the science of substance also studies the per se accidents of substances, it goes on to ask whether it will study in addition to these accidents such terms as 'same', 'other', 'similar', 'dissimilar', 'contrariety', 'prior' and 'posterior', and then concludes by asking whether it will also study even the per se accidents of these last mentioned items. This is to ask whether in addition to investigating the definitions of the per se accidents of substance, it will also study such issues as whether each contrary has a single contrary. Gamma 2 is in part devoted to answering these last two questions in the affirmative." (pp. 57-58).

Notes

(1) 'That which is qua thing that is' translates '*to on hêi on*', an expression often rendered as 'being qua being'.

From: Alan Code, "Aristotle's Logic and Metaphysics", in: C. C. W. Taylor (ed.), *Routledge History of Philosophy. From the beginning to Plato*, Vol. I, London/New York: Routledge, 1997.

"One of the most difficult problems of interpretation set by the Metaphysics lies in the fact that in book IV the 'sought-for science' is characterized very precisely as the science of 'being qua being' (ὄν ᾗ

όν).(1) Unlike the particular sciences, it does not deal with a particular area of being, but rather investigates everything that is, in its most general structural elements and principles. This description fulfils the expectations the reader has derived from books I and III, which repeatedly aim at insights of the highest generality. But, on the other hand, and startlingly, we also discover that in *Metaphysics VI 1* - only a few pages further on, if we exclude book V as not part of the collection Aristotle seems first to accept this opinion and then, immediately afterwards, to embrace its exact opposite. For in *VI 1* we again find an analysis of the sciences designed to establish the proper place of 'first philosophy'. Here, however, Aristotle does not, as he did in book IV, distinguish the 'sought-for science' from all other sciences by its greater generality. First he divides philosophy into three parts: theoretical, practical, and productive; and then he splits theoretical philosophy into three disciplines. To each of these disciplines he entrusts well-defined areas as objects of research. The 'sought-for science', referred to in IV as the 'science of being qua being', he now calls 'first philosophy', and defines it as the science of what is 'changeless and self-subsistent (*akinêton kai chôriston*)'. He explicitly gives it the title of 'theology'. Physics and mathematics stand beside it as the two neighboring disciplines in the field of theoretical philosophy.

Such an unexpected conclusion to so extended an introduction to 'first philosophy' must seem strange to the reader. It is understandable that an author should see the fundamental philosophical science as universal ontology. We can also accept that a philosopher should elevate theology above all other sciences because of the importance of its object. But that Aristotle should attempt to undertake both enterprises in a single work surely violates 'the greatest duty of a philosopher', which, according to Kant, consists in 'being consistent'.(2) That Aristotle here contradicts himself has been the dominant view in textbooks and commentaries since the middle of the last century. When faced by such difficulties of interpretation, it is customary to seek help from philology. It seemed necessary to saddle Aristotle with an internal inconsistency; and yet scholars were unwilling to credit him with one. Might not philology show that Aristotle's text did not, after all, contain such an inconsistency? In this way, the problem has submitted to what might be called

therapeutic surgery at the hands first of Paul Natorp [1887] and then, more recently, of Werner Jaeger ([1948], pp. 214-21). Natorp resorted to the classical remedy of the nineteenth century, the obelus. Jaeger replaced this by its modern and more lenient counterpart, stratification. The two attempts are, curiously, almost mirror images of each other: Natorp saw the 'theologising tendency' of VI 1 as the result of interpolations by a later hand into Aristotle's text. By making excisions in the text and by giving a somewhat violent interpretation to what was left, he attempted to obliterate this tendency. Jaeger, on the other hand, regards the problematical line of thought which culminates in the description of 'first philosophy' as theology not as the amateurish addition of anonymous epigoni but as the remains of an earlier theologising stage in Aristotle's own development.

The following discussion attempts to prove three points:

I. Both Natorp's and Jaeger's solutions, (3) which may be seen as the two end points of a whole spectrum of related solutions, 'are contradicted by the text of the *Metaphysics* itself.

II. As opposed to these radical solutions, we find that a conservative treatment, based on a detailed analysis of the text is possible.

III. This interpretation, which defuses the supposed contradiction, reveals a characteristically Aristotelian mode of thought and argument -- a mode which can be discovered in other parts of the corpus too, and which merits the attention of anyone concerned to give an accurate portrayal of Aristotle's intellectual 'development'."

(1) *Met.* IV 1, 1003a21; 24; 31.

(2) *Critique of Practical Reason* (1787), p. 44.

(3) Thus Reidemeister in his important article 'Das System des Aristoteles' (now in K. Reiderneister, *Das exakte Denken der Griechen*, 1949, pp. 67-87) speaks of a certain 'refractoriness' which 'appears in Aristotle's thought as a double inclination that he could not overcome but is explicitly aware of' (p. 70). Reidemeister rejects, on good grounds, both the separate ascription of these inclinations to Aristotle's youth and to his maturity, and the early dating of books I-

VI. And he has informed me by word of mouth that he does not regard the 'refractoriness' as a contradiction.

From: Günther Patzig, "Theology and Ontology in Aristotle's *Metaphysics*", in: Jonathan Barnes, Malcolm Schofield, Richard Sorabji (eds.), *Articles on Aristotle*, Vol. 3: *Metaphysics*, London: Duckworth 1979 (Originally published in German in: *Kant-Studien*, 52, 1960/61 pp. 185-205. (Translated by Jennifer and Jonathan Barnes).

A NOTE ON THE NUMBERING OF THE BOOK OF ARISTOTLE'S METAPHYSICS

The books of Aristotle's *Metaphysics* are standardly referred to by their Greek numbering, i.e. by the letters of the Greek alphabet, because of the anomaly that after book 'I' there comes a short book labeled, as it were, not 'II' but 'i'. Translators have often called this 'book II', so that the following book is then called 'book III' in English, though in the Greek it is unambiguously entitled 'B', which means 'II'. This creates confusion, which is avoided by using the Greek numbering throughout. For those unfamiliar with the Greek alphabet, here are the relevant letters, and the confusing 'translation' of them into Roman numerals, which is found in translations of the *Metaphysics* but nowhere else:

A = I

α = II

B = III

Γ = IV

Δ = V

E = VI

Z = VII

H = VIII

Θ = IX

I = X

K = XI

Λ = XII

M = XIII

N = XIV

This peculiar numbering reflects a more important fact about the books themselves, namely that they do not form a single and well

organized whole, and one should not think of them as intended for publication as they stand. Aristotle clearly did mean there to be a connected series of books which we could call his 'Metaphysics' but the writings that have come down to us under that title contain much that would have been either abandoned or re-formed in a final version. For example, book a, which is an alternative introduction, would surely have found no place at all; book A would certainly have been pruned of the material in the first half of chapter 9 (which reappears almost unchanged in chapters 4-5 of book M), and probably of other material in consequence. There is no book of the existing Metaphysics of which one can confidently say that it would have figured in the final version just as it now is."

"Pierre Aubenque's "Science Regained" (1962; translated by Clayton Shoppa) was originally published as the concluding chapter of *Le Probleme de l'Etre chez Aristote*, one of the most important and original books on Aristotle's *Metaphysics*. In this essay, Aubenque contends that the impasses which beset the project of first philosophy paradoxically become its greatest accomplishments.

Although science stabilizes motion and thereby introduces necessity into human cognition, human thought always occurs amidst an inescapable movement of change and contingency. Aristotle's ontology, as a discourse that strives to achieve being in its unity, succeeds by means of the failure of the structure of its own approach: the search of philosophy - dialectic - becomes the philosophy of the search. Aubenque traces this same

structure of scission, mediation, and recovery across Aristotelian discussions of theology, motion, time, imitation, and human activity." (p. 7)

"I offer truth conditions for propositions about being *qua* being in Aristotle's philosophy. I show that in general Aristotle views expressions of the form "qua S" in "S qua S is P" (or "S is P qua S") as making a claim not about the subject "S", but about the predication of "P" of "S". I develop necessary and sufficient truth conditions for propositions of the form "S qua S is P". Finally, I show how this analysis satisfactorily covers what Aristotle says about being *qua* being in the *Metaphysics* ."

In chapter Two of book IV of the "Metaphysics", Aristotle alludes to an argument that the Platonic vision of constructing a science of being "qua" being is made possible by the fact that the verb "to be", while categorially ambiguous, also exhibits a special sort of ambiguity to which he gives the name "focal meaning." This paper contains a reconstruction of the focal meaning analysis of "to be", from which are extracted principles which are shown to form the structure of Aristotle's argument for the science of being "qua" being.

being in the *Metaphysics* ." *Southwestern Journal of Philosophy* no. 10:79-88.

"Scholars have believed that there are two apparently conflicting doctrines of being in the "metaphysics" -- one which treats being qua being as the concept of the most general object, comprehending both sensible and supersensible being alike, traditionally identified as the "ens commune"; the other which treats being qua being as the concept of the separate and divine entities, traditionally identified as the "ens perfectissimum". Following Owen, the conflicting positions of the tradition of Greek commentators are contrasted with those Aristotelianizing christians of the middle ages; scholarship, in the last century, on this problem of the conflicting doctrines of being in the "Metaphysics" is considered. Next, it is argued that primary being for Aristotle is understood as formal cause, the meaning of which is considered in terms of the separate and divine entities, the "ens perfectissimum". Finally, an attempt is made to explain the inclusion of the supposedly conflicting doctrine of the "ens commune", as a means of clarifying the nature of primary being as formal cause."

"*Pros hen* equivocity unquestionably plays a central role in Aristotle's philosophy, both as a linguistic and as an ontological structure. This paper attempts to answer both G.E.L. Owen's charge that the secondary senses of being are reducible to the primary and D. W. Hamlyn's charge that the dependence of secondary on primary being cannot be understood concretely.

It shows that Aristotle carries out the program of "Metaphysics" vii, 1 in the "Physics" where the dependence of secondary on primary being can be understood concretely in terms of characteristic ranges within which all processes of quantitative and qualitative change occur. Thus he is able to preserve both the irreducible multiplicity of the categorial senses of being and their unity, and so *pros hen* equivocity."

32. Marx, Werner. 1954. *The Meaning of Aristotle's 'Ontology'* . The Hague: Martinus Nijhoff.

"This study forms part of a wider investigation which will inquire into the relationship of Ontology and Anthropology. Since the meaning of the term 'ontology' is far from clear, the

immediate task is to ask the 'father of ontology' what he might have understood it to mean.

The introductory chapter emphasizes the fact that Aristotle himself never used the term 'ontology.' It should be stressed at once that, even had he used it, he could not very well have employed it to denote the discipline of ontology. For it was only during the era of the schoolmen that the vast and rich body of the *prose philosophia* came to be disciplined into classifications; these classifications reflected the Christian, - not the pagan Greek view of all-that-is. The *metaphysica specialis* dealing with God (theology), his creatures (psychology), and the created universe (cosmology), was differentiated from the *metaphysica generalis*, dealing with being-in-general (*ens commune*). This latter discipline amounted to the 'discipline of ontology' (1).

We are not concerned with the meaning of the *metaphysica generalis*. We wish to approach our problem with an open mind and want to hear directly from Aristotle - on the basis of the text of the *prose philosophia* alone - which body of thought he might have called his 'ontology' and what its meaning might have been.

Yet however carefully we may attempt to 'bracket' all preconceived notions, it still remains true that it is an audacious undertaking to pose a definite question to Aristotle. More than two millenia of changing human thought cannot be eliminated, and we know very well that our question, as such, shapes and compels the answer in a definite direction which might easily be adjudged too 'modem'. Moreover, in concentrating on just one motif out of the many variegated and rich themes of the *corpus aristotelicum*, we are certain to overstress this one motif at the expense of others." 45. Poli, Roberto. 1994. "Formal aspects of reduplication." *Logic and Logical Philosophy* no. 2:87-102.

"Aristotle's presentation of ontology advanced at the beginning of the fourth book of *Metaphysics* is universally known: "there is a science which studies being qua being. . . ". Needless to say, this is a familiar sentence: unfortunately, it is also quite an odd one. Why Aristotle does not simply say that ontology is the theory of being? Is there any difference between 'theory of being' and 'theory of being qua being'?"

In brief, the problem is to decide whether the two expressions 'the study of being' and 'the study of being qua being' are

equivalent. If they are, the 'qua' does not play any interesting role. On the contrary, if the two expressions are different, that is to say, if there is a difference between the study of being (*simpliciter*) and the study of being qua being, we should study the role played by the (operator) 'qua'.

Let us remember that 'qua' is a technical term. The word is the Latin translation of the Greek 'he' in the expression 'on he on' which, in the 17th century, gave origin to the term ontology'.

I shall call 'reduplicative' the expressions containing some instance of the functor 'qua'. Theories of reduplicative expressions will also be labelled as qua-theories." (*)

(*) The term 'reduplication' (anadiplosis) is to be found in Aristotle. For a general presentation of reduplication see Roberto Poli, "", (PDF) in Liliana Albertazzi, (ed.), Kluwer, Dordrecht, 1998, pp. 245-256).

46. ———. 1999. "Qua -theories." In *Shapes of Forms. From Gestalt Psychology and Phenomenology to Ontology and Mathematics*, edited by Albertazzi, Liliana, 245-256. Dordrecht: Kluwer.

"Reduplicative expressions: some introductory notes.

I shall call a theory of the functor 'qua' a 'qua-theory'. This functor is used in expressions like 'A qua B is C'. Some synonymous expressions are 'as', 'insofar as', 'in virtue of', 'with respect to'.

'Qua' is a technical term. The word is the Latin translation of the Greek 'he' in the expression 'on he on' which in the seventeenth century gave origin to the term 'ontology'. That is to say, a qua-theory is an ontology, and ontology is the heart of philosophy.

The definition of ontology that Aristotle advanced itself involves the functor 'qua'. His definition of ontology at the beginning of the fourth book of *Metaphysics* is universally known: "there is a science which studies being qua being [...]". My problem is this: why does Aristotle does not simply say that

ontology is the theory of being? Is there any difference between 'theory of being' and 'theory of being *qua* being'?

In brief, the problem is deciding whether the two expressions 'the theory of being' and 'the theory of being *qua* being' are equivalent. If they are, the '*qua*' does not play any interesting role. On the contrary, if the two expressions are different - that is to say, if there is a difference between the theory of being (*simpliciter*) and the theory of being *qua* being - we should study the role played by the (operator) '*qua*'.

The main reason for distinguishing between theory of being and theory of being *qua* being rests on Aristotle's opinion that the analysis of being *simpliciter* cannot be developed in a scientific fashion. Aristotle's intention to submit being to scientific analysis was the principal reason for his adoption of a reduplicative kind of analysis. His position derived from the thesis that being is not a genus.

It is well known that Aristotle believed that scientific analysis can be developed only if there is a common genus for the entities under examination. If being does not have a common genus, the study of being cannot be a science.

From this arises a fundamental difference between study of being and study of being *qua* being. If ontology is a science, we must admit that there is a common genus for the entities studied by ontology: the main role of '*qua*' is precisely that of assigning a surrogate for the lacking common genus to beings by making explicit the *context* of the being referred to.

Qua- theories will be collectively referred to as reduplicative-theories or as theories of reduplication." pp. 245-246.

47. Politis, Vasilis, and Steinkrüger, Philipp. 2017. "Aristotle's second problem about the possibility of a science of being *qua* being: a reconsideration of *Metaphysics* Γ 2." *Ancient Philosophy* :59-89.

Abstract: "It is commonly assumed that Aristotle thinks that his claim that being exhibits a category-based *pros hen* structure, which he introduces to obviate the problem of categorial heterogeneity, is sufficient to defend the possibility of a science

of being qua being. We, on the contrary, argue that Aristotle thinks that the pros hen structure is necessary only, but not sufficient, for this task. The central thesis of our paper is that Aristotle, in what follows 1003b19, raises a second problem for the possibility of the science of being qua being; and that he does not think that the resolution of the first, the category-based problem, is either necessary or sufficient for resolving this problem. This is the problem: how can a plurality of apparently primary kinds and their opposites (they include *to hen*, *to on*, *to auto*, *to homoion*, *to heteron* and *to an homoion*) be the subject-matter the science of being qua being? It has been argued that these kinds are per se attributes of ousia and that, therefore, this problem is not different from the first problem. This, we argue, is mistaken; for nowhere in Gamma 2 does Aristotle claim that unity is a per se attribute of ousia. Rather, he says that identity, similarity, etc. are per se attributes of being qua being and unity qua unity. Aristotle's resolution of the second problem, we argue, is that most of these kinds are reducible to a single compound principle: being-and-unity. Being and unity, moreover, are themselves related to each other as primary ousia and consequent ousia; but, we argue, Aristotle leaves it open, in Gamma 2, which of the two is primary, and which is consequent ousia."

48. Reale, Giovanni. 1980. *The Concept of Philosophy and the Unity of Metaphysics of Aristotle* . Albany: State University of New York Press

Edited and translated by John R. Catan.

Authorized Translation from the Third Edition.

49. Seddon Jr., Frederick A. 1981. "The principle of contradiction in *Metaphysics* , *Gamma* ." *New Scholasticism* no. 55:191-207.

"The purpose of my paper is an historical-critical examination of the principle of contradiction as it appears in Aristotle, specifically but not exclusively as it appears in "Metaphysics, Book Gamma". to achieve this goal, I have chosen to subject Jan Lukasiewicz's article on this topic in the march 1971 number of "The Review of Metaphysics" to critical exposition and, as it turns out, refutation. Should the essay achieve its

intended result, it will have shown that the principle of contradiction to be "...true of being qua being..." rather than, as Lukasiewicz would have us believe, a mere assumption having only a practical-ethical value."

50. Shields, Christopher. 2012. "Being Qua Being." In *The Oxford Handbook of Aristotle*, edited by Shields, Christopher, 343-371. New York: Oxford University Press.

Abstract: "According to Aristotle, there is a science (epistêmê) that studies being qua being, and the attributes belonging to it in its own right. This claim, which opens *Metaphysics* IV 1, is both surprising and unsettling—surprising because Aristotle seems elsewhere to deny the existence of any such science, and unsettling because his denial seems very plausibly grounded. He claims that each science studies a unified genus, but denies that there is a single genus for all beings; claims which evidently conspire against the science. Aristotle announces: "[I]f there is no genus of being and every science requires its own genus, then

there is no science of being." This seems, moreover, to be precisely the conclusion he draws in his *Eudemian Ethics*, where Aristotle maintains that we should no more look for a general science of being than we should look for a general science of goodness. This article looks at three problems about the science of being qua being: The Possibility Problem, the Extension Problem, and the Intension Problem."

51. Skousgaard, Stephen. 1976. "Wisdom and Being in Aristotle's First Philosophy." *Thomist* no. 40:444-474.

"The thesis of this article is that Aristotle's notion of wisdom is determined by his ontology. Starting with the fact that people do think, and think about being, the argument of the article traces the development of Aristotle's notion of being "qua" being, then decides that the tension between being-itself and the many-ways-of-being structures wisdom as dynamic rather than dogmatic."

52. Stevenson, J.G. 1975. "Being "qua" Being." *Apeiron* no. 9:42-50.

"It is shown that in the opening chapter of the Fourth Book of the "Metaphysics" (Book Gamma), Aristotle conceives of metaphysics as a very general study, encompassing all being. This is shown by means of a close study of the meaning of the phrase "being qua being" which Aristotle uses here. This result is important because it contradicts the claims of Joseph Owens and Philip Merlan, who have argued that there is nothing in Aristotle's "metaphysics" to contradict a conception of metaphysics as theology."

53. Upton, Thomas. 1988. "Aristotle on existence: escaping the snares of ontology?" *New Scholasticism* no. 62:373-399.
54. Wedin, Michael. 2009. "The science and axioms of Being." In *A Companion to Aristotle*, edited by Anagnostopoulos, Georgios, 125-143. Malden: Wiley-Blackwell.

"Aristotle's first editor, Andronicus of Rhodes, placed the fourteen books now known as the *Metaphysics* after the *Physics*, whence comes the word "metaphysics," which literally means "after the physics." Some have used this fact to buttress the claim that the work as a whole has no focused subject, but rather is a collection of loosely linked essays. There is some warrant for this skeptical assessment. The first chapter of the first Book, Book A, (1) announces that "we" are seeking a certain kind of theoretical knowledge, something Aristotle calls "wisdom" (*sophia*). Because wisdom is knowledge of first causes and principles, the task is to investigate what sorts of causes and principles are suited to play this role. The reader might expect Aristotle to then proceed on just such a course of inquiry. After A, however, the term "wisdom" effectively disappears from the treatise.(2) In B's set of puzzles we get instead the "science of substance," in G we are introduced to the "science of being qua being," and in Book E preference appears to be given to "first philosophy" and "theology." Are these the same or different enterprises and, if different, are they independent or related, and, if related, how? These questions can be addressed by seeing how Aristotle's treatment of wisdom follows a coherent, if complicated, path through much of the *Metaphysics*, beginning with the science of being qua being." p.

(1) It is customary to indicate books of the *Metaphysics* by uppercase Greek letters, with the exception of the diminutive second book, which is denoted by lower case *Alpha* (*a*).

(2) The term occurs in *B.2* but only by way of referring back to *A.2*'s marks of wisdom. It also reappears in *K*. But *K* is just a precis of Books *B*, *G*, and *E* (with, in its second half, material from the *Physics*); plus, some doubt that *K* was even written by Aristotle.

5. Bastit, Michel. 2002. *Les quatre causes de l'être selon la philosophie première d'Aristote*. Louvain-la-Neuve: Éditions Peeters.

"... le présent ouvrage se devra de préserver l'originalité de la pensée d'Aristote et, pourrait-on dire, toute sa verdeur. Il devra

donc entre autre se garder des lectures platoniciennes de la *Métaphysique* très fréquentes depuis celles de nombreux commentateurs grecs, jusqu'à certains aspects de celles qui sont inspirées aujourd'hui par Heidegger. Sans aucun doute, le texte d'Aristote n'est pas lui-même univoque, il suffit de rappeler la multiplicité des interprétations auxquelles il a donné lieu pour en être persuadé. Néanmoins, notre intention n'est nullement de tenter de projeter, en recourant à telle ou telle philosophie, un sens sur un texte qui par lui-même en serait dépourvu. Nous chercherons plutôt l'originalité g nue de ce texte. Cela implique de penser qu'il peut encore nous  clairer sur les questions que nous avons  voqu es. Mais cet espoir n'est pas infond , dans la mesure o  les probl mes que nous rencontrons aujourd'hui pour utiliser les causes dans le cadre d'une philosophie de l' tre et d'une philosophie premi re sont issus d'une remise en cause et d'un oubli progressif de la pens e aristot licienne. Nous demanderons   Aristote de nous aider   philosopher sur une r alit  commune; peut- tre est-ce l  ce que les doctrines contemporaines de l'interpr tation appellent une fusion d'horizon (1).

Notre propos se d roulera selon le plan suivant. Apr s avoir examin  quelques-unes des interpr tations des causes aristot liciennes les plus autoris es, nous commencerons par marquer nos r serves   l' gard de la pr sentation habituelle de la causalit  aristot licienne, ou tout au moins nous en ferons ressortir les limites. Nous devons constater  galement que celle qui lui a  t  pr f r e par Richard Sorabji n'est pas non plus enti rement satisfaisante. Ceci constituera un premier chapitre,   la suite duquel nous nous tournerons vers l'usage des causes tel qu'il est mis en oeuvre dans la *M taphysique*. L  nous montrerons que la recherche des causes les plus  lev es, leur d nombrement et leurs relations constituent l'un des caract res originaux de la pens e d'Aristote.

Notre projet consistera donc d'abord   examiner la conception aristot licienne de la causalit  l  o  elle se d ploie avec le plus d'intelligibilit  pour nous,   savoir en physique et en logique. Cela nous conduira   concevoir la causalit  comme une relation de d pendance dans l'ordre de l'intelligibilit  ou du devenir. En

même temps nous serons conduit à reconnaître l'originalité de l'exercice de chaque genre de causes et le lien de celles-ci avec la cause formelle. Nous devrions donc parvenir à une conception de la causalité beaucoup plus diversifiée que celle qui réduit les causes à la cause matérielle ou efficiente, voire à la cause formelle si on néglige la distinction qui suit. En effet ceci ne sera possible qu'en recourant à la distinction des causes en acte et des causes en puissance qui fait cruellement défaut dans la plupart des interprétations aristotéliennes, alors qu'elle recouvre pourtant tous les genres de causes. Probablement cette distinction peut-elle faire saisir à la fois l'unité des causes et leur rattachement à la cause formelle.

Muni de ces préalables, nous devons alors constater que la philosophie première aristotélienne se donne bien comme une analyse de l'être à la lumière des causes et des principes les plus élevés. Si la quête de ces causes et principes exige une méthode dialectique, celle-ci par sa fécondité même entraîne une connaissance des causes et une science analogique de cet objet analogique qu'est l'être dans la diversité des étants. Nous entreprendrons alors d'examiner l'usage des diverses causes dans la philosophie première. Ce qui nous montrera d'une part la fidélité d'Aristote au programme initial du livre Alpha et d'autre part la spécificité irremplaçable de chacune d'elles pour parvenir à une connaissance satisfaisante de l'être. Mais la connaissance des causes et des principes ne peut en rester à celle des causes universelles et en puissance.

Elle doit, pour parvenir à son terme, à savoir les causes en acte, parvenir jusqu'au principe de cette actualité, lequel ne peut lui-même être que l'être où les causes sont perpétuellement actuelles. L'analyse des causes de l'être devra donc, pour être complète, déboucher sur une théologie. Pour ce faire, nous prendrons en compte essentiellement les textes de la Métaphysique, mais aussi ceux de la Physique et de l'Organon, principalement dans les Analytiques, sans nous interdire les incursions et rapprochements avec d'autres textes du corpus aristotélien, tels qu'ils ont été lus dans la tradition antique et médiévale et jusqu'aux modernes."

"Les raisons de lire Gamma plutôt ainsi qu'autrement: pour une histoire sophistique de la philosophie.

La question à laquelle Terence Irwin et moi-même avons accepté d'être confrontés, sinon de répondre, est une application du principe de raison leibnizien, sans doute constitutive de l'herméneutique elle-même: quelles sont les raisons de lire un texte plutôt ainsi qu'autrement? Et, s'il y en a, rendez-les-nous, si vous pouvez!

Elle suppose d'abord, qu'il y a plusieurs lectures, plusieurs mondes, possibles; ensuite que ces lectures, ces mondes, sont hiérarchisables selon un classement comparatif auquel préside encore le principe de raison, cette fois sous forme de principe d'économie: maximum d'effet pour un minimum de dépense. Reste à décider ce qu'est un "effet" et ce qu'est une "dépense" en herméneutique: mettons, maximum d'intelligibilité, c'est-à-dire d'oscillation entre fidélité et philosophicité (comme la boiterie du centaure philologue-philosophe que décrit Nietzsche), pour un minimum d'hypothèses, d'anomalies et de déchets.

Tout le problème est de savoir s'il n'y a que des comparatifs, ou bien si l'on peut, si l'on doit, passer au superlatif.

(...)

Ce type de chemin faisant, il me semble qu'on tente de sortir du sillon ontologique de l'herméneutique, pour s'essayer à quelque chose comme: une histoire sophistique de la philosophie.

Je propose d'appeler "histoire sophistique de la philosophie" celle qui rapporte les positions, non pas à l'unicité de la vérité, qu'elle soit éternelle ou progressivement constituée en mode hégélien (la vérité comme *telos*, dans un temps orienté, ou "comme si" orienté), mais celle qui les rapporte aux instantanés du *kairos*, occasion, opportunité, grâce à des *mékhanai*, procédés, ruses, machines, permettant de happer le *kairos* par son toupet. Et l'agôn est par excellence l'une de ces procédures, vieilles comme le monde.

(...)

Bref, dans l'histoire sophistique de la philosophie, il serait explicite que le meilleur, la performance, est la mesure du vrai.

Le premier intérêt de ce type de série comparative, par différence avec la clôture du superlatif, même réfléchissant, c'est qu'elle n'est, en droit, jamais finie. (...) Le challenge du "encore mieux" (passer à l'étage au-dessus) fait place à la possibilité de l' "autrement mieux" (traverser la cour). Et même, à en croire Deleuze et Lindon, c'est autrement mieux tout simplement déjà parce que c'est autrement. Il ne s'agit plus dans ce cas des "raisons de lire Gamma plutôt ainsi qu'autrement", mais bel et bien des "raisons de lire *Gamma* autrement".

"In this article the author inquires into the meaning of "First Philosophy" in Aristotle's "Metaphysics". In his view, attentive examination of the passages in which the nature of this discipline is mentioned (essentially "Alpha" 1-2, "Gamma" 1-3 and "Epsilon" 1) shows rather clearly that the Stagirite meant by "First Philosophy" the science of first causes and hence necessarily of divine substances, which are causes of this kind. In other words, First Philosophy, being the supreme aitiology, was theology for him, as the traditional interpretation always held. But, being the science of first causes, it was equally the science of being "qua" being in his eyes, as first causes are

precisely those of being "qua" being. The author thus concludes, contrary to the hermeneutic deriving from Suarez, that it is inappropriate to maintain a duality of inspiration and of subject-matter in the "Metaphysics", and that there is no "onto-theological" ambiguity in Aristotle's view of first philosophy."

"Le quatrième livre de la *Métaphysique* est divisé en deux sections principales. La première section (chapitres 1-3) est programmatique; Aristote introduit la science de l'être en tant qu'être (ou: de l'étant en tant qu'étant), et décrit les tâches de cette science nouvelle. La deuxième section (chapitres 4 et suivants) est en même temps polémique et constructive; Aristote présente une défense du principe de non-contradiction (PNC), et il combat le subjectivisme de Protagoras. Quel est le lien entre les deux sections du livre? En particulier, Aristote se borne-t-il à décrire la science proposée, ou achève-t-il son programme? Autrement dit: la section polémique de *Gamma* nous offre-t-elle des raisonnements propres à la science de l'être, ou faut-il conclure qu'ils ne sont que préliminaires à cette science ?

Je voudrais discuter principalement la section programmatique, pour mieux comprendre la tâche et le but qu'impose Aristote à la science de l'être. Ensuite, je vais suggérer que la section polémique de *Gamma* fait vraiment partie intégrante de la science de l'être ; c'est-à-dire que, après avoir annoncé le programme de la science nouvelle, Aristote commence à le remplir'.

L'interprétation de *Gamma* que je vais esquisser n'est certainement pas la seule possible; et je voudrais la développer en comparaison avec une interprétation alternative qui a

souvent paru être bien fondée. Selon cette interprétation, que j'appellerai "propédeutique", le livre *Gamma* n'achève aucun raisonnement propre à la science de l'être; bien sûr, la section polémique discute de questions qui sont propres à la science de l'être, mais elle ne présente aucun raisonnement scientifique; au contraire, les raisonnements sont tout à fait préliminaires à la science de l'être (2)

L'interprétation propédeutique peut paraître bien fondée, si nous tenons compte de la conception aristotélicienne de la science (*epistêmê*). On peut raisonner comme suit :

(I) Aristote exige une forme démonstrative pour chaque vraie science, selon les règles des *Seconds Anatytiques*; mais

(II) les raisonnements du livre *Gamma* sont évidemment dialectiques, plutôt que démonstratifs ; donc

(III) ces raisonnements ne peuvent pas appartenir à une science (3).

La première prémisse est hors de contestation, si l'on applique les règles des *Anatytiques* à la *Métaphysique*. La deuxième prémisse est hors de contestation, si l'on considère les raisonnements de *Gamma* en les comparant avec la conception aristotélicienne normale de la dialectique. Donc, si l'on accepte les conceptions de la science et de la dialectique qui sont exposées dans l'*Organon*, on conclura que les raisonnements de *Gamma* ne sont point scientifiques.

Cette conclusion laisse, pourtant, un rôle légitime aux raisonnements de *Gamma*. Car Aristote assigne à la dialectique un rôle sur la route "vers les principes" des sciences démonstratives (*Topiques*, 101 a 36 - b 4). On ne peut pas saisir les principes par les raisonnements propres à la science elle-même; donc il faut les saisir par l'intuition (*nous*). La dialectique elle-même n'atteint pas l'intuition des principes, mais elle accomplit une tâche propédeutique qui nous aide à atteindre cette intuition.

On voit alors que l'interprétation propédeutique prétend révéler une certaine unité et stabilité dans la pensée d'Aristote.

Selon cette interprétation, il n'y aurait aucune fracture entre l'*Organon* et la *Métaphysique* sur la question des rapports entre la science et la dialectique. Il ne faut donc pas rejeter l'interprétation propédeutique, à moins de trouver des objections fortes; et telles sont les objections que je cherche. J'espère montrer comment remplacer l'interprétation propédeutique par une interprétation (pour ainsi dire) "scientifique", selon laquelle les raisonnements de *Gamma* font partie intégrante de la science de l'être."

(1) Dans les sections I-II, je présente des questions que j'ai plus largement discutées dans *Aristotle's First Principles*, Oxford, 1988; voir surtout les chapitres 7-9 (avec des renseignements bibliographiques). Dans les sections III-VI je propose des corrections et des développements. Après avoir écrit *Aristotle's First Principles*, j'ai lu la discussion très provocante de *Gamma* par Barbara Cassin et Michel Narcy, *La Décision du sens*, Paris, 1988; mais, pour la circonstance présente, je ne réponds pas aux thèses principales de ce livre (qui portent surtout sur la section VI, infra).

(2) Pour une défense de l'interprétation propédeutique, voir, par exemple, W. D. Ross, *Aristotle's Metaphysics*, Oxford, 1924, p. 252; M. Frede, *Essays in Ancient Philosophy*, Oxford, 1987, p. 94.

(3) Cette objection est soutenue par P. Aubenque, *Le Problème de l'être chez Aristote*, Paris, 1962, p. 299: "L'opposition de la dialectique et de la philosophie serait donc justifiée si la philosophie parvenait à se constituer comme science selon le type défini dans les *Analytiques*."

26. Moreau, Joseph. 1977. "Remarques sur l'ontologie aristotélicienne." *Revue Philosophique de Louvain* no. 75:577-611.

"The science of being "qua" being dwells on dialectic and from the examination of the conditions of speaking draws the priority of substance towards other categories. Then the analysis of sensible substance exhibits an "aporia" which, through the distinction of act and potency, leads to the concept of immaterial substance or pure act. Theology is connected with ontology by means of "ousiology", and the consideration of hierarchised substances, according with degrees of act and potency, is a way for understanding the role of cognition within realistic ontology."

"Les méthodes de la stylométrie fournissent des indications non négligeables concernant la chronologie relative des parties de la *Métaphysique* et leur authenticité aristotélicienne. Le passage de *Met.* K 7 (1064 a 28 - 1064 b 14), où la science de l'être en tant qu'être se trouve assimilée à la science de l'être divin, est plus proche, du point de vue de la stylométrie, de la

Métaphysique de Théophraste que de celle d'Aristote. Il en va de même pour *Met.* Kappa 10. En revanche, pour les autres chapitres, le classement fondé sur la stylométrie correspond à l'évolution que paraît avoir connue, à divers égards, la pensée d'Aristote."

"This is a review of five articles on Aristotelian metaphysics ("Revue Philosophique de Louvain", 90, November 1992). Main results are: 1) there is no conflict between ontology and theology, because in its object the latter also comprises the causes of the being qua being. 2) in the formula "being qua being" the "qua being" does not stand for a specific reality, but

for a formal point of view directing the investigation. 3) the train of thought in book Z leads to the establishment of the fundamental structure of being, i.e., the "being in itself". 4) ontology and henology (theory of the one) complement each other; the former relates to reality, the latter provides the corresponding methodical structure. 5) the application of stylometric methods and an in-depth analysis of book K show certain traditional interpretations in a new light."

Bibliographical resources on some logical and metaphysical works of Aristotle

Lexicon

Readers with Greek will find indispensable:

Hermann Bonitz, *Index aristotelicum*, First edition Berlin, 1870, reprinted by Walter de Gruyter, 1961.

A new Greek Lexicon of Aristotle's works is now available:

Aristotle. Edited by Roberto Radice, Electronic edition by Roberto Bombacigno, Milano: Biblia, 2005.

Readers without knowledge of Greek can see:

Wilson Organ Troy, *An Index to Aristotle in English Translation*, Princeton: Princeton University Press, 1949 (reprinted in 1966, New York: Gordian Press).

From the Preface: "It is well-known that the Corpus Aristotelicum contains many passages which throw light on one another, but there has been no method by which the student of Aristotle can easily discover this interrelationship. Bonitz' word index is of great help to advanced students of Aristotle in locating terms, but it is of little value to those who are interested in attaining a well-rounded view of Aristotle's analysis of a particular subject. Students of Plato find Abbott's index to Jowett's translations of the dialogues invaluable; but students of Aristotle, who are in much greater need of a synoptic apparatus, have no such work to which they may refer.

Consequently, Aristotle is often studied as a biologist, or an orator, or a metaphysician, or an art critic, or a political and moral

philosopher without due attention being given to the light thrown upon a particular view by his other works. When approached in this manner Aristotle is open to unnecessary misinterpretations; for example, he has been unduly Christianized by those who have attempted to comment upon the Politics or the Poetics without appreciating the relevance of his Ethics and Metaphysics. The intricacies of his terminology and the variety of extant translations add to the difficulty. This English topical index should aid not only the philosopher, but also the student of letters, politics, ethics, or psychology who seeks to evaluate Aristotle's contribution in a specific field.

In the preparation of this index the eleven volume English translation edited by W. D. Ross and J. A. Smith and published by the Oxford University Press (1908-1931) was used. The page numbering is that of the Berlin Academy edition of the Greek text (1831-1870) edited by Immanuel Bekker. This pagination is listed in the margins of the Oxford translations and is likewise indicated in most translations of Aristotle's works. In this pagination, 184 b 32, for example, refers to line 32 of the second column on page 1284 of the text."

Critical editions and translations of Aristotle's De interpretatione

(In preparation)

Bibliographical resources on Aristotle's Metaphysics

On Aristotle's *Metaphysics* the most complete bibliography is:

Roberto Radice e vari collaboratori, *La 'Metafisica' di Aristotle nel XX secolo. Bibliografia ragionata e sistematica*, Seconda edizione riveduta, corretta e ampliata, Presentazione di Giovanni Reale, Milano: Vita e Pensiero 1997.

English translation: Roberto Radice and Richard Davies, *Aristotle's Metaphysics. Annotated bibliography of the Twentieth-Century Literature*, Leiden: Brill 1997.

From the Foreword by Giovanni Reale: "The historiography of philosophy, especially today, with the huge and unpredictable growth in publication, has need of Annotated bibliography. Aiming to avoid the Scylla of partialness and the Charybdis of mere cataloguing, the present volume aims not merely to collect most, but to describe much, of the astonishing amount of work that Aristotle's *Metaphysics* has stimulated and continues to stimulate in our

century. Roberto Radice undertook the labour of putting this bibliography together more than five years ago, and has worked at it tirelessly and with great efficiency ever since, producing the first Italian edition in 1996. This sold out in less than a year, and the second, up-dated, edition appeared in 1997. It is on this latter that Richard Davies has based his translation. My hope is that the reader will appreciate not only their vision of the importance of the instrument they have made available, but also the commitment and passion that they and the other collaborators have brought to this undertaking.

The result of the editors' collaboration with the team of more than forty scholars world wide is a work that will surely be indispensable to anyone seeking to investigate the *Metaphysics* with an open mind and without the blinkers of methodological or theoretical preconceptions. I am confident, therefore, that Aristotle's masterpiece will be more fruitfully exploited and more clearly seen for what it is—one of the great and abiding legacies of ancient Greece."

The Rediscovery of the *Corpus Aristotelicum* and the Birth of Aristotelianism

The edition of Aristotle's works by Andronicus of Rhodes

"We know that Aristotle's death in 322 B.C. left in the hands of his immediate disciples an impressive series of texts unedited and without determinate classification.(1) As F. Wehrli has suggested,(2) the very nature of the texts (joined to the difficulty of the message which they contain) was perhaps the principal cause of what one must call the decadence of the *Peripatos* during the Hellenistic period. Still the fact remains that the rebirth of Aristotelianism in the first century before our era coincides with the labors of Andronicus of Rhodes, who obtained a first-rate edition of the principal so-called "acroamatic" texts [writings thought to have served as the basis for oral presentations] of Aristotle, of which Andronicus drew up a new catalog.(3) Its arrangement supposes an organizing principle about which we should inquire.(4) The historian who desires to measure the originality of Andronicus' contribution is forced to study the early lists of Aristotle's works preserved by Diogenes Laertius and the anonymous author of the *Vita Menagiana*, which permit us to ascertain the condition of the *Corpus* a good century at least before the catalogs of Andronicus were drawn up.(5) But the comparison of these earlier materials with the catalogs of Andronicus is not without difficulties. For no Greek text has preserved the latter for us. Perfectly known in Plutarch's time (6) and probably still used by Porphyry and the Neoplatonists,(7) these catalogs, if one believes the tradition, were integrated (in an abridged form?) into a general work on Aristotle's life and writings composed by a certain Ptolemy.(8)

Thanks to Ptolemy, at first translated into Syriac,(9) they then penetrated the Arab world and it is there that we can make our acquaintance with them in the parallel editions of Ibn al Qifti (twelfth-thirteenth centuries) and Ibn Abi Usaibi'a (thirteenth century).(10) A section of the lists which these authors offer us has every chance of reproducing the work of Andronicus; it indexes the principal titles of the modern *Corpus* as it is edited, for example, by I. Bekker.(11) It is a section which has no parallels in the earlier lists and thus constitutes an exceptional document." (pp. 111-112)

The story of Aristotle's Library

"In 307 the Peripatos met with a decisive catastrophe. Demetrius Poliorcetes captured Athens nearly without striking a blow. Demetrius of Phaleron escaped to Thebes and from there to Alexandria. The Athenians who had constantly been hostile towards the pro-Macedonian Peripatos, were easily enticed into adopting a decree, compelling all non-Athenian philosophers to leave Athens. Ptolemy Soter now tried to persuade Theophrastus to move Aristotle's school to Alexandria. He declined, but Strato and Demetrius accepted the invitation. Strato became tutor of the young Philadelphus: thus pursuing the tradition of Aristotle, and Demetrius advised Soter in planning for the Mouseion and the library. Soter was obviously very anxious to uphold the traditional relations with

Aristotle's school. He was particularly interested in acquiring for his new library as many of the written works of Aristotle he could lay hand on. So it happened that Alexandria rapidly became a seat of learning, marked by the scientific tradition from the Peripatos. But whereas Aristotle as ὁ νοῦς τῆς διατριβῆς had been able to lead and unite all branches of study, specialization, often in rather narrow tracks, became the rule in Alexandria. After the catastrophe of 307 Eudemus returned to his home in Rhodes. It is more than probable that he brought with him copies of the Aristotelian school literature, and I have already mentioned his correspondence with Theophrastus on this matter. Praxiphanes, one of Theophrastus' disciples, was also from Rhodes. Among later Rhodians whose writings betray intimate knowledge of Aristotle's writings may be mentioned Hieronymus, Panaetius and Posidonius. From Rhodes came also Andronicus, of whom I shall speak presently. Hieronymus played an important rôle in popularizing Aristotelian doctrines. He was highly appreciated and utilized by Cicero and Plutarch. What Panaetius and Posidonius did as intermediaries of Aristotle's doctrines', and philosophy can hardly be overrated.

Cicero's knowledge of Aristotle came this way. When he was in Rhodes and listened to Posidonius, he certainly did not miss the opportunity to visit its rich library. In 287 Theophrastus died, and was succeeded by Strato. He bequeathed his and Aristotle's library, which was the private possession of the *σχολάρχης*, to his kinsman Neleus (*τὰ βιβλία πάντα Νηλεΐ* Diog. V 52). Up to this point the tradition is undisputed. As to what happened with the library after Neleus had taken possession of it, there is complete disagreement. I limit myself to stating briefly how I interpret the evidence.(1) We know from the testaments of Strato and Lyco that a distinction was made between *τα βιβλία ἀνεγτωμμένα* and *τὰ ἀίνεκδοτα* or *ἀ αυτοί γεγράφαμεν*,(2) i.e. between copies of published books and the author's own un-edited manuscripts. Neleus sold to Philadelphus Aristotle's and Theophrastus' library of published books, including works of both philosophers, but kept Aristotle's manuscripts and brought them with him to his home in Skepsis.

In his eagerness to obtain a collection as complete as possible of Aristotle's writings, Philadelphus bought books from all quarters. We are thus told that the library possessed no less than 40 copies of

Aristotle's Analytics, only four of which were regarded as representing the pure Aristotelian version. We have hardly any right to doubt, that a complete collection of Aristotle's writings, both the dialogues and the school literature, belonged to the original stock of the Brucheion. The *πίνακες* contained a *πίναξ των φιλοσόφων*, fr. 438 Pfeiffer, and we are told that "Ἑρμιππος δ' ἐν τοῖς Θεοφράστου μαθηταῖς καταλέγει which is a strong support for the view that Hermippus ± 200 B. C. composed the catalogue of the works of Theophrastus. This catalogue is alphabetical, whereas the arrangement of the catalogue of Aristotle's writings is more or less systematic.(3) It is probably older, and I suppose that Hermippus incorporated it in his biography of Aristotle, without essentially changing its character." (pp. 59-61)

From: Ingemar Düring, "Notes on the History of the Transmission of Aristotle's Writings", *Acta Universitatis Gotoburgensis* 1950, pp. 37-70. (Reprinted as second study in: *Aristotle and His Influence: Two Studies*, New York: Garland 1987.)

"As it is recounted both in ancient sources and by modern scholars, the history of the Peripatetic School after Aristotle and Theophrastus may be summed up in one word: decline. Some accounts, with special pleading or a begrudging tone, may admit that Theophrastus' immediate successor, Straton of Lampsakos, was a somewhat worthy heir of the school (cf. Diogenes Laertius V, 64; Cicero, *De Finibus* V, 5.13); but otherwise ancient (1) and modern (2) authorities agree that the Peripatos declined drastically during the Hellenistic Period. Wilamowitz stated the prevailing view in its most extreme form, when he spoke — in a remark which is often quoted with approval — of "the death-sleep of Aristotelian Philosophy" beginning with Straton's successor Lykon.(3) Despite the unanimity of opinion, one might nevertheless be tempted to question whether or not the Athenian Peripatos did decline so much. For there is an enormous variety of work produced in the Hellenistic Period which goes under

the name “Peripatetic”: “Peripatetic biography,” “Peripatetic literary criticism,” “Peripatetic art criticism,” and “Peripatetic historiography.” Most of this activity, however, did not in fact go on in the school at Athens. The essential distinction to be made about the label “Peripatetic” in the Hellenistic Period is stated very precisely by K. O. Brink:

The name *Peripatetikos*, which by the middle of the third century denoted a member of the Peripatetic School in Athens, changed its significance about that time. With the wider influence of Peripatetic studies it is not only used for the Athenian School but can also denote any writer of biography or literary history connected with Alexandria. The two non-Peripatetics to whom the name appears to have been applied first are two pupils of Callimachus, Hermippos and Satyros.(4)

Since the Peripatos under Aristotle established the systematic treatise, particularly in biography and literary history, as a new form of writing, any Alexandrian author of such a work might claim the title *Peripatetikos* — whether or not he had studied in the Athenian Peripatos and whether or not he composed his treatise along lines which appear to be in some sense “Aristotelian.” As Brink has shown, much of the so-called “Peripatetic” work done at Alexandria was in fact anti-Aristotelian in intention.(5) Not only did these “Neo-Peripatetics” reject Aristotelian principles in their biographies and literary treatises but they also claimed to be doing better what Aristotle and his school had inaugurated. Polemical opposition rather than descendancy is what the use of the title *Peripatetikos* signifies among the Alexandrians. Far from being an Alexandrian extension indicating the vitality of the Athenian Peripatos in the third and second centuries B.C., the “Peripatetic” works of Hermippos, Satyros, Sotion, Herakleides Lembos, and other Alexandrians represent an attempt to usurp and to surpass the traditions inherited by Aristotle’s school in Athens." (pp. 135-137)

Notes

(1) In Cicero's *De Finibus* (V, 4-5) a survey of the Peripatetic School is put into the mouth of Piso, whose contention is that after Aristotle and Theophrastus the Peripatetics “declined so much that they seem to have been born of themselves.” Strabo, who had studied

Peripatetic philosophy with Boethos of Sidon at Rome (XVI, 2.24), says that “the earlier men from the Peripatos, after Theophrastus, were unable to study philosophy effectively but instead managed only to spout tedious commonplaces” (XIII, 1.54). Diogenes Laertius reveals that a number of schemes for treating the history of Greek philosophy ended the Peripatetic tradition with Theophrastus (I, 14-15). The Roman editor of Aristotle, Andronicus of Rhodes, also had a very low opinion of the Athenian Peripatetics after Theophrastus. For a reconstruction of Andronicus' critique of the school, see M. Plezia, *De Andronicii Rhodii studiis aristotelicis* (Krakow, 1946) pp. 10-15.

(2) According to I. Düring, “it is not merely exaggeration, when Cicero says [of the later Peripatetics] *ita degenerapt ut ipsi ex se nati esse videantur*; their teaching consisted of endless repetition of their master's words, just as in the school of Ammonios seven hundred years later” (*Aristotle in the Ancient Biographical Tradition* (1957), p. 394). The Peripatetic's are often dismissed with little or no comment even in general works on Hellenistic philosophy and literature; cf. F. A. Wright, *A History of Later Greek Literature* (New York, 1932) p. 128: “Of the Peripatetics little need be said; after the death of Theophrastus they abandoned pure philosophy for the collection of historical and scientific facts, and by the middle of the third century their work was over.” E. Zeller had a slightly higher opinion of the Hellenistic Peripatos, but only slightly; cf. *History of Greek Philosophy VI, Aristotle and the Earlier Peripatetics*, vol. 2, p. 500.

(3) “Der Totenschlaf der aristotelischen Philosophie,” Wilamowitz, *Antigónos von Karystos*, p. 83; cf. F. Susemihl, *Geschichte der griechischen Literatur in der Alexandrinerzeit I* (Leipzig, 1891) p. 147.

(4) K. O. Brink “Callimachus and Aristotle: An Inquiry into Callimachus' *Pros Praxiphanen*” *Classical Quarterly* 40 (1946) p. 11; cf. art. “Peripatos” in Pauly-Wissowa (Suppl. band 7) col. 905. The distinction between “Peripatetics” and Alexandrian “Neo-Peripatetics” is usefully observed in the article by A. Podlecki, “The Peripatetics as Literary Critics,” *Phoenix* 23 (1969) pp. 114-137.

From: John Patrick Lynch, *Aristotle's School. A Study of a Greek Educational Institution*. Berkeley: University of California Press 1972.

"Reasons for the decline in the Peripatos have often been suggested. Some scholars are content with attributing the decline to a general "failure of nerve" characteristic of the Hellenistic Period.(19) But the difficulty with this kind of explanation is quite obvious. Theophrastus' directorship of the school came in the Hellenistic Period, and two of the schools -- the Stoa and the Garden -- were founded and flourished at the beginning of the age. Not long after the Peripatos declined never to rise again, the Stoa and the Academy were bolstered by their "second founders," Chrysippos and Arkesilaos. The "failure of nerve" thesis fails to account for the fact that the later history of the Peripatos was so different.

The most recent and perhaps most authoritative solution to the problem has been offered by F. Wehrli in his "Rückblick der Peripatos in vorchristlicher Zeit" (*Die Schule des Aristoteles*, Heft 10 (Basel, 1959; 2nd ed., 1969 pp. 95-128). Although Wehrli's treatment of the question is very brief, his views are based on an elaborate re-edition, with commentary, of all the fragmentary *Peripatetikoí* in the pre-Christian era. Wehrli's sketch of the process of decline in the school convincingly demonstrates the prevailing view of the Hellenistic Peripatos after Theophrastus; his explanation for the phenomenon is not, however, equally persuasive.

It is Wehrli's contention that since Aristotle's philosophical outlook changed considerably over the time between his earlier dialogues and his later systematic treatises, the Peripatos failed to develop an orthodoxy which subsequent members of the school could follow. Because it was difficult, Wehrli argues, for the Peripatetics of the third century B.C. to reconcile the teaching of Aristotle's esoteric treatises with that of the exoteric dialogues, the school ended up in confusion and, in an eclectic spirit, turned to sources of clarification outside the confines of the Lyceum. And these sources proved to be influences of the worst sort, such as those tendencies of the age which emphasized the marvelous over the logical. As far as the apparent split between the earlier and later Aristotle was concerned, all later Peripatetics chose one to the exclusion of the other. Most

opted for the direction suggested by Aristotle's exoteric writings and addressed themselves to subjects of popular appeal; those who followed the lead of the esoteric writings failed to recognize the importance of keeping larger systems in mind and as a result ended up pursuing a banal empiricism. The result of all these developments was the decline, or -- to use Wehrli's stronger word -- the "disintegration," of the Peripatos until its revival in the time of Andronicus of Rhodes.

Wehrli's interpretation seeks to explain the decline of the school purely on the literary level. That is to say, Wehrli tried only to isolate tendencies in the writings of Aristotle and his successors which, in his opinion, led to disintegration; he did not consider other modes of explanation which might help to account for the phenomenon and which might, in addition, suggest causes for the literary tendencies themselves. In brief, the features which Wehrli points out in the writings of the later Peripatetics seem more symptomatic of degeneration than causal. Furthermore -- and equally important -- the problem of decline in the Peripatetic School is more than a literary problem, just as the school itself was more than a literary phenomenon.

(...)

Several events in the early history of the Peripatos as an institution suggest much less subtle and more convincing reasons why Aristotle's school at Athens declined in the third century B.C. An important factor was undoubtedly the loss of the school library, which after Theophrastus' death was taken by Neleus of Skepsis from Athens to the Troad. (20)

Strabo in fact argues that this was the reason why the Peripatos became so insignificant in the period after Theophrastus:

The effect of this [the loss of the library] was that the earlier men from the Peripatos after Theophrastus had no books at all, with few exceptions, mostly exoteric works; hence, instead of studying philosophy effectively, they were able only to spout tedious commonplaces. (Strabo, XIII, 1.54; cf. Plutarch, Sulla 26)

Modern scholarship, however, has shown that Strabo's view of Peripatetic decline is simplistic for a number of reasons. Later

Peripatetics at Athens, although only fragments of their works survive, show knowledge of most esoteric works, as do some other Athenian *philosophers* in the Hellenistic Period.(21) Despite the implications of Strabo's statement, it is not reasonable to suppose that the library of Neleus contained the only copies of the *pragmateiai* written under Aristotle and Theophrastus. Other members of the school doubtless had copies of esoteric works which interested them and could have gotten copies of others if they had some incentive to do so. It is known, for example, that when Eudemos left the Peripatos in the time of Theophrastus and went to Rhodes, he had in his possession a copy of Aristotle's *Physics*, some readings in which he asked Theophrastus by letter to check in the school text (fr. 6, Wehrli); it is probable that Eudemos also had a copy of the *Ethics*, a version of which he worked up into a different form, and copies of other treatises as well.(22) Straton, who took over the Peripatos after Neleus' departure, was able to build up and pass on to his successor a library which probably contained personal copies of some of the school literature (cf. Straton's will in *Diogenes Laertius V*, 62).

P. Moraux has made a brilliant and plausible case that the catalogue of Aristotle's writings preserved by Diogenes Laertius (V, 22-27) is a copy of the works available in the library of the Peripatos during the time of Ariston of Keos, the second-century B.C. scholar who, Moraux argues, was responsible for drawing up the list as part of his biography of Aristotle.(23) And Diogenes Laertius' catalogue, though full of Aristotle's dialogues and rhetorical works and deficient in the works on natural science, does include a large number of the esoteric treatises.(24) It appears that by the third century B.C. multiple copies of books were increasingly available, and it became common for cities and private individuals like Eratosthenes (Strabo II, 1.5) to amass considerable libraries of their own.(25) In building up the Alexandrian Library, Ptolemy II Philadelphos reportedly was able to buy from Neleus a complete set of the works of Aristotle and Theophrastus (Athenaeus I, 3a-b) (26)

Why were the members of the Peripatos content to do without works which they did not have? And why did they not build upon those which they are known to have had? The loss of the library was undoubtedly a serious inconvenience and could not help setting back

somewhat the workings of a school which aimed to systematize the whole of human knowledge. But that loss alone cannot, as Strabo would have it, completely explain the decline of the Peripatos. A vital philosophical community could have done more than the Peripatetics after Theophrastus did to offset the loss of the systematic collection which Theophrastus willed to Neleus."

See the full analysis of the contents of Diogenes Laertius' list given by P. Moraux 1951 (above, n. 21) pp. 27-153.

On city libraries in the third century B.C., see E. A. Parsons, *The Alexandrian Library* (New York, 1952.) pp. 19-50. The testimonia to private and city libraries are gathered by J. Platthy, *Sources on the Earliest Greek Libraries* (Amsterdam, 1968). The proliferation of libraries in the third century B.C. implies the existence of multiple copies of books.

Athenaeus' statement is supported by Elias, *In Cat.* p. 107.11 = T 75p, p. 419, *Miring*; Philoponos, *In Cat.* pr. p. 7.16 = T 77c, p. 456, *Dining*. On the esoteric works available in the Alexandrian Library during the Hellenistic Period, see the article of E. Howald, "Die Schriftenverzeichnisse des Aristoteles und des Theophrast," *Hermes* 55 (1920) pp. 204-221, which also must be modified by the work of Moraux." (pp. 144-149)"

Notes

(19) This influential view of the Hellenistic Period was first developed by G. Murray, *Four Stages of Greek Religion* (New York, 1912); cf. Murray's third edition, *Five Stages of Greek Religion* (New York, 1951) pp. 119-165.

(20) The story of Aristotle's library has often been recounted and includes many controversial details. The most detailed and readable study is perhaps that of J. Bidez, *Un singulier naufrage littéraire dans l'antiquité* (Bruxelles, 1943). The ancient evidence is assembled and discussed by Düring, *Aristotle in the ancient biographical tradition*. Stockholm: Almqvist & Wiksell 1957, pp. 337-338, 382-384, 392-395, 412-425; E. Zeller V, *Aristotle and the Earlier Peripatetics*, vol. 1, pp. 137-160; and F. Susemihl, *Geschichte der griechischen Literatur in der Alexandrinerzeit* II, pp. 296-301; cf. also A.-H. Chroust, "The Miraculous Disappearance and Recovery of

the Corpus Aristotelicum," *Classica et Mediaevalia* 23 (1962) pp. 50-67 and R. Shute, *On the History of the Process by which the Aristotelian Writings Arrived at their Present Form* (Oxford, 1888), an excellent essay bringing together and sifting the results of research done in the nineteenth century. For a very illuminating overview of the complicated process by which Aristotle's writings were transmitted to the West, see I. Düring, "Von Aristoteles bis Leibnitz," *Antike and Abendland* 4 (1954) 118-154 (reprinted in P. Moraux, ed., *Aristoteles in der neueren Forschung* [Darmstadt, 1968] pp. 250-313).

(21) E. Zeller (above, n. 20) reexamined the question of knowledge of the esoteric writings during the Hellenistic Period and argued that most of the Aristotelian Corpus must have been available at Athens and Alexandria after Theophrastus' death: "We may sum up the case by saying that of the genuine portions of the extant *Corpus*, there are only the works on the *Parts*, *Genesis*, and *Movement of Animals*, and the minor anthropological tracts, as to which we cannot show either express proof or high probability that they were in use after the disappearance of Theophrastus' library from Athens. Even as to these we have no reason to doubt it -- only we cannot positively prove it; and that, when we remember the fragmentary character of our knowledge of the philosophic literature of the period in question, is nothing strange' (p. 152). Zeller's discussion and conclusions must be modified somewhat by the work of P. Moraux, *Les listes anciennes des d'Aristote* (Louvain, 1951) especially pp. 312-321 (conclusions). But Moraux's work serves to confirm the general view that despite Strabo's statement to the contrary, a large number of esoteric works were available in the Hellenistic Period (see further below, n. 23 for the Aristotelian works in the library of Ariston of Keos). The esoteric works do not appear to have been studied or used very much, even in the Peripatos; but that is a different problem -- one directly connected with the decline of the school.

(22) It is commonly held that the *Eudemian Ethics* was so-called because it was a compilation of Aristotle's lectures on ethics by Eudemos, while the *Nicomachean Ethics* was a version compiled by Nikomachos. For a discussion of various theories about the relation between the two works, see W. Jaeger, *Aristotle*, pp. 228-258 and I.

Düring, art. "Aristoteles" in Pauly-Wissowa (Suppl. band 11, 1968) cols. 282-287.

(23) P. Moraux, *Les listes anciennes des d'Aristote*, pp. 237-247. I. Düring has attempted to refute Moraux's thesis in favor of the traditional view that Diogenes Laertius' list reflects the one drawn up by Hermippos and contains the holdings of the second-century B.C. Alexandrian Library ("Ariston or Hermippos?" *Classica et Mediaevalia* 17 [1956] pp. 11-21). But Moraux's objections to Hermippos as author seem to me to be persuasive (pp. 221-233). Moraux's thesis has been strongly supported against Düring's objections by J. J. Keaney, "Two Notes on the Tradition of Aristotle's Writings," *American Journal of Philology* 84 (1963) pp. 52-63.

From: John Patrick Lynch, *Aristotle's School. A Study of a Greek Educational Institution*. Berkeley: University of California Press 1972.

The recovery of Aristotle's works

"The difficulty of piercing the screen, sometimes very opaque, which is the Aristotelianism of so many centuries, based substantially on the thinking of a thousand and one more or less faithful "disciples," is doubled by a difficulty probably unique in its kind: the impossibility of always being able to determine exactly the sort of things the writings of the authentic Aristotelian *Corpus* are. For we suspect that scholars often have to deal with texts whose definitive form owes something to the work of Aristotle's disciples. We remain, on the other hand, powerless to determine always with precision the extent to which the products of their work continue to conform to the master's thinking or proceed, on the contrary, from a new idea. At least I can state very generally that the organization of the *Corpus Aristotelicum*, such as scholars after Andronicus of Rhodes have understood it, depends for them on the firmer and firmer conviction that Aristotle elaborated a philosophical system whose constituent parts are reflected in the arrangement of the different preserved treatises, as if their author had effectively "programmed" them from the perspective of systematic expression. Now, this is the one intention that we may hardly attribute to our philosopher. The project of expounding a genuine system is in fact, as I. Düring has

written,(4) "typically Hellenistic but very un-Aristotelian." Such a claim will perhaps seem today the unavoidable result of Jaeger's explicit attempt to combat "scholastic idolatry,"(5) which regarded the work of the "master of those who know" as a genuine "summa," firmly articulated. But, independently of Jaeger, K. Praechter, for example, assures us that "a secure division of the philosophical disciplines according to a determinate principle does not occur in Aristotle"! (6) And it is obvious that Aristotle was not as concerned as his disciples were to propose a rigid system of sciences and to organize his writings systematically according to it.

This indeterminateness is obviously quite irksome for the interpreter who asks about the occasion for the project of Aristotle to which the texts catalogued under the titles *Ethics* and *Politics* correspond, and who finds himself dealing with a *Corpus* established by people who indeed thought that they could abolish such indeterminateness by recourse to the hypothesis that the philosopher conceived his project as formally expounding a genuine system. Moreover -- and this is a prime consideration whose significance I shall examine at great length -- the originality of Aristotle's project risks being masked by the interpretation or the importance given since antiquity to certain interpretive categories (human philosophy, practical science, ethics, etc.) in accounting for the approach of a series of texts integrated in the *Corpus*, itself conceived as a philosophical summa. The danger will appear considerable especially as these categories make reference to Aristotelian vocabulary.

To restore to the philosopher that which properly belongs to him is thus an extremely perilous task. Without hiding from ourselves either the difficulty of the undertaking or the limits beyond which everything is no more than a tissue of gratuitous hypotheses, it is important to state in the clearest way the particulars of the problem." (pp. 9-10, some notes omitted)

"Strabo is the main source. There are supplementary texts, the most important of which is in Plutarch.(1) Here, first, are Strabo and Plutarch.

From Scepsis came the Socratics, Erastus and Coriscus, and also Coriscus' son, Neleus, a man who attended the lectures both of Aristotle and of Theophrastus, and who took over Theophrastus' library, which included Aristotle's. For Aristotle left his own library to Theophrastus, to whom he also entrusted the school. (Aristotle was the first man we know to have collected books, and he taught the kings of Egypt how to put a library together). Theophrastus left it to Neleus, who took it to Scepsis and left it to his successors. They were not philosophers and kept the books locked away and carelessly stored. When they heard that the Attalid kings, by whom their city was ruled, were eagerly searching for books in order to set up the library at Pergamum, they hid them underground in a sort of tunnel, where they were damaged by mildew and worms. Some time later the family sold the books of Aristotle and Theophrastus for a large sum to Apellicon of Teos. Apellicon was a bibliophile rather than a philosopher. That is why he tried to repair the worm-damage by transferring the writings to new manuscripts but did not complete them satisfactorily; and he published the books full of errors.

Thus it was that the older Peripatetics who came after Theophrastus did not possess the books at all -- except for a few, and in particular the exoteric works -- and so were not able to do any serious philosophy but merely declaimed generalities. Their successors -- once these books became available -- were better philosophers and better Aristotelians; yet they were obliged for the most part to speak at haphazard because of the number of mistakes.

Rome too had a considerable hand in this. For immediately after Apellicon's death Sulla, who had captured Athens, took his library and brought it here, where the scholar Tyrannio, who was an amateur of Aristotle, put his hand to it, having buttered up the librarian. And certain booksellers made use of bad scribes and did

not check the copies -- something which happens with other books which are copied for sale, both here and at Alexandria. But enough of this. Strabo, [*Geography*] 13-1. 54 (608-9).

Sulla reserved for himself the library of Apellicon of Teos, which included most of the works of Aristotle and Theophrastus (which were then not yet familiar to most people). It is said that after the library had been taken to Rome the scholar Tyrannio prepared most of it and that Andronicus of Rhodes obtained copies from him, made them public and drew up the catalogues which are now in circulation. The older Peripatetics were themselves evidently accomplished and scholarly men; but the writings of Aristotle and Theophrastus which they had come across were neither numerous nor accurately written because the estate of Neleus of Scepsis (to whom Theophrastus had left his books) was passed on to men who were unambitious and not philosophers. (Plutarch, *Sulla* 26 (468 BC))

Strabo does not cite any authority for his story. Elsewhere he says that he heard Tyrannio lecturing (12. 3. 16 (548)), and also that he 'studied Aristotelian philosophy together with Boethus' of Sidon (16. 2. 24 (757)). He might well have heard the story from Tyrannio or from his Aristotelian lecturer.'(10) Plutarch cites no authority either; but his text is strikingly close to Strabo's, and it is tempting to suppose that either Plutarch copied from Strabo or else the two men drew from a common source.(11) If the two men drew from a common source, then Strabo-whatever he may have heard from his cronies-knew the story in a written form." (pp. 2-3, some notes omitted)

Notes

(1) The texts are conveniently found in Düring [1966], Gigon [1987], and in Fortenbaugh et al. [*Theophrastus* 1992] I. 90-4. Of recent discussions the fullest are Düring, [1966] 46-54; id. [1968] cols. 190-203; Moraux [1973] I. 3-94; Blum [1977] 109-34; Gottschalk [1990] 1083-97; Richardson [1994] 7-28; Irigoien [1994] 50-3. Of the older literature, I mention Stahr [1830] 117-34; id. [115] 23-32. The romantic will read L. Canfora, *La biblioteca scomparsa* (Palermo, 1986), 34-7, 59-66, 181-90.[See the Bibliography on the Rediscovery of *Corpus Aristotelicum* below for the complete references]

(...)

(10) Together with Andronicus and Boethus he [i.e. Strabo] heard Tyrannio, and through Andronicus he became interested in Aristotle's works': Düring [132] 413 -- a garbled invention.(11) See Moraux [76] I. 21-4; below, pp. 9, 19-20.

From: Jonathan Barnes, *Roman Aristotle* in: Jonathan Barnes and Miriam Griffin (eds.), *Philosophia togata II. Plato and Aristotle at Rome*, Oxford: Clarendon Press, 1997, pp. 1-69.

"The external evidence for the transmission of Aristotle's writings before the edition of Andronicus is meagre. There is also a great difference in opinion as to the essential question. Silently and without entering upon the problem many scholars seem to presuppose that Aristotle's writings, in the form they are handed down to us in the *Corpus Aristotelicum*, were widely circulated during the Hellenistic era and that the edition of Andronicus was nothing but a stage in an otherwise uninterrupted tradition. Other scholars maintain that the scientific *pragmateiai* known to us through the *Corpus Aristotelicum* on the whole were unknown during the time from the death of Theophrastus to the age of Sulla, when, through Apellicon's famous find, they began to be known again. This opinion is energetically and with great skill defended by Bignone and the Italian school.(1) It is a well-known fact that the Peripatetic School mismanaged their inheritance from Aristotle. It was outside the Peripatos that Aristotle's philosophic tenets, his scientific method, his achievements in various branches of 'science, in brief, his life's work gained most importance. How could this be possible, if we are not to assume widespread and intimate knowledge of his writings, the dialogues as well as the treatises, in the Hellenistic era? More concretely the question might be put thus: which works of Aristotle were known for example to Polybius, Posidonius or Cicero? The crucial point in an inquiry into this problem is that direct and definable quotations from Aristotle are exceedingly rare, particularly quotations which agree with a text known to us in the *Corpus Aristotelicum*. As to quotations from Plato it is, as everybody knows, quite the other way. They are generally in perfect accord with our text. It is not unusual to come upon a statement like this: here we find the earliest quotation from the

Metaphysics. A close examination of the passage in question, however, often makes us disappointed. As a rule it turns out that there is a general agreement between the two passages in factual content, but this is not enough." pp. 37-38

(1) A. Bignone. *L'Aristotele perduto*, Firenze 1936, Vol. I p. 33. He often stresses that "l'Aristotele che pubblicamente si leggeva e che solo, o quasi solo, si poté conoscere, soprattutto fuori della scuola, particolarmente nel periodo fra la morte di Teofrasto e l'età di Silla ... era l'Aristotele dei dialoghi e degli scritti esoterici, i soli da lui pubblicati."

(...)

In 47 B. C. the main part of the books belonging to the Alexandrian library were destroyed. Caesar intended to bring the books to Rome and had them transported down to the harbour. In the course of the riots they caught fire. (...) This fire did not of course mean that Aristotle's writings were lost to the world: there existed, as I have said, copies in other libraries. But when the commentators began their work in the first and second century they were obliged to resort to the Andronicean edition and such books as they happened to encounter in one library or another. Apart from the Andronicean edition, there existed no more a complete collection of the writings of Aristotle like that which had existed in Alexandria. We shall now briefly trace the history of this edition. Athens was, in the beginning of the first century B. C., the stage of events which became decisive for the history of the Peripatos and for later Aristotelianism. In these happenings Apellicon played an important rôle. Apellicon was, according to Strabo, φιλόβιβλος μάλλον ἢ φιλόσοφος. His wealth enabled him to buy large collection of books during his travels in Asia Minor. He happened to run into the family of Neleus, who still treasured Aristotle's manuscripts, once inherited from Theophrastus. He bought the whole collection and brought it to Athens, where he, as Strabo says, »attempted to restore the parts which had been eaten and corroded by worms, made alterations in the original text and introduced them into new copies; he moreover supplied the defective parts unskilfully, and published the books full of errors«. This last statement is, of course, impossible to control, and we can believe it or not. (...) When, during the first Mithridatic war, the Athenians sided

with the oriental despot against the Romans, Apellicon was elected στρατηγός βί των δπλων. In 86 [B.C.] Sulla besieged Athens. The Roman soldiers cut down the grove of Academus and used the trees for their entrenchments. The Peripatos was evacuated, and what eventually was left of books landed in Apellicon's library. When, early next year, Sulla stormed Athens, Apellicon was slain. His library was subsequently sent to Rome.

Another famous Roman also brought books to Rome, namely Lucullus (2) and among them also copies of Aristotle's works. He was a great philhellene, and when at Amisos he captured the learned Tyrannio, he treated him well, after some quarrel with his legate Murena. Tyrannio went with him to Rome in 67 and there became an important person. He took charge of the books taken as war-booty. At the same time as he acted as adviser to Roman noblemen, he gathered a library of his own, comprising 30.000 volumes. It is probable that he acted as counsellor to Atticus in his publishing-house. He was still alive in 26. Cicero mentions his name often, the first time in 59 (3) as literary authority. In 56 he rearranged Cicero's library and fixed appropriate titles on his rolls, *offendes designationem Tyrannionis mirificam in librorum miorum bibliotheca*; and in another letter from the same year *postea vero quam Tyrannio mihi libros disposuit, mens addita videtur meis aedibus*. (4) The last time he is mentioned by Cicero is in a letter of 46.(5) It was probably through Tyrannio Cicero for the first time had access to other works of Aristotle than the dialogues. In earlier work he had spoken of the *flumen aureum* of Aristotle's style. Aristotle, Theophrastus and Carneades were *eloquentes et in dicendo soaves atque ornati*.(6) In 45 he writes in his *Hortensius* (*apud Nonium* p. 264.15): *magna etiam animi contentio adhibenda est explicando Aristoteli si legas*, and a year later, in his *Topica* he confesses that Aristotle *ignoratur ab ipsis philosophis praeter paucos*. He seems to have accustomed himself to his style, which now is characterized as *dicendi incredibilis copia, tum etias suavitas*, words that arouse some suspicion in everybody who know Aristotles' *Topica*.

We must, however remember, that he writes this from memory during a voyage. His judgment is superficial as so often. In Sulla's library Cicero must have had ample opportunities to browse. Sulla's son was killed in Caesar's camp 46, and after this time the library

was entirely in Tyrannio's charge. Already in 55 Cicero writes to Atticus (IV 10): *ego hic pastor bibliotheca Fausti*.

Tyrannio seems to have advised Atticus to publish works of Aristotle after the manuscripts, bought to Rome by Sulla and Lucullus.

Since we have no exact information about these editions, it can hardly have been more than occasional copies. That Atticus admired Aristotle particularly, is shown by the fact that Cicero mentions a statue of Aristotle in a niche in Atticus' office. (7)

Tyrannio left the task of preparing an edition of Aristotle's works to Andronicus of Rhodes. And here we leave the story to Plutarch, Sulla 26 [see the text cited above] .

From the context in which this notice occurs, (8) it is pretty obvious that it is taken from Strabo's lost work *Hypomnemata historika*. It is Strabo too, who in his geographical work provides information concerning Apellicon's find and how his library was brought to Rome by Sulla.(9) We can also see the reason why Strabo was so well informed in this matter. He mentions that he together with Boëthos of Sidon listened to lectures in Aristotelian philosophy.(9) Boëthos was the foremost disciple of Andronicus and pursued his work. It is not improbable that Strabo sat together with Boëthos in Rome before Andronicus' professorial chair, or perhaps all together heard Tyrannio.(10) This must have happened circa 30 B.C. Strabo's *Hypomnemata historika* related events which occurred in 27 and must consequently have been finished some time after this date. His Geography was not finished before 18 B.C. and is probably later.

If the chronology which I have followed here is right, it is impossible to date the beginning of Andronicus activity as editor of Aristotle's works earlier than 40. It would probably be safer to say: between 40 and 20 A. C. This means that Andronicus' edition did not appear until many years after Cicero's death.

Here I am entirely at issue with the general opinion. It is generally believed that Andronicus was scholar in Athens in the seventies and published his edition there. Practically all information in this matter in current handbooks is based on F. Littig's dissertations. (11) Even K. O. Brink follows Littig in his article *Peripatos*, (12) although

he expresses his doubts. In my opinion Littig's argumentation does not stand confrontation with the ancient evidence. His chief argument is, in fact, his strong belief in his own theory, and this is, as all of us know, a *communis malum* in our field of study.

To the positive arguments I have set forth in support of my theory, I should like to add a very strong negative argument. Cicero was very interested in the works of Aristotle, particularly during his last years when he wrote his philosophical works. He mentions Lucullus' two companions, Antiochus of Ascalon and Tyrannio, he often speaks of Diodotus, but he never mentions Andronicus. When he was in Athens 78, he heard Philo, the leading Peripatetic, and when, in 45, he sent his son to Athens, he mentioned Cratippus as the foremost Peripatetic. Is it really possible that he could have escaped noticing a man of Andronicus' qualities, and much less, a new edition of Aristotle's works?

Andronicus introduced his edition with a work in five books, containing a biography and catalogue of Aristotle's writings. A comparison between Hermippus' catalogue in Diogenes and Andronicus' (which is handed down to us in Arabic versions) raises a number of problems which cannot be discussed here. I just wish to touch two essential questions. Firstly, is it a catalogue of the writings of Aristotle, known to Andronicus, or a catalogue of his edition? For my part I find the first alternative more probable. It is not very likely that he made new editions of works already known and widely circulated, such as the dialogues, Protrepticus, the politics. It is more probable that our present *Corpus Aristotelicum* on the whole corresponds to his edition.

He is responsible for the editing of the existing treatises. Thus he added the *peri lexeos* as a third book to the Rhetoric, the independent first book of the *Parts of Animals* to the existing edition, the likewise independent fourth book to the existing edition of the *Meteorologica* etc. In his catalogue and in quotations after his time we meet with the title *Meta ta phusikà*, reflecting the order in which he arranged the treatises. The earliest quotation I have found, which is undoubtedly taken from Andronicus' edition, is Dionysius de compos. c' 25, 198 and ep. ad Arm. 8 *en te tite bublo ton technon*. These works were written after the year 30 B. C.

Andronicus was also responsible for introducing the distinction between exoteric and esoteric works. The notion in itself is early (13) but we find no signs of this distinction applied to Aristotle's works until after the edition of Andronicus. Andronicus obviously interpreted Aristotle's of *oi exoterikoi logoi* in a way, which suited the taste of his time. Thus he inspired the creation of the myth of the two Aristotles, ridiculed in Lucian's *Vitarum auctio* 566.

The second interesting question is this: did Andronicus use the manuscripts, bought by Apellicon from the family of Neleus in Skepsis, as a basis for his edition? This is not the place for a full discussion of this problem, but I should like to add a few remarks. I think the part played by the manuscripts from Skepsis has been both underrated (14) and overrated.(15) As I have shown, there was in Rome, from the sixties onwards, a continuous influx of books to private libraries. The first public library in Rome was founded in 39 by Asinius Pollio after his triumph over the Parthians. Andronicus must have had to his disposal a comparatively rich collection of Aristotelian works, although certainly not nearly so rich as that in Alexandria.

Sulla brought from Athens not only the manuscripts from Skepsis, but also other books taken from Apellicon's library. An attempt to define more precisely the contents of the collection from Skepsis can only be a mere guess. Thus I do not find it improbable that *Metaphysics α*, the *peri lexeos*, the first book of the present *Parts of Animals*, the fourth book of the *Meteorologica* and a collection of Aristotle's letters came to Andronicus exclusively through the find in Skepsis. In his catalogue of Aristotle's writings, handed down to us in the Arabic translation of Ptolemaios Chennos, we read under n. 86: "the books found in the library of Apellicon", and under n. 90: "other letters, found by Andronicus ". We shall probably never know, exactly how important the find from Skepsis was for the formation of Andronicus' edition, but it is certain that this edition saved Aristotle's works from the fate that befell the works of Democritus." (pp. 64-70)

From: Ingemar Düring, "Notes on the History of the Transmission of Aristotle's Writings", *Acta Universitatis Gotoburgensis* 1950, pp. 37-70. (Reprinted as second study in: *Aristotle and His Influence: Two Studies*, New York: Garland 1987.)

The Roman edition of Aristotle's works

"Most information on Andronicus in current handbook is based on F. Littig's dissertation *Andronicus von Rhodos. I. Das Leben des Andronikos and seine Anordnung der aristotelischen Schriften*, München 1890, followed by two additional parts, Erlangen 1894-95.

K. O. Brink, in: *Realencyclopädie der Classischen Altertumswissenschaft Suppl. 7, s. v. Peripatos*, expresses some doubt as to the validity of Littig's conclusions. As I said in my "Notes on the history of the transmission of Aristotle's writings", Littig's argumentation does not stand confrontation with the ancient evidence. Very useful is M. Plezia, "De Andronici Rhodii studiis Aristotelicis", *Polska Ak. Archiwum filologiczne*, N. 20, Kraków 1946. Although I do not agree with some of his conclusions, his treatment of the subject has considerably advanced our knowledge.

There is no ancient evidence that Andronicus ever was head of the Peripatetic school in Athens, apart from T 75 p [Elias *In Cat. CIAG (Commentaria in Aristotelem Graeca)* XVIII, 1, p. 113-117)], which I regard as entirely untrustworthy. Cratippus is mentioned as scholarch in 46 by Cicero; when Cicero was in Athens in 78, he met no Peripatetic philosopher of importance except Antiochus, *germanissimus Stoicus*, as he mockingly calls him, seeing that he was in fact more of a Stoic than Aristotelian. Neither before nor after Cratippus is there any room for Andronicus as scholarch. To Littig the solution was simple: "Wahrscheinlich dass Andronikos in aller Stille Vorstand der Schule geworden war."

In our evidence there is universal agreement on one point: Andronicus was highly respected as a conscientious scholar. He was educated in Rhodes, an old centre of Aristotelian studies, and it is not unlikely that he preserved the traditions of Eudemus and his school, see T 75 m [Simplicius *In Phys. CIAG X*, p. 923-927] and Diels in: *Abhandlungen Akademie Berlin*, 1882, p. 40. It was one of those rare and happy coincidences of history that this scholar, educated in a good Aristotelian tradition, happened to find in Rome a library rich in manuscripts of Aristotle's writings. The find from Scepsis was probably not unimportant, but of much greater importance was the large-scale influx of books to the private libraries in Rome after about 60 B. C. Lucullus, the great philhellene, brought with him from Asia Minor not only Tyrannion and other learned scholars, but books in great quantities, too, bought or taken from old Hellenistic libraries. We are told that Tyrannion collected a library of his own, comprising 30,000 rolls; from Cicero's correspondence we may conclude that he acted as literary adviser to Atticus. Sulla's son was killed in 46, and after this time his library was in Tyrannion's

charge. In the circle of men of letters that we get to know through Cicero's correspondence, Aristotle was admired as one of the greatest minds of the past. Atticus had a bust of him in his library, and Orsini believed that the replica he had bought actually was that same bust (see Studniczka *Das Bildnis des Aristoteles* (1908) p. 17). It is against this background of a general awakening of interest in Aristotle that we should see Andronicus' achievement.

Cicero knows nothing about Andronicus or his edition. The evidence, especially T 66 c [Strabon XIII 1, 54, p. 608], 74 d [Strabon XII, 3,16 p. 548] and 75 b [Strabon XVI 2, 24, p. 757], suggests that Andronicus was younger than Tyrannion and that he came to Rome some time between 50 and 40 B. C. In my "Notes on the history of the transmission of Aristotle's writings" I suggested that his work on Aristotle's writings and his edition of the *Organon* and the other pragmaties were accomplished between 40 and 20 B. C. Dionysius of Halicarnassus, *De compos.* c. 25, 198 and *Ep. ad Amm.* 8 εν τη τρίτη βυβλώ των τεχνών are the earliest references to Andronicus' edition known to me. These works were written after 30 B. C. When speaking of his "edition", εκδοσις, we should take care not to think in modern terms. Horace's poems and literary works of the same kind might have been produced commercially, although we should be on our guard against too exaggerated accounts of ancient book-production. A scholarly work like Andronicus' edition, was produced only for use in the school, and certainly only a few copies were made for his collaborators and disciples.

The only work of Andronicus which concerns us in this connexion is his book on Aristotle's writings. We do not know the title, but we know that it served as an introduction to his edition of the scholarly writings of Aristotle; we are entitled to conclude that his work had a somewhat propagandistic tendency. Like all innovators he was full of enthusiasm for his great enterprise, and rightly so. Porphyry mentions his book as Διαίρεσις των 'Αριστοτελικών συψφραμματων Simplicius as '(Περὶ) Αριστοτέλους βιβλίων, Gellius merely says *Liber Andronici philosophi*. Ptolemy mentions Andronicus' book in title 97, retranslated by Baumstark εν πεμπτω 'Ανδρονίκον Περὶ πίνακος των 'Αριστοτέλους συγγραμμάτων. If we stick to this information, the title of his book must have been *On Aristotle's writings*, but the exact Greek title cannot be ascertained. It was a

work in at least five books; in the third book Andronicus dealt with the physical treatises.

We have three fairly extensive fragments of the text, T 75 m [Simplicius *In Phys.* CIAG X p. 923-927] and o [Philoponus *In de an.* CIAG XV, p. 27.21, T 76 f [Aulus Gellius *Noct. att.* XX 5], and several short indications of the contents, as in T 75 g, j, n and q [Porphyrius *Vita Plotini*, c. 24; Ammonius *In l. De interpr. pr.*, CIAG IV 5, p. 5.24 -- Scholia Brandis, p. 97a 13-20; Philoponus *In Cat. pr.*, CIAG XIII 1, p. 5.16; Boethius *In Aristotelis De interpr.* II p. 11.16]. According to VM 43 it included the text of Aristotle's Will. We have no evidence whatever that his book contained a biography of Aristotle. The story presented by Gellius T 76 f is an extract from a chapter in which Andronicus developed his ideas about the difference between "exoteric" and "acroatic" writings.

Littig, Baumstark and Plezia take for granted that Andronicus' work contained a biography of Aristotle. Baumstark's and Plezia's reconstruction of the work is interesting. Plezia thinks that the first book was devoted to the biography, including the Will; the second dealt with the dialogues, the third (cited by Simplicius) with the *σύταγματικά*, the fourth with the *ὑπομνήματα*, the fifth finally with the *ψευδεπίγραφα* (this he infers from the note in Ptolemy's catalogue). He then reconstructs Andronicus' biography by picking out from the *Vita Marciana* and the Arabic tradition all objective information on Aristotle and excluding all those small details which are so characteristic of Ptolemy's *Vita*. The result is, as he himself says, "rigida atque ieiuna de vita philosophi narratio."

Quite consistently he concludes that such a biography is entirely different from the anecdotic *Vita* of Hermippus and the neoplatonic eulogy of Ptolemy, and consequently must have been written by a scholar who seriously tried to apply the principles stated by Dionysius, *De Dinarcho* 2. This is all very attractive, but Plezia has finally to admit that not a single fragment of this Life of Aristotle has reached us; no ancient writer mentions the name of Andronicus in connexion with a single biographic detail, apart from the Will. With this the whole structure falls to the ground. Until new evidence is produced, I think we must rest content with what we really know,

namely that Ptolemy relied on Andronicus for his *Index librorum* and for the text of the Will.

In his work on Aristotle's writings Andronicus was inspired by some typically Hellenistic but very un-aristotelian ideas. He believed that Aristotle had written his scholarly treatises as part of a philosophic system; he tried to arrange the writings according to this idea. The arrangement was based on his ideas of the subject-matter treated; rather artificially he created a department of knowledge which he called "metaphysics", corresponding to Aristotle's Πρώτη φιλοσοφία. The chemical treatise was collocated as the fourth book of the *Meteorology*, the treatise *On diction and style* as the third book of the *Rhetoric*. He paid no respect to the chronology of the various treatises; the whole corpus was to him a closed system of knowledge. He accepted and developed further the idea that Aristotle had expounded certain advanced doctrines in his lectures and pragmaties which differed from the opinions set forth in the dialogues and other popular writings. He identified "exoteric" with the popular writings, and held that the "acroatic" writings were more important and in reality the only true expression of Aristotle's philosophy. His third idea is perhaps not entirely un-aristotelian, but mentioned only in passing by Aristotle, namely that logic and dialectics are the instruments of philosophy. Andronicus was so impressed by this idea that he built a system on it and arranged all the logical writings in a corpus to which he gave the title *Organon*. Finally, he had a high opinion of himself: as a result of his work on Aristotle and his investigations, he arrived at the conviction (which certainly was true), that he and the circle of scholars around him were fellow actors in a great revival of Aristotelian studies. He believed that he was following up the great tradition from Theophrastus and Eudemus, whereas the Peripatetics of the third and second century had degenerated (see T 66 b, 66 d and 76 b [Strabon XIII 1, 54 p. 609; Boethius *De divisione*, Migne 64, p. 892 b; Cicero *De fin.* V 4.10 (45 B.C.)]). His book as a whole was a vigorous plea for a new approach to Aristotelian studies.

None of his basic ideas was in itself new; no doubt Antiochus of Ascalon has a great share in propagating them (T 76 b [Cicero *De fin.* V 4.10 (45 B.C.)]). But it was Andronicus who fused these ideas into a kind of philosophy and soon became celebrated as the man who had

given new impetus to Aristotelian studies. He gave rise to a school of commentators whose main activity aimed at making the learned writings of Aristotle more intelligible by means of paraphrases and commentaries: among them may be mentioned his contemporary Ariston of Alexandria, disciple of Antiochus; his own collaborator Boethus of Sidon; Eudorus, Xenarchus, Athenodorus and, most famous of these early commentators, Nicolaus of Damascus.

Plezia believed that the first book of his work contained a biography of Aristotle; I am more inclined to believe that it was a general introduction, developing the ideas which I have outlined here. It is understandable that his introduction should have aimed at arousing great interest in his edition; the extract preserved by Gellius is a good example of his style in this introduction. It is interesting to see that he did not abstain from using spurious letters as evidence; I have offered a possible explanation in my note on T 76 f. [Aulus Gellius *Noct. att.* XX 5] From Ptolemy's catalogue we can gather that he included Artemon's collection of letters in his "catalogue raisonné" and that he himself had collected no less than twenty books of letters. His interest in this kind of literature is thus well attested. In his introduction he also made as much as he could of the find from Scepsis.

The Will is a special problem. To Littig, Baumstark and Plezia the solution was simple: it formed part of his biography. But if he did not include a biography, why did he find it appropriate to present the text of the Will, which was well known through Hermippus? In my notes on Ptolemy, p. 239, I have offered a possible explanation. He might have found in the papers from Scepsis a better text than that given by Hermippus and added it as an appendix to his *Index librorum*.

His catalogue was a thoroughly revised edition of the old Alexandrian Πίναξ, transmitted by Hermippus; in this he included his own rearrangement of the scholarly treatises. In Ptolemy's catalogue we possess a transcript of his index which gives us a fairly good idea of the original. The reconstructions made by Littig, Baumstark and Plezia are interesting but seem to me too sophisticated and speculative. We have not the slightest evidence that Andronicus divided the dialogues in tetralogies. Much more

interesting is that we know a good deal about his methods in discussing the titles; the extract in T 75 m [Simplicius *In Phys. CIAG* X, p. 923-927] is especially valuable. Plezia rightly says: "Ex hoc fragmento facile colligi potest Andronicum imprimis Aristotelis ipsius testimoniis colligendis operam dedisse, quibus usus scripta eius in ordinem quendam redigeret, qui ipsius auctoris consiliis ei respondere videretur. Quibus ut hunc ad modum uti liceat, probandum est Arius Aristotelem omnia opera sua uno eodemque examinato consilio conscripsisse; nobis id parum probabile videtur, sed Andronicus rem ita se habere certe persuasum habuit." -- "At in solis locis non acquievit, qui in ipsis Aristotelis scriptis haerent, sed etiam extrinsecus testimonia quaerebat.

" His methods were thus in principle the same as those followed by modern scholars before W. Jaeger. His systematic discussion was a "catalogue raisonné" in which he applied the leading ideas which I have outlined; scraps of the discussion concerning the composition, arrangement and authenticity of individual writings are found in great number in Simplicius (see Plezia, pp. 7-10) and other commentators; in this connexion he also made observations on philosophic questions. He had an open mind and did not hesitate to criticize Aristotle. Owing to the immense influence of his edition and its leading idea that all the writings contained in it are parts of a closed philosophic system he has been called "the first school-man", but this is quite inappropriate. He was a fine scholar and in certain respects an innovator; a good example of Hellenistic erudition and scholarship, with the imperfections and merits of his age." (pp. 420-425)

From: Ingemar Düring, *Aristotle in the Ancient Biographical Tradition*, Stockholm: Almqvist & Wiksell 1957.

The role of Demetrius of Phalerum

Demetrius of Phalerum (c. 350 - c. 280 B.C.) was a disciple of Theophrastus (the successor of Aristotle at the head of Peripatos).

Demetrius and the Alexandrian Library

Fragment 58A: "This Ptolemy Philadelphus brought together from all over the world every book, so to speak, through the exertions of

Demetrius of Phalerum, third lawgiver of the Athenians, a man of great importance amongst the Greeks. Included were also the writings of the Hebrews, as mentioned above.(1) Thus he established the library in Alexandria in the 132nd Olympiad,(2) but while it was being stocked he died.(3) There were, according to some, 100,000 books.” (p. 111)

From: Georgius Syncellus, *Chronographical Selection*, Karl Wilhelm Dindorf (ed.), *Corpus scriptorum historiae byzantinae* (CSHB), Bonn 1829, vol. 22, p. 518 (Alden A. Mosshammer (ed.), *Georgii Syncelli Ecloga chronographica*, Leipzig: Teubner, 1984, pp. 329, 3-8)

Notes

(1) Part of this paragraph on Ptolemy II Philadelphus is quoted in Fragment 64.

(2) I.e., 252/1-249/8. According to Eusebius, *Ecclesiastical History* 5.8.11 (citing Irenaeus, *Against Heresies* 3.21.2; cp. 61.3-4), it was founded by Ptolemy I Soter.

(3) In 246.

Fragment 58B: “For the said king Ptolemy, (1) a truly most philosophic and divine spirit, was a confirmed lover of everything beautiful to sight and in deed and in word. Thus he collected through the services of Demetrius of Phalerum and other elderly men the books from all over the world in Alexandria, defraying expenses out of the royal funds, and deposited them in two libraries. Of these two the one outside numbered 42,800 books, the one inside the royal palace(2) 400,000 books of a composite nature and 90,000 books of a simple and non-composite nature... (3)”

From: Joannes Tzetzes, *Introduction to Greek Comedy*, Proem II (Willem John Wolff Koster & Douwe Holwerda (eds.), *Scholia in Aristophanem*, Groningen: J. B. Wolters, Amsterdam: Swets & Zeitlinger, 1960-1964, XIa II, 1.1A.32.2-11)

Notes

(1)i.e., Ptolemy II Philadelphus, mentioned by Tzetzes in the preceding sentence.

(2) The one outside was the Serapeum, the one inside the Museum.

(3) Tzetzes adds that these figures were computed later on by Callimachus in his *pinakes*

Fragments cited from: William W. Fortenbaugh, Eckart Schütrumpf (eds.), *Demetrius of Phalerum. Text, Translation and Discussion*, New Brunswick: Transaction Publishers 2000.

Demetrius and the History of Aristotle's Works

"His influence on later letters may in fact have been far more profound than is usually suspected and than I have thus far suggested. (I am aware that I am entering onto very slippery ground, but proceed anyway.) The account in the letter of Aristeeas that made Demetrius head of the library charged with collecting all the books in the world, even with translating books from the Hebrew,(58) is certainly late -- ca. 100 B.C. -- and fundamentally wrong on some important points.(59) To take but the most obvious -- however much the first Ptolemy may have laid the groundwork for it, the library as an actual institution did not apparently come into being until the reign of Ptolemy II Philadelphos. By then Demetrius was out of favor at court; he could not, therefore, have been head of the library. Surely, however, Demetrius was active in some way in the efforts of the first Ptolemy to create a collection. The letter could well, therefore, preserve in exaggerated form a real memory of Demetrius' activities. He no doubt put together at least part of the collection that later became the great library.(60) And he certainly saw to it that his own books and his own scholarly work found a place in the new collection. More importantly, it is *prima facie* extremely probable that he acquired ca. 295 B.C. or earlier copies of many of the works of Aristotle and Theophrastos. As a distinguished member of the Peripatos, he was unusually well-positioned to do exactly this.

If this is correct (and it must remain an hypothesis), the early history of Aristotle's works must be seen in a different light than heretofore. Previous discussion has tended to focus on the activities of one Neleus of Skepsis to whom Theophrastos left all his books at his death ca. 287 B.C.(61) It is reported, I assume correctly, that the books of Aristotle were among Theophrastos' books.(62) The ancient sources preserve two conflicting accounts about Neleus' handling of his legacy. One was that he took the books to Skepsis where after his

death they lay moldering in a cellar until Apellikon of Teos brought them back to Athens early in the first century B.C.(63) The other was that he sold them to Ptolemy II Philadelphos for the library at Alexandria.(64) Whatever Neleus' exact role was, (65) it is significantly diminished in importance if we believe that, thanks to the activities of Demetrius of Phalerum, copies of many of the major Aristotelian treatises were already in Alexandria before the death of Theophrastos.(66) They were thus well-known in the Hellenistic period and some of them formed the basis for the work of the scholars of the library.

In conclusion, Demetrius surely deserves a better press than he has received -- first, for his enlightened rule of Athens where he accomplished much that was positive and did the best he could for his fellow citizens in the difficult circumstances he faced; second, for his very important scholarly contributions, particularly his efforts to further, as well as preserve, the work of the Peripatos; finally, for his creation of the collection that formed the basis of the library at Alexandria." (pp. 343-345)

Notes

(58) The letter of Aristeas to Philokrates (Felix Jacoby's *Die Fragmente der griechischen Historiker* 1954, 228 T6e).

(59) Beginning with this sentence most of this paragraph and the next have been taken with slight alterations from my *Athenian Democracy in Transition*, Berkeley: University of California Press 1995 50-51.

(60) P. M. Fraser *Ptolemaic Alexandria* I (Oxford: Clarendon Press 1972), 314-15.

(61) D.L. 5.52. Theophrastos died either in the year 288/7 or 287/6.

(62) The report occurs in Athenaios 1.3A-B and in Strabo 13.1.54. The will of Aristotle preserved in Diogenes Laertios (5.11-17) makes no provision for his books. There are two possible reasons: either the will is incomplete or the books had already been entrusted to Theophrastos.

(63) Strabo 13.1.54, Plutarch Sulla 26.1-2.

(64) Athenaios 1.3A-B.

(65) On Neleus' activities, see H. B. Gottschalk, "Notes on the Wills of the Peripatetic Scholarchs," *Hermes* 100 (1972) 335-42 and C. Lord, "On the Early History of the Aristotelian Corpus," *American Journal of Philology* 107 (1986) 137-61, esp. 138-45.

(66) Indeed, their presence may have acted as a catalyst to spur the agents of Ptolemy II to assemble in the library at Alexandria as complete a collection as possible of the works of Aristotle. Neleus may indeed have been approached by them and sold to them much of what he had. Thus it is quite possible that the very efforts of Demetrius to preserve the writings of his great master and his school brought it about that they were concentrated in the library at the time of the great fire and thus many works, including his own, were lost to posterity.

Ancient Catalogues of Aristotle's Works: First Part

Diogenes Laertius Lives V, 22-27

The Vitae Aristotelis and the Ancient Catalogues

"The following pages are an attempt to give a brief account or compressed overview of what may be called the 'traditional' *Vitae Aristotelis*, namely, the lost *Vita* authored by the Peripatetic Hermippus of Smyrna, and the lost *Vita* composed by the Neo-Platonist Ptolemy, whom the Arabic biographers call Ptolemy-el-Garib. These two *Vitae*, which have been compiled in antiquity, survive in one form or another only through their respective 'derivatives' or epitomes of which we still possess a fair number.

The more important biographies of Aristotle, (6) which have been handed down to us from antiquity, are:

Diogenes Laertius, *The Lives And Opinions of Eminent Philosophers* V. 1-35; (7)

the *Vita Aristotelis Hesychii*; (8)

the *Pseudo-Hesychius*; (9)

the *Vita Aristotelis Marciana*; (10)

the *Vita Aristotelis Vulgata*; (11)

the *Vita Lascaris*; (12)

the *Vita Aristotelis Latina*; (13)

the *Vita Aristotelis Syriaca I* (anonymous); (14)

the *Vita Aristotelis Syriaca II* (anonymous); (15)
the *Vita Aristotelis Arabica I* (by An-Nadim); (16)
the *Vita Aristotelis Arabica II* (by Al-Mubashir or Mubassir); (17)
the *Vita Aristotelis Arabica III* (by Al-Qifti); (18)
and the *Vita Aristotelis Arabica IV* (by Usaibi'a). (19)

All these *Vitae* in some ways are related to, or are more or less accurate abridgments of, either the *Vita Aristotelis* of Hermippus or the *Vita Aristotelis* of Ptolemy-el-Garib. An attempt shall be made here to reconstruct the essential content or outline of these two basic *Vitae* with the help of their surviving 'derivatives' or epitomes. Such an undertaking, however, is a purely tentative effort based on much conjecture and many hypotheses.

According to C. A. Brandis, E. Zeller, F. Susemihl, E. Heitz, W. Christ, F. Littich, W. Jaeger, W. D. Ross, L. Robin, I. Düring and others,(20) Hermippus -- the Peripatetic, the disciple of Callimachus and the justly famed librarian at Alexandria (towards the end of the third century B.C.) -- must be considered the main, though by no means the sole, source for the biographical notes found in Diogenes Laertius. It has been claimed by some scholars that as a librarian at the Alexandrian Museum this Hermippus had at his disposal ample biographical materials about Aristotle. In the year 306 B.C., when all 'alien' or 'subversive' philosophers were threatened with banishment from Athens by the decree of Demetrius Poliorcetes,(21) Ptolemy Soter, the King of Egypt, invited Theophrastus to come to Egypt and also to transfer the Peripatetic School together with its library to Alexandria. Although Theophrastus declined this invitation, two of his disciples or colleagues in the Peripatus, Straton of Lampsacus and Demetrius of Phaleron, for a short period of time actually went to Egypt.(22) Undoubtedly, these two men brought to Alexandria some of the writings of the Peripatetics, including probably some of Aristotle's compositions or, at least, notes and excerpts from his works. It is also known that at the time of his death (288-87 or 287-86 B.C.) Theophrastus bequeathed the library of the Peripatus, including the writings of Aristotle, to Neleus of Scepsis.(23) Neleus (or his heirs) subsequently might have sold parts of this library or

'collection' to Ptolemy Philadelphus, the successor of Ptolemy Soter. (24)

All this would indicate that in the course of the third century B.C., Alexandria had become one of the great centers of Aristotelian and Peripatetic scholarship as well as the repository for many Aristotelian and Peripatetic works. Such a situation, in turn, enabled Hermippus to draw much reliable information concerning the life and works of Aristotle from the materials which had accumulated in Alexandria. Moreover, Hermippus himself was considered a painstakingly objective and conscientious scholar whose statements could unquestionably be taken at face value.

This highly idealized picture, which, among other matters, is based on the entirely unsupported presumption that many of Aristotle's writings had reached Alexandria and that Hermippus was a dispassionate as well as objective reporter, was shattered by I. Düring. On the strength of his detailed and searching studies, Düring, in opposition to many scholars, reached the well-founded conclusion that Hermippus' biographical reports were uncritical accounts, heavily slanted in favor of Aristotle.(25) In keeping with the general literary tendencies of the time (which were concerned primarily with entertaining and amusing one's readers), Hermippus, according to Düring, concocted a strange *mélange* of fact and fiction, history and anecdote, truth and gossip, praise and slander. To be sure, Hermippus' biography contains many items which are correct, or almost correct. In accord with a widespread Hellenistic trend, however, it is also replete with many fanciful stories devoid of all foundations in fact. Moreover, it is by no means certain that any of the intramural, 'esoteric' or doctrinal late writings of Aristotle, provided they were actually and in toto authored by the Stagirite, ever reached Alexandria during the fourth and third centuries B.C., although it will have to be admitted that some of his 'exoteric' early compositions were known there. According to tradition, after the death of Theophrastus (c. 286 B.C.) the 'esoteric' works were carried to Scepsis by Neleus of Scepsis, where they were gradually lost. Düring believes that Hermippus' most important contribution (and, perhaps, least credible addition) to the biographical tradition concerning Aristotle was his determined effort to present Aristotle as the true and sole founder of the Peripatetic school. Among the many

and, in all likelihood, fanciful stories he invented, probably the most conspicuous was the legend, subsequently widely accepted (and widely exploited), that Aristotle seceded from the Academy and from Plato's basic teachings while Plato was still alive. (...)

When attempting to recast some of the main features of Hermippus' *Vita Aristotelis*, we must always bear in mind, however, that with the exception of the very complex *Vita Aristotelis* of Diogenes Laertius and some parts of the *Vita Hesychii*, all surviving *Vitae Aristotelis*, in the main, go back to Ptolemy (-el-Garib) rather than to Hermippus. It is more than likely, however, that Ptolemy (or his sources) to some extent is also influenced by Hermippus' *Vita*, although the degree of this influence can no longer be determined. Hence, it would appear that any attempt to reconstruct the basic contents of Hermippus' *Vita Aristotelis* will have to rely almost exclusively on Diogenes Laertius. Düring has suggested a tentative and conjectural sketch of the main features that were characteristic of the likely contents of Hermippus' original biography of Aristotle.(28) Implementing Düring's suggestions, it may be assumed, as some of the other *Vitae* of Diogenes Laertius indicate, that ancient biographies of philosophers seem to have followed a general pattern. They recite, (i) the name of the philosopher; (ii) the name of his father, but rarely that of his mother; (iii) sometimes the 'social position' and occupation of the father; (iv) the place of birth of the philosopher; (v) the time of his birth; (vi) sometimes the more remote ancestry of the father and occasionally that of the mother; (vii) the philosopher's schooling and his teacher or teachers; (viii) his 'intellectual qualities'; (ix) his physical appearance and physical peculiarities; (x) his travels; (xi) his 'social connections'; (xii) sometimes his 'family status'; (xiii) his public or political activities; (xiv) his scholarly activities and achievements; (xv) bits of general information; (xvi) some particular events in his life; (xvii) some particular honors bestowed upon him or some unusual misfortunes that befell him; (xviii) sometimes his last will and testament or his last sayings; (xix) his death; (xx) a list of the works he wrote; (xxi) his most distinguished pupils; and (xxii) a summary of his philosophic teachings. Naturally, not every ancient biography follows this pattern, mentions all the facts we have indicated or observes the order suggested above."

Notes

(6) Except for the purpose of shedding some additional light on the several *Vitae Aristotelis*, no attention will be paid here to occasional biographical references to Aristotle by a host of ancient authors, historians, grammarians, critics and commentators. For an exhaustive treatment of our subject, see also I. Düring *Aristotle in the Ancient Biographical Tradition*, Acta Universitatis Gothoburgensis, vol. 63, no. 2 (Goteborg, 1957), passim [this work contains a critical edition of all the *Vitae Aristotelis*. Added by R. Corazzon]; O. Gigon, 'Interpretationen zu den Antiken Aristotelesviten,' *Museum Helveticum*, vol. 15 (1958), pp. 147-93. Also, no mention is made here of the 'abridgment' or 'chronology' found in Dionysius of Halicarnassus, *I Epistola ad Ammaeum* 3-5. This epitome, it will be noted, is based on several *Vitae Aristotelis* that were in circulation during the latter part of the first century B.C. See A.-H. Chroust, 'The Vita Aristotelis of Dionysius of Halicarnassus (I Epistola ad Ammaeum 5)' *Acta Antiqua Academiae Scientiarum Hungaricae*, vol. 13 (1965), pp. 369-77, and Chapter II.

(7) See O. Gigon (see note 6); I. Düring, *cit.*, pp. 29-56; P. Moraux, 'La composition de la "Vie d'Aristote" chez Diogène Laërce,' *Revue des Études Grecques*, vol. 68 (1955), pp. 124-63; A.-H. Chroust, 'A Brief Analysis of the Vita Aristotelis of Diogenes Laertius (DL V. I-16)' *Antiquité Classique*, vol. 34, fasc. I (1965), pp. 97-129, and Chapter III.

(8) This *Vita*, which contains an important 'list of Aristotle's writings,' is also known as the *Vita Menagiana* or *Vita Menagii*. It is reprinted in V. Rose, *Aristotelis Qui Ferebantur Librorum Fragmenta* (Leipzig, 1886), pp. 9-18; I. Düring (see note 6), pp. 82-9.

(9) This relatively unimportant *Vita* is a brief compilation from Diogenes Laertius and from the *Vita Hesychii*. See I Düring (see note 6), pp. 92-3.

(10) This important *Vita* was first edited by L. Robbe, *Vita Aristotelis ex Codice Marciano Graece* (Leiden, 1861); V. Rose (see note 8), pp. 426-36. See also A. Busse, 'Neuplatonische Lebensbeschreibung des Aristoteles,' *Hermes*, vol. 28 (1893), pp. 252-73; I. Düring (see note

6), pp. 96-106; O. Gigon, *Vita Aristotelis Marciana: Kleine Texte für Vorlesungen and Übungen*, Heft no. 81 (Berlin, 1962). The *Vita Marciana*, in the main, is dependent on an abridgment of Ptolemy's lost *Vita Aristotelis*.

(11) This *Vita*, which is also called *Vita Pseudo-Ammoniana* or *Pseudo-Elias*, is probably an abridgment of Ptolemy's *Vita Aristotelis* or is based on such an abridgment. It contains some additions which can also be found in an anonymous commentary to Porphyry's *Isagoge*. See A. Busse, *Die Neuplatonischen Ausleger der Isagoge des Porphyrios* (Berlin, 1892), passim; V. Rose (see note 8), pp. 437-41; I. Düring (see note 6), pp. 131-6.

(12) This *Vita* is an unimportant abridgment of the *Vita Marciana*. See I. Düring (see note 6), pp. 140-1; A. Továr, 'Para la formation de la Vita Marciana de Aristoteles,' *Emerita*, vol. 11 (1943), pp. 180-200; V. Labate, 'Per la biografia di C. Lascaris,' *Archivio Storico Siciliano* (1901), pp. 222-40; L. Alfonsi, 'Su una Vita di Aristotele scritta da C. Lascaris,' *Giornale di Metafisica*, vol. 4 (1949), pp. 381 ff.

(13) This *Vita*, which can be found in V. Rose (see note 8), pp. 442-50, is a rather 'liberal' thirteenth-century Latin translation of a Greek epitome of Ptolemy's *Vita* or of the *Vita Marciana* (which likewise is based on such an epitome), with some minor additions from the *Vita Vulgata* (?). See I. Düring (see note 6), pp. 142-63.

(14) This brief *Vita*, which might be called a Syriac version of the Greek *Vita Vulgata* (see note 11), ultimately goes back to Ptolemy's *Vita* (or to an abridgment of this *Vita*), which probably was brought to Nisibis when Emperor Zeno closed down the Neo-Platonic school in Edessa. It was edited and translated by A. Baumstark, *Syrisch-Arabische Biographien des Aristoteles* (Leipzig, 1900), appendix to p. 130, and *ibid.*, p. 38. See I. Düring (see note 6), pp. 185-6.

(15) This very short and relatively unimportant *Vita*, which is likewise based on Ptolemy's *Vita*, was translated by A. Baumstark (see note 14), p. 116. See I. Düring (see note 6), pp. 187-8.

(16) This *Vita*, which follows the *Vita* of Ptolemy, was translated by A. Baumstark (see note 14), pp. 39 ff. See I. Düring (see note 6), pp. 193-5.

(17) This *Vita*, which shows the influence of Ptolemy's *Vita*, the *Vita Syriaca I* and *II*, and of the *Vita Arabica I*, was translated by A. Baumstark (see note 14), pp. 39-51 and 120-4; and by J. Lippert, *Studien auf dem Gebiete der Griechisch-Arabischen Übersetzungsliteratur* (Braunschweig, 1894), pp. 4-19. See I. Düring (see note 6), pp. 197-201.

(18) This *Vita*, which is a sort of 'article' on Aristotle, to a large extent is based on the *Vita* of Ptolemy as excerpted by several Arabic authors. See J. Lippert, *Ibn al-Qifti's Tarih-al-Hukama* (Leipzig, 1903); M. Steinschneider, *Al-Farabi: Des Arabischen Philosophen Leben and Schriften* (St Petersburg, 1869), pp. 187-91; I. Düring (see note 6), pp. 211-12.

(19) This *Vita*, which likewise follows Ptolemy's *Vita*, contains a 'catalogue' of Aristotle's writings which ultimately goes back to Ptolemy-el-Garib. See P. Moraux, *Les Listes Anciennes des d'Aristote* (Louvain, 1951), *passim*; I. Düring (see note 6), pp. 211-31. The important and influential Greek *Vita Aristotelis* of Ptolemy, which underlies the Syriac and Arabic *Vitae Aristotelis* (and the *Vita Marciana*, the *Vita Vulgata* and the *Vita Latina*), has come down to us only in the garbled, mutilated and abridged form of these *Vitae*. See below. A discussion of the *Vitae* mentioned in notes 9-19 can also be found in I. Düring (see note 6), *passim*; the *Vitae* mentioned in notes 14-19 are analysed in A.-H. Chroust, 'A brief summary of the Syriac and Arabic *Vitae Aristotelis*,' *Acta Orientalia*, vol. 29, nos 1-2 (1965), pp. 23-47, and Chapter IV.

(20) These scholars were opposed by V. Rose, J. Bernays, H. Diels, A. Gercke and others, who insisted that the primary source of information used by Diogenes Laertius was Adronicus of Rhodes, the alleged 'restorer' of the *Corpus Aristotelicum* around the middle of the first century B.C. This thesis, which sees in Andronicus the original source of Diogenes Laertius, by now has been mostly abandoned.

(21) See Demochares' *Oration Against the Philosophers* in support of Sophocles' motion to have all 'subversive' philosophers expelled from Athens (in 306 B.C.). D.L. V. 38; Athenaeus, *Deipnosophistae* XIII. 610EF, and XI. 509B; Pseudo-Plutarch, *Vita Decem Oratorum* (*Moralia* 850B ff.); Eusebius, *Praeparatio Evangelica* XV. 2. 6;

Pollux IX. 42. Demochares denounced Aristotle in particular (whom he charged with having committed many acts detrimental to Athenian political interests) as well as the philosophers in general.

(22) Straton of Lampsacus probably went to Egypt because he was an 'undesirable alien' in Athens as well as a Peripatetic. Demetrius of Phaleron left because, aside from his association with the Peripatus, he was in political difficulties. See note 21.

(23) D.L. V. 52. See also A.-H. Chroust, 'The miraculous disappearance and recovery of the Corpus Aristotelicum,' *Classica et Mediaevalia*, vol. 23, fasc. 1-2 (1962), pp. 50-67.

(24) Athenaeus, *Deipnosophistae* L 3AB. See also I. Düring, *Notes on the History of the Transmission of Aristotle's Writings* (Acta Universitatis Gothoburgensis, vol. 56, Goteborg, 1950), pp. 59-60.

(25) I. Düring (see note 6), pp. 464-7. See also M. Plezia, 'De Hermippi Vita Aristotelis,' *Charisteria Th. Sinko Quinquaginta abhinc Annos Amplissimis in Philosoph. Honor. Ornato ab Amicis Collegis Discipulis Oblata* (Warsaw, 1951), pp. 271-67; P. Moraux (see note 19), pp. 243-5.

(28) I. Düring (see note 6), pp. 465-7.

From: Anton-Hermann Chroust, *Aristotle. New Light on His Life and on Some of His Lost Works. Vol. I. Some Novel Interpretations of the Man and His Life*, London: Routledge & Kegan Paul, 1973, pp. 1-4.

The following Vitae contain catalogues of the writings of Aristotle:

a) Diogenes Laertius, *Lives of Eminent Philosophers* - Book V. *The Peripatetics* 22-27 (III century);

b) The anonymous [*Vita Menagiana or Vita Hesychii*](#), attributed to Hesychius of Miletus (V century);

c) The catalogue attributed to [*Ptolemy el-Garib*](#), surviving in two Arabic version by Ibn al-Qifti (ca. 1172-1248) and Ibn Abi Usaibi'a (1203-1270) (IV century?).

The Works of the Peripatetics on Philology, Literary History and Biography until the Middle of the Third Century B.C.

"Many of Aristotle's pupils and their own pupils shared his interest in philology and literary history. In some of them these interests were even more pronounced than they were in Aristotle himself. This pertains to the following scholars of the last third of the fourth and the first third of the third century BC.:

1) Herakleides Pontikos, that respected pupil of Plato, had also heard Aristotle in the Academy but he had returned to his hometown Herakleia on the Pontos when Aristotle reappeared in Athens (335 B.C.). Although he may be counted among Aristotle's pupils, he does not belong to the Peripatetics, but is generally dealt with together with them. His works, which cannot be dated, belong however more to the pre- and exo-peripatetic researches in fields that were also investigated by the Peripatetics.

2) Theophrastos of Eresos on Lesbos, Aristotle's versatile successor, who was, however, more interested in other disciplines. We have already made his acquaintance as a doxographer of natural philosophy.

3) Phainias of Eresos, a fellow countryman of Theophrastos and of about the same age as he, who had heard Aristotle when he taught in Mytilene on Lesbos (345-343 RC.) and remained there.

4) Aristoxenos of Tarentum, nicknamed "the musician", a rival of Theophrastos, who had hoped to become Aristotle's successor. Even today he is highly regarded as a theoretician of music, and we met him already as a doxographer of musicology.

5) Dikaiarchos of Messene (Messina).

6) Chamaileon of Herakleia on the Pontos, a somewhat younger fellow countryman of Herakleides, who apparently returned to his home town after studying in the Peripatos.

7) Demetrius of Phaleron, a pupil of Theophrastos, who switched from science to politics, ruled Athens under Macedonian sovereignty

from 317 till 307, had to flee, and lived since 297 in Alexandria at the court of Ptolemaios I.

8) Praxiphanes of Mytilene on Lesbos, also a pupil of Theophrastos. He taught on Rhodos. Eudemos, a pupil of Aristotle who hailed from the island, and had worked meritoriously on mathematical and astronomical doxography, taught also there during the last period of his life. It is said that Praxiphanes, purportedly the teacher of Kallimachos, was the first to be named a grammarian in the later Alexandrian sense.(181)

9) Hieronymos of Rhodos, probably a pupil of Praxiphanes.(182) The relevant writings of these scholars are lost, but we know the titles of many of their works, and we also know a little more about some of them because they were used by later authors. Thus, it is possible to indicate at least approximately which subjects were dealt with by the pupils of Aristotle and by their own pupils. It is much more difficult to say what they did not deal with, because so little has come down to us."

Notes

(181) See note 23 above [note 23: Alfred Hilgard (ed.) *Scholia in Dionysii Thracis Artem grammaticam* Leipzig, 1901. (*Grammatici Graeci* I,3) pp. 164, 26-28 and 488, 12-14; Rudolf Pfeiffer, *History of Classical Scholarship: from the beginning to the end of the Hellenistic age*, Oxford, 1968, p. 158.] ; see also Wehrli *Die Schule des Aristoteles. Texte und Kommentar* (1967) Heft 9, fragment 8010 and 16-17, with commentary.

(182) On the cited scholars and their works see the relevant fascicles (Hefte) of Wehrli's collection *cit.* (2. Auf. 1967-69), also his summary in Heft 10, pp. 95-128. Wehrli excluded Theophrastos, which is understandable because what has been preserved of his works would have been beyond the scope of the collection. Only five of the Peripatetics of the 4th and 3rd century B.C. dealt with by Wehrli did not pursue studies in the history of literature: Eudemos (except for the doxography), Klearchos, Straton, Lykon, and Ariston. It is remarkable that except for Demetrios, who had to leave the city, Herakleides, Phainias, Chamaileon, Praxiphanes, and Hieronymos did not live in Athens for the better part of their lives, but this fact is

not quite clear. In addition to the Peripatetics dealt with by Wehrli there were of course at that time also others who were active in literature, e.g. the "Homer scholar" Megakleides named by Tatianos (see above, note 23) and Menon, the founder of medical doxography.

The Library of Aristotle

We have four *testimonia* on the destiny of the Library of Aristotle (that included his own works) after his death:

- Strabo, *Geographia*, XIII, 1, 54-55;
- Plutarch, *Sulla*, XXVI, 468 A-B;
- Athenaneus, *Deipnosophistae*, I, 3A-B;
- Athenaneus, *Deipnosophistae*, V, 214D - 215A;

I give the texts in an [Appendix](#) to this page.

"The library of Aristotle which is mentioned by several ancient authors must have been a very plentiful collection of Greek literature, and it was also at the disposal of his pupils. The works of Aristotle and his pupils, especially those mentioned above, show a comprehensive knowledge of literature and could not have been written at all without such a library. Public libraries, where scholars could study works of interest to them or where they could even borrow them, did not exist at that time, neither in Athens nor anywhere else. But Aristotle had the necessary means to acquire the books which he needed from booksellers or other people. Thus, after the death of Speusippos, Plato's successor, he bought his books (library?) (there were only a few of them) for the sum of three talents (18,000 drachmas).(210) The geographer Strabo (d. AD. 20) claims in a passage that Aristotle had been the first man, so far as known, to collect books; that, to be sure, is an exaggeration. because Euripides (485-406 B.C), for example, already had a library. But if that statement is limited to the systematic organization of a research library, then it is correct.

The nickname *anagnostis* (reader) which Aristotle acquired in Plato's Academy, seems to indicate that he had a library already at that time. He was also a new type of philosopher in that he, unlike those of an earlier period and quite like those of a modern scholar, perused the literature and made excerpts.(211)

During this lifetime, this became the custom of all scholars, largely thanks to his own example, but in his youth, immediately before this change, it still made him the butt of jokes on the part of his school mates who were listeners rather than readers. Euripides, a reader and collector of books, had also been ridiculed by his contemporaries, especially by Aristophanes.(212) Plato himself declared in the Phaedrus that written notes served not for the communication of knowledge but only as memory aids for the knowledgeable.(213) Basically, Aristotle shared this opinion. During his time in the Academy he, like his teacher, published works (mostly in the form of dialogs) that were intended for a larger public, but as head of a school he acted through talks, lectures and didactic writings which grew out of his lectures and were intended only for the school itself.(214) Nevertheless, he thought it indispensable to complement the oral transmission of knowledge by the study of literature. His method demanded to begin every inquiry with the collection of material. This included also the perusal and evaluation of the relevant literature.(215)

The fate of Aristotle's library is a very remarkable chapter of ancient library history, and it is also important for our present investigation. His collection contained three parts: 1. the copies of works by other authors which he had bought, that is, his library proper; 2. the personal copies of his own works, written by himself or by others, both those that were intended for a larger public, the more polished 'exoteric' works, and those that were aimed only at his pupils, the "acroamatic" works which resulted from his lecture notes (literally: only intended to be heard); 3. his written legacy (in the archival sense), consisting of notes (*hypomnemata*) of all kinds (annotations, excerpts, lecture notes and the like),(216) letters and personal papers. Well-known scholars of Antiquity as well as modern researchers identified, however, Aristotle's works which formed part of his library with that library itself, as if it had contained only his works and his literary legacy. The term *ta Aristotelus biblia*

(Aristotle's books) which occurs in addition to *hē Aristotelus bibliothēkē* (Aristotle's library), is admittedly ambiguous: it means both the books acquired by Aristotle and those written by him. Even those researchers who distinguished between these kinds of books did generally not consider that the books written by Aristotle himself constituted, despite their large number, only a very small part of his library; strictly speaking, they were even no more than an annex to that collection of books which surpassed all earlier ones in scope and importance. This is so because researchers devoted to Aristotle tried to elucidate the fate of the philosopher's library with regard to the history of transmission of his works. Gottschalk and Moraux treated the problem also from that point of view.⁽²¹⁷⁾ .217 Since I cannot agree with them on some important points, I must here deal with the fate of Aristotle's library, limiting myself to questions that are relevant for my investigations."

The Life of Aristotle by Diogenes Laertius (Vitae, Book V)

"The Catalogue of Aristotle's writings has been thoroughly examined and discussed by P. Moraux, *Listes anciennes des d'Aristote*, Louvain 1951. I refer to his bibliography and his copious and careful references to the earlier literature. I have refuted his thesis concerning the origin of the catalogue in my paper "Ariston or Hermippus?", in: *Classica et mediaevalia* 17, 1956, pp. 11-21, but this hypothesis is a rather unimportant detail in his valuable book. His main contribution is the interpretation and discussion of the individual titles. I have limited myself to very brief notes, appended to each individual title in the testimonia under the text; for further information I refer to Moraux.

As I have said in my paper, mentioned above (which I am now summarizing), our evidence favours the traditional opinion that the catalogue is a list of manuscripts of Aristotle's works in the possession of the Alexandrian library. To be more precise, I would say that it is an inventory of the manuscripts acquired fairly soon after the library was established. Apart from the *History of Animals* and the *Anatomai*, the important biologic works and the *Meteorology* are missing, but these works are expressly mentioned and quoted by third century writers; it is inconceivable that the Alexandrian library should not have possessed copies of these works. Their absence from our catalogue is best explained, if we assume that it is an old inventory made before the collection was complete. The disposition of the inventory is this:

1) Nos. 1-19. The works most widely known by the general public in Hellenistic times.

2) Nos. 20-24. Here we recognize Aristotle's synopses of Plato's dialogues and oral teaching, later quoted under the collective title *ta Platoniká*. We do not know anything certain about 23-24; they might be doxographic hypomnemata of the kind mentioned by Aristotle *Top.* I 14, 105 b 12.

3) Nos. 25-73. Logical and dialectical writings. Some of the titles are known to us as titles of separate parts of the pragmaties, other titles

seem to be entirely out of place. In many instances Moraux's interpretations of individual titles are convincing. More than any other part of the catalogue, this section gives the impression of being an inventory of manuscripts in the possession of a library. It is likely that Nos. 42, 43 and 62 were different manuscripts of the same work, and the same can be said about Nos. 48, 56 and 57. (...)

4) Nos. 74-75. Political writings, very meagre indeed. We should have expected to find the ethical treatises here (it is almost certain that Epicurus knew and used the *Nicomachean Ethics*), and the omission is difficult to explain. Nos. 78 - 79. Works on rhetoric and on style. Nos. 90-110 (109 - 110 may be late interpolations). Works pertaining to natural philosophy and biology. Nos. 111 - 116. Mathematical works, including optics and musical theory. In this section we can see that the author has attempted to arrange the books according to their subject-matter.

5) Nos. 117-127 (128). *Aporemata* and *Problemata*. It is possible that 128 is a collective title referring to the following section.

6) Nos. 129-144. Collectanea. Here Nos. 141 -142 are certainly misplaced, probably interpolated in the course of transmission.

7) Letters and poetry.

I can find no philosophy behind this arrangement, no idea that Aristotle's writings should be arranged according to some principle inherent in his philosophy; it is purely matter-of-fact. Any librarian endowed with common sense could have made this list, starting with the more well-known, popular works, proceeding with the bulk of the scholarly works roughly arranged according to their subject-matter, then the so-called hypomnematic works and the collectanea, and finishing the catalogue with the personal documents, letters and poetry.

Hermippus worked in the Alexandrian library and had access to its inventories and catalogues. He hit upon an old inventory of Aristotle's writings and incorporated it in his biography, without essentially (or perhaps at all) changing its character. Perhaps he realized that it would have involved him in a laborious work, entirely outside his competence, to investigate these four hundred-odd rolls, many of which had more or less identical titles or no titles at all.”

From: Ingemar Düring, *Aristotle in the Ancient Biographical Tradition*, Stockholm: Almqvist & Wiksell 1957, pp. 67-69.

“The catalogues are arranged according to different principles and, overall, there is a great lack of uniformity among them, which would seem to point to different sources. All of the lists, moreover, are unsatisfactory or imperfect for several reasons: for each of the philosophers we can point to titles of works cited by other trustworthy ancient sources which do not appear in Diogenes' lists, many titles are repeated or duplicated in a single catalogue, there are variant titles for the same work listed separately, instances of melding and blending the other lists and later supplements, the separate listing of individual books of larger, collective works as well as the listing of the collective work, restorations, clear misattributions, and other contaminations and corruptions.(292) All of the lists present almost insurmountable difficulties for interpretation and analysis and the final conclusive word on them has yet to be spoken and may never be. Even if there were space and time to do so, I cannot discuss each item in each list here, but shall limit discussion to a presentation of some of the general characteristics of each list.

The catalogues of Aristotle (5.21-7) and Strato (5.59-60) are most like one another, which is evidence that they derive from the same source. They are ordered along similar lines in a sensible, matter-of-fact manner. Dialogues or exoteric works appear first, listed according to the diminishing number of books included for individual titles. Esoteric works take up the next section, within which various scientific treatises are grouped according to subject matter. Next, collections of different sorts are found, e.g. *aporemata* and *ipomnemata*, and each list concludes with personal papers and letters.(293) Of course in both lists there are titles which are found in each of the sections which do not fit them, but overall one can see this general pattern of arrangement.” (p. 3850)

Notes

(292) Diogenes does not seem to have been totally oblivious to problems of trustworthiness in the book lists which he transmits. At the end of his entry for Aristotle, he writes: "For Aristotle was in all

things !oust industrious and most inventive, as is obvious front the writings listed before, which come near in number to 400, at least all those that are undisputed" (5.34).

(293) See I. Düring, *Aristotle in the Ancient Biographical Tradition*, pp. 67-69 and P. Moraux, *Les listes anciennes des d'Aristote* p. 27 ff. and 246-7 .

From: Michael George Sollenberger, *The Lives of the Peripatetics: An analysis of the contents and structure of Diogenes Laertius ' Vitae philosophorum' Book 5*. In Wolfgang Haase and Hildegard Temporini (eds.), *Aufstieg und Niedergang der römischen Welt*, vol. 36.6, Berlin: Walter de Gruyter 1992, pp. 3793-3879.

“At the conclusion of three of these catalogues, those of Aristotle, Theophrastus, and Strato, Diogenes appends a stichometric notice. This is meant to be an indication of the total length of all the writings in each catalogue. One *stichoi*, a verse or line, was regarded as a line of prose or poetry equivalent in length to one hexameter verse, approximately sixteen syllables or 34-38 letters.(300) Counting the number of *stichoi* in a given work seems to have been a customary way of measuring its length, and such notices were a common bibliographic practice in Alexandria in the third century B.C., a point to which I shall soon return. The total given for Aristotle is 445,270 verses, for Theophrastus 232,850, and for Strato 332,440.(301) But these numbers are certainly corrupted. If they are supposed to represent the number of lines contained in all the works in each catalogue, there is some great disproportion. There are 146 titles in Aristotle's list which comprise over 550 individual books. His total number of *stichoi* is almost twice that of Theophrastus, and yet the latter is credited with more titles (224) and almost as many individual books (495). Further, Strato's catalogue has only 47 titles (302) which comprise only 58 individual books, yet his number of *stichoi* is nearly half again as many as the number given for Theophrastus. If some rough calculations are made and the number of *stichoi* is divided by the number of individual books, we arrive at some surprising average lengths of individual books. For Strato the average length of a book is 5,732 verses, for Aristotle 809, and for Theophrastus 470. These figures are so incommensurate that, unless we want to assume that Strato composed tremendously long books,

over twelve times as long as those written by Theophrastus, we will have to reject them as accurate measurements of the total length of the works listed in Diogenes' catalogues.(303)

Diogenes nowhere names his source(s) for the catalogues of Peripatetic writings, but the stichometric notices in the first three, although their accuracy is to be rejected, may provide some clue about the provenance of the lists. Such a reckoning system points, as mentioned earlier, to an Alexandrian source.(304) Book catalogues were compiled in Alexandria during the third century B. C., most notably by Callimachus, whose 130-volume *Pinakes* (305) appears to have been a listing of works available in the library at Alexandria in his day. (306) It is generally thought that Callimachus arranged the works in large groups according to type or genre, e. g., medical treatises, epic, tragic and lyric poetry, philosophy, political works, etc. Within each of these classes the various authors were listed in alphabetical order. For each author some brief biographical material seems to have been included. Next, the works of each author were apparently listed in alphabetical order, with the *incipit* and number of verses in each being given.(307) But, as already remarked, there are three different types of catalogues among the Peripatetics in Book Five of Diogenes' work: 1) systematic (Aristotle's and Strato's), 2) alphabetical (Theophrastus'), and 3) thematic (Demetrius' and Heraclides'). Surely these must derive from three different sources, which may be Alexandrian in origin. The only one which comes close to fitting the previous outline of Callimachus' cataloguing method is that of Theophrastus. While no one has ever suggested that Callimachus himself compiled Theophrastus' catalogue, and no such claim is made here, most scholars tend to accept the conclusion of H. Usener that Theophrastus' catalogue is derived fundamentally from the work of Hermippus of Smyrna, a follower of Callimachus.(308) Hermippus, in fact, has been put forth by a number of scholars as the source not only of Theophrastus' catalogue, but also of the other four lists of Peripatetic writings. This can hardly be the case, unless one assumes that the same man compiled Bibliographies according to three different systems. It seems more likely that if Hermippus was Diogenes' ultimate source for Theophrastus' list of writings, there is a different source behind his lists of Aristotle and Strato, and probably yet another one for the lists of Demetrius and Heraclides. Besides

Hermippus, the source of Aristotle's list has been thought to be Andronicus of Rhodes, the famous arranger and editor of the works of Aristotle and Theophrastus.(309)

On the other hand, others have maintained that Diogenes' ultimate source of Aristotle's list as well as Strato's was Ariston of Ceos, who is considered to have been the successor to the leadership of the Peripatos after Lyco.(310) Further, it has been claimed that these lists pre-date the bibliographic activities in Alexandria and derive from a library list in the Lyceum itself.(311) For the lists of Demetrius and Heraclides, besides Hermippus, Sotion has often been suggested as Diogenes' ultimate source.(312) In addition to all these contending claims concerning the source(s) of these lists there is the matter of the tale of the fate of the books of Aristotle and Theophrastus, their alleged disappearance and general unavailability during the two centuries after Theophrastus' death and their rediscovery in the first century B.C. This complicated tale begins with Theophrastus' bequest of 'all the books to Neleus' in his will (5.52). This topic is extremely controversial and complex and requires more space than can be allotted here. It has little relevance to the lives and wills of the Peripatetics, but is of major importance for the influence of Aristotle and Theophrastus and the availability and use of their writings during the succeeding centuries.(313)” pp. 3852-3855

Notes

Mit Beiträgen zur Textgeschichte des Theokrit, Catull, Properz und anderer Autoren* (Berlin, 1882) p. 204-5, 214, and 286, K. Ohly, *Stichometrische Untersuchungen. Zbl. für Bibliothekswesen, Beiheft 61* (Leipzig, 1928) p. 4-22, and R. Blum, *Kallimachos und die Literaturverzeichnung bei den Griechen: Untersuchungen zur Geschichte der Biobibliographie. Archiv für Geschichte des Buchwesens 18* (Frankfurt a. M., 1977) p. 124 n. 291 and 238 ff.

(301) D. L. 5.27, 5.50, and 5.60 respectively.

(302) In all three cases the number of titles could be greater or fewer, since in some instances what is listed as one title may in fact be two.

One example of this should suffice: 5.59 *Peri ton metallikon mekanematon* may be two titles *Peri to metallikon* and *Mekanematon*.

(303) I. Düring, *Aristotle in the Ancient Biographical Tradition*, p. 77, writes: "MorauX counted 550 books; a simple calculation (sc. *Listes anciennes* p. 192) shows that his figure tallies well with the number of lines at the end of the catalogue. Taking as standard an average page of a Greek text in the Loeb library with 30 lines of 40 letters in each line, Aristotle's literary output according to Hermippus' catalogue, in which most of the great pragmatics are missing, would correspond to about 12,000 printed pages." The calculations for Aristotle are not disproportionate as far as I. Düring and P. MorauX are concerned, but since Strato's numbers are so incommensurate, perhaps all such numbers should be suspected of error. It is also interesting to note that Demetrius of Phalerum is reported to have surpassed all Peripatetics in the number of lines written (5.80). However, Demetrius' total is not given by Diogenes; his list of works is nowhere near as long as Theophrastus' or Aristotle's.

(304) In addition to the studies of T. Bity, R. Blum, and K. Ohly (note 300 above), see F. Ritschl, *Die Stichometrie der Alten*, in: ID., *Die Alexandrinischen Bibliotheken unter den ersten Ptolemäern und die Sammlung der Homerischen Gedichte durch Pisistratus* (Breslau, 1838, Reprint: Amsterdam, 1970) p. 91 and 103 ff. = ID., *Opuscula Philologica* vol. 1 (Leipzig, 1886) p. 74 and 84 ff., E. Howald, *Die Schriftenverzeichnisse des Aristoteles und des Theophrast*, *Hermes* 55 (1920) p. 204, F. Schmidt, *Die Pinakes des Kallimachos*. *Klassisch-Philologische Studien* 1 (Berlin, 1922) p. 68 ff., W. Weinberger, *Stichometrie*, *RE* 3A,2 (1929) col. 2487 - 8, P. MorauX, *Listes anciennes*, p. 214 n. 17 and 246, I. Düring, *Ariston or Hermippus?*, *Classica et Mediaevalia* 17 (1956) p. 19, and L. Daly, *Contributions to the History of Alphabetization*. *Coll. Latomus* 90 (Brussels, 1967) p. 92. While stichometric notices are given for the sum of the writings of both Speusippus (4.5) and Xenocrates (4.14), elsewhere totals are given in *epe*, e. g., 1.34, 9.20 and 9.111. Totals for individual writings are also given, e. g., 1.61, 68, 79, 85, 89, 97, 101, and 8.77.

Several different purposes were achieved by stichometric notices. They served to indicate the extent of a work or corpus of works, to determine the pay of the copyist, to determine the price or value of a work or corpus of works, to ascertain the integrity of a work or corpus as well as its authenticity. Moreover, stichometry facilitated the citation of individual passages in a work, for just as line numbers are often used in modern books, consecutive numbers of verses were often placed at regular intervals in the margins of a work. See the citations of line numbers by Diogenes at 7.33 and 7.187-8 and the remarks of M. Sschanz, *Zur Stichometrie*, *Hermes* 16 (1881) p. 309-14, K. Wachsmuth, *Stichometrie und kein Ende*, *Rheinische Museum* 34 (1879) p. 481-4, and K. Ohly, *op. cit.* (note 300) p. 74 f.

(305) The full title of the work is recorded as [*Pinakes (or Tables) of those who were eminent in every branch of learning, and what they wrote, in 120 volumes*] in the *Suda*, s. v. *Kallimachos* (no. 227, part 3, p. 19.27-9 Adler).

(306) See O. Regenbogen, *Pinax*, *RE* 20.2 (1950) col. 1419-20, and R. Blum, *op. cit.* (note 300) p. 224 ff., for much of the older literature on Callimachus' bibliographical work.

(307) On the reconstruction of Callimachus' work see R. Pfeiffer, *Callimachus*, 2nd ed. (Oxford 1965), fr. 429, 435, 438, and 452-3, R. Blum, *op. cit.* (note 300) p. 231, and F. Ss Schmidt, *op. cit.* (note 304) p. 58 ff.

(308) H. Usener, *Analecta Theophrastea* (Diss. Bonn; Leipzig, 1858) p. 22-4, reprint. in: *Idem, Kleine Schriften*, ed. L. Rademacher, Vol. 1 (Leipzig, 1912). For a succinct summary of Usener's argument, see O. Regenbogen, *Theophrastos* col. 1366-9.

(309) For a review of the scholarly battles on the sources of these lists and the various proponents see P. Moraux, *Listes* p. 15-21, 211-16, and 221-37, and *Idem, Der Aristotelismus bei den Griechen von Andronikos bis Alexander von Aphrodisias I. Die Renaissance des Aristotelismus im 1. Jh. v. Chr., Peripatoi* 5 (Berlin-New York, 1973) p. 4 n. 2, and C. Lord, *The Early History of the Aristotelian Corpus*, *Amer. Journal of Philology* 107 (1986) p. 137-61.

(310) P. Moraux, *Listes* p. 243 ff., and more recently with a bit of hesitation, *Idem, Diogène Laërce et le Peripatos* p. 251-2. That

Ariston was Diogenes' source was first suggested by A. Gercke, Ariston no. 52, RE 2.1 (1896) col. 953 ff.

(311) J. Keaney, Two Notes on the Tradition of Aristotle's Writings, *American Journal of Philology* 84 (1963) p. 58-63.

Who is the source of Diogenes' Catalogue: Aristo of Ceo, Hermippus of Smyrna or an Anonymous author?

The Traditional Thesis: Hermippus of Smyrna

"Hermippus refers by name to the following writers: Eumelus, Bryon (from whom he quotes Theocritus of Chios), Timaeus, Timotheus, Lycon, Timon. It is a well-known fact that many ancient writers like to quote their subsidiary sources but keep silent about their principal sources. Hermippus worked in the library of Alexandria and was a diligent compiler. It is reasonable to assume that he had access to a rich material, not only of books published in the usual manner, but also of records and other unpublished material which had reached the library from the archives of the Peripatos. The Catalogue of Aristotle's writings which he included in his biography is best explained as an inventory of the books in the possession of the Alexandrian library.

The Hellenistic biographic literature in the two centuries after Hermippus was very rich, but in most cases only the titles of these works are known. It is likely that a small standard biography of Aristotle crystallized in what we use to call the *koiné historia*, corresponding to our encyclopaedias. Dionysius of Halicarnassus refers in general words to the *koiné historia* and to "those who have written about the life of Aristotle". No certain fragments of these biographies are known.

Some fragments of other Hellenistic literature give us glimpses of what we have lost. A valuable fragment of Apollodorus' *Chronica* on the chronology of Aristotle's life is preserved by Dionysius and Diogenes. Aristocles tells us that Apellicon wrote a book on Aristotle's relations with Hermias. It is tempting to assume that Artemon used some of the letters which Apellicon had bought from Aristotle's heirs in Scepsis in his collection of Aristotle's correspondence (in no less than eight books). But most of the letters in his collection were probably faked, which did not prevent later writers from quoting them as genuine. Philodemus is generally held to be the author of the *Index Academicorum philosophorum Herculensis*, containing precious information from old reliable sources. In his *Volumina Rhetorica*, written about 75 B.C., he deals at length with the Epicurean attacks on Aristotle.

At about this time Cicero was in Athens, listening to lectures held by Antiochus of Ascalon and other reputed professors. Cicero's letters and philosophic treatises testify to his great interest in Aristotle, and I do not doubt that it was Antiochus who stimulated this interest. With Antiochus begins the revival of Aristotle; according to him the Peripatos after Straton had degenerated; it was his ambition to resuscitate the old Peripatetic tradition. The final result of this revival is Andronicus' edition of Aristotle's scholarly works.

As an introduction to his edition Andronicus wrote a book *On Aristotle's writings* which I have characterized as a "catalogue raisonné". It is superfluous to repeat here what I have said in the chapter on the Roman edition of Aristotle's works about the ideas which inspired Andronicus. It is nowhere attested that his book contained a biography of Aristotle. Hermippus' *Life of Aristotle* remained the standard work."

From: Ingemar Düring, *Aristotle in the Ancient Biographical Tradition*, Stockholm: Almqvist & Wiksell 1957, pp. 466-467.

APPENDIX: THE ANCIENT TESTIMONIA ON THE LIBRARY OF ARISTOTLE IN ENGLISH TRANSLATION

The texts are collected in:

- Ingemar Düring, *Aristotle in the Ancient Biographical Tradition*, Part III. *Fragments of the Ancient Biographical Tradition*, Chapter VII. *Aristotle's Library*, pp. 337-338; see also Chapter XVIII. *The Roman edition of Aristotle's works*, pp. 412-425.
- Olof Gigon, *Aristotelis opera III: Librorum deperditorum fragmenta*, Berlin: Walter de Gruyter, 1987;
- William Fortenbaugh et al. (eds.), *Theophrastus of Eresus*, Part One, Leiden Brill 1992, *Writings. Preservation and Publication [Fragments] 37-41*, pp. 90-94 (with English translation).

These are the more relevant texts:

“[1] From Scepsis [a town in the Troad] were the Socratics Erastos and Coriscus, and Coriscus' son Neleus, a man who studied under Aristotle and Theophrastus. He received the library of Theophrastus, which contained also Aristotle's library. For indeed Aristotle gave his own library to Theophrastus, and also left his school to him.

[2] Aristotle was the first man we know to have collected books, and he taught the kings in Egypt how to organize a library.

[3] Theophrastus gave (the library) to Neleus. But Neleus brought it to Scepsis and gave it to his heirs, ordinary men who kept the books shut up and carelessly stored. And when they learned that the Attalid kings, to whom their city was subject, were eagerly searching for books for the provision of the library in Pergamum, they hid them in a place dug in the ground.

[4] After some length of time their descendants sold the books of Aristotle and Theophrastus, which were damaged by dampness and moths, to Apellicon of Teos for a large sum of money. But Apellicon

was more a bibliophile than a philosopher. For this reason, though he attempted to correct parts that had been eaten through, he transferred what was written to new copies, making restorations that were not good, and published the books full of errors.

[5] Since the ancient members of the Peripatos after Theophrastus were entirely without books, except a few, and these were mostly the exoteric writings, it happened that they were unable to do philosophy in a systematic way, but could (only) hollowly declaim theses.

[6] Those who came later, after these books (re)appeared, were better able than they to philosophize and to expound Aristotle. Nevertheless they were forced in many cases to state what was probable, due to the great number of errors.

[7] Some also added much to this (situation). For immediately after Apellicon's death, Sulla, who had taken Athens, seized Apellicon's library, and after it had been brought here (to Rome), Tyrannio, the grammarian, a lover of Aristotle, got his hands on it by playing up to the person in charge of the library, [8] and some booksellers, employing poor scribes and not comparing (manuscripts) — which also happens in the case of books copied for sale, both here and in Alexandria. But enough about these matters.”

From: Strabo (64/63 B.C.-25 A.D.), *Geographia*, XIII, 1, 54-55.

"Having put out from Ephesus with all his ships, (Sulla) anchored on the third day in Piraeus. And after being initiated into the mysteries, he carried off for himself the library of Apellicon of Teos, in which were most of the books of Aristotle and Theophrastus, at that time not yet clearly known to many. When it (the library) was brought to Rome, Tyrannio the grammarian is said to have prepared many (of the books) and the Rhodian Andronicus, obtaining the use of copies from him, published them and drew up the lists now in circulation. In themselves the elder Peripatetics appear to have been elegant and fond of learning, but neither to have read many of the writings of Aristotle and Theophrastus nor (to have done so) with care, since the estate of Neleus of Scepsis, to whom Theophrastus left his books, passed to men who lacked aspiration and were ordinary."

From: Plutarch (ca. 45–120 A.D.), *Sulla*, 26.1-3.

"He (Athenaeus) says that he (Larensis) possessed such a great number of ancient Greek books that he outdid all those who have been admired for their collections: Polycrates the Samian and Peisistratus, who was tyrant of the Athenians, and Euclid, who was also an Athenian, and Nikocrates the Cypriot and, moreover, the kings of Pergamum and Euripides the poet and Aristotle the philosopher (and Theophrastus), and Neleus, who preserved their books. From him, he says, Ptolemy, surnamed Philadelphus, the king of our country, purchased all of them and transferred them along with those from Athens and Rhodes to beautiful Alexandria."

From: Athenaneus (? - after 192 A.D.), *Deipnosophistae*, 1.4, 3A-B: Livius Laurensis, a rich Roman, is the host of the symposium (this first book is extant only in a byzantine epitome of unknown date).

"And he [Athenion] seized not merely the property of citizens [of Athens], but presently he took the goods of foreigners as well, reaching out his hands even for the property of the god at Delos. At any rate, he sent to the island Apellicon of Teos, who had been made an Athenian citizen and had run a chequered and novelty-seeking career.

When, for example, he professed the Peripatetic philosophy, he bought up Aristotle's library and many other books (for he was very rich), and began surreptitiously to acquire the original copies of the ancient decrees in the Metroön, as well as anything else in other cities which was old and rare. Detected in these acts at Athens, he would have forfeited his life if he had not absconded. But after a short while he returned to Athens again, having won over the favour of many persons; he then enlisted in the cause of Athenion, as one who belonged to the same philosophic sect. Athenion, meanwhile, had forgotten the precepts of the Peripatetic school, and was rationing out a quart of barley every four days to the silly Athenians, giving them food fit for cocks, not human beings. And Apellicon, though he had set out with a military force to Delos, behaved as if he were attending a festival rather than as a true soldier, and, on the side toward the town of Delos, set a guard which was too negligent; as for the regions behind the island, he left them completely unguarded, and went to bed without even throwing up a palisade. When this came to the knowledge of Orbius, who was the Roman

praetor in charge of Delos, he waited for a night when there was no moon; he then led out his troops and attacked the Athenians when they were asleep or carousing, and slaughtered them and their companions in arms like sheep, to the number of six hundred; he also took about four hundred prisoners. And this noble general Apellicon made off from Delos in secret flight. When Orbius observed many others fleeing together for refuge in farm-houses, he burned them up, houses and all, as well as all their appliances for a siege, including the siege-engine which Apellicon had constructed when he came to Delos...”

Ancient Catalogues of Aristotle's Works: Second Part

Hesychius and Ptolemy al-Garib

The anonymous Vita Menagiana or Vita Hesychii

"The Vita is known in the literature under the name of *Vita Menagiana*, because it was first edited by Gilles Ménage in the London edition of Diogenes, 1663. His *Animadversiones*, extended and considerably improved, were then published in the beautiful folio edition, Amsterdam 1693, printed by H. Wetstenius, together with the notes of H. Stephanus, Casaubonus father and son, and others; a veritable treasure-house from which all later commentators have borrowed material.

V. Rose reprinted the Index Hesychii in his *Aristoteles pseudepigraphus*, pp. 18-20, reporting that Tischendorf had seen a manuscript of the Vita Hesychii ("cum edito plane conspirantem") in St. John's monastery in Patmos. The Index is reprinted in the Berlin edition of Aristotle, vol. 5, p. 1466, and then in Rose's *Aristotelis fragmenta*, 1886, together with the Vita. It was also reprinted by Buhle in the first volume of his edition, by Westermann in his *Vitarum scriptores*, and by Flach in his *Hesychii Milesii Onomatologi quae supersunt*. P. Moraux in his *Listes anciennes des d'Aristote* deals at length with problems connected with the Index librorum."

From: Ingemar Düring, *Aristotle in the Ancient Biographical Tradition*, Stockholm: Almqvist & Wiksell 1957, p. 81.

"If we count the books listed in the first part of the catalogue (1-139), accepting the transmitted numbers of books and assuming, when no figure is given, that the title represents one book, we get 403 books plus the 158 books of the *Polities*. Moraux counted in the original list of Hermippus (or as he believed, Ariston) 551 books (*Listes anciennes*, p. 192). The number of *stikoi*, according to Hermippus' catalogue was 445.270, corresponding roughly to 550 papyrus-rolls of about 800 lines each.

(...)

Hesychius' Catalogue of Aristotle's writings has been dealt with at length by P. Moraux, *Listes anciennes*, pp. 195-271. Plezia has a note on the catalogue in *De Andronici Rhodii studiis*, p. 51.

On the first part of the catalogue, titles 1-139, there is general agreement. As appears from the following survey, it is essentially the same *Pinax* as that transmitted by Hermippus.

Nos. 1-24. The works most widely known to the general public in Hellenistic times; the list agrees pretty well with Hermippus.

Nos. 25-68. Logical and dialectical writings; a few titles misplaced, but the general agreement with Hermippus is obvious. It is interesting to see that both lists preserve an old error: *ethikon* (title 38 in Diogenes Laertius, 39 in Hesychius).

Nos. 69-70, and title 64, misplaced; the same three "political" writings as in Hermippus.

Nos. 81-98, eighteen writings on natural philosophy and biology; as in Hermippus, the list ends up with two interpolated titles, 97-98, another old error which both lists have preserved.

Nos. 99-104, the same six mathematical and astronomical writings as in Hermippus.

Nos. 105-119, hypomnematic writings; No. 111 must be a late addition, perhaps by Hesychius himself.

Nos. 120-131, collectanea; No. 121 is perhaps the general title. No. 123 has preserved an ancient gloss, probably an annotation by the librarian who made up the original *Pinax*. "This is the book by which he defeated the corresponding book of Menaechmus."

Nos. 132-133, added in the same way as Hermippus 141-142. Nos. 135-139, the same as Hermippus.

Both catalogues, then, are transcribed from the same original. According to Heitz, DL is more reliable, according to Howald the list of Hesychius is a deteriorated copy of the list in DL. Like Moraux I am more inclined to believe that Diogenes and Hesychius independently used the same original, and that in some small and rather unimportant details Hesychius has preserved the original better than Diogenes. At least two additions are very late and may be ascribed to Hesychius himself: title 96 (this work was not divided into two books until the second century A. D.), and title 111.

The *appendix Hesychiana*, titles 140-197, raises problems which can never be answered satisfactorily. Moraux's hypotheses are very ingenious, but I doubt whether he can persuade anybody to believe in them. And what has Porphyry to do with this list? As far as I know, his *Philosophos historia* did not include a biography of Aristotle, let alone a Catalogue of his writings, genuine or spurious.

The *appendix* consists of four different parts.

Nos. 140-147 belong to the class of *aporemata* or *problemata*, possibly with one exception, No. 140.

Nos. 148-158, a selection of the well-known pragmaties, as edited by Andronicus.

Nos. 159-187, a list of various writings, inviting wild conjectures as to the original arrangement. Christ, and later Plezia, suggested that this is an inventory of a Hellenistic library, e.g. in Rhodes or Pergamon, an attractive and simple hypothesis which, however, as Plezia rightly says, "aequo iure affirmari ac negari potest".

Nos. 188-197, a list of pseudepigrapha. Such a list was probably included in Andronicus' work; at least he discussed the titles of spurious works. Diogenes merely says that he knows that some books, circulated under Aristotle's name, are *anaepsilekta*. Moraux's reconstruction of the original alphabetical order in this list, p. 271, is attractive but does not carry us any further.

Hesychius, a diligent collector of facts, must have compiled this appendix from different sources. The first and the third section are

probably pre-Andronicean. The second list, 148-158, is certainly made after Andronicus, but equally certain is that the titles are quite arbitrarily ranged. If Hesychius had known Andronicus' work, he would hardly have presented such a disordered list of the pragmaties. It is therefore more likely that this section, too, is an inventory of a library. It is futile to make any conjectures concerning the fourth section.

As to the individual titles, I refer to Moraux's careful and valuable comments. A characteristic feature of this catalogue is that so many of the titles are in the accusative. The history of the transmission of this list is entirely unknown; it may, or may not have been interfered with during this process.

It is generally assumed that the *Vita Hesychii* is an epitome of the original *Onomatologon* of Hesychius, and the language in ([*Vita Hesychii*] 4) would lend some support to this hypothesis. Concerning the relationship with Diogenes we can only say that Hesychius used the same biographical sources, but the mixture is his own, and on two or three points he transmits information which is plainly wrong and not found anywhere else. The catalogue proves that he had access to post-Andronicean sources.

The *Suda* contains an excerpt of our *Vita* under No. 3929 Adler. The text is identical with that of Ambros. 490 with a few minor variants, annotated in the critical apparatus."

From: Ingemar Düring, *Aristotle in the Ancient Biographical Tradition*, Stockholm: Almqvist & Wiksell 1957, pp. 90-92.

Ptolemy el-Garib (or al-Gharib)

"It is commonly held that the two surviving Syriac and the four extant Arabic *Vitae Aristotelis* are ultimately based on the biographical tradition represented or inaugurated by Ptolemy (-el-Garib) and his (lost) *Vita Aristotelis*.⁽¹⁾ Probably in the course of the fifth or sixth century A.D., a Syriac translation was made of Ptolemy's *Vita* or, more likely, of an epitome of this *Vita*. Of this original translation, only two rather scanty abridgements by some Syriac biographers survive, namely, *I Vita Aristotelis Syriaca* and *II Vita Aristotelis Syriaca*, which might also be called short resumes of an

older and more comprehensive Syriac translation of Ptolemy's original Greek *Vita Aristotelis* or of an epitome of this *Vita*.

The Syriac translation of either Ptolemy's *Vita* or that of an epitome of this *Vita*, together with some additional (probably Neo-Platonic) materials transmitted through several intermediary sources, ultimately became the foundation of the four Arabic *Vitae Aristotelis*. It has been surmised that towards the end of the ninth century A.D., Ishaq Ibn Hunayn translated into Arabic a Syriac rendition of Ptolemy's *Vita* or, rather, of a Syriac translation of an epitome of this *Vita*. In any event, the Arabic biographers, without exception, ultimately derived their information and materials, through the intermediary of Syriac translators, from Ptolemy, although they seem to have included in their *Vitae* not only some elements that were probably added (or invented) by the Syriac translators (or by the Arabic biographers themselves), but also bits of information gleaned from some other (Neo-Platonic?) reports or accounts. There exists no evidence, however, that the later Arabic biographers made direct use of Greek or Syriac sources. It might be correct to maintain, therefore, that the Syriac and Arabic biographers, like the Neo-Platonic School of Ammonius, derived most of their information concerning the life of Aristotle from Ptolemy (-el-Garib) and his *Vita Aristotelis*.(2)

The four major Arabic biographers of Aristotle are: Al-Mubassir (or Al-Mubashir, subsequently cited as *II VA*), who wrote during the latter part of the eleventh century; (3) Ibn Abi Usaibia (subsequently cited as *IV VA*), who wrote during the latter part of the thirteenth century; (4) Ibn an-Nadim (subsequently cited as *I VA*), who wrote near the end of the tenth century; (5) and Al-Qifti Gamaladdin (subsequently cited as *III VA*), who wrote during the first half of the thirteenth century.(6) A cursory examination of the Arabic (and Syriac) *Vitae Aristotelis* might indicate that especially *I VA*, *II VA* and *IV VA*, which are based on a single main source, are quite similar in content. Closer analysis reveals, however, that there exist quite a few significant differences in the facts selected and discussed by the different Arabic biographers. It is also obvious that some of the later Arabic biographers simply copied from some earlier Arabic author. Thus, Usaibia, for instance, occasionally seems to quote from Mubashir without, however, acknowledging his source." pp. 54-55

(...)

"A long list of Aristotle's writings is preserved by Usaibia. This list or catalogue, which includes a number of pseudepigrapha, ultimately goes back to the list compiled by Ptolemy (-el-Garib).(104) A brief classification of Aristotle's works can also be found in An-Nadim (*I VA* 18). Mubashir (*II VA* 35), who maintains that Aristotle 'wrote many books, about one hundred, and that it is said that apart from these one hundred books he wrote others too,' (105) enumerates only twenty works which he claims to have seen, namely, 'eight books on logic; eight (actually seven) books on physics; (106) one book on ethics; one book on constitutions; one large book called *Metaphysics*, also known by the title of *Theology*, that is, *Divine Discourse*; one book on mathematics; and one book on mechanics.' (107)

A comparison of the Syriac and Arabic *Vitae Aristotelis* with other *Vitae* -- Diogenes Laertius V. 1-16,(108) *Vita Aristotelis Marciana*, *Vita Aristotelis Vulgata*, *Vita Aristotelis Latina* and *Vita Aristotelis Hesychii* (*Vita Menagiana* or *Vita Menagii*) -- indicates that the Syriac and Arabic biographies supplement and implement, and must be implemented by, these other *Vitae*." pp. 68-69

(1) See A.-H. Chroust, 'A brief account of the traditional *Vitae Aristotelis*,' *Revue des Etudes Grecques*, vol. 77, nos. 364-5 (1964), pp. 50-69, especially, pp. 60-9, and Chapter I. The title of Ptolemy's *Vita Aristotelis* probably was something like 'On the Life of Aristotle, His Last Will and Testament, and a List of His Writings.' See Elias (olim David), *Commentaria in Porphyrii Isagogen et in Aristotelis Categorias*, CIAG, vol. XVIII, part I (ed. A. Busse, Berlin, 1900), p. 107, line 7, where we are told that Ptolemy wrote about Aristotle's 'list of writings, about his life, and about his last will and testament.' *I VA* 19 (An-Nadim) reports that 'Ptolemy-el-Garib . . . is the author of a book "On the Life of Aristotle, His Death, and the Classification of his Writings."' See also *IV VA* (Usaibia), at the beginning. For the Syriac and Arabic *Vitae Aristotelis*, see, in general, F. A. Muller, 'Die griechischen Philosophen in der arabischen Überlieferung,' *Festschrift der Frankischen Stiftungen für Professor Bernhardt* (Halle, 1873); F. A. Muller, 'Das Arabische Verzeichnis der Aristotelischen Schriften,' *Morgenländische Forschungen*:

Notes

(3) His full name is Abu-(e)l-Wafa al-Mubashir (or Mubassir) Ibn Fatik. He authored the *Kitab Mukhtar al-Hikam wa-Mahasin al-Kilam* (The Book of Selections of Wisdom and Wonderful Sayings). For simplicity's sake the accents on the Arabic words have been omitted.

(4) He authored the *Kitab uyun al-Anba fi Tabaqat al-Atibba* (The Book of Sources for Information Concerning the School of Physicians). Usaibia, who died in 1270, was a physician.

(5) His full name is Ibn Abi Yaqub an-Nadim. He authored the *Kitab al-Fihrist*, which was written before the year 987. This work, like that of Al-Qifti (see note 6), is more in the nature of a 'biographical encyclopedia.'

(6) His full name is Al-Qifti Gamaladdin al-Qadi al-Akram. He authored the *Tabaqat al-Hukama* (The School of Wise Men). He died in 1248. See note 5.

Neither the work of An-Nadim nor that of AlQifti will be used extensively.

(104) Usaibia also contains a short survey of Aristotle's writings. This survey is based upon, or taken from, Ibn Said Al-Qordubi.

(105) The number 'one hundred' is probably a mistranslation or misreading of the Greek *chilioi* (one thousand), which can be found in *Vita Marciana* 45 and *Vita Lascaris* 48.

(106) Like An-Nadim (*I VA* 18), Mubashir (*II VA* 35) actually recites only seven titles on 'physics.'

(107) Mubashir (*II VA* 36) also mentions the 'public' and private letters of Aristotle. These 'public' letters might well contain the 'official reports' which Aristotle sent to Macedonia and to Antipater in particular. In his *Oration Against the Philosophers* of 306 B.C., Demochares implies that Aristotle 'conspired' with Macedonia against Athens.(...)

From: Anton-Hermann Chroust, *Aristotle. New Light on His Life and on Some of His Lost Works. Vol. I. Some Novel Interpretations of the Man and His Life*, London: Routledge & Kegan Paul, 1973, pp. 54-55; 68-69

"The *Kitab al-Fihrist* by Ibn An-Nadim: "Ptolemy-el-Garib who was an adherent of Aristotle and spread knowledge about his merits; he is the author of a book *On the life of Aristotle, his death, and the classification of his writings*. -- Usaibia, in the introduction to his biography, says: "Thus speaks Ptolemy in his book to Gallus on the life and history of Aristotle, his Will and the list of his famous writings." -- Apart from the fact that his name is mentioned several times in the biographies, this is all information we have on Ptolemy in Arabic sources." I. Düring, *Aristotle in the Ancient Biographical Tradition*, cit. p. 195

"The *Life of Aristotle* current in the neoplatonic schools was written by a certain Ptolemy. The identification of this Ptolemy, the character and scope of his biography, the relationship of the

numerous late epitomes to the original work: all this is very problematic.

We possess three neoplatonic epitomes, all from the fifth century, Vita Marciana, Vita vulgata, and Vita Latina; the two Syriac Vitae are probably from the same period; the Arabic tradition is represented by an-Nadim's *Fihrist*, transcribed by al-Qifti, and by the extracts in al-Mubashir and Usaibia; there are also some scattered fragments of other writers; the entire Arabic tradition goes back to a translation (or epitome) of Ptolemy's Life of Aristotle, presumably made by Ishaq ibn Hunayn towards the end of the ninth century.

All the material handed down to us in these nine Vitae is very uniform in its general character, in spite of differences in details. But sometimes, even in small details, their agreement is complete, as I have shown in my comments. I do not for a moment doubt that these nine Vitae ultimately are derived from the same common source, Ptolemy's Life of Aristotle. I have found no vestiges of any other independent source. This conclusion is confirmed by the neoplatonic prolegomena. The biographical material in these prolegomena (and incidentally in the commentaries) shows such close relationship with the Vitae and with Ptolemy's Catalogue of Aristotle's writings that there is no room for doubt.

The examination of the three Greek and Latin Vitae has led to the result that they are three independent versions of the same original epitome. This epitome was used as the basis of oral instruction in the school of Ammonius Hermeiu and by his disciples Olympiodorus, David and Elias. It was also used by Philoponus and Simplicius, and after the time of Elias and David by the anonymous professor called Pseudo-Elias: thus by three generations of students from about 480 A. D. until the middle of the following century.

The Syriac Vitae are very meagre in content and not derived directly from any of the existing epitomes; they too must be regarded as independent versions of the same original. They may have been current in the school of Ibas of Edessa, but it is also possible that they are products of the seventh century used in the schools of Bishop Sebocht of Qennesrin or Jacob of Edessa.

The Arabic tradition is rich in facts which are not found at all in the Greek and Syriac Vitae, and in many cases when the Greek Vitae merely contain a hint or a simple fact, we find a more elaborate account in the Arabic tradition. The Arabic tradition has been unduly neglected; as I have shown in my comments, it contains much valuable material of undoubtedly Greek origin; the Arabic elaborations, distortions and embellishments stand out clearly, and in most cases we can easily detach them. The Arabic text of Aristotle's Will affords an excellent criterion, since we can directly compare the Greek and the Arabic text paragraph by paragraph. The result is that there is a remarkable agreement between Diogenes' text (derived from Hermippus, probably via Phavorinus), and the Arabic text (derived from Andronicus, via Ptolemy, via Ishaq's translation and other possible intermediate sources). As a matter of fact, the Arabic text of the Will is in certain respects superior to that given by Diogenes. This should warn us not to be too suspicious of the Arabic tradition. The criteria that I have used in my scrutiny of the Arabic sources are these: agreement in substance with Greek sources, agreement in language of such a kind that it is possible to recognize typically Greek idioms behind the Arabic text, and finally, agreement in tendency.

Ptolemy's biography has a clear tendency: it is a glorification of Aristotle, based on some typically neoplatonic conceptions. Aristotle is *dios Aristoteles*. He was entrusted to Plato in compliance with an oracle of the God in Delphi. He made an extraordinary impression on Plato, and when Plato went on his second visit to Sicily, he deputized as head of the school. He was held in great honour by Philip and Alexander and was very influential in political affairs, "using philosophy as an instrument". He dissuaded Alexander from attacking Persia, telling him that the omina were unfavourable. He was great as a benefactor, both towards individuals and cities. The inhabitants of Stagira honoured him in many ways after his death. They believed that "their coming to the place where Aristotle's remains were buried would purify their minds". It is said that a swarm of bees was found around the urn containing his ashes. And so forth.

It is further characteristic of Ptolemy's biography that he frequently refers to Aristotle's correspondence as evidence. It is probable that

he used Artemon's collection of letters and the additional collection made by Andronicus as principal sources. The section on chronology is probably taken from Hermippus; the fact that Aristotle was not elected head of the Academy after Plato's death is explained in exactly the same way as by Hermippus: "Aristotle was on a mission to Macedonia". Other facts are of such a nature that it is impossible to determine whether he has taken them from Hermippus or from the *koiné historia*. Although his tendency to glorify Aristotle forbids us to speak of critical scholarship, it cannot be denied that his biography is a scholarly work, based on extensive investigations and a thorough knowledge of the biographical tradition. He wanted to find material likely to extol Aristotle and present him as an almost divine personality, and he found it. If suitable for his purpose, he transferred to Aristotle qualities, honours, and actions originally ascribed to other persons. Philip, Alexander and Antipater were honoured by the Athenians after the battle of Chaeronea with statues on the Acropolis and the status of *proxenoi* -- Ptolemy felt no scruples in transferring this to Aristotle, perhaps using faked letters as evidence; other examples of similar transfers are cited in my comments. The habit as such is old; a short time after Aristotle's death the historian Eumelus is already describing Aristotle as a second Socrates. Ptolemy is really critical only when he refutes stories which, if believed, could damage the memory of his idol." Düring, *cit.*, p. 469-471

"Who was this Ptolemy and when did he live? The identification with Ptolemaios Chennos should in my opinion be discarded. The general character of the Vita tells us that the author was a neoplatonist, writing after Porphyry's time. A neoplatonist named Ptolemy is mentioned as disciple of Porphyry and Iamblichus, Stobaeus I 378 Wachsmuth; he might well be our Ptolemy. But the name was indeed very common, especially in Alexandria. A curious detail in *Fihrist* 15 is the dating of Aristotle's death to "the beginning of the reign of Ptolemy, son of Lagos". An Arabic writer can hardly have invented this; it must be derived from Ptolemy; it would be natural for an Alexandrian scholar to use the Alexandrian List of Kings instead of or parallel with the Athenian List of Archons. This is admittedly a weak argument, but it points to Alexandria. So does the scholarly character of the biography. My conclusion, then, is that Ptolemy was

a member of Porphyry's and Iamblichus' school and that he wrote his *Life of Aristotle* in the first half of the fourth century. I base this conclusion mainly on the general tendency of the biography.

Two problems, in themselves of little importance, must be left open: the alleged dedication of the biography to a certain Gallus, and the name Ptolemy-el-Garib. The simplest solution is to accept both facts as true. Dedications of books to Roman noblemen was a common habit; Porphyry is a good example. It is possible to translate el-Garib with "the unknown", and explain it as a surname given to him by Ishaq to distinguish him from the well-known Ptolemy, the author of *Al-Magest*. Other possible explanations are discussed in my comments on al-Qifti.

With this my brief survey comes to an end. After Ptolemy no ancient writer is known who has made an independent or original contribution to the biographical tradition.

The biographical tradition on Aristotle is interesting from two quite different points of view. Part of this material is important because it is true and gives us knowledge about the historical Aristotle, about the events of his life and about his personality. His *Will* is one of the most precious documents that antiquity has preserved to us. Another part of the fragments and the biographies is interesting because it provides us with material for a history of Aristotelianism. But it is not my object in this book, either to write a *Life of Aristotle* or a history of the changes in the conception of his personality and importance as a philosopher and scholar, but rather to provide a source-book for such work."

Les Listes Anciennes des Catalogues d'Aristote : Première Partie

Diogène Laërce, Vies, V 22-27

Introduction

L'Antiquité nous a laissé trois catalogues des d'Aristote :

Diogène Laërce, *Vies et doctrines des philosophes illustres*, Livre V. *Les Péripatétiques 22-27* (III siècle) ;

La [Vita Menagiana \(anonyme\)](#), connue aussi comme [Vita Hesychii](#), attribuée à Hesychius de Milet (V siècle) ;

Le catalogue attribué à [Ptolémée el-Garib](#), existant en deux versions arabes de Ibn al-Qifti (ca. 1172-1248) et de Ibn Abi Usaibia (1203-1270) (IV siècle ?).

Les études de Paul Moraux

1) Le livre *Les listes anciennes des d'Aristote*, Louvain : Éditions universitaires, 1951.

"M. Paul Moraux a publié, en 1942, une fort bonne monographie consacrée à Alexandre d'Aphrodise, exégète de la noétique d'Aristote. On sait que l'activité d'Alexandre, aux environs de l'an 200 de notre ère, marque l'une des étapes les plus importantes dans l'histoire de l'aristotélisme et que ses vues sur les conditions de la pensée humaine ont alimenté pendant des siècles les controverses sur le sens véritable de la doctrine aristotélicienne de l'intelligence. Depuis ce premier travail plein de promesses, M. Moraux a poursuivi en sens inverse, en remontant vers la source, ses études sur le péripatétisme

ancien ; mais nul n'ignore que la longue période qui s'étend de Théophraste à Alexandre nous est connue seulement par des témoignages fragmentaires et trop peu nombreux, permettant à peine de tracer une image bien pâle des prestations de l'École péripatéticienne à cette époque.

Devant cette pénurie de documents, M. Moraux n'a pas craint de s'attaquer à ceux d'entre eux dont la nature même ne semblait guère autoriser l'espoir d'en tirer des renseignements quelque peu substantiels sur la vie de l'École et l'activité concrète du maître : les sèches énumérations de titres d' que constituent les listes anciennes des écrits du Stagirite. L'étude historique qu'il en a entreprise répond sans doute aux vœux des spécialistes que ne pouvaient plus satisfaire les travaux actuellement vieillis sur cette matière aride. Mais par la manière dont il a su traiter le sujet, il rejoint des problèmes d'un intérêt plus étendu et de portée plus grande. On ne songe plus, de nos jours, à contester l'importance des recherches sur l'origine et la formation des écrits d'Aristote. Elles éclairent autant le philosophe qui s'attache à la doctrine du maître du Lycée pour en approfondir le sens, que l'historien qui a souci de retracer l'évolution de sa pensée et de suivre les répercussions qu'elle a eues après lui dans son école. Toute contribution nouvelle à l'étude de ces questions mérite, dès lors, notre attention sympathique.

C'est précisément à ce titre que nous avons été heureux d'accueillir dans la collection consacrée à l'œuvre philosophique d'Aristote l'ouvrage de M. Moraux sur les listes anciennes des écrits du Stagirite. Car cet ouvrage nous apporte beaucoup plus que son titre ne permet de le soupçonner. Sans doute y trouvera-t-on un examen patient et consciencieux du contenu et de l'origine de ces listes. Mais pour découvrir ce qui se cache sous ces longues énumérations de titres dont la grosse part ne révèle quasiment rien au premier abord, il était nécessaire de replacer dans leur cadre aussi bien les listes elles-mêmes que chacun des écrits qui y sont relevés. M. Moraux s'y est employé avec un succès remarquable. Il s'est imposé la tâche ardue de rassembler les données innombrables propres à éclaircir le mystère de chacun des titres de ces listes. Il ne s'est pas contenté toutefois des renseignements épars, fournis par les auteurs de l'antiquité, sur l'activité d'Aristote ou des philosophes postérieurs ; il a su tirer des lumières inattendues de l'étude des traités conservés du

Stagirite : en scrutant le contenu, la structure, les procédés de composition, les expressions caractéristiques, il est parvenu à déceler, avec une sûreté de coup d'œil peu commune, le sens vrai de tel titre d'apparence anodine, ne suggérant de façon précise aucune œuvre nettement déterminée.

Il nous amène ainsi à reconnaître, sans contestation possible, que tels livres parfaitement connus d'un de nos traités, -- des Topiques, par exemple, -- figurent dans les listes sous des dénominations inattendues. Et par ce biais on apprend aussi de quelle indépendance relative ont joui, aux premiers temps de l'École, certaines parties -- livres ou groupes de livres -- des traités aristotéliens considérés depuis des siècles comme formant une unité.

Par ces brèves indications, données à titre d'échantillon, nous espérons faire entrevoir en quelque mesure ce que l'on peut attendre du travail de M. Moraux. La manière même dont il a abordé son sujet l'a mené bien au-delà de l'interprétation immédiate des documents squelettiques qui font l'objet direct de son étude. Pour une bonne part, les écrits qui y sont simplement énumérés ont pu être replacés dans leur ambiance vivante et dans les circonstances concrètes où ils ont vu le jour. Par voie de conséquence, certaines dates ont pu être précisées de façon heureuse, ou du moins proposées avec une sérieuse probabilité. On est mis en présence d'Aristote en pleine activité au sein de son école, rassemblant avec ses disciples des documents de toute sorte, constituant avec eux des collections de problèmes et d'exercices relatifs aux domaines les plus variés, mais composant aussi, de façon progressive, ses fameux traités qui devaient le rendre si célèbre plus tard.

A côté de cela, on nous montre, avec preuves à l'appui, le rétrécissement de plus en plus accentué du champ sur lequel s'est porté l'intérêt des représentants de l'École après les successeurs immédiats du maître. Ces disciples tardifs se cantonnent dans certains domaines, — logique et dialectique, entre autres, — rappelés par une profusion de titres dans les listes les plus anciennes. Ils semblent plier sous le poids d'un héritage trop lourd pour leurs faibles épaules et négligent, malgré leur importance, une série de traités de philosophie naturelle caractéristiques de la manière et des préoccupations du fondateur du Lycée.

C'est à la fin du III^e siècle avant J.-C. que nous reportent en fait les documents envisagés. En étudiant de façon minutieuse les procédés de la catalographie alexandrine, M. Moraux a su montrer que les listes les plus anciennes d'Aristote (Diogène Laërce, Hésychius) n'appartiennent pas au milieu alexandrin, mais ont leur origine dans l'école péripatéticienne elle-même, vers la fin du III^e siècle, un peu plus de cent ans après la mort du Stagirite. Elles proviennent d'un catalogue dressé à cette époque et dont l'auteur ne serait autre qu'Ariston de Céos, chef de l'École après Lycon. -- En même temps, les listes en question nous fournissent un précieux témoignage touchant la diffusion des traités aristotéliens après Théophraste et avant l'édition d'Andronicus de Rhodes. Il en résulte une fois de plus qu'on ne peut ni refuser tout crédit, ni s'en tenir de façon exclusive à la tradition qui veut que tous les traités ou à peu près seraient restés enfouis durant plus de deux siècles dans une cave à Skepsis.

Cet aperçu, tout incomplet qu'il soit, ne laisse pas, croyons-nous, de mettre en lumière la richesse de contenu de l'ouvrage de M. Moraux et l'apport considérable qu'il représente pour notre connaissance de l'œuvre d'Aristote, de la formation et de l'origine de maints écrits qui y figurent, et du sort qui leur fut fait aux temps qui suivirent la mort du maître. Nous osons espérer que cette étude sera le point de départ de bien d'autres, visant à approfondir la genèse et la signification de bon nombre de ces écrits qui n'ont pas encore livré à l'histoire tout le secret de leur origine, ni dévoilé à l'analyse toute la portée philosophique de leur contenu." (pp. V-VIII)

Préface de Augustin Mansion à Paul Moraux, *Les listes anciennes des d'Aristote*, Louvain : Éditions universitaires 1951.

Oubli des scolaires d'Aristote dans le premier Peripatos

"Près de trois siècles s'écoulèrent entre le moment où furent écrits les scolaires d'Aristote et celui où l'activité des commentateurs en assura la diffusion dans le monde philosophique. Durant cette longue période, l'histoire des traités d'Aristote reste fort obscure. Strabon rapporte, à ce propos, une singulière histoire. La bibliothèque de Théophraste, qui contenait celle d'Aristote, fut transmise à Nélée par voie d'héritage. Nélée la fit transporter à Skepsis en Troade. Ses

successeurs, des gens ignorants, l'enfouirent dans une cave pour la dissimuler à l'ardeur bibliophile des Attales. Longtemps après (au commencement du III^e siècle avant J.-C.), les livres furent achetés par Apellicon ; celui-ci les publia en réparant maladroitement les dégâts faits par les vers et par l'humidité. La bibliothèque fut ensuite transportée par Sylla d'Athènes à Rome. Là, elle "passa par les mains" du grammairien Tyrannion, qui goûtait beaucoup Aristote. Les libraires se servirent souvent de copies fautives qu'ils ne collationnaient pas, ce qui arrive encore tous les jours, dit Strabon, aussi bien à Rome qu'à Alexandrie (1). Dans la *Vie de Sylla*, Plutarque raconte la même histoire ; il ajoute cependant qu'Andronicus de Rhodes acquit de Tyrannion des copies qu'il "publia et qu'il écrivit les tables (*pinakés*) qui circulaient encore à l'époque de Plutarque (2). Les deux auteurs signalent que les anciens Péripatéticiens, successeurs de Théophraste, n'avaient point les livres d'Aristote, si ce n'est en très petit nombre, et que, par conséquent, ils ne pouvaient pas philosopher sérieusement.

Dans ces récits, le mélange d'histoire et de légende est bien difficile à débrouiller. Strabon, le plus ancien auteur qui narre le sort des livres d'Aristote, n'écrivait guère qu'un demi-siècle après la découverte de l'Apellicon ; il était disciple de Tyrannion (3), avait étudié la philosophie aristotélicienne avec Boéthus de Sidon (4) et puisait souvent son information chez le stoïcien Posidonius, lequel témoignait un vif intérêt aux choses de l'aristotélisme (5). Toutes ces circonstances confèrent un certain poids à son témoignage.

D'ailleurs, l'école péripatéticienne elle-même semble avoir ignoré longtemps les scolaires d'Aristote. Straton fut sans doute le dernier à les utiliser, pour les combattre ; peut-être même ne les lisait-il plus et n'en connaissait-il les théories que par l'enseignement de Théophraste. Après Straton, le Lycée décline. Lycon n'est qu'un beau parleur ; l'éloquence l'intéresse plus que la philosophie. Ariston passe aussi pour un orateur plein d'élégance et pour un philosophe sans profondeur. Hiéronymus et Diodore, les moralistes de l'école, cherchent leur inspiration chez les Cyrénaïques, les Épicuriens et les Stoïciens. Critolaus, le seul Péripatéticien de l'époque qui ait quelque importance comme philosophe, utilise visiblement les dialogues d'Aristote et non ses ésotériques.

En dehors de l'école, on ne connaît pas davantage les traités scolaires du Stagirite. L'adversaire le plus acharné de l'aristotélisme, Épicure, dirige ses attaques contre les dialogues. L'*Eudème*, le *Protreptique*, le *De Philosophia*, le *Banquet* et d'autres exotériques font l'objet de ses critiques. Il ne tient compte ni du *De Anima*, ni de l'*Éthique*, ni de la *Métaphysique*, ni des autres traités dont les théories différaient, sur bien des points, de celles des dialogues (6). Cependant, Épicure fut l'hôte d'Athènes dès 323, année où Aristote prit sa retraite à Chalcis en Eubée. Il était alors âgé de dix-huit ans et s'occupait de philosophie depuis plusieurs années. Quand il revint à Athènes et y ouvrit une école, après avoir enseigné à Mytilène et à Lampsaque, Aristote était mort depuis quinze ans. Dans ces conditions, les traités ésotériques ne lui auraient pas échappé, s'ils avaient joui d'une certaine diffusion à Athènes.

Dans leur polémique contre l'école péripatéticienne, Colotes et Diogène d'Énoanda se contentent de reproduire les arguments d'Épicure. D'autre part, les Épicuriens associent dans leurs attaques l'Académie et le Lycée, comme si l'enseignement des deux écoles était le même ; pareille confusion n'aurait pas été commise si l'on avait connu les traités ésotériques, où Aristote établissait sa position antiplatonicienne. La thèse syncrétiste d'un Antiochus d'Ascalon, affirmant l'unité foncière des doctrines de l'Académie, du Lycée et du Portique, ne se justifie pas autrement. Il semble d'ailleurs que Cicéron, le disciple d'Antiochus, ne connaisse d'Aristote que les publiés, les dialogues.

Pendant près de trois cents ans, les traités du Stagirite sont donc demeurés inconnus de la plupart des philosophes. Ce fait confirme, dans une certaine mesure, le récit de Strabon et de Plutarque. Cependant, il ne faut pas perdre de vue que nous connaissons mal l'histoire philosophique des siècles pendant lesquels, selon Strabon, les écrits d'Aristote demeurèrent cachés à Skepsis. Les penseurs de cette époque n'ont laissé aucune grande œuvre qui nous soit parvenue : nous n'avons que des fragments transmis par des auteurs parfois très tardifs (7). Dans ces conditions, il est bien téméraire d'affirmer qu'un philosophe ou qu'une école de ce temps ignorait tel ou tel ouvrage d'Aristote.

Peut-être les traités du Stagirite étaient-ils connus, mais peu prisés ; il n'est pas nécessaire d'en admettre la disparition pour expliquer l'oubli dans lequel ils tombèrent (8)." (pp. 1-3)

(5) Strabon, II, 104. Cfr R. Zimmermann, *Posidonius und Strabo*, dans *Hermes*, XXIII, 1888, pp. 103-130.

(6) Sur la connaissance qu'il a pu avoir des *Analytiques* et des de physique, cfr infra, p. 4 et n. 9.

(7) M. F. Wehrli a commencé à réunir les fragmenta des Péripatéticiens sous le titre *Die Schule des Aristoteles, Texte und Kommentar*, B. Schwabe, Basel. Sont parus jusqu'ici : I, *Dikaiarchos* (1944) ; II, *Aristoxenos* (1945) ; III, *Klearchos* (1948) ; IV, *Demetrios von Phaleron* (1949).

(8) L'étude des traités scolaires n'a peut-être pas été absolument négligée : un assez long morceau de l'ouvrage d'Ocellus (§ 20-35) présente d'incontestables analogies avec le *De generatione et corruptione* ; à cause de cette circonstance, Diels (*Doxographi Graeci*, p. 187 ss.) croit qu'Ocellus a vécu après Andronicus. Mais le bien-fondé de cette déduction est contesté par Harder, dont voici la thèse : Ocellus n'a pas utilisé directement Aristote ; il s'est contenté de reproduire un commentaire, fort imprécis et de maigre valeur, au deuxième livre du *De gen. et corr.* ; ce commentaire n'est probablement rien autre qu'un cours provenant d'Athènes ; il est si médiocre que l'on ne peut le croire postérieur à la renaissance de l'aristotélisme ; les arguments qui tendent à démontrer qu'Ocellus a vécu avant Andronicus restent donc valables. Cfr. : Richard Harder, *Ocellus Lucanus*, Berlin, 1926, pp. 97 et 110-111 (= *Neue philologische Untersuchungen*, I).

2) Les écrits successifs de Paul Moraux sur Diogène Laërce

"Parmi les autres documents très précieux que nous devons à Diogène, il faut mentionner les "catalogues" des d'Aristote (13), Théophraste (14), Straton (15), Démétrius de Phalère (16) et Héraclide Pontique (17). Celui d'Aristote, que j'ai étudié en détail il y a quelque 35 ans (18), mérite de retenir particulièrement notre attention. Il s'agit manifestement d'un document très ancien, antérieur à la mise en ordre du corpus par Andronicus de Rhodes. Plusieurs grands traités scolaires, et des plus importants, n'y sont pas mentionnés. Pour d'autres, comme les *Topiques*, chaque livre figure encore isolément, sous un titre particulier. En revanche, on y trouve à peu près au complet les dialogues et autres exotériques, qui ne devaient pas tarder à disparaître après la diffusion des scolaires. La liste mentionne aussi une foule de travaux et recueils destinés aux exercices de l'école, et qu'on n'a pas reproduits dans la suite. Elle contient une série de grandes collections documentaires telles que les Constitutions, les Didascalies, les Listes de vainqueurs, etc. Tout cela montre bien que celui qui a dressé la liste ne disposait pas encore des travaux d'Andronicus, mais avait connaissance d' que le Rhodien n'a probablement pas repris dans son édition. Par ailleurs, les d'Aristote y sont groupés dans un ordre encore perceptible, en dépit d'accidents mineurs et de l'incertitude de l'une ou l'autre identification. On trouve en tête les exoterica, suivis d'extraits de Platon et d' consacrés au platonisme. Vient alors une longue série d' proprement scientifiques, classés par disciplines : de logique, consacrés aux disciplines pratiques et poétiques et aux sciences théorétiques. On trouve ensuite des aide-mémoires en tout genre (les écrits dits hypomnématiques), puis des collections et finalement des documents d'ordre privé, les lettres et les poèmes.

Si nous nous tournons vers la liste de Straton, nous constatons que l'ordre dans lequel sont énumérés les est assez semblable à celui qu'offre la liste d'Aristote. À l'une ou l'autre exception près, les premiers titres ont trait à l'éthique et à la politique. Vient ensuite une série de 25 titres environ consacrée, en gros, à la philosophie naturelle. Une troisième section, d'une dizaine de titres, groupe des ayant manifestement trait à la logique. De même que le pinacographe d'Aristote avait groupé à part les collections, les

hypomnemata et les lettres, celui de Straton mentionne en fin de liste un catalogue d'inventions, des hypomnemata d'authenticité douteuse et enfin les lettres de notre philosophe (19).

Le *pinax* de Théophraste se présente, lui, sous un aspect très différent. Comme Usener l'a bien montré dans sa dissertation doctorale (20), il est fait en réalité de quatre parties distinctes : a) une liste alphabétique de 108 titres ; b) une seconde liste alphabétique, de 65 titres ; elle énumère sans doute les nouvelles acquisitions faites par la bibliothèque à laquelle appartenaient les mentionnés dans le premier tronçon du catalogue ; c) une série de 29 titres cités pêle-mêle ; il s'agit sans doute d'acquisitions qui n'ont pas encore été mises en ordre, et dont on n'a pas supprimé les titres faisant double emploi avec ceux d'autres parties de la liste : d) enfin, une nouvelle liste alphabétique de 22 titres, dont l'ordre a été quelque peu troublé par l'insertion intempestive de quatre titres en fin de liste.

Que peut-on conclure de la comparaison de ces listes ? D'une part, nous savons qu'Hermippos, élève et successeur de Callimaque, s'était intéressé à l'authenticité des de Théophraste et avait dressé une *anagraphé* de ceux-ci. Il y a donc de bonnes chances que le catalogue reproduit par Diogène soit l'œuvre d'Hermippos et ait été rédigé à partir du catalogue de la grande bibliothèque d'Alexandrie. L'ordre alphabétique, du reste, est particulièrement commode pour grouper, dans un catalogue de bibliothèque, les d'un seul et même auteur (21). Mais alors, les catalogues d'Aristote et de Straton remonteraient-ils aussi à Hermippos, comme on l'admet assez couramment ? Le même bibliothécaire-pinacographe aurait-il soigneusement classé les d'Aristote et de Straton en respectant à la fois les grandes articulations de la philosophie et certaines pratiques habituelles dans la confection des catalogues systématiques, mais adopté pour Théophraste le principe du classement alphabétique ? Une telle hypothèse semble difficile à admettre, et on est tenté de dire que si le catalogue de Théophraste est bien d'Hermippos, ceux d'Aristote et de Straton ne peuvent être de lui (22). En partant de ces considérations, j'ai suggéré, dans mes *Listes anciennes*, que le catalogue d'Aristote devait avoir été rédigé dans l'école péripatéticienne elle-même et était probablement tiré de l'ouvrage d'Ariston de Céos sur les scolarques ses prédécesseurs. Cette thèse a, on le sait, été approuvée

par les uns et rejetée par les autres (23). Aujourd'hui, j'hésite à me prononcer. Ce sont surtout les lacunes très importantes de la liste qui me paraissent militer contre la thèse de son origine péripatéticienne ; il est en effet peu probable, en principe, que le Lycée, même en pleine décadence, n'ait pas conservé au moins un exemplaire de pragmaties aussi importantes que le *De caelo*, le *De generatione et corruptione*, les *Météorologiques*, le *De anima* et l' *Éthique à Nicomaque*. Dans une étude récente, R. Blum soutient la thèse que la bibliothèque de Nélée, qui contenait les livres d'Aristote et de Théophraste, aurait été acquise par la grande bibliothèque d'Alexandrie, où auraient été dressées les listes conservées par Diogène. Il n'ignore pas, bien sûr, la différence fondamentale entre le catalogue "alphabétique" de Théophraste et le catalogue "systématique" d'Aristote, mais il se débarrasse assez cavalièrement de la difficulté : d'après lui, la liste de Théophraste représenterait une exception, un essai d'Hermippos pour classer alphabétiquement les d'un même auteur ; cet essai n'aurait pas eu de succès et serait resté sans lendemain (24).“ pp. 249-252

Les Listes Anciennes des Catalogues d'Aristote : Deuxième Partie

Hésychius de Milet et Ptolémée el-Garib

A) La Vita Menagiana (Anonymus Menagii) attribuée à Hésychius de Milet

Les études de Paul Moraux

1) Le livre *Les listes anciennes des d'Aristote*, Louvain : Éditions universitaires, 1951

“La *Vita Menagiana* d'Aristote (1) se termine par une liste d' dont la première partie ressemble fort à la liste de Diogène. Même si cette vie anonyme n'est autre que l'article ' *Aristoteles*' de l' *Onomatologue* d'Hésychius de Milet (2), son origine demeure obscure, car les sources d'Hésychius n'ont pas encore été identifiées avec certitude (3). Il est donc impossible d'en déterminer a priori les rapports avec Diogène Laërce.

La liste anonyme se divise en trois parties. La première compte cent trente-neuf titres (4) et correspond à peu près à la liste de Diogène ; la seconde, plus courte, se compose de quarante-six titres, dont certains figurent déjà dans la première partie, tandis que d'autres sont nouveaux ; la troisième est faite de dix titres d' donnés comme pseudépigraphes." pp. 195-196

(...)

"Vingt-cinq titres de la liste anonyme occupent une place différente de celle qu'ils ont chez Diogène ; ils ne sont cependant jamais fort

éloignés de la place qu'ils devraient occuper si l'ordre des deux listes était identique.

L'ordonnance primitive de la liste a été conservée plus fidèlement par Diogène que par l'Anonyme. (...)

Un examen attentif de la liste anonyme permet d'affirmer que les déplacements de titres ne sont pas dus à une volonté formelle d'améliorer la liste ou d'y introduire un nouveau principe d'ordre.

De toute évidence, les modifications ont été exécutées sans but ; elles sont bien plus le produit d'un hasard aveugle que l'œuvre d'une intelligence ordonnatrice. Elles doivent, à notre avis, s'expliquer en grande partie par des accidents survenus au cours des copies successives de la liste. L'auteur de la *Vita* avait sous les yeux un catalogue qui s'était déjà altéré au cours des siècles, et les copistes qui nous transmirent la *Vita* ne manquèrent point d'ajouter encore aux fautes existantes. Il suffit, en effet, d'une légère distraction pour que l'on oublie plusieurs titres en transcrivant de semblables listes. Les copistes commettent souvent des omissions de ce genre ; ils tentent bien de réparer leurs bévues, en ajoutant en marge ou entre les lignes les titres oubliés. Mais ceux qui transcrivent un texte ainsi surchargé ne savent pas toujours où il faut insérer les additions : la porte est ouverte aux bouleversements de l'ordre primitif.

(...)

L'étude comparative des deux listes nous a permis d'arriver aux conclusions suivantes : la liste anonyme n'a pas été copiée directement sur celle de Diogène ; elle conserve en effet des vestiges d'un texte meilleur ou plus complet (6) ; la présence de ceux-ci serait incompréhensible si l'Anonyme ou sa source n'avait eu sous les yeux que le texte de Diogène. En outre, la liste anonyme contient cinq titres absents de celle de Diogène, ceux de la *Métaphysique* et de quatre écrits hypomnématisques ; or, le texte de Diogène présente justement une lacune de cinq titres dans la quatrième colonne, où devaient se trouver la *Métaphysique* et les hypomnemata : alors que les trois premières colonnes comptent trente-cinq titres, la quatrième n'en compte que trente. La conclusion s'impose : les cinq titres propres à l'Anonyme sont ceux qu'a perdus Diogène ; la liste anonyme ne peut donc pas dériver du texte lacuneux de Diogène.

Heitz et Howald ont vu juste : les deux listes remontent à une source commune ; celle-ci est postérieure à la transcription du pinax en cinq colonnes, au déplacement du *peri pathon*, et de l' *Éthique* et à l'interpolation des *Physiognomiques*, des *Iatrika*, des *Catégories* et du *De interpretatione* ; elle présentait un certain nombre de fautes qui ont passé dans les deux listes, notamment des mauvaises coupes de titres (7) et des erreurs de lecture (...)

Le texte de Diogène demeure assez proche de sa source ; il en conserve fidèlement l'ordre ; de ci, de là, il laisse bien tomber l'un ou l'autre morceau de titre, mais ces suppressions n'ont, d'ordinaire, aucune gravité (11) ; son principal défaut est l'omission de cinq titres, dont celui de la *Métaphysique*.

Le texte de l'Anonyme présente des altérations de loin plus graves et plus nombreuses. Il n'est pas impossible d'établir en partie dans quel ordre celles-ci se sont succédé.

Certaines confusions de chiffres, notamment celles de 'α' avec 'γ' et de 'γ' avec 'δ' n'ont pu se produire que dans l'ancienne onciale ; elles sont antérieures à l'ère chrétienne (12). Or, ces fautes sont propres à la liste anonyme ; elles n'apparaissent pas chez Diogène. La source commune de l'Anonyme et de Diogène (le catalogue déjà fautif dérivant du *pinax* en cinq colonnes interpolé) ne les connaissait pas ; elle est donc nécessairement antérieure à l'ère chrétienne.

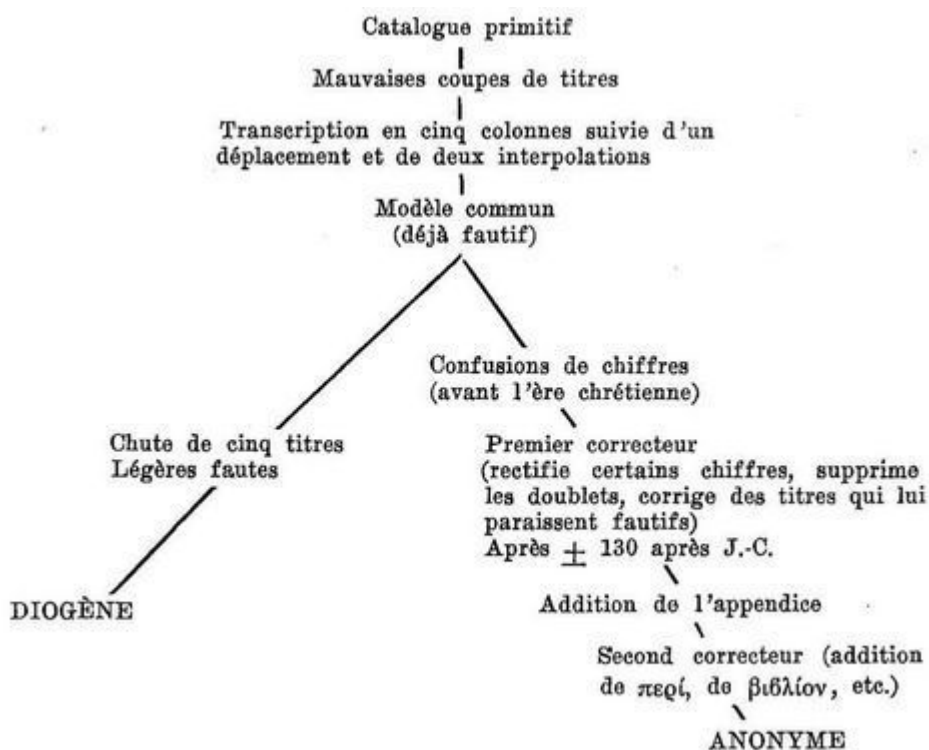

Les chiffres de quelques livres ont été corrigés intentionnellement, pour mettre la liste d'accord avec les éditions d'une époque donnée ; ces corrections doivent avoir été opérées après le premier tiers du second siècle de notre ère (13). La suppression des doublets et les corrections savantes de certains titres remontent vraisemblablement au personnage qui a jugé bon de rectifier les chiffres. D'autre part, la suppression des doublets est antérieure à l'addition de l'appendice : dans le cas contraire, le correcteur aurait supprimé les nombreux titres qui y font double emploi avec ceux de la première partie (tels sont : 145, 146, 147, 151, 153, 154, 161, 163, 167, 169, 171, 172, 174, 176 ?, 177, 181, 182). Les rectifications de chiffres sont, elles aussi, antérieures à l'addition de l'appendice ; autrement, un correcteur s'intéressant au nombre des *volumina* n'aurait pas toléré que plus de la moitié des titres de l'appendice manquent de cette indication bibliographique ; si son modèle avait laissé à désirer à ce point de

vue, il l'aurait complété, du moins en partie, d'après les matériaux dont il disposait. L'addition de l'appendice fut faite après l'intervention du premier correcteur ; elle est donc postérieure au premier tiers du second siècle après J.-C.

Les modifications apportées à la forme des titres (addition de *perí*, de *biblion*, etc.) remontent à un autre correcteur ; celui-ci ne connaît guère le contenu des dont il lit les titres et son intervention est parfois malheureuse : il fait précéder d'un *perí*, comme s'il s'agissait de traités théoriques, des listes de divisions ou des didascalies (...).

Quant aux bouleversements apportés à l'ordre primitif dans la liste anonyme, ils ne peuvent être datés ; il en va de même des fautes accidentelles affectant l'énoncé de certains titres.

Les transformations successives du catalogue sont représentées par le tableau suivant, que nous précisons plus loin, quand nous aurons analysé l'*appendix hesychiana*." (pp. 204-209)

Notes

(*) *Observationes et emendationes in Diogenem Laertium* Paris 1663 (réimprimé à Londres 1664) : *Observationibus ad librum V*

Diogenis Laertii, p. 202 ss. [Note de R. Corazzon]

(1) Cette vie anonyme fut éditée pour la première fois par Égide [Gilles]Ménage, en appendice à son édition de Diogène Laërce (*). Elle avait été communiquée à Ménage par un avocat d'Angers, Philippe Loyauté, qui ne dit point d'où il la tenait (cfr. [Aemilius] Heitz, *Aristotelis Fragmenta* [1869], p. 5) ; on la retrouve dans un manuscrit de Patmos, décrit par Tischendorf (*Wiener Jahrbücher*, 110, *Anz. Bl.*, p. 17), et dans le Codex Ambrosianus R 117. Les plus récentes éditions sont, à notre connaissance, celles de Flach dans *Hesychii Milesii Onomatologi quae supersunt*, Leipzig, 1883, pp. 245-249, et de Rose dans *Aristotelis q. f. librorum fragmenta*, Leipzig, 1886, pp. 9-18. [Voir la [Bibliographie](#) pour les éditions plus récentes].

(2) Rose a, le premier, défendu cette thèse dans son *De Arist. libror. ord. et auctoritate*, Berlin, 1854, pp. 48-50. La Vie anonyme et celle de Suidas se correspondent textuellement, à cette différence près, que Suidas ne donne pas la liste des œuvres. Or, on sait que la source principale de Suidas est, pour les parties biographiques de l'ouvrage, l' *Épitomé* de l' *Onomatologue* d'Hésychius (cfr. Suidas, s. v. *Hesuchios*, et A. Adler, dans *RE*, s. v. *Suidas*, col. 706-707). La Vie anonyme est donc tirée de l' *Onomatologue* non encore abrégé. Cette thèse est admise entre autres par Susemihl, *Aristoteles Politik*, p. XLIII ; Schneider, *Callimachea*, II, p. 26 ; Heitz, *Die verlorenen Schriften des Aristoteles*, p. 15 et *Aristotelis, Fragmenta*, p. 5 ; Nietzsche, dans *Rheinische Museum*, XXIV, 1869, p. 216 ; Maass, *De biographis graecis*, pp. 81 et 119 ; G. Wentzel, *Hesychiana*, dans *Hermes*, XXXIII, 1898, p. 276, et H. Schultz, dans *RE*, s. v, *Hesychios* 10. Elle est rejetée par Flach, *Untersuchungen zu Suidas und Eudokia*, Leipzig, 1879, p. 93, que nous n'avons pas pu consulter, et *Hesych. Mil. Onomat.*, p XIX, note 1, où l'auteur ne donne aucun argument.

(3) L'état de la question est résumé par H. Schultz, *ll.*, qui conclut qu'aucun résultat certain n'est acquis.

(4) l'édition de Ménage, don Heitz, *Aristotelis Fragmenta*, pp. 5-9 reproduit la liste, est fautive et lacuneuse ; Rose, *Aristotelis q. f. librorum fragmenta*, Leipzig, 1886, l'a considérablement amendée.

(7) Dans *Aristot. Opera*, V, p. 1467, app. crit. ad 107.

(11) Zeller, *Die Philosophie der Griechen*, II, 2 p. 103, n. 1, *sub fine*.

12) Cfr *supra*, p. 202, n. 20.

Cfr *supra*, p. 203. Il ne faut pas s'étonner que le correcteur n'ait pas amendé les erreurs de chiffres résultant de confusions paléographiques : celles-ci affectaient, pour la plupart, des qui n'étaient plus guère en circulation au second siècle après J.-C

Extrait de : Paul Moraux, *Les listes anciennes des d'Aristote*, Louvain : Éditions universitaires 1951.

2) Les écrits successifs de Paul Moraux sur la *Vita Menagiana*

(en préparation)

B) La liste de Ptolémée el Garib (en préparation)

"La liste de Ptolémée diffère, par plus d'un aspect, des documents étudiés jusqu'ici. Nous en connaissons l'auteur, du moins de nom. Nous savons aussi qu'elle est relativement récente : elle est postérieure aux classiques travaux d'Andronicus et date d'une époque où le corpus aristotélicien avait, à peu de chose près, pris la forme qu'il a conservée jusqu'aujourd'hui. Enfin, les témoins qui nous l'ont transmise sont très tardifs ; ce sont deux Arabes du début du treizième siècle ; comme bien on pense, les intermédiaires, et notamment les traducteurs, n'ont pas été sans faire subir au document plus d'une transformation.

Par bonheur, cette liste a, bien plus que les précédentes, retenu l'attention des érudits : les témoins arabes ont été traduits à plus d'une reprise et la liste elle-même a fait l'objet de bonnes monographies, au premier rang desquelles il convient de signaler celle de Baumstark. Notre tâche sera donc assez simple : nous résumerons à grands traits les résultats acquis ; nous redresserons, à l'occasion, l'une ou l'autre erreur de détail et surtout nous tâcherons de faire la lumière sur certaines questions qui n'ont pas intéressé nos devanciers. Étant donné la date de sa composition, la liste de Ptolémée ne présente d'ailleurs pour nous qu'un intérêt secondaire :

elle nous servira de jalon pour montrer le chemin parcouru depuis Ariston, et, en outre, elle nous permettra de constater la longue survivance des principes d'ordre adoptés par ce pinacographe ; en revanche, comme elle est indubitablement postérieure à Andronicus, elle ne peut pas nous apprendre grand 'chose sur l'état du corpus avant l'activité de ce savant." (p. 289)

Bibliography on the Ancient Catalogue of Aristotle's Works

Ancient Catalogues

A) Diogenes Laërtius (III century): *Lives and Opinions of Eminent Philosophers* - Book V.22-27 *The Peripatetics*.

1. Diogenes, Laertius. 2018. *Lives of the Eminent Philosophers*. New York: Oxford University Press.

Translated by Pamela Mensch.

Edited by James Miller.

The translation is based on Tiziano Dorandi edition of the Greek text, published in 2013 by Cambridge University Press.

2. Diogenes, Laertii. 1964. *Vitae Philosophorum*. Oxford: Clarendon Press.

Critical edition of the Greek text by Herbert Strain Long.

3. Diogenes, Laertius. 1999. *Vitae philosophorum*. Stuttgart: B. G. Teubner.

Critical edition by Miroslav Marcovich.

Vol. I: *Libri I - X*; Vol. II: *Excerpta Byzantina et indices*; Vol III: *Indices* Hans Gärtner (2002).

4. Diogenes, Laërtius. 2013. *Lives of Eminent Philosophers*. Cambridge: Cambridge University Press.

New critical edition by Tiziano Dorandi.

B) The Anonymous Catalogue known as *Vita Menagiana* or *Vita Hesychii*, sometimes attributed to Hesychius of Miletus (V century).

1. Diogenis, Laertis. 1664. *De vitis, dogmatis et apophtegmatibus eorum qui in philosophia claruerunt libri X*. Londinii: Octavianum Pulleyn.

First edition Paris 1663. Reprint by John Pearson (1613-1686) of the Aldobrandinian edition of 1594 with *Annotationes* by Henri Estienne (Stephanis), Isaac and Méric Casaubon and *Observationibus* by Gilles Ménage (Aegidii Menagii, 1613-1692) that contains the first printed edition of an anonymous life of Aristotle (the so-called *Vita Menagiana*).

2. ———. 1692. *De vitis, dogmatibus et apophtegmatibus clarorum philosophorum libri X*. Amstelædami: H. Wetstenium.

Greek and Latin text by Marc Meibom, with annotations to I. and M. Casaubon, T. Aldobrandini in two volumes.

The second volume contains: Aegidii Menagii *in Diogenem Observationes auctiores, ut et Joachimi Kühnii ad Diogenem Notas*.

3. Rose, Valentine. 1863. *Aristoteles pseudoepigraphus*. Lipsia: Teubner.

Index Diogenis pp. 12-18; *Index Hesychii (ex Aegidii Menagii observ. in Diog. Laert. p. 201 cum vitis omnibus accurate exscriptus)* pp. 18-20.

4. ———. 1886. *Aristotelis qui ferebantur librorum fragmenta*. Lipsia: Teubner.

Reprint of the *Vita Hesychii* published in *Aristoteles pseudepigraphus*.

5. Düring, Ingemar. 1957. *Aristotle in the Ancient Biographical Tradition*. Stockholm: Almqvist & Wiksell.

Reprinted New York, Garland, 1987.

Diogenes Laertius (Catalogue) pp. 41-50; Hesychius (Catalogue) pp. 83-89; Ptolemy's Catalogue (English translation and Greek retroversion from Arabic) pp. 221-231.

6. Diogenes, Laertius. 1999. "Pseudo-Hesychii Milesii De Viris Illustribus." In *Vitae philosophorum*, 89-138. Stuttgart: B. G. Teubner.

Vol. II: *Excerpta Byzantina et indices*. Critical edition by Miroslav Marcovich of the Pseudo-Hesychius *Viris illustribus*: a compilation of texts extracted from the *Lives* of Diogenes Laertius and the *Suda*.

7. Dorandi, Tiziano. 2006. "La Vita Hesychii d'Aristote." *Studi Classici e Orientali* no. 52:87-106.

Publié en 2009; édition critique du text grec pp. 98-103.

"La *Vita Hesychii* ou *Vita Menagiana* d'Aristote (= *VH*), faisait partie de l'*Onomatologos e pinax ton en paideia onomaston* d'Hésychius de Milet (VI s.), histoire de la littérature limitée, à ce qu'il semble, aux auteurs païens, et perdue dans son intégralité.

Je voudrais proposer une nouvelle édition de ce court texte, dont l'importance pour la reconstruction de la biographie d'Aristote et de la liste de ses oeuvres est indéniable. J'ai commencé à travailler sur la *VH* en marge de mon édition du texte grec des *Vies et doctrines des philosophes illustres* de Diogène Laërce (en particulier de la *Vie d'Aristote* au livre V 1-35), et en prévision d'un volume consacré à la tradition biographique antique d'Aristote dans lequel je rééditerai, entre autre, les *Vies* anciennes (grecques et latines) du Stagirite accompagnées d'apparats, d'une traduction et de notes de commentaire." p. 87

C) The Catalogue attributed to Ptolemy el-Garib (I century) and transmitted in two Arabic version by Ibn al-Qifti (ca. 1172-1248) and Ibn Abi Usaibia (1203-1270).

1. Ibn, An-Nadim. 1871. *Kitab al-Fihrist, mit Anmerkungen*. Leipzig: F.C.W. Vogel.

Two volumes: I edited by Gustav Flügel (1871); II: edited by Johannes Rödiger, August Müller (1872); written in the 10th century.

On Ptolemy el-Garib see vol. I pp. 246-252.

"We learn from the writer's own words that he has before him the *Vita* of Ptolemy-el-Garib; he gives us the title of it and says in (14) that his own notes are a brief epitome. Our conclusion is that before 950 there was in circulation in Baghdad an Arabic summary of Ptolemy's *Vita*, including a full translation of the Will. Since an-Nadim presents his classification of Aristotle's writings in roughly the same form as al-Yaqubi (...), Baumstark concluded that he had not seen the Arabic translation of Ptolemy's catalogue. But this is a weak argument, for he might have found Ptolemy's catalogue too detailed and technical and have preferred the classification based on the traditional prolegomena. Moreover we observe that, unlike al-Kindi and al-Yaqubi, an-Nadim regarded the *De anima* as one of the physical treatises." Düring, 1957 cit., p. 195.

(14) About him [Aristotle] numerous stories are circulated of which we only have mentioned the essentials.

2. Müller, August. 1875. "Das Arabische Verzeichniss der Aristotelischen Schriften." In *Morgenländische Forschungen. Festschrift Herrn Professor Dr. H. L. Fleischer*, 1-32. Leipzig: Brockhaus.

Verzeichniss der Aristotelischen Schriften aus dem Buche des Ptolomaeus an Gallus (first edition of Ptolemy's Catalog) pp. 19-22.

3. ———, ed. 1884. *Ibn Abi Usaibi'a. Uyun al-anba fi tabaqat al-atibba (Lives of the Physicians)*. Königsberg.

Vol. I pp. 54-69 (contains the *Vita Aristotelis* by Usaibi'a and the Catalogue by Ptolemy el-Garib) written 1245-1246.

"Comments on Ptolemy's Catalogue. P. Moraux's valuable book, *Les Listes anciennes des ouvrages d'Aristote*, Louvain 1951, deals at length with Ptolemy's catalogue and gives full references to the earlier literature. I have learnt much from his discussion of the complicated problems, but I do not always agree with his conclusions; see my paper "Ariston or Hermippus?", in: *Classica et mediaevalia*, 17, 1956, pp. 11-21. M. Plezia *De Andronici Rhodii studii aristotelicis* closely follows Baumstark but contributes many good observations.

My translation of the catalogue is based on Usaibia, but I have added al-Qifti's readings (...)

A full critical apparatus is found in Steinschneider's edition, in the Berlin Academy edition of Aristotle, tom. V, pp. 1469-73. (...) Baumstark *Syrisch-arabische Biographien des Aristoteles* gives a complete translation of the two versions of the catalogue, pp. 61-70, profuse comments and a bold reconstruction of the original catalogue of Andronicus, built on Littig's book on Andronicus. I am sceptical of these airy constructions. In my edition I have added ten sub-titles (Published works, etc.) to distinguish the sections of the catalogue." (Düring, *Aristotle in the Ancient Biographical Tradition*, 1957 cit., pp. 241-242

4. Baumstark, Anton. 1900. *Syrisch-arabische Biographien des Aristoteles. Syrische Kommentare zur Eisagoge des Porphyrios*. Leipzig: Teubner.

Aristoteles bei den Syrern vom V. - VIII. Jahrhundert

Syrische texte herausgegeben, übersetzt und untersucht von Dr. A. Baumstark. Erster Band.

Reprint: Aachen, Scientia Verlag, 1975.

German translation of the two versions of Ptolemy's Catalogue (by IBN al-Qifti and by Ibn Abi Usaibi'a) pp. 61-70).

5. Lippert, Julius, ed. 1903. *Al-Qifti Gamaladdin. Tabaqat al-hukama (Schools of Wise Men)*. Leipzig.

Contains the Catalogue by Ptolemy el-Garib; Latin translation of the Catalogue by Moritz Steinschneider in: *Aristotelis Opera Omnia* vol. V, Berlin, 1870, p. 1469.

"s. v. *Ptolemy-el-Garib*:

'This scholar was during his lifetime a philosopher in the country of the Greeks, and he is not identical with the author of the *Almagest*. He was a friend of Aristotle whom he loved and defended from his enemies, and he transmitted his doctrines to everybody who was eager to acquire knowledge about them

from him. On account of this he was a highly reputed and honoured scholar during his lifetime.

Many kings and scholars are known under the name of Ptolemy. They distinguished them from one another by adding a special name, so that we can know them under this name.

In order to show his solicitude concerning Aristotle this scholar wrote a book *On the life of Aristotle, his death, and the classification of his books*.

Comment: The *Fihrist* says (19): "Ptolemy-el-Garib who was an adherent of Aristotle and spread knowledge about his merits; he is the author of a book *On ... books*". - Usaibia, in the introduction to his biography, says: "Thus speaks Ptolemy in his book to Gallus on the life and history of Aristotle, his Will and the list of his famous writings."

Apart from the fact that his name is mentioned several times in the biographies, this is all information we have on Ptolemy in Arabic sources. Almost identical is the title given by Elias, *In Cat. CIAG XVIII 1 p. 3*.

Al-Qifti's work is a biographic handbook with about one hundred articles on Greek authors, arranged in alphabetical order, written between 1230 and 1235. The original, now lost, was used by Usaibia, Abu-l-Farag, and Abu-l-Fida; what is left is an epitome and several extracts. Steinschneider, Lippert and Baumstark characterize the work as a compilation of earlier works, partly lost, partly extant. Steinschneider *Al-Farabi. Des arabischen Philosophen Leben und Schriften* (1869), pp. 187-191 gives a general survey of his biographical article on Aristotle; some additional notes by Baumstark *Syrisch-arabische Biographien des Aristoteles* p. 15, and by Lippert *Studien auf dem Gebiete der griech-arab.*

Übersetzungslitteratur, Braunschweig, 1894, in his comments on Mubashir. Latin translation of the catalogue by Steinschneider, in: *Aristotelis Opera Omnia*, V, Berlin 1870, p. 1469.

On the special problem of identifying our Ptolemy a great many scholars have expressed opinions; a good survey of the

literature in P. Moraux, *Listes anciennes des ouvrages d' Aristote*, pp. 289-294. It was W. Christ and J. Lippert who simultaneously suggested that our Ptolemy is identical with the rather obscure Ptolemaios Chennos, writing in the last half of the first century A. D.

It is important to realize that the presentation of Ptolemy in our three sources is nothing but an elaboration of the title of his book. Everything in this note is obviously based on the book itself as the only source. Lippert interpreted the sentence "They distinguished - under this name" as implying: "and this is why Ptolemy-el-Garib also has a special name, given to him by the Greeks". Susemihl, in his review of Lippert, op. cit. (Berl. Phil. Wochenschrift 15, 15, p. 1130) added the following remark: "dass diese Bezeichnung "der Fremde" nicht erst von den Arabern herrihrt, erhellt aus der nachdrucklichen Angabe von Qifti". Unfortunately this is not so; Usaibia's statement is not at all so definite and unambiguous." Düring, *Aristotle in the Ancient Biographical Tradition*, 1957 cit., pp. 208-209

6. Düring, Ingemar. 1957. *Aristotle in the Ancient Biographical Tradition*. Stockholm: Almqvist & Wiksell.

Reprinted New York, Garland, 1987.

Diogenes Laertius (Catalogue) pp. 41-50; Hesychius (Catalogue) pp. 83-89; Ptolemy's Catalogue (English translation and Greek retroversion from Arabic) pp. 221-231.

7. ———. 1971. "Ptolemy's *Vita Aristotelis* Rediscovered." In *Philomathes. Studies and Essays in the Humanities in Memory of Philip Merlan*, edited by Palmer, Robert B. and Hamerton-Kelly, Robert, 264-269. La Haye: Nijhoff.

Contains the English translation, by Bernhard Lewin, of the dedicatory letter to Gallus found in an Arabic manuscript (codex *Ayasofya 4833*, Istanbul, folios 10a-18a) of the *Vita Aristotelis* by Ptolemy el-Garib.

8. Hein, Christel. 1985. *Definition und Einteilung der Philosophie. Von der spätantiken Einleitungsliteratur zur arabischen Enzyklopädie*. New York: Peter Lang.

Inhaltsverzeichnis: Einleitung 1; 1. Einleitungen in der Gesamtphilosophie 34; 2. Einleitungen in die Philosophie des Aristoteles 238; 3. Schriftenverzeichnisse zu Aristoteles (Pinakes) 388; Anhang zu Teil 3: *Ms. Ayasofia 4833 fol. 10b-11a, 14b-18a* 415; Zusammenfassung 440; Siglen 445; Abkürzungen 446; Literaturverzeichnis 447-482.

Contains the Arabic transcription of the Catalogue of Aristotle's writings ascribed to Ptolemy el-Garib and a German translation of the dedication to Gallus, according to the new Arabic manuscript discovered in the Aya Sofia Library in Istanbul by Hellmut Ritter, "Philologica XIII. Arabische Handschriften in Anatolian and Istanbul" in: *Oriens* 2, 1949, pp. 236-314; 3, 1950, pp. 31-107.

9. Ptolémée, "al Gharib". 2021. *Épître à Gallus sur la vie, le testament et les écrits d'Aristote*. Paris: Les Belles Lettres
Texte établi et traduit par Marwan Rashed.

"On trouvera ici l'*editio princeps*, fondée sur tous les témoins disponibles, dont un manuscrit jusqu'ici inconnu, d'un document antique perdu en grec et conservé en arabe. Il s'agit d'une épître adressée par un certain Ptolémée à un certain Gallus. Ce vestige est l'une de nos meilleures sources d'information et la seule qui soit interne à l'école péripatéticienne -sur la biographie d'Aristote. C'est aussi notre seul témoignage sur la première édition, dans l'Antiquité, des écrits savants du Philosophe. Instantané pris sur le vif de l'état de la philologie aristotélicienne, à Alexandrie, avant les grandes pertes libraires du III^e siècle, ce texte préservé par les érudits arabes est une pièce essentielle pour reconstituer l'histoire mystérieuse du corpus d'Aristote à la période hellénistique et au début de la période romaine. C'est de lui que doit partir, on s'en apercevra à la lecture, quiconque s'intéresse à la question de savoir ce que nous lisons quand nous lisons Aristote. Le paradoxe n'est qu'apparent : un peu de philosophie éloigne de l'histoire des textes, beaucoup y ramène." (*Introduction*).

Editions and translations of the Fragments of the Peripatetic School

The fragments of the successors of Aristotle and Theophrastus have been edited in ten volumes by Fritz Wehrli; the fragments of some Peripatetics are now available, with English translation, in the Rutgers Studies in Classical Humanities (RUSCH), founded in 1979 by William Fortenbaugh.

For Theophrastus see [Selected bibliography on the Philosophical Works of Theophrastus](#).

Bibliography on the Ancient Catalogue of Aristotle's Works

Studies in English: A-Gra

1. Barnes, Jonathan. 1997. "Roman Aristotle." In *Philosophia Togata II. Plato and Aristotle at Rome*, edited by Barnes, Jonathan and Griffin, Miriam, 1-69. Oxford: Clarendon Press.

Reprinted in: Gregory Nagy (ed.), *Greek Literature in the Roman Period and in Late Antiquity*, New York, Routledge, 2001 pp. 119-187; revised edition in J. Barnes, *Mantissa: Essays in Ancient Philosophy IV*, Oxford: Clarendon Press, 2015, pp. 407-478.

"When Theophrastus died, his library, which included the library of Aristotle, was carried off to the Troad. His successors found nothing much to read; the Lyceum sank into a decline; and Peripatetic ideas had little influence on the course of Hellenistic philosophy. It was only with the rediscovery of the library that Aristotelianism revived — and it revived in Italy. For the library went from the Troad to Athens — and thence, as part of Sulla's war-booty, to Rome. There Andronicus of Rhodes produced the 'Roman edition' of the corpus Aristotelicum. It was the first complete and systematic version of Aristotle's works, the first publication in their full form of the technical treatises, the first genuinely critical edition of the text. Andronicus' Roman edition caused a sensation. It revitalized the languishing Peripatetics. It set off an explosion of Aristotelian studies. It laid the foundation for all subsequent editions of Aristotle's works, including our modern texts. When we read Aristotle we should pour a libation to Andronicus — and to Sulla.

That story is the main subject of the following pages. It is familiar enough; and although my argument will be long and laborious, I have nothing new to say, and my general conclusions are dispiritingly sceptical. But recent scholarship on the topic has taken to the bottle of phantasy and stumbled drunkenly from one dogmatism to the next. Another look at the pertinent texts may be forgiven — and in any event the story is a peach.

My concern (let me stress at the start) is the way in which Aristotle's texts reached Rome — and us. I am not concerned with the general influence of Peripatetic ideas on the Roman intelligentsia — that is a vast and a complex question; nor am I concerned with the specific influence of Aristotle's ideas on the Roman intelligentsia — that is a different question, less vast and more complex. Indeed, I deal neither with the history of ideas nor with the history of philosophy: my subject is an episode in the history of books and the book-trade. " (J. Barnes, *Mantissa* , p. 407)

2. Benoit, William L. 1981. "A Guide to Line Numbers in the Aristotelian Corpus." *Rhetoric Society Quarterly* no. 1:42-44.

"Those who work with several of Aristotle's works at once, as is often necessary, are frequently confronted with the minor difficulty of determining which work contains the passage indicated by the line numbers from Bekker's edition of *Aristotle's Opera* (Berlin, 1870). This is especially true when using the index of Hermann Bonitz *Index Aristotelicus*, Graz, 1955 or of Troy Organ *An Index to Aristotle in English Translation*, Princeton, NJ, 1949. As a tool for the Aristotelian scholar, then, this guide may be of some modest assistance. In an attempt to make the work as helpful as possible, both English and the Greek titles are included, as well as the names of the Oxford and Loeb Translators and the Oxford volume number for each work (these being the two most complete sets)." (p. 42)

3. Blum, Rudolf. 1991. *Kallimachos. The Alexandrian Library and the Origins of Bibliography* . Madison: University of Wisconsin Press.

Translated by Hans H. Wellisch from the German: *Kallimachos und die Literaturverzeichnis bei den Griechen. Untersuchungen zur Geschichte der Biobibliographie* - Frankfurt am Main, Buchhändler-Vereinigung, 1977.

"This work deals with the beginnings of bibliography. Kallimachos of Kyrene, a Hellenistic scholar and a famous poet, created about 260 B.C. a fundamental list of Greek authors with biographical and bibliographical data, the first national author bibliography, based on the holdings of the Alexandrian library. But what he, his predecessors, and successors achieved in the field of bibliography, that staging area for the history of literature, is almost unknown outside the circle of experts. In addition, there are some important related issues which are still in need of clarification.

The investigations which I have undertaken for this purpose pertain to questions in the history of ancient scholarship and librarianship. But I endeavored to write in such a manner that not only students of Classical Antiquity will be able to follow me. Therefore, I inserted explanations of issues pertaining to Antiquity wherever I deemed them to be appropriate. Greek quotations are rendered in translation. Greek titles of books, typical Greek expressions, and shorter sayings of Greek scholars are always transliterated. Some passages in the footnotes are also given in the original Greek.

Bibliographic works of the Romans and those of Christians in Antiquity have been omitted because I am treating these, together with those of the Middle Ages and the early modern period, in another work. (*)" (*Preface* , IX)

On Aristotle see Chapter 2: *Forerunners: Aristotle, His Predecessors and Pupils* , pp. 14-94 (in particular 2.6 *The Library of Aristotle* pp. 52-94) and Chapter 5: *Later lists of Greek Writers and Their Works* , pp. 182-225 (in particular 5.4

The List of Aristotle's Writings by Andronikos of Rhodos , pp. 194-195 and 5.6 *The Work of Diogenes Laertios on the Lives and Opinions of Famous Philosophers* , pp. 199-201).

4. Bodéüs, Richard. 1993. *The Political Dimensions of Aristotle's Ethics* . Albany: State University of New York Press.

Translation by Jan Edward Garrett of: *Le Philosophe et la cité* , Paris, Publications de la Faculté de Philosophie de l'Université de Liège, 1982.

See Chapter I. *In Search of Aristotle's Project* pp. 9-46.

"Conceived at first for the sake of the citizens of the Greek city of the fourth century B.C., the part of Aristotle's teaching traditionally associated with human philosophy sought somehow to be useful. How can one make sense of this aim historically, this desire to contribute concretely to the perfection of human becoming? This is the question which has guided my research from the beginning.

It has led me to scrutinize the unity of purpose which clearly governs the elaboration of the two *Ethics* and of the *Politics* . This issue is not sufficiently clarified if one limits oneself to saying that the two series of texts are written from the same theoretical perspective, a perspective appropriate for explaining human affairs, and that the one series describes mies of an ethical code for individuals, the other series principles for the organization of communities.

On this point it is necessary to challenge a very long tradition of misunderstandings.

To make this clear is my task in the first chapter. This chapter also brings to light support for the belief that the works of Aristotle with which we are concerned were the object of a political teaching which the philosopher aimed primarily at the "lawgiver" (νομοθέτης). Aristotle designates by this term not the well-known magistrate of Athenian institutions (19) but, like the French word *législateur* , with its collective sense, the individuals to whom political communities entrust the ultimate task of defining coercive norms relating to the good and who

potentially include all the adult citizens in the city which corresponds "to the wishes" of the philosopher." (p. 3)

(19) Cf. Demosthenes, *Olynth* . III, 10, "Although they are not mentioned by Aristotle in the *Constitution of Athens* , their existence is not in doubt." (P. Lavedan, *Dictionnaire illustré de la mythologie et des antiquités grecques et romaines* , Paris: Hachette, 1964, s.v.).

5. Bollansée, Jan. 1999. *Hermippos of Smyrna and His Biographical Writings: A Reappraisal* . Leuven: Peeters.

See Appendix 1. *Translations of selected Testimonia and the biographical fragments* pp. 189-226, and 3. *Hermippos and the authorship of Diogenes Laertios' Catalogue of Aristotle's writings (5.22-27)* , pp. 233-243.

Abbreviations: F = Fragment, T = Testimonia.

"A problem that cannot be left undiscussed in the present study is Hermippos' presumed authorship of the catalogue of Aristotle's writings as found in Diogenes Laertios, even though strictly speaking we have no nominativum F or even an indirect testimony connecting the Callimachean with that catalogue, let alone that the ancient sources speak of such a list ever having been composed by Hermippos in the first place. However, since we have sound proof that he drew up (or at least transmitted) a similar *pinax* for Theophrastos (1), it is a reasonable assumption that the Callimachean may also have edited (or published) one for Aristotle (as well as for others: cf. F 9, 44, 89). To be sure, this is still a far cry from asserting that Diogenes' list goes back to the Callimachean. As it is, along with the provenance of the other catalogues of leading Peripatetics preserved in Diogenes' Book 5 (Theophrastos: 5,42-50; Straton: 5,59-60; Demetrios of Phaleron: 5,80-81; Herakleides of Pontos: 5,86-88), the origin of the Laertian *pinax* of Aristotle is one of the most oft-discussed points with regard to the history of the transmission of the early Peripatetic corpus of writings. In spite of the great number of participants in the debate, definitive results of this quest are still wanting." (Appendix 3: *Hermippos and the Authorship of Diogenes Laertios' Catalogue of Aristotle's Writings (5,22-27)* , p. 233)

- (1) See the discussion of T 20 and F 37 above, p. 164-177.
6. ———. 2001. "Animadversiones in Diogenem Laertium." *Rheinisches Museum* no. 144:64-106.

§ b) *Diog. Laert. 5.2-3: On Aristotle and the Foundation of the Peripatos*, pp. 72-99.

"If, as seems likely in the light of the foregoing, this means that Diogenes had one primary source for the passage, that authority might very well be identified as Hermippos, who is quoted at the very beginning. It would seem that his account of the foundation and organization of the Peripatos by Aristotle was worked out in much more detail and that the Laertian (and/or his intermediary) practically condensed it to the point of incomprehensibility. All this will be made clear and modified in the following exposition" (p. 74)

7. Bos, Abraham P. 1987. "The Relation Between Aristotle's Lost Writings and the Surviving *Corpus Aristotelicum* ." *Philosophia Reformata* no. 52:24-40.

Reprinted as Chapter X in A. Bos, *Cosmic and Meta-Cosmic Theology in Aristotle's Lost Dialogues*, Leiden: Brill, 1989, pp. 97-112.

"Something else is relevant at this point. Historians of philosophy concerned to trace Aristotle's influence are faced by the remarkable fact that in the first centuries following Aristotle's death his school shows a clear and continual decline in both quality and productivity. Not until the first century BC is it possible to speak of a 'renaissance'. Only then does the Peripatetic school awaken 'aus ihrer langen Lethargie'.(43) No satisfactory explanation for this highly remarkable state of affairs has yet been suggested. We must begin by realizing that the decline of the Peripatos took place during the period in which the dialogues, composed, ordered, and produced in a highly polished form by Aristotle himself, were in circulation, while the writings of the Corpus were not available as they are to us.

The revival of interest in Aristotle's philosophy, on the other hand, is strictly connected with the discovery of the

unpublished treatises in the first century BC. Here too we should prefer a *philosophical* explanation. We suggest that Aristotle's philosophy, in the period when he was known on the basis of his published work only, fell into disrepute because the notion of 'genuine, serious scholarly philosophy' underwent a change at the hands of the professional philosophers, who no longer accepted an appeal to any experience other than common human experience. And to this shift in the idea of 'scientific philosophy' Aristotle's own activities within the school no doubt pointed the way." (pp. 110-111 of the reprint)

- (43) Cf. P. Moraux, *Der Aristotelismus bei den Griechen*, I, xiv.
8. ———. 1989. "Exoterikoi Logoi i and Enkyklioi Logoi in the Corpus Aristotelicum and the Origin of the Idea of the Enkyklios Paideia ." *Journal of the History of Ideas* no. 50:179-198.

Reprinted as Chapter XI in: A. P. Bos, *Cosmic and Meta-Cosmic Theology in Aristotle's Lost Dialogues*, Leiden: Brill, 1989, pp. 113-152.

"We would now like to show how various elements from the tradition can be combined in an entirely new hypothesis.

(a) Since the explanations of the term 'exoteric' do not appear until after Andronicus' edition, it is legitimate to assume that they were attempts to solve the problem of the references in the Corpus with no more information than is now available to us.

(b) On the basis of the subjects dealt with in the *exoterikoi logoi*, as we will discuss below, which included Plato's doctrine of Ideas and the debate over the Idea of the Good, we seem justified in considering that 'exoteric' was understood by Aristotle as: 'pertaining to the realities lying outside *Physis* .

(c) That is to say that in these works Aristotle discussed the subjects which, according to his own philosophy of science, were not susceptible to treatment in a discursive, conclusive argumentation. For argumentation or proof is possible only on the basis of acceptance of the starting-points (*archai*)." (p. 129 of the reprint)

(...)

"We would like to advance the hypothesis, therefore, that the notion of the *enkyklios paideia* is a product of philosophical reflection on kinds of knowledge in relation to kinds of objects of knowledge, as laid down in the lost writings of Aristotle. The introduction of this notion may well have been linked there to the distinction which Aristotle did make in any case, i.e. between *enkyklioi logoi* and *exoterikoi logoi*, if we assume that *enkyklios* and *exoterikos* in this combination refer not to the target group of these *logoi* but to their content. In this view, the *enkyklioi logoi* comprised all sciences concerning the natural reality 'surrounding' us and whatever is derived from it through abstraction. And the *exoterikoi logoi* dealt with the matters related to *ta exo* and with those themes which Plato reserved for dialectic and Aristotle for an 'earlier, higher, and more logical science than physics', a science which deals with the *archai*, the *principia*, and which cannot therefore be deductive and demonstrative.(162) This distinction was no doubt geared to a difference in the level of difficulty, seen from the viewpoint of man who stands at the beginning of the road to knowledge. Aristotle will have regarded the study of experiential reality in all its aspects as a necessary preliminary training for insight into metaphysical reality. The elements discussed above are best integrated, therefore, if we assume that in his lost writings Aristotle described the process of man's striving for knowledge in metaphors of 'liberation', 'purification', 'initiation', 'ascent', and 'enlightenment', following and transforming what Plato had said about this process in his dialogues the *Phaedo*, the *Phaedrus*, and the *Republic*.

Aristotle saw man in his everyday existence as a 'natural' being, a being belonging to and enclosed by *Physis*, and endowed with a 'natural' rational faculty. As such, man is occupied by, bound to, and oriented toward the 'surrounding' reality of ordinary, everyday experience. But as such, man is also in many respects 'unfree'(163) and 'is as susceptible to those things which are by nature most evident as the eyes of bats to daylight'.(164) The road to liberation indicated by Aristotle is a road involving various stages." (pp. 150-151 of the reprint).

9. Chroust, Anton-Hermann. 1962. "The Miraculous Disappearance and Recovery of the *Corpus Aristotelicum* ." *Classica et Mediaevalia* no. 23:50-67.
10. ———. 1964. "A Brief Account of the traditional *Vitae Aristotelis* ." *Revue d'Études Grecques* no. 77:50-69.

Reprinted in A.-H. Chroust, *Aristotle: New Light on His Life and on Some of His Lost Works* , London: Routledge & Kegan Paul, 1973, Vol. I, pp. 1-15, with the title: A Brief Account of the (Lost) *Vita Aristotelis* of Hermippus and of the (Lost) *Vita Aristotelis* of Ptolemy el-Garib.

Abstract: "The *Vita Aristotelis* of Diogenes Laertius to a large extent relies on Hermippus whose original account might be reconstructed with the help of Diogenes Laertius. Hermippus' is a strange though in the main encomiastic melange of fact and fiction, praise and slander. With the exception of the *Vita Hesychii* (*Vita Menagii*), all the other *Vitae* — the *Vita Marciana*, the *Vita Vulgata* (*Vita Pseudo-Ammoniana*) , the *Vita Latina*, the two *Syriac Vitae* and the four *Arabic Vitae* — ultimately go back to, or are derivatives of a *Vita* (or an epitome of a *Vita*) of Ptolemy (el-Garib), a member of Porphyry's or Jamblichus' school of Neo-Platonists. The *Vita* of Ptolemy, the essential contents of which can fairly well be reconstructed with the help of its several derivatives, is strongly encomiastic. It is based on what seems to be an adequate mastery of the biographical materials available around 300-400 A. D., but its uncritical admiration for Aristotle greatly reduces its historical value."

11. ———. 1965. "The *Vita Aristotelis* of Dionysius of Halicarnassus." *Acta Antiqua Academiae Scientiarum Hungaricae* no. 133:369-377.

Reprinted in A.-H. Chroust, *Aristotle: New Light on His Life and on Some of His Lost Works* , London: Routledge & Kegan

Paul, 1973, Vol. I, pp. 16-24.

"In his *Vita Aristotelis* (or *Chronologia Vitae Aristotelis*), which because of its brevity and alleged unimportance has been sadly neglected, Dionysius of Halicarnassus writes:

‘Aristotle was the son of Nicomachus, who traced his ancestry and his profession to Machaon, the son of Asclepius. His mother, Phaestis, descended from one of the colonists who led the [Greek] settlers from Chalcis to Stagira. Aristotle was born in the 99th Olympiad, when Diotrephes was archon in Athens [384-83 B.C.]. Hence, he was three years older than Demosthenes. During the archonship of Polyzelus [367-66 B.C.], and after his father had died, he went to Athens, being then eighteen years of age. Having been introduced to the company of Plato, he spent a period of twenty years with the latter. On the death of Plato, during the archonship of Theophilus [348-47 B.C.], he went to Hermias, the tyrant of Atarneus. After spending three years with Hermias, during the archonship of Eubulus [345-44 B.C.], he repaired to Mytilene. From there he went to the court of Philip [of Macedonia] during the archonship of Pythodorus [343-42 B.C.], and spent eight years there as the tutor of Alexander. After the death of Philip [in 336 B.C.], during the archonship of Evaenetus [335-34 B.C.], he returned to Athens, where he taught in the Lyceum for a space of twelve years. In the thirteenth year [of his second stay in Athens], after the death of Alexander [in 323 B.C.] and during the archonship of Cephisodorus [323-22 B.C.], he retreated to Chalcis where he fell ill and died at the age of sixty-three.’ (1)" (p. 16 of the reprint)

(1) Dionysius of Halicarnassus, I Epistola ad Ammaeum 5. See also F. Jacoby, *Frag. Hist. Graecae* . 244, F. 38.

"The brief and not very informative *Vita Aristotelis* of Dionysius of Halicarnassus, it must be borne in mind, is primarily a ‘chronology’ rather than a detailed biography of Aristotle, compiled to disprove the allegation that Demosthenes owed his rhetorical prowess to Aristotle’s *Rhetoric*. Hence, like Apollodorus in his *Chronicle* (DL V, 9-10), Dionysius was of the opinion that he could restrict himself to citing some of the

essential dates in the life of Aristotle. Aside from this rather scanty bit of information, the *Vita Aristotelis* of Dionysius contains practically nothing that might shed additional light on the life and work of the Stagirite. The only novel piece of information furnished by Dionysius is the report that Aristotle's mother Phaestis was a descendant from the original colonists who led the Chalcidian settlers from Chalcis on the island of Euboea to Stagira. Of great importance and much assistance to us is also his effort to date, though in all likelihood not always accurately, certain key events in the life of Aristotle by referring to the respective archonships during which these events took place.

Despite its brevity, the *Vita Aristotelis* of Dionysius of Halicarnassus appears to be based on extensive research and what seems to be a fairly accurate grasp of the most relevant facts and dates in the life of the Stagirite. It was motivated by the desire to check and disprove the claims of certain Peripatetics who exalted and exaggerated beyond reason and historical fact the importance and influence of Aristotle upon the history of rhetoric in general and on the rhetoric of Demosthenes in particular. In so doing, Dionysius, like so many apologists, occasionally overstates his case and becomes guilty of some minor inaccuracies. What he did not know, and probably could not know, is that certain parts of the Aristotelian Rhetoric—the (Urrhetorik⁹ according to W. Jaeger—may date back to the years 360-55 B.C., and that during the fifties of the fourth century B.C., Aristotle probably composed, two works on rhetoric as well as taught a course of lectures on rhetoric.⁴⁹ Moreover, his manner of dating Aristotle's arrival in Athens in the year 367 B.C., that is, his insistence that Aristotle went there during the archonship of Polyzelus (367-66 B.C.), when he was eighteen years old (in his eighteenth year), is open to debate.⁵⁰ Most likely, Aristotle went to Athens during the latter part of Nausigenes' archonship (368-67 B.C., or the first year of the 103rd Olympiad), that is, in the late spring of 367 B.C. (after Plato had departed for Syracuse), when he was seventeen years old (in his seventeenth year), rather than in the summer or early fall of 367. Dionysius also seems to imply that

Aristotle died during the archonship of Cephisodorus (323-22 B.C.), that is, during the first half of the year 322, rather than during the early part of Philocles' archonship (322-21 B.C.), that is, between July and October of 322 B.C." (pp. 23-24 of the reprint, a note omitted)

12. ———. 1965. "A Brief Analysis of the *Vita Aristotelis* of Diogenes Laertius (DL V 1-16) " *L'Antiquité Classique* no. 34:97-129.

Revised and expanded in A.-H. Chroust, *Aristotle: New Light on His Life and on Some of His Lost Works*, London: Routledge & Kegan Paul, 1973, Vol. I, pp. 25-53.

"Book V, sections 1-16, of Diogenes Laertius' *The Lives and Opinions of Eminent Philosophers*, also called *The Lives of the Philosophers* (Photius) or *The Lives of the Sophists* (Eustathius),(1) contains a rather important, though at times confused (and confusing), account of the life of Aristotle.(2) In his *Vita*, which to a large extent relies rather heavily on a biography of Aristotle by Hermippus of Smyrna, Diogenes Laertius also employs a number of other divergent sources. Some of these sources are cited by name, others can be determined with a reasonable degree of certainty, while others cannot readily be identified. What is perhaps the most striking characteristic of Diogenes' biography, however, is that he constantly alternates his use of two distinct types of sources or biographical tendencies: the decidedly sympathetic, favorable and even encomiastic tradition; and the clearly unsympathetic, unfavorable and even hostile trend.(3) In this, Diogenes Laertius and his *Vita Aristotelis* differs from the majority of the extant biographies of Aristotle. The following is a tentative analysis of Diogenes' rather bewildering account in terms of these two types of sources or tendencies." (p. 25 of the reprint)

(1) Diogenes Laertius, in the main, has remained an obscure author. There exists no certainty even about his correct name. Eustathius (*Comment. in Iliadem M 153*, vol. III, p. 103, ed. G. Stallbaum) calls him Laertes, while some authors (Stephanus of Byzantium and Photius, for instance) refer to him as Laertius Diogenes. The approximate date of his *Vitae* has been fixed

provisionally in the first decade or decades of the third century A.D., that is, shortly after the year A.D. 200, although some scholars would prefer to place the *Vitae* closer to the year A.D. 300. The latest philosopher whom Diogenes cites in his work is Saturninus (DL IX. 116), an otherwise unknown disciple of Sextus Empiricus (*floruit* towards the end of the second century A.D.). If our assumption should be correct, namely, that Diogenes Laertius wrote shortly after 200 A.D., then he was the younger contemporary of Clement of Alexandria, Galen and Philostratus. See, in general, E. Schwartz, 'Diogenes Laertius,' in Pauly-Wissowa, *Real-encyclopädie der classischen Altertumswissenschaft*, vol. V (Stuttgart, 1905), pp. 738-63.

(2) See P. Moraux, 'La Composition de la Vie d'Aristote chez Diogène Laërce,' *Revue des Études Grecques*, vol. 68 (1955), pp. 124-63; I. Düring, *Aristotle in the Ancient Biographical Tradition* (Acta Universitatis Gothoburgensis, vol. 63, no. 2, Göteborg, 1957, pp. 29-79, *et passim*; O. Gigon, 'Interpretationen zu den Antiken Aristoteles-Viten,' *Museum Helveticum*, vol. 15 (1958), pp. 147-93. I. Düring, *op. cit.*, pp. 25-6, aptly calls the *Vita Aristotelis* of Diogenes Laertius 'a compilation of literary sources ranging over a period of about 500 years. It lacks stylistic unity. It is probable that the author went on making insertions and adding marginal notes until he partly spoiled his original arrangement. It is probable, too, that some of these additions were rather carelessly inserted in the text... This makes Diogenes' work appear more disorderly, not to say sloppier, than it really is. It is habitual to sneer at Diogenes as an insipid and stupid author... The texts which he excerpted were of course not without textual errors, and we must expect that he inherited many of these ancient errors.... The assumption that he was stupid is mainly based on the epigrams with which he adorned his work: they beat the record in bathos and bad taste. But this manifestation of insipidity does not give us the right to dismiss him once and for all as an ignorant ass... [H]e has undoubtedly collected for us a material without which our knowledge of the history of ancient philosophy would be much poorer; he has traced and used

some excellent sources; and he has put his material in a tolerably good order.

(3) Whenever and wherever the situation demands it, some of the sympathetic sources or biographies turn at times into outright, though fanciful, apologies, while some of the unsympathetic or hostile sources or biographies, though by no means all of them, lapse into invective and slander. Naturally, there are also those sources which, on the whole, seem to be fairly 'neutral' and objective.

13. ——. 1965. "A Brief Summary of the Syriac and Arabic *Vitae Aristotelis* ." *Acta Orientalia* no. 29:23-47.

Revised version in A.-H. Chroust, *Aristotle: New Light on His Life and on Some of His Lost Works* , London: Routledge & Kegan Paul, 1973, Vol. I, pp. 54-72.

"It is commonly held that the two surviving Syriac and the four extant Arabic *Vitae Aristotelis* are ultimately based on the biographical tradition represented or inaugurated by Ptolemy (-el-Garib) and his (lost) *Vita Aristotelis* .(1) Probably in the course of the fifth or sixth century A.D., a Syriac translation was made of Ptolemy's *Vita* or, more likely, of an epitome of this *Vita* . Of this original translation, only two rather scanty abridgements by some Syriac biographers survive, namely, *I Vita Aristotelis Syriaca* and *II Vita Aristotelis Syriaca* , which might also be called short *résumés* of an older and more comprehensive Syriac translation of Ptolemy's original Greek *Vita Aristotelis* or of an epitome of this *Vita* .

The Syriac translation of either Ptolemy's *Vita* or that of an epitome of this *Vita* , together with some additional (probably Neo-Platonic) materials transmitted through several intermediary sources, ultimately became the foundation of the four Arabic *Vitae Aristotelis* . It has been surmised that towards the end of the ninth century A.D., Ishaq Ibn Hunayn translated into Arabic a Syriac rendition of Ptolemy's *Vita* or, rather, of a Syriac translation of an epitome of this *Vita* . In any event, the Arabic biographers, without exception, ultimately derived their information and materials, through the intermediary of Syriac translators, from Ptolemy, although they seem to have included

in their *Vitae* not only some elements that were probably added (or invented) by the Syriac translators (or by the Arabic biographers themselves), but also bits of information gleaned from some other (Neo-Platonic?) reports or accounts. There exists no evidence, however, that the later Arabic biographers made direct use of Greek or Syriac sources. It might be correct to maintain, therefore, that the Syriac and Arabic biographers, like the Neo-Platonic School of Ammonius, derived most of their information concerning the life of Aristotle from Ptolemy (-el-Garib) and his *Vita Aristotelis* .(2)

The four major Arabic biographers of Aristotle are: Al-Mubassir (or Al-Mubashir, subsequently cited as *II VA*), who wrote during the latter part of the eleventh century;(3) Ibn Abi Usaibia (subsequently cited as *IV VA*), who wrote during the latter part of the thirteenth century;(4) Ibn an-Nadim (subsequently cited as *I VA*), who wrote near the end of the tenth century;(5) and Al-Qifti Gamaladdin (subsequently cited as *III VA*), who wrote during the first half of the thirteenth century.(6) A cursory examination of the Arabic (and Syriac) *Vitae Aristotelis* might indicate that especially *I VA*, *II VA* and *IV VA* , which are based on a single main source, are quite similar in content. Closer analysis reveals, however, that there exist quite a few significant differences in the facts selected and discussed by the different Arabic biographers. It is also obvious that some of the later Arabic biographers simply copied from some earlier Arabic author. Thus, Usaibia, for instance, occasionally seems to quote from Mubashir without, however, acknowledging his source." (pp. 54-55 of the reprint)

(1) See A.-H. Chroust, 'A brief account of the traditional *Vitae Aristotelis*,' *Revue des Études Grecques* , vol. 77, nos 364-5 (1964), pp. 50-69, especially, pp. 60-9, and Chapter I. The title of Ptolemy's *Vita Aristotelis* probably was something like 'On the Life of Aristotle, His Last Will and Testament, and a List of His Writings.' See Elias (olim David), *Commentaria in Porphyrii Isagogen et in Aristotelis Categorias* , *CIAG* , vol. XVIII, part 1 (ed. A. Busse, Berlin, 1900), p. 107, line 7, where we are told that Ptolemy wrote about Aristotle's 'list of writings, about his life, and about his last will and testament.' *I VA* 19

(An-Nadim) reports that ‘Ptolemy-el-Garib ... is the author of a book “On the Life of Aristotle, His Death, and the Classification of his Writings.”’ See also *IV VA* (Usaibia), at the beginning.

Walzer, ‘Studi su al-Kindi I: un scritto introduttivo alio studio di Aristotele,’ *Memorie della Reale Accademia Nazionale dei Lincei*. Classe di Scienze Morali, series VI, vol. VI, fasc. 5 (Rome, 1940), pp. 375-419; R. Walzer, ‘New light on the Arabic translations of Aristotle,’ *Oriens*, vol. VI (1953), pp. 91-142; I. Düring, *Aristotle in the Ancient Biographical Tradition*, *Acta Universitatis Gothoburgensis*, vol. LXIII, no. 2 (Göteborg, 1957), pp. 183-92, 193-246.

(3) His full name is Abu-(e)l-Wafa al-Mubashir (or Mubassir) Ibn Fatik. He authored the *Kitab Mukhtar al-Hikam wa-Mahasin al-Kihm* (*The Book of Selections of Wisdom and Wonderful Sayings*). For simplicity’s sake the accents on the Arabic words have been omitted. See also Chapter I, note 17.

(4) He authored the *Kitab uyun al-Anba fi Tabaqat al-Atibba* (*The Book of Sources for Information Concerning the School of*

Physicians). Usaibia, who died in 1270, was a physician. See also Chapter I, note 19.

(5) His full name is Ibn Abi Yaqub an-Nadim. He authored the *Kitab al-Fihrist*, which was written before the year 987. This work, like that of Al-Qifti (see note 6), is more in the nature of a 'biographical encyclopedia.' See also Chapter I, note 16.

(6) His full name is Al-Qifti Gamaladdin al-Qadi al-Akram. He authored the *Tabaqat al-Hukama (The School of Wise Men)*. He died in 1248. See note 5 and Chapter I, note 18. Neither the work of An-Nadim nor that of Al-Qifti will be used extensively.

14. ———. 1970. "Estate Planning in Hellenic Antiquity: Aristotle's Last Will and Testament." *Notre Dame Law Review* no. 45:629-662.

Reprinted in A.-H. Chroust, *Aristotle: New Light on His Life and on Some of His Lost Works*, London: Routledge & Kegan Paul, 1973, Vol. I, pp. 183-220.

"The text of Aristotle's last will and testament is preserved in the writings of Diogenes Laertius, (1) Ibn An-Nadim, (2) Al-Qifti Gamaladdin, and Ibn Abi Usaibi'a.(4) Without question, this instrument is wholly authentic. Although in the course of its transmission it may have been somewhat mutilated or abridged, it remains the most revealing, as well as the most extensive, source of information among the few surviving original documents related to the life of Aristotle. It is safe to assume that the ancient biographers of Aristotle derived or inferred much of their information and data from this will. Concomitantly, this document supplies the modern historian with details that in many instances have been obscured, altered, or simply omitted in the traditional (and preserved) biographies of Aristotle.

The testaments of the early Peripatetic scholars, including Aristotle's, were carefully preserved and finally collated by Ariston of Ceos in his Collection [of the Wills of the Peripatetic Scholars].(6)" (p. 183 of the reprint)

(1) Diogenes Laertius, βίων [καί ·γνώμων] των ἰν φιλοσοφίαιεὔδοκιμησάντων των εἰς δέκα (On the Lives [and

Opinions] of Eminent Philosophers in Ten [Books]), bk. 5, paras. 11-16 [hereinafter cited as Diogenes Laertius].

(2) Ibn Abi Ya'qub An-Nadim Kitab al-Fihrist [hereinafter cited as I Vita Aristotelis Arabica].

(3) Al-Qifti Gamaladdin al-Qadi al Akram, Tabaqat al-Hukama' (Schools of Wise Men) [hereinafter cited as III Vita Aristotelis Arabica].

(4) Ibn Abi Usaibi'a, Kitab 'Uyun al-Anba' fi Tabaqat al-Atibba' (Book of Sources of Information about the Schools of Doctors) [hereinafter cited as IV Vita Aristotelis Arabica]. The text transmitted by An-Nadim is almost identical to that of Usaibi'a. It is fair to assume that Usaibi'a used the text of An-Nadim.

(5) Diogenes Laertius, bk. 5, para. 64; see Strabo, "Στράβωνος γεωγραφικῶν (Geography), bk. 13, ch. 1, para. 54.

(6) In the preserved will of Theophrastus we read: "And the whole library [of the school] I bequeath to Neleus." Diogenes Laertius, bk. 5, para. 52; see Strabo, supra note 5, bk. 13, ch. 1, para. 54; Athenaeus, Αθηναίου Νανκρατίτου δειπνοσοφιστῶν (Deipnosophists), bk. 1, para. 3A [hereinafter cited as Athenaeus]. Theophrastus, it must be borne in mind, expected that Neleus of Scepsis would succeed him in the scholarchate of the Peripatus. When Neleus failed to be "elected" scholarch, he went back to Scepsis, in the Troad, taking with him the library containing the intramural compositions or treatises of Aristotle, Theophrastus, and other early Peripatetics. This incident also explains why the doctrinal treatises of Aristotle and others became lost for some time. See Chroust, *The Miraculous Disappearance and Recovery of the Corpus Aristotelicum*, 23 *Classica et Mediaevalia* 50 (1962). This also justifies doubts as to the authenticity of parts of the extant *Corpus Aristotelicum*.

"This book, which consists of two distinct volumes, essentially is a collection of papers which I wrote between 1963 and 1968, when I became interested in the historical Aristotle -- the Aristotle revealed not merely in the highly problematic *Corpus Aristotelicum*, but also in the ancient biographical tradition and in the 'lost works' of the young Stagirite. Some of the papers collected and edited here owe their origin to classroom discussions and lectures which I offered while on leave from the Notre Dame Law School. They have previously been published in various journals, both in the United States and elsewhere. When re-editing these papers for this book, I made some far-reaching alterations, important additions, incisive corrections and, it is hoped, some worthwhile improvements." (Vol. I, from the *Preface*, IX)

"Aside from a more general and rather sweeping discussion of the several *Vitae Aristotelis* in Chapter I, only the *Vita* (or *Chronologia*) *Aristotelis* of Dionysius of Halicarnassus, the *Vita* of Diogenes Laertius And the *Vitae* of the Syriac and Arabic biographers are treated in this book with any detail. The *Vita Aristotelis Marciana*, which was recently edited by O. Gigon, the *Vita Hesychii* (*Vita Menagii* or *Vita Menagiana*), the *Vita Vulgata*, the *Vita Latina* and the brief biographical sketches found in the Neo-Platonic commentaries to the works of Aristotle, on the other hand, have not received special treatment, although frequent reference is made to them. Chapter I also makes an attempt to reconstruct the essential content of the lost *Vita Aristotelis* of Hermippus of Smyrna as well as that of the likewise lost *Vita Aristotelis* of Ptolemy (-el-Garib). These two *Vitae*, it is claimed, constitute the most important sources or intermediary authorities for the majority of the subsequent *Vitae*. Chapter II, which discusses the *Vita Aristotelis* of Dionysius of Halicarnassus, indicates that this

Vita is actually a brief chronology which offers little detailed information, except some valuable and apparently accurate biographical data. The *Vita Aristotelis* of Diogenes Laertius, which is analyzed in Chapter III, poses many vexing problems, some of which are almost impossible to resolve. Especially difficult to determine are the sources used by Diogenes Laertius. There can be little doubt, however, that this *Vita*, as we shall see in Chapter I, draws heavily on the *Vita* of Hermippus. Chapter IV, again, presents a general survey and discussion of the Syriac and Arabic *Vitae Aristotelis* without entering into a detailed analysis of each individual *Vita*. This particular chapter is primarily an attempt to illustrate the peculiar biographical trend introduced (?) by the Neo-Platonic biographers and by Ptolemy (-el-Garib) in particular. Of necessity no less than by design, the expository and analytical discussions of all these *Vitae Aristotelis* are at times repetitious in that certain statements found in one *Vita* are referred to or restated again and again.

(...)

The somewhat arbitrary selection of these biographical sources was made on the basis of the following considerations: The lost *Vita Aristotelis* of Hermippus and the lost *Vita Aristotelis* of Ptolemy (-el-Garib), it is widely and probably correctly held, constitute what appear to be the two main biographical trends. The *Vita* of Diogenes Laertius, in particular, to a fairly large extent, though not exclusively, relies on the *Vita* of Hermippus (as does the *Vita Aristotelis* of Hesychius) and, hence, at least in part, may be considered an 'epitome' or 'derivative' of the latter. The Syriac and Arabic *Vitae*, in turn, are primarily based on the *Vita* of Ptolemy (-el Garib) -- as are the *Vita Marciana*, the *Vita Vulgata* and the *Vita Latina* -- and, hence, may be called 'epitomes' or 'derivatives' of Ptolemy's biography. The *Vita Aristotelis* of Dionysius of Halicarnassus, which is largely based on what appear to be independent investigations, seems to follow a course of inquiry all its own." (Vol. I, *Introduction*, pp. XIX-XX, notes omitted).

16. Dix, T. Keith. 2004. "Aristotle's 'Peripatetic' Library." In *Lost Libraries. The Destruction of Great Book Collections since*

Antiquity , edited by Raven, James, 58-74. New York: Palgrave Macmillan.

"The details in Strabo's account are subject to question and interpretation; and the truth of the Scepsis episode in particular must remain an open question. Three elements in Strabo's story do ring true to the history of libraries in the Hellenistic age. First, there is the rise of institutional libraries, beginning with the library of the Peripatetic school.

At least four of the Macedonian dynasts established libraries in their capitals, a practice which spread to other rulers on the fringe of the Mediterranean world who aspired to Hellenic culture; and a number of Greek cities established libraries in their city gymnasia, presumably for the education of their young men. Second is the bibliomania of rival Hellenistic kings, especially the Ptolemies in Alexandria and the Attalids in Pergamum. Indeed, the entire Scepsis episode may reflect wrangling between Alexandria and Pergamum over who had the better texts of Aristotle. Third is the confiscation of the cultural treasures of Greek civilisation, including libraries, by victorious Roman generals: Sulla was not the first nor would he be the last to acquire a library as spoils of war. One element is unusual: Strabo's assertion that the decline of the Peripatetic school after Theophrastus was due to the 'disappearance' of Aristotle's library. In no other ancient account of lost libraries do we find any assessment of the consequences of loss. Other ancient accounts and modern scholarship do not seem to bear out Strabo's assertion; nevertheless, for his ability to conceive that the loss of a library might have practical and intellectual consequences, Strabo can take his place in this collective history of lost libraries. (pp. 69-70)

17. Dorandi, Tiziano. 2016. "The Ancient Biographical Tradition on Aristotle." In *Brill's Companion to the Reception of Aristotle in Antiquity* , edited by Falcon, Andrea, 277-298. Leiden: Brill.

"Conclusion

I have tried to answer the two question I asked at the beginning of this chapter— *Who was Aristotle?* and *What should we take the ancient biographical tradition on Aristotle to be?* At the

same time, I have mapped some of the landmarks in the reception of Aristotle's thought in this body of literature. The results may be limited, but they are nevertheless interesting and consequential.

Both as a metic and above all because of life choices well matched with his philosophical ideas, Aristotle lived an isolated and studious life, entirely caught up in scientific and theoretical research and in his educational program at the Lyceum.

The biographical tradition tries, in various ways, to fill in the gaps left by a normal life of philosophical research. The tradition unfolds in two broad currents, one of which probably goes back to Hermippus of Smyrna (third century BC) and the other to the Neoplatonic milieu (starting in the fourth century AD). There is also an Arabic tradition, parts of which are drawn from lost Greek sources.

A "biographical legend" took form early on, attaching various friendly and hostile accounts to Aristotle's name. The sources for the reconstruction of these biographical veins are varied. They include an enormous amount of evidence which must, in every case, be analyzed and studied in order to establish their importance and reliability which separates the authentic from the spurious.

In the biographical as well as the gnomological tradition, we ultimately find clear traces both of Aristotle's own doctrine and of doxographical texts which combine readings of Aristotelianism from several centuries, filtered through Hellenistic and Neoplatonic philosophy. Two concrete examples are preserved in Sextus Empiricus and Diogenes Laertius." (pp. 295-296)

18. Drossart, Lulofs Henrik Joan. 1999. "Neleus of Scepsis and the Fate of the Library of the Peripatos." In *Tradition et traduction. Les textes philosophiques et scientifiques grecs au Moyen Age latin. Hommage à Fernand Bossier*, edited by Beyers, Rita, Brams, Jozef, Sacré, Dirk and Verrycken, Koenraad, 9-24. Leuven: Leuven University Press.

Text prepared for publication and completed after the death of author by A. M. I. van Oppenraay.

"Roughly speaking, Posidonius (135-51 BC) and Apellicon (d. 87) were contemporaries, while Strabo was only 13 years old when Posidonius died. So this (*) is the earliest mention of Apellicon's purchase of Aristotle's library which has come down to us. When and where he acquired it is not explicitly stated, but it may have been in his student days — thirty or forty years before, perhaps with Athenion, who after a career as sophist in Messene and at Larissa, in Thessaly, amassed a considerable fortune and returned to Athens. (31) Messene, Larissa and Athens are quite distant from Scepsis. Since Posidonius does not refer to Neleus at all, it is clear that he follows a different tradition. Even so it is noteworthy that the two authors (Posidonius and Strabo) agree as to the main point: that Apellicon was the owner of the library of Aristotle (so Athenaeus; Strabo more correctly adds Theophrastus).

The implications in § 4 are downright impossible. For it is improbable that this rascal, at best an amateur, was able to restore heavily damaged manuscripts of extremely difficult texts. Apart from that, even if he had been an accomplished philosopher and a trained expert in textual criticism, he might have corrected only a very small part of the 676.078 lines of the literary remains of Aristotle and Theophrastus (32).

There is, however, an independent witness: the annotated catalogue of Andronicus is lost, but we still have a summary (in Arabic), made by a certain Ptolemy. Towards the end of the Arabic translation of the catalogue of Ptolemy, called the Foreigner (al-garīb), in which a miscellany of personal papers, letters etc. is listed, there is a reference to "Books that were found in the library of a man called Ablikun" (Ablikun is the regular transcription of Apellicon). Now, it is known that he was interested in Aristotle's marriage to Pythias (I. Düring, *Aristotle in the Ancient Biographical Tradition*, p. 267, T. 10; p. 375, T. 58 / and the commentary, on p. 392), and it may be that he bought some personal papers concerned with Aristotle's private life, because such texts appealed to him, and he was

able to read and to emend them. Boastful and vainglorious as he was, he may have grossly exaggerated his acquisition.

According to § 7, after his death Apellicon's books were carried away by Sulla and included in his private library at Rome (or Cumae? see Cicero, *ad Att.* IV. 10, 1). If it really had contained all the books of the Peripatos, the hundreds of volumes in large chests would immediately have caught the eye. But Cicero, who was privileged to visit Sulla's library, failed to notice anything of the sort, so that we may safely conclude that the famous library of the Peripatos was not among the belongings of Apellicon captured by Sulla. Presumably, Apellicon had actually acquired some Aristotelica, which may easily have escaped Cicero's attention. On the other hand Cicero came across several *Commentarii*, that is to say esoteric works, of Aristotle in the library of Lucullus, another general, who had collected manuscripts during his expeditions in the East (see Cicero, *Fin.* III. 10 and Moraux *Der Aristotelismus bei den Griechen* 1973, pp. 39ff.). This is extremely interesting, for the same Lucullus brought Tyrannio of Amisias as a prisoner to Rome, where he was freed and honoured as a scholar. Apparently, even in remote Pontus it was possible to acquire Aristotelian MSS. In this connection it should be stressed once more that, contrary to the impression given by Strabo's account (in § 5), MSS of Aristotelian *esoterica* were available outside the school in various countries. This stands to reason, because the school was known all over the world. And this was exactly what Strabo's informant ignored: apart from Athens and Rome there existed intellectual centres in many parts of the ancient world (like the Troad, for instance, see note 25).

My conclusions are that Strabo's account ought to be dated early, that it may have had a place in Strabo's own *Historical Sketches*, and that later on it may have been inserted in his *Geography*. It consists mainly of misinterpreted facts." (pp. 23-24)

(*) [Athenaeus, *Deipnosophistae*, V. 214 de].

(25) Note that Straton is nowhere referred to in the account, and Strabo himself seems to have ignored that he was a

Peripatetic. He quotes him (in 1.3, 4-5) on the authority of Eratosthenes with his usual nickname Straton the Physicist. The account in *Geogr.* XIII. 1.45 may suggest that Scepsis was an insignificant one-horse town, but that is far from the truth. In the next chapter of the 13th book Strabo repeatedly quotes Demetrius of Scepsis (*Geogr.* XIII.1.45, 55, al.), a famous historian who spent his life in his native town, where he must have been able to collect the material for his thirty books of commentary on a little more than sixty lines of Homer, that is on the *Catalogue of the Trojans* (ibid. XIII.1.45), a work of stupendous erudition. In fact, Strabo's reports on the Troad reveal that it was one of the centres of intellectual activity. From Assos, where Aristotle had taught, came Cleanthes, the Stoic (ibid. XIII. 1.57). With Lampsacus and Parium many great names are connected. See ibid. XIII.1.19 : "Now Neoptolemus, called the Glossographer [and author of a Poetic, heavily drawn upon by Horace for his *Ars poetica*], a notable man, was from Parium; and Charon the historian and Adeimantus and Anaximenes the rhetorician, and Metrodorus the comrade of Epicurus were from Lampsacus; and Epicurus himself was in a sense a Lampsacenean, having lived in Lampsacus and having been on intimate terms with the ablest men of that city, Idomeneus and Leonteus and their followers" (transi. Jones). Here again, Strabo omits mention of Straton — a Lampsacenean too — and of Lycon, the son of the Trojan Astyanax, who was Straton's successor. Evidently he was poorly informed about the Peripatos.

20. ———. 1956. "Ariston or Hermippus? A note on the Catalogue of Aristotle's writings, Diog. L. V 22." *Classica et Mediaevalia* no. 17:11-21.

"The catalogue of Aristotle's writings preserved to us by Diogenes Laertius is a valuable document, supplementing our knowledge of Aristotle's literary production. Provided that we can solve the problem of its origin, it will enable us to draw important conclusions as to the extent to which Aristotle's books were known during the centuries immediately following his death. In his book on this and the other catalogues, preserved by Hesychius and Ptolemy-el-Garib, Moraux (1) has well summarized the results of earlier research, and his own contributions to the interpretation and clarification of details in these catalogues are very important. With his predecessors Littig and Baum-stark, however, he shares a tendency towards highly conjectural construction. Owing to the conditions under which the catalogues are handed down to us, they pose for us a series of complicated problems. If we are going to draw any profit from the information they contain, we must be careful not to transcend what is really knowable. These problems cannot be solved by substituting still more problematic reconstructions, however ingenious these may be.

Moraux has advanced and vigorously defended the thesis that the catalogue preserved by Diogenes is a list of Aristotle's works in the library of the Peripatos, composed by Ariston of Ceos who succeeded Lycon as head of the School, about 226/5 B.C. If this thesis can be proved, it will have important consequences for the history of the Peripatos and Hellenistic philosophy in general, and Moraux has not shrunk from drawing such far-reaching conclusions. The object of this paper is to examine Moraux's thesis and match it with the traditional opinion that this catalogue is an inventory of Aristotle's books in the possession of the Alexandrian library." (pp. 11-12)

Contents: Preface 7; Part I. Editions of the Ancient Vitae Aristotelis. 1. Diogenes Laertius 13; 2. Hesychius 80; 3. Vita Marciana 94; 4. Vita vulgata 120; 5. Vita Lascaris 140, 6. Vita Latina 142, 7. Medieval Vitae Aristotelis 164; Part: II. The Syriac and Arabic tradition on Aristotle's life and writings 183; Part III. Fragments of the ancient biographical tradition. I. Chronology of Aristotle's life 249; II. Descent and family 263; III. Hermias of Atarneus 272; IV. Relationship with Philip and Alexander 284; V. Aristoteles and Isocrates 299; VI. Aristotle and Plato 315; VII. Aristotle's library 337; VIII. Aristotle honoured by the Delphic Amphyxions 339; IX. Aristotle's dicta on leaving Athens 341; X. Aristotle's apology 343; XI. Aristotle's death 345; XII. Appearance and personal qualities 349; XIII. Some ancient verdicts 353; XIV. Indirect evidence from Aristotle's own writings 366; XV. Early invectives against Aristotle 373; Comments on ch. XV 374; XVI. Characteristic sayings. Bon-mots. Anedoctes 396; XVII: The words *peripatos*, *peripatein*, *peripatetikos* 404; XVIII. The Roman edition of Aristotle's works 412; XIX. *Exoterichoi logoi* 426; XX. The neoplatonic introductions to the study of Aristotle 444; Part IV. From Hermippus to Ptolemy. A brief summary of results and conclusions 459; *Index testimoniorum* 479-490.

"This book has a long history. It was begun as an investigation of the passages in which Plutarch speaks of Aristotle. Detached from their context some of these passages lent themselves to different interpretations and I found too that they were used as evidence for quite different opinions. It soon became apparent that the scattered fragments of the biographical tradition could not be fully understood and properly interpreted unless on the basis of an examination of all the material. The aim of this book is to present this material and the result of my examination of it and to trace the development of the biographical tradition concerning Aristotle's life and writings.

Part I contains critical editions of all ancient *Vitae Aristotelis*, based on fresh collations of all manuscripts known to me. To the very last I hoped to find another manuscript of the *Vita Marciana*, now preserved only in *Marcianus 257*, which is today almost indecipherable, but my hope failed. The editions of the *Vitae* pose problems which I have set forth in the introductions. To each text I have added *testimonia*, a running commentary, and a short chapter with a general evaluation. In this part of the book I have also included a brief survey of some of the late medieval *Vitae*.

Part II contains a survey of the Syriac and Arabic tradition. My chief object has been to present readable translations of the most important *Vitae Aristotelis* and to discuss the problems raised by these texts. This material has been hard to deal with for a non-orientalist, and it would have been impossible for me to give an account of it, had I not received kind and generous assistance from my orientalist colleagues, Professors Oscar Löfgren and Bernhard Lewin, Göteborg University, and Dr. Richard Walzer, Oxford University. I wish to emphasize, however, that I am alone responsible for all shortcomings in this chapter.

Part III contains about four hundred passages from ancient and medieval writers, selected from a large collection of excerpts and arranged according to subject-matter. I have experimented with several types of arrangement and finally decided upon the one chosen here. This arrangement of the material inevitably leads to certain repetitions for which I ask the reader's indulgence. I hope that the frequent cross-references and the *Index testimoniorum* will help the reader to find what he wants to find.

In most cases each passage or cluster of passages is provided with a commentary. In my comments and interpretations I have followed the simple method applied in every critical treatment of sources and authorities. Each statement has first been examined separately, with due consideration given to textual problems, language, context, mode of transmission, the writer's personality (if known), time and tendency, and so

forth. It has then been compared with related texts and further analysed and interpreted with the ultimate aim of finding out as much as possible about trends and tendency in that branch of the biographical tradition to which the passage belongs. Certain facts recorded in the biographical tradition are of such a nature that we can never prove whether they are true or not. But we may advance a step nearer the truth if we can prove that the author (or his source) is biased and find out something about his prejudices or tendency. In most cases it is possible to evince that he follows a certain tradition whose general character we are able to determine. However, everybody familiar with the ancient biographical tradition knows that the material is fragile and often open to different interpretations. I have honestly tried to make a clear distinction between facts and hypotheses and left many questions open with a *non liquet*. But I am fully aware how complicated and difficult the problems are and how evasive the truth is. The reader will find that my conclusions are often qualified by an additional "probably" or subject to other reservations.

It is my hope that the editions of the *Vitae Aristotelis* together with the large collection of testimonia will prove useful as a source book for the purpose of reference, quite irrespective of the appended comments.

Part IV contains a brief outline of the development of the biographical tradition from Hermippus to Ptolemy-el-Garib.

I have of course had a great mass of material to draw upon in the works of the many scholars who have written on the life of Aristotle: Brandis, Stahr, Blakesley, Zeller, Bywater, Shute, Busse, Baumstark, Praechter, Jaeger, Mulvany, Wormell, Hubbell, Moraux, and many others cited or referred to in my notes and comments. My separate debts to predecessors I have tried to acknowledge in all cases where they were contracted; I may sometimes have put down, from ignorance or forgetfulness, as my own, what ought to have been credited to another. Let me say, however, that without the diligent and careful work done by generations of scholars towards clarifying obscure passages and hidden rapports in the biographical

tradition, this presentation and, if I may be allowed to say so, this tidying-up of the entire material, could not have been achieved." (from the Preface, pp. 7-9)

22. ———. 1971. "Ptolemy's *Vita Aristotelis* Rediscovered." In *Philomathes. Studies and Essays in the Humanities in Memory of Philip Merlan*, edited by Palmer, Robert B. and Hamerton, Kelly, 264-269. La Haye: Nijhoff.

"In a discussion at the Fondation Hardt (1) Professor Richard Walzer reminded classical scholars and historians of philosophy that they largely ignore the fact that Arabic translations of hitherto unknown Greek texts are becoming known in steadily increasing numbers, either through editions of the Arabic texts or, more often, because more detailed information about existing manuscripts is now available. The following example well illustrates his point.

Some twelve years ago I attempted to collect a number of facts transmitted to us in nine late epitomes of a *Vita Aristotelis*, two Greek, one Latin, two Syriac, and four Arabic *Vitae*. I concluded that these epitomes were extracts from a *Vita* written by a certain Ptolemy. Having examined the evidence and the solutions reached by other scholars I came to the result which I summarize here.(2) The author is possibly identical with the Neo-Platonic Ptolemy mentioned by Iamblichus, Proclus, and Priscianus.(3) The book was dedicated to Gallus, presumably a Roman of high standing and a contemporary phil-Aristotelian. Ptolemy's book contained a biography, numerous aphorisms and anecdotes referring to Aristotle, the text of Aristotle's Will, and a catalogue of Aristotle's writings. The biography has a clear tendency: it is a glorification of Aristotle,(4) based on some typical Neo-Platonic conceptions." (pp. 264-265)

On Aristotle see pp. 850-856.

"That all knowledge of the acroatic works was completely lost is an untenable belief and the cellar at Scepsis is a highly suspicious story(43). Fortunately, however, the complexities of the problems connected with the Andronican recension need not concern us here. On the basic facts about Apellicon, Sulla, Tyrannion, Andronicus and the transmission of Aristotle to Rome Strabo is a witness of authority. He studied Aristotelian philosophy with Boethus of Sidon, Andronicus' most notable pupil, perhaps under Andronicus himself(44), and also heard Tyrannion lecture(45). Two things seem incontrovertible: that Rome at the time that Sallust was writing was the centre of Aristotelian studies and that the result of these studies, Andronicus' edition, was to make available for the first time to the generally educated and cultured public the works of Aristotle as we know them, whatever had been the position among philosophic specialists. On the latter point the argument *ex silentio* from Cicero is decisive. For all his wide reading and commerce with Greek philosophers and scholars he did not know our Aristotle. His Aristotle, with one exception, is the author of the dialogues and the exoterica(46).

The date of the publication of Andronicus' edition cannot be accurately established. The earliest indication seems to be in Dionysius of Halicarnassus, 'Epistula ad Ammaeum' I, written to refute the belief of an unnamed Peripatetic that Demosthenes learned the rules of rhetoric from Aristotle's 'Rhetoric', a view which Dionysius himself had once held(47). The discussion is conducted with considerable skill on the basis of wide research. There are quotations expressly assigned to all three books of the 'Rhetoric' as we know it(48). Dionysius

clearly knew our text of the 'Rhetoric' well(49). Moreover, Dionysius has a confident command of the details of Aristotle's biography and of the order of his works: on internal evidence he argues that 'Topica', 'Analytica' and 'Methodica' precede the 'Rhetoric'(50)." (pp. 851-852)

(43) My colleague Dr. H. B. Gottschalk, whose guidance through the maze of the Aristotelian text tradition has been invaluable, suggests to me that the cellar was an invention of Apellicon to cover up theft of MSS from the Peripatos.

(44) Strabo, XVI 2, 24.

24. Gottschalk, Hans B. 1972. "Notes on the Wills of the Peripatetic Scholarchs." *Hermes* no. 100:314-342.

"Among the more important documents preserved by Diogenes Laertius are the wills of six leading philosophers, Plato (3, 41—3), Epicurus (10, 16—21), and the first four heads of the Aristotelian school, Aristotle himself (5, 11—16), Theophrastus (5, 51—7), Strato (5, 61—4 = fr. 10 Wehrli) and Lyco (5, 69 to 74 = fr. 15 Wehrli); Aristotle's will has also been preserved in two Arabic versions containing some variant readings (1). While those of Plato and Aristotle are purely personal, the remaining wills contain more or less detailed provisions for the continuation and endowment of the Epicurean and Peripatetic schools, which throw a good deal of light on their organisation

and the conditions in which they operated. The Peripatetic wills are particularly instructive, forming as they do a continuous series dating from 322 to 228/5 BC. Yet there has been no comprehensive study of these documents since the eighties of the last century, and the discussions published then concentrated mainly on their legal aspects (2). The aim of this paper is rather to extract as much historical information as possible about the Peripatos and its members. I shall press the evidence hard and some of my conclusions are more speculative than I like. But none of my results conflict with any reliable ancient testimony, and I hope at least to succeed in dispelling some misconceptions and in clarifying the nature of our sources and the limits of our knowledge." (p. 314)

(1) See below, p. 315 ff.

(2) C. G. Bruns, "Die Testamente der gr. Philosophen", *Ztschr. d. Savigny-Stiftung*, Romanistische Abtlg. I, 1880, 1-52; A. Hug, "Zu den Test. d. gr. Philos.", *Festschr. zur Begrüßung der Vers. deutscher Philologen u. Schulmänner*, Zürich 1887, 1-22. Wilamowitz, *Antigonos v. Karystos*, Berlin 1881, 263ff., deals with the historical problems. Aristotle's will has come in for a great deal of individual attention. An English translation of the Arabic version of Usaibia is printed by I. Düring, *Aristotle in the Biographical Tradition*, Göteborg 1957, p. 219f., and both the Arabic and the Greek text are discussed on pp. 61 ff. and 238 ff. ; this work will be referred to as *AB*. Another edition of the Greek text, with the chief Arabic variants (in a Latin translation) given in an apparatus, is in M. Plezia, *Arist. Epistulae cum Testamento*, Warsaw 1961. Discussions by A. Grant, *Aristotle*, London 1877, 26ff. ; G. Grote, *Aristotle*, London (2nd edition) 1880, 17ff. ; E. Zeller, *Ph. d. Gr.* II 23, 1879, 41 ff.; W. W. Jaeger, *Aristoteles*, Berlin 1923 etc., 34ff.; C. M. Mulvany, "Notes on the Legend of Ar.", *Class. Quart.* 20, 1926, 157ff. ; M. Plezia, in *Meander* 2, 1947, 215ff. (in Polish ; not available to the present writer); A.-H. Chroust, "Ar.'s Last Will and Testament", *Wien. Stud.* 80, 1967, 90 ff. includes English translations of the Greek and Arabic versions in parallel columns. Düring, Plezia and Chroust break the text up into short numbered sections; in this paper references will be

given to Diogenes' paragraphs and sections in the numeration of Düring and Plezia, e.g. *Diog.* 5. 15, § 2e D.-P. Chroust's numeration differs from that of the other editors and will not be given here.

25. ———. 1987. "Aristotelian Philosophy in the Roman World from the Time of Cicero to the End of the Second Century AD." In *Aufstieg und Niedergang der römischen Welt, vol. 36: Philosophie, Wissenschaften, Technik. II. Teilband: Philosophie (Platonismus, [Forts.]; Aristotelismus)*, edited by Haase, Wolfgang, 1079-1174. Berlin: Walter de Gruyter.

Partial reprint in: R. Sorabji (ed.), *Aristotle Transformed. The Ancient Commentators and Their Influence*, London: Duckworth, 1990, pp. 55-81.

Contents: Introduction 1079; I. The revival of Aristotelianism 1083; II. The 'early commentators' 1097; III. Compendia and compilations 1121; IV. The impact on other schools 1139; V. Aristotelians of the later first and second centuries AD 1151; VI. Ptolemy and Galen 1164; VII. Conclusion 1172-1174.

"A particular difficulty for our study is the almost complete loss of the relevant literature. This is in large measure due to the character of that literature, much of which consisted of commentaries on Aristotle's works or discussions of problems arising out of them. Such writings were by their very nature liable to be superseded as each generation reread Aristotle in the light of its own needs and preoccupations. The only writings by professed Aristotelians of this era to have survived in their original form are a commentary on parts of the 'Nicomachean Ethics' by Aspasius (second century AD) and the 'De mundo' wrongly attributed to Aristotle himself, to which one can doubtfully add the pseudo-Aristotelian 'De virtutibus et vitiis' with its doublet, falsely ascribed to Andronicus of Rhodes. In addition two treatises by Nicolaus of Damascus,

originally perhaps parts of the same work, have survived through being translated into Syriac or Arabic.(1) Besides these we only have fragments quoted by later writers; the chief sources are the commentaries on Aristotle's works written by Alexander of Aphrodisias in the third century and by

Ammonius (the son of Hermeias), Philoponus and Simplicius in the fifth and sixth.(2) The last-named is especially generous with quotations and sometimes gives a synopsis of the views of earlier interpreters on particular problems;(3) the introduction of his commentary on the 'Categories' (pp. 1-2) includes a survey of the work of earlier commentators. The information they provide is sufficient to give us an idea of the problems which interested the earlier Aristotelians and the kind of answer they gave, but usually not to reconstruct their arguments in full." (p. 1080)

(1) All these works will be discussed below.

(2) This and the other ancient Greek commentaries on Aristotle have been excellently edited in the series 'Commentaria in Aristotelem Graeca' (CAG), published under the auspices of the Prussian Academy (Berlin 1883-1909); other relevant works, notably the treatises and essays of Alexander of Aphrodisias, have been published in the same format in the 'Supplementum Aristotelicum' (Berlin 1885—1903). They will be quoted by page and line of these editions.

(3) E.g. *In Cat.* 62-7, on whether Aristotle was right to posit ten and only ten categories.

26. Grayeff, Felix. 1956. "The Problem of the Genesis of Aristotle's Text." *Phronesis* no. 1:105-122.

"If the *Corpus Aristotelicum* consists of such varied material it is necessary, as Brink says ["Peripatos" in Pauly-Wissowa suppl. VII 1.1. p. 925], to investigate separately in each case in what manner the individual books, or μέθοδοι, of the Corpus were first edited. But perhaps the most immediate task of Aristotelian students is, to search for characteristics of the three (or more) main sources on which, I think, Tyrannion and Andronicus drew, i.e. to attempt to assign parts of the Corpus to the Rhodian, the Athenian, the Alexandrian branches of tradition. Only if we succeed in distinguishing between such branches, if we discover trends prevalent in each of them, and understand the principles of editing and lecturing used in the different peripatetic centres, can we hope to find a way to Aristotle himself." (p. 122)

27. ———. 1974. *Aristotle and His School: An Inquiry into the History of the Peripatos with a Commentary on Metaphysics Z, H, Λ and Θ*. London: Duckworth.

Contents: Preface 7; List of Abbreviations 8; Introduction 9; Part One: 1. Life of Aristotle 13; 2. The Peripatos after Aristotle's Death 49; 3. The Emergence of New Philosophical Schools during the Fourth and Third Centuries B.C. 57; 4. The Library of the Peripatos and its History 69; Part Two: 5. The Structure of Metaphysics Z; 6. Peripatetic Ontology according to Metaphysics H 127; 7. Peripatetic Ontology according to Metaphysics Λ 143; Excursus: The Theory of the Proper Place 183; 8. A Volume on Potentiality and Actuality: Metaphysics Θ 187; Select Bibliography 213; Index of Passages Quoted in Text 219; General Index 225-230.

"This book on Aristotle and the Peripatos aims at elucidating the origin and growth of the Aristotelian treatises and it poses the question whether the treatises are the work of Aristotle himself, or of some of the outstanding members of his school."
(p. 9)

(...)

"In making this new attempt at explaining the Aristotelian contradictions I intend to analyse the structure of Metaphysics Z, H, Θ and Λ — a task greatly facilitated by W. D. Ross's commentary on Aristotle's works. The analysis, which forms the main part of this book, is preceded by an introductory section on Aristotle's life and the history of the Peripatos after Aristotle's death, and on the history of the school library, especially after the closure of the school. Both sections of the book are designed to throw light on the genesis of the treatises, which must not be read as though they had been composed in a void, but as lectures delivered before often critical audiences of students, in the consciousness of changing trends of thought."
(p. 10)

Bibliography on the Ancient Catalogue of Aristotle's Works

Studies in English: Gut-Z

1. Gutas, Dimitri. 1986. "The Spurious and the Authentic in the Arabic Lives of Aristotle." In *Pseudo-Aristotle in the Middle Ages: the Theology and Other Texts*, edited by Ryan, William Francis, Krayer, Jill and Schmitt, Charles Bernard, 15-36. London: Warburg Institute. University of London.

Reprinted as Chapter VI in D. Gutas, *Greek Philosophers in the Arabic Tradition*, Aldershot: Ashgate, 2000.

"The study of the Arabic lives of Aristotle is an old and tired subject; it can fairly lay claim to the distinction of being the first area of sustained scholarly concentration in Graeco-Arabic studies. I would not undertake an extensive treatment anew in a volume on Pseudo-Aristotle were it not for the fact that, despite considerable discussion for more than a century now, much light can still be shed on the scope and nature of this material from the vantage point of an examination of the spurious and the authentic in it, and for the rather ironic state of affairs that the secondary literature has itself generated its own share of the spurious. A review of the whole subject, then, that would list in detail the sources and remark on the ways of analysing them, remove the incrustations of outdated or misguided scholarship, and put the tasks of future research in perspective would seem to be in order.

For the purposes of the present discussion, all the Arabic biographical material on Aristotle can be conveniently categorized under the following six headings:

- 1) Reports in Arabic biographies of scholars;
- 2) Information in Arabic histories and chronographies, in so far as it does not derive from No. 1;
- 3) The story of young Aristotle, the precocious orphan, in Hunayn's *Nawâdir al-falasifa* ('Anecdotes of the Philosophers');
- 4) The story of Aristotle's death in *The Book of the Apple*;
- 5) Various scattered reports, the Aristotelian *adespota*;
- 6) The voluminous material on Aristotle in his relation with Alexander: anecdotes, stories, correspondence, the 'legend' of Aristotle.

In this paper I shall concentrate mainly on No. 1, deal very briefly with Nos. 2 to 5, and omit altogether No. 6 which, in addition to being biographical only peripherally, clearly requires a volume -- if not volumes -- of its own." (p. 15)

2. ———. 2012. "The Letter before the Spirit: Still Editing Aristotle after 2300 Years." In *The Letter before the Spirit: The Importance of Text Editions for the Study of the Reception of Aristotle*, edited by van Oppenraai, Aafke M. I., 11-36. Leiden: Brill.

Summary: "Survey of the methods and practices used to edit the texts of Aristotle from the time of Aristotle himself to the present. Special attention is paid to the significance of the translations of Aristotelian texts, in particular into Arabic, for the establishment of their critical editions, as well as to the relative value of the vet-eres and recentiores Greek codices. Attention is also paid to some of the shortcomings of modern research and the challenges it faces." (p. 11)

3. Hatzimichali, Myrto. 2013. "The Texts of Plato and Aristotle in the First Century BC." In *Aristotle, Plato and Pythagoreanism in the First Century BC*, edited by Schofield, Malcolm, 1-27. Cambridge: Cambridge University Press.

"One of the main developments that characterise first-century bc philosophy is that the detailed study of texts became an

autonomous and often central philosophical activity in its own right. For this reason, any investigation of philosophical developments during this period must address questions surrounding the circulation of written texts. In this chapter I will examine the respective fates of the texts of Plato and Aristotle, and the editorial interventions that shaped each tradition. The case of Plato, as well as further evidence on the activity of ancient scholars and editors, will then inform my proposed interpretation of developments in the textual tradition of Aristotle, where the first century bc holds particular prominence thanks to the well-known sensational stories about the rediscovery of long-lost works. The history of these texts indicates two different and separable types of activity, namely textual criticism and canon-organisation. However, the modern term 'edition' is sometimes used to describe either activity, thus making it more difficult to ascertain what it was that ancient 'editors' actually did. In fact, as Dorandi pointed out, Porphyry is probably the only 'real' ancient editor of a philosophical corpus, having dealt with both aspects of Plotinus' text.⁽¹⁾ Keeping the two activities distinct will help to clarify what happened to Aristotle's text in the first century bc and inform the eventual value judgement that this period was of paramount importance for the way in which Aristotle has been transmitted to us." (p. 1)

4. ———. 2016. "Andronicus of Rhodes and the Construction of the Aristotelian Corpus." In *Brill's Companion to the Reception of Aristotle in Antiquity*, edited by Falcon, Andrea, 81-100. Leiden: Brill.

"The present chapter will be an effort to trace some of the steps in the complicated history of the Aristotelian corpus, with particular emphasis on the role of Andronicus of Rhodes. We shall be asking what happened in the first century BC that led Strabo to speak of a rediscovery of Aristotle's writings with an

impact on Peripatetic philosophizing; and we shall also be looking for factors that could have contributed to the published dialogues' falling out of circulation. For a long time it was traditional to speak of a "Roman edition" of Aristotle, prepared by Andronicus of Rhodes, and often credited with being a canonical or standard edition. But Jonathan Barnes in his "Roman Aristotle"(2) reminded us quite emphatically that no ancient source speaks of such a respected reliable edition, nor is Andronicus held in any esteem anywhere as a textual critic. So it is important to make a distinction between two different and separable types of activity, namely textual criticism on the one hand and canon- or corpus-organization on the other. A modern edition of an author's entire oeuvre normally involves both activities, and this can lead to the term "edition" being used for either one when speaking of ancient "editors," which does not help with ascertaining what it was they actually did. In fact, as Tiziano Dorandi has shown very convincingly,(3) Porphyry is the only individual that we can safely speak of as a full-blown ancient editor of a philosophical

corpus, because we know that he dealt with both aspects of Plotinus' text, namely ordering (*διάταξις*) and correction (*διόρθωσις*) (*Life of Plotinus* 24).

As we shall see, Andronicus can only be credited with the former activity, that of canon- or corpus-organization, and in that respect he was very successful and influential indeed."(pp. 81-82)

"The starting point for this inquiry is a scholium in one of the most important pieces of evidence for the handwritten tradition of the Aristotelian corpus: *Parisinus graecus 1853* , from the tenth century.

This scholium concerns a somewhat strange opusculum by Theophrastus that was first transmitted to us within the Aristotelian corpus under the title *Metaphysics*. The scholium reveals that this opusculum was not on

the lists of Theophrastus' works drawn up by Hermippus in the Library of Alexandria in the third century B.C., or those by Andronicus two centuries later. It also reveals that Nicolaus[*], still in the first century B.C.,

identified its true author in his study of Aristotle's *Metaphysics*. The history of the transmission of this opusculum is thus closely linked to that of the Aristotelian corpus. My codicological inquiry has led me to some

new findings, not only concerning the history of the transmission of Theophrastus' *Metaphysics* , but also that of Aristotle's *Metaphysics*, and even the history of the transmission of part of the Aristotelian corpus

which includes some zoological treatises. These findings support other research on the nature and function of Theophrastus' opusculum, and confirm its particular literary status." (pp. 171-172)

6. Huby, Pamela M. 1969. "The transmission of Aristotle's writings and the places where copies of his works existed." *Classica et Mediaevalia* no. 30:241-257.

"This is an attempt to trace the history of the Aristotelian tradition, (1) mainly by means of a study of the evidence about the whereabouts of the manuscripts of his esoteric writings in ancient times. In this particular case the task is a relatively easy one, because these works are too difficult to have had a wide circulation. A few important centres of learning probably had good copies of all of them, and some works like the *Organon*, may have been much more widely known at certain periods, but most of the material that once existed must have been destroyed, and we can often say where and when such destruction is likely to have happened. We can distinguish four main centres of tradition, by which I mean places where manuscripts were kept, studied and copied over a long period — Athens, Alexandria, Rome and Constantinople. (2) Of these the Roman tradition is completely lost, except in some Latin translations; the large collection at Athens probably slowly decayed, though some manuscripts may have gone to Constantinople; the perhaps even larger collection at Alexandria was scattered, but its tradition survived in Antioch and other parts of the Arab dominions, and is probably at the base of the Arabic translations. Even in Constantinople much was lost through fire or neglect, but a certain amount survived till the revival of interest in the ninth century, when our earliest extant Greek manuscripts were made." (p. 241)

(1) The following books are frequently referred to by an abbreviated title:

Düring, ABT = I. Düring, *Aristotle in the Ancient Biographical Tradition*, (Göteborg, 1957)

Lulofs = H. J. Drossaart Lulofs, ed. & trans: *Nicolaus Damascenus, On the Philosophy of Aristotle* (Leiden, 1965).

2) Too much must not, however, be made of the idea of a separate tradition in each place. For long periods there was close contact between two or more of these centres, and men, and their private libraries, might move from one to another. But it has some value.

7. Jaeger, Werner. 1948. *Aristotle: Fundamentals of the History of His Development*. Oxford: Clarendon Press.

English translation by Richard Robinson of: *Aristoteles. Grundlegung einer Geschichte seiner Entwicklung*, Berlin: Weidemann, 1923.

"This book, being at once treatise and monograph, demands a brief word of explanation.

It does not seek to give a systematic account, but to analyse Aristotle's writings so as to discover in them the half obliterated traces of his mental progress. Its biographical framework is intended merely to make more palpable the fact that his previously undifferentiated mass of compositions falls into three distinct periods of evolution. Owing to the meagerness of the material the picture that we thus obtain is of course fragmentary, yet its outlines constitute a distinctly clearer view of Aristotle's intellectual nature and of the forces that inspired his thinking.

Primarily, this is a gain to the history of philosophical problems and origins. The author's intention is, however, not to make a contribution to systematic philosophy, but to throw light on the portion of the history of the Greek mind that is designated by the name of Aristotle." (From the Author's Preface to the German Edition)

8. Keaney, John J. 1963. "Two Notes on the Tradition of Aristotle's Writings." *American Journal of Philology* no. 84:52-63.

"In recent years, scholars have taken up anew the problem of the knowledge of Aristotle's works, most particularly his school treatises, in the period from Theophrastus to Andronicus, and the question of the sources of the catalogues of Aristotle's writings, especially of that preserved by Diogenes Laertius (V, 22-7). The names of Paul Moraux and Ingemar Düring have been prominent in this activity.(1) In the present paper, I propose to deal with two of the many points raised by these scholars." (p. 52)

transmission of Aristotle's writings," *Goteborgs Hogskolas Araskrift*, LVI (1950), pp. 35-70.

9. Lindsay, Hugh. 1997. "Strabo on Apellicon's Library." *Rheinische Museum* no. 140:290-298.

"A remarkable tale, full of fabulous elements, appears in Strabo's *Geography* in the course of his discussion of notable figures from Scepsis (2). It relates to the history of the text of the *Corpus Aristotelicum*. The passage has been taken to contain an important discussion of the chain of events surrounding the fate of Aristotle's personal library between the time of Aristotle and Cicero. It certainly purports to deal with this topic, but there are good reasons for believing that it exaggerates the extent to which Aristotelian texts were unavailable in the interim (3). This has frequently been noticed, but in this paper I shall suggest that Strabo had motives related to his own career for wishing to add to the mystique over the history of Aristotle's text, and for dismissing the value of earlier editions of Aristotle. It may be that Apellicon before him had started the process of making excessive claims over the importance of the documents that passed through his hands." (pp. 290-291)

(2) Strabo 13.1.54 p.608-9. For a summary of the vast literature on this passage see H. B. Gottschalk, *Notes on the Wills of the Peripatetic Scholars*, *Hermes* 100 (1972) 335 n. 2, and further in "Aristotelian philosophy in the Roman world from the time of Cicero to the end of the second century AD", ANRW II.36.2, 1079-1174, partially reprinted as "The earliest Aristotelian commentators", in: *Aristotle Transformed: The ancient commentators and their influence*, ed. R. Sorabji (London 1990) 55-81 (henceforth Gottschalk 1990).

10. Lord, Carnes. 1986. "On the Early History of the Aristotelian Corpus." *American Journal of Philology* no. 107:137-161.

"The manner in which the collection of Aristotelian writings now extant was originally constituted remains very much a mystery. The curious and in many respects implausible story of the disappearance and subsequent recovery of the library of Theophrastus is the best known element in this puzzle. But the most detailed evidence concerning the early condition of the Aristotelian corpus is that provided by three lists of books ascribed to Aristotle which have been preserved in ancient biographies of him. These catalogues are the chief source of external evidence touching on both the condition of Aristotle's writings in the period immediately following his death and the alterations they appear to have undergone in the edition of Aristotelian works prepared by Andronicus of Rhodes in the first century B.C. Because of the many problematic features of the catalogues, their evidence has often been ignored or dismissed, or used only in selective and unsystematic fashion.

The extensive studies devoted to the catalogues in recent years by Paul Moraux and Ingemar Düring have rectified this situation to some degree, and have secured general agreement as to their authority and importance.⁽¹⁾ At the same time, however, the problem of the catalogues, and of the early history of the Aristotelian corpus as a whole, can hardly be said to have been satisfactorily resolved. Disagreements persist over such questions as the identity of the original source of the earliest catalogues and the circumstances and precise nature of Andronicus' editorial activity. Moreover, even when liberal recourse is had to textual emendation, no fully convincing account has yet been given of the exact relationship of the three catalogues to one another, to the edition of Andronicus, and to the corpus as presently constituted.⁽²⁾ In the state of our knowledge, many uncertainties must remain concerning matters such as the status of book titles and the meaning of the numbering of books of larger treatises. Still, it has to be acknowledged that much information in the lists appears to be transmitted with great fidelity, and under these circumstances it seems legitimate to wonder whether there are not alternative hypotheses concerning the catalogues which remain to be explored.

In what follows, an attempt will be made to establish the plausibility of such a hypothesis and to examine some of its implications with respect to the composition and early history of Aristotle's writings." (pp. 137-138).

11. Lynch, John Patrick. 1972. *Aristotle's School: A Study of a Greek Educational Institution*. Berkeley: University of California Press.

See Chapter V. *The Athenian Peripatos and Its Decline Among the Successors of Aristotle and Theophrastus*, in particular pp. 146-154.

"The research presented here does not make great claims for its utility in understanding Greek philosophy as a speculative phenomenon. Pure philosophers will not find in these pages much even about the educational theory of Aristotle and his successors. My inquiry originates from a concern with what Aristotle and other Greek philosophers actually did as teachers, not what they said should be done. Such a concern is, I believe, both proper and desirable. For Greek philosophy as it developed in the Athenian schools of the fourth century B.C. was more than a general name for various kinds of theories and systems, and that "more" — philosophia as higher education among the Greeks — can be legitimately isolated and subjected to analysis on its own. Much confusion results from not clearly distinguishing between theory and practice. Histories of ancient education almost always conflate the two with misleading results, and interpretations of Greek philosophical texts often lapse into concrete formulations such as "Plato's University," "Scholarch of the Stoa," or "chair in the Peripatos" without considering concrete facts which such language implies.

To those scholars who are interested in ancient educational practice and the external history of the Athenian philosophical schools, the modifications in traditional views which have been suggested above may seem too drastic. Because of the vastness of the area concerned, this may well prove in some measure to be the case. But if these six chapters serve to stimulate some debate in a virtually unexplored field, the purpose of this investigation will be fulfilled." (pp. 7-8)

12. McAdon, Brad. 2006. "Strabo, Plutarch, Porphyry and the Transmission and Composition of Aristotle's *Rhetoric*—a Hunch." *Rhetoric Society Quarterly* no. 36:77-105.

Abstract: "Scholars who have been writing recently about the unity and composition of Aristotle's *Rhetoric* make either brief or no mention of the transmission and editorial history of Aristotle's texts. This essay addresses this void by first presenting and discussing Strabo's, Plutarch's, and Porphyry's accounts of the transmission and editorial history of Aristotle's and Theophrastus' texts in conjunction with discussing the list of works that Diogenes Laertius ascribes to both authors. Once the transmission and editorial history is considered, evidence is presented from the *Rhetoric* that may indicate two important points—the extent to which the text is a compilation of previously independent texts that were ascribed to both Aristotle and Theophrastus and that Andronicus, rather than Aristotle, may be responsible for the text as we have it."

13. Menn, Stephen. 1995. "The Editors of the *Metaphysics* ." *Phronesis. A Journal for Ancient Philosophy* no. 40:202-208.

"Christopher Kirwan writes as follows in his introductory note to *Metaphysics* Γ:

We are told that the fourteen books of *Metaphysics* were brought into their present arrangement by editors after Aristotle's death."(1)

(...)

"To conclude: we have not been "told," as Kirwan says we have, that editors after Aristotle's death brought the fourteen books of the *Metaphysics* into their present arrangement. We have

been told that the editors received from Aristotle fourteen books of *Metaphysics* in their current order (except possibly for α or A), and that, perhaps to repair some damage, they made local changes which did not affect the overall structure (although we might consider it a major change if the original K has been completely replaced).

Apart from the possibly correct general tradition that the present text comes from the school of Eudemus, those who "tell" us about the history of the text know no more than what we know, namely, that there are doublets, and that sometimes we have difficulty construing the argument. Of course, we may very well conclude that the order of the text as we have it fails in some major way to reflect Aristotle's intentions; we might even conclude that we have before us fourteen independent treatises on metaphysical topics; but we cannot draw such conclusions from authority. We can only draw them if, after serious effort, we are unable to make sense of the text as we have it.

Kirwan may possibly be right that *Metaphysics* Γ "announces its subjectmatter in the first chapter" and that it and later books of the *Metaphysics* proceed to explore the science first defined there, "hardly more dependent on what has preceded than on other parts of Aristotle's works," rather than specifying further the science of first principles described in $A\alpha B$ and resolving problems in that science; but the claim cannot be allowed to pass without argument." (p. 208)

(1) *Aristotle's Metaphysics, Books Γ , Δ , and E* , translated with notes by Christopher Kirwan (Oxford, 1971), p.75. The second edition (Oxford, 1993) reproduces the original edition with new supplementary material. The passage here cited is not modified by anything added in the second edition.

14. Natali, Carlo. 2013. *Aristotle: His Life and School*. Princeton: Princeton University Press.

Translated and edited by D.S. Hutchinson from Italian *Bios theoretikos. La vita di Aristotele e l'organizzazione della sua scuola*, Bologna: Il Mulino, 1991.

"In my view, the interest to be taken in an investigation into the biography of Aristotle, as with the biography of Plato or of other figures of the ancient world, lies principally in the paradigmatic value of their intellectual experience. With Aristotle, in my view, a new cultural type was born, a model of the wise man different from that of his predecessors, and especially different from the sages who have been called the "Presocratics"; and a new style of philosophical reflection was worked out, the impact of which on European culture in all the centuries that followed would be very difficult to overestimate. What I am interested in doing here is to reconstruct as well as possible the historical features of this new intellectual figure, and to determine its specific characteristics.

In the reconstruction of these historical events I shall not concern myself directly with the content of Aristotle's thought; its birth and its development will be understood in a more global context, by means of a comparison with the philosophical discussions of the school of Plato and the influences of other cultural currents of his time. In this sense my research is lacking and insufficient, but it is impossible to proceed otherwise, given the enormous difficulty and the great complexity of this material.

(...)

In the first three chapters of the present work I have started off by going back to the ancient sources, rather than the scholarly status quaestionis; and I have instead devoted the whole of chapter 4 of the present study to a delineation of the panorama of biographic research on Aristotle from the time of Zeller to the present. In the first three chapters I have not failed to keep in mind the results of the critical debate, at least of most of it, but I have undertaken first and foremost to re-read the texts, and have attempted to reconstruct a coherent picture of the life and of the intellectual personality of the philosopher by making use of the most reliable facts or, if not those, of the least uncertain ones. In order to give my readers some tools with which to check up on what I am going to be saying, I thought it a good idea to provide for them, in

my own Italian translation, most of the data and most of the texts upon which I base my reconstruction." (pp. 3-4)

15. Pajón Leyra, Irene. 2013. "The Aristotelian Corpus and the Rhodian Tradition: New Light from Posidonius on the Transmission of Aristotle's Works." *Classical Quarterly* no. 63:723-733.

"There are clear pieces of evidence (6) that point, if not to a broad circulation of the Corpus' treatises, at least to the existence of copies of several Aristotelian works, preserved in the various culture centres of the Hellenistic period associated with the Peripatos. Though it is most unlikely that the works of Aristotle and Theophrastus were at that time widely known and available, the idea that they were preserved in single copies can hardly be sustained, so that the problem now is not to determine if there was a total loss of the Corpus, but when and where the different treatises were known, and what their relation is to the version of the Corpus that we know today.

In this context, the preserved fragments of the works of the Stoic philosopher Posidonius of Apamea might offer useful information. The aim of this paper is, then, to examine how they demonstrate that the author had access to some Aristotelian treatises during the time when they were supposed to be lost, and how Posidonius' reading of Aristotle can shed light on the tradition of Peripatetic studies developed in Rhodes, and on its role in developing the final version of the Aristotelian *Corpus* as we know it today." (pp. 724-725)

(6) Particularly important is the information provided by Philodemus and Simplicius. See Phld. *Cont.: P.Herc. 1005*, fr. 111 Angeli; W. Crönert, *Kolotes und Menedemos. Texte und Untersuchungen zur Philosophen und Literaturgeschichte* (Amsterdam, 1965 = 1874), 174, on the existence of copies of the Aristotelian *Analytics* and *Physics*. See F. Grayeff, *Aristotle and his School. An Inquiry into the History of the Peripatos. With a Commentary on Metaphysics Z, H, A and Θ* (London, 1974), 70 n. 2. Simpl. *In Phys.* 923.9 ff., on the letters exchanged between Theophrastus and Eudemus, regarding a mistake of the scribe on the copy of the *Physics* available in

Rhodes. See Zeller, *Die Philosophie der Griechen in ihrer geschichtlichen Entwicklung, Zweiter Teil, zweite Abteilung: Aristoteles und die alten Peripatetiker* (Hildesheim, 1963 = 1921 4th edition = 1878) 149 n. 2; J. E. Sandys, *A History of Classical Scholarship. Vol. 1: from the Sixth Century B. C. to the End of the Middle Ages* (Cambridge, 1921), 85.

16. Perkams, Matthias. 2019. "The Date and Place of Andronicus' Edition of Aristotle's Works According to a Neglected Arabic Source." *Archiv für Geschichte der Philosophie* no. 101:445-468.

Abstract: "This paper presents and discusses the notice on the life and work of Andronicus of Rhodes by the famous Arabic philosopher Abū Naṣr al-Fārābī, which has been transmitted by the historian of medicine Ibn Abī 'Uṣaibi' a. This text, which has never been discussed by modern scholarship on Andronicus, is our only direct source on the life, the time and the place of Andronicus' famous edition of Aristotle. The paper argues that the informations in this passage must stem from a rather well informed Greek source, which presented an alternative and more complete account than the informations we have from Plutarch.

We learn that Andronicus taught Aristotelian philosophy in Alexandria before 30 B.C. and based his editorial work on old Aristotelian manuscripts from the library there. After that date, he accompanied Augustus to Rome where he may have completed his edition. Thus, the late dating of Andronicus' edition is confirmed by an independent source."

17. Plezia, Marian. 1961. "Supplementary Remarks on Aristotle in the Ancient Biographical Tradition." *Eos.Commentarii Societatis Philologae Polonorum* no. 51:241-249.

"Ingemar Düring's excellent book *Aristotle in the Ancient Biographical Tradition* (Göteborg 1957) represents an important step forward in the development of research on Aristotle, in so far it manages to present an almost complete collection of biographical material available to us and relating to the philosopher of Stagira, not only in the form of his proper biographies in Greek, Latin, Syrian and Arabic, but also in the

shape of a rich collection of loose references to him (some taken from valuable sources) which can be found scattered in the whole of the ancient and parts of medieval literature. At the end of the book the author makes an attempt to draw some conclusions, of a broadest nature, from the collected texts, which are all very clearly annotated.

However, like all human works, Düring's valuable book shows some shortcomings and defects, which are unavoidable at such first attempts; we thought it therefore both necessary and useful to present here a handful of supplementary remarks, based on our research on the same subject, carried out between the years 1943 to 1957, in the belief, that they may prove useful to those interested in Aristotle's biography and how it took shape in the course of centuries. Our remarks are divided, in conformity with the way Düring handles his material, into three parts: (a) those dealing with full biographies of the philosopher of Stagira; (b) those dealing with loose references to him, contained in sources pertaining to various epochs; and finally (c) certain amendments relating to the question of how the ancient tradition about Aristotle has developed." (p. 241)

18. Richardson, Nicholas J. 1994. "Aristotle and Hellenistic Scholarship." In *La philologie grecque à l'époque hellénistique et romaine. Sept exposés suivis de discussions*, edited by Montanari, Franco, 7-28. Genève: Fondation Hardt.

Followed by a discussion, pp. 29-38).

"Modern scholars have on the whole viewed Strabo's story with scepticism(3). The serious question is not so much what became of the books which Neleus inherited, but rather whether other copies of Aristotle's esoteric works were available, and if so to what extent. It is generally believed that the catalogue of Aristotle's writings preserved by Diogenes Laertius (V 22-7) dates from the Hellenistic period, and this includes many (but not all) of the esoteric works, arranged in a way which suggests the work of a member of the Peripatos. Moraux argued that this may have been done by Ariston of Ceos in the third quarter of the third century B.C., whereas Düring and others have ascribed it to Callimachus' pupil

Hermippus of Smyrna(4). In a more recent work Moraux concluded, after a careful review of the evidence, that some at least of the esoteric texts were available and used during the Hellenistic period, but that they were probably not in general circulation(5). As we shall see, there is indeed evidence to suggest that this is correct, although much of it relates to the documentary and antiquarian areas of Aristotle's scholarship (where, moreover, his work shades most naturally into that of his followers). The situation becomes a good deal less clear when we turn to such a key text for literary studies as the *Poetics*. " (pp. 11-12)

3 Cf. H.B. Gottschalk *ANRW* !I 36, 2, 1083 ff. and *Hermes* 100 (1972), 335-42; P. Moraux, *Der Aristotelismus bei den Griechen* I (Berlin 1973), 3-31. But see [*Les éditions de textes*] pp. 51 f. below, where J. Irigoin argues for its truth, and suggests that what Athenaeus refers to could be the purchase by Philadelphus of the "bibliothèque de documentation réunie par Aristote et Th6ophraste", whereas the esoteric works, i.e. the papers and notes of Aristotle's own lectures, were kept in Scepsis.

4 Cf. P. Moraux, *Les listes anciennes des ouvrages d'Aristote* (Louvain 1951), especially 243 f.; 1. Düring, in *Classica et Medievalia* 17 (1956), 11-21. For a review of other opinions cf. P. Moraux, *Der Aristotelismus bei den Griechen* I (Berlin 1973), 4 n. 2.

Lord, in *AJP* 107 (1986), 137-61; L. Canfora, *The Vanished Library: a Wonder of the Ancient World*, transl. M. Ryle (Berkeley and Los Angeles 1990), 173-82; R. Janko, in *Cronache Ercolanesi* 21 (1991), 7.

19. Rist, John M. 1964. "Demetrius the Stylist and Artemon the Compiler." *Phoenix* no. 18:2-8.

"The appearance of G. M. A. Grube's book (1) on Demetrius the Stylist has revived interest in the date of his work. Grube dates it at about 270 B.C. whereas G. P. Goold holds (2) that it was written in the Augustan Age. Such a discrepancy is disturbing; two hundred and fifty to three hundred years is a wide margin of error. This note therefore is intended to reduce the gap by an investigation of the Artemon who is described by Demetrius (223) as the editor of Aristotle's Letters. It seems that some progress may be possible here, although the matter has been quickly passed over by both Grube (3) and Goold. (4) More in fact can be discovered about the date of Artemon than either of these scholars has indicated. To attain such knowledge, it is necessary to examine the traditional accounts of the contents of the Aristotelian corpus." (p. 2)

(2) G. P. Goold, "A Greek Professorial Circle at Rome," *TAPA* 92 (1961) 168-192.

(3) Grube (note 1), who on p. 111 writes that nothing is known of the Artemon who edited Aristotle's letters, mentions on p. 42 the suggestion of H. Koskenniemi, "Studien zur Idee und Phraseologie des griechischen Briefes," *Annales Academiae Scientiarum Fennicae* B.102 (Helsinki 1956), that the Artemon mentioned by Demetrius may have been a contemporary of Theophrastus.

(4) Goold (note 2) 181.

20. Searby, Denis Michael. 1998. *Aristotle in the Greek Gnomological Tradition*. Uppsala: Acta Universitatis Upsaliensis.

Dissertation for the Degree of Doctor of Philosophy in Classical Languages presented at Uppsala University 1998.

Abstract: "This dissertation consists of a new collection of maxims and apophthegms associated with Aristotle in the Greek gnomologies along with an introduction to the sources and a commentary on the content of the sayings. The major sources have been Diogenes Laertius, the anthology of

Stobaeus, *Gnomologium Vaticanum* and related collections, cod. Par. gr. 1168 (*Corpus Parisinum*) and cod. Bodl. Digby 6, the *Loci Communes of ps.-Maximus the Confessor* and related anthologies, the *Florilegium Atheniense*, and the gnomology of Joannes Georgides. The introductory chapters concern the definition and history of the gnomological tradition, the investigation of the extant sources, the problem of multiple attributions, possible explanations for the title *The Chreiae of Aristotle* found in Stobaeus, and the different ways Aristotle makes his appearance in the tradition. The collection of sayings is based on Greek sources alone, but frequent references are made to the Latin and Arabic traditions, and Appendices I and IV offer a sampling of the material to be found in these traditions. Appendix VI shows the sources of the so-called *Gnomologium Parisinum Ineditum*. The commentary dwells primarily on the attribution to Aristotle and the possible Aristotelian content of the sayings while at the same time relating the sayings to the gnomological tradition as a whole."

"A familiar and once popular account of the revival of interest in Aristotle's esoteric works runs as follows. Ancient tradition tells us that Andronicus of Rhodes produced a standard edition of Aristotle's esoteric works in the first century BC. Even if we do not have to believe - and would be very unwise to believe - the story that these works were completely inaccessible in the preceding, Hellenistic period because the only surviving copies were buried in a ditch in Asia Minor, it is clear that Andronicus' edition marked a turning-point; he himself wrote commentaries on the works, his pupil Boethus did so too, and from that day onwards philosophy, inspired by the attempt to understand Aristotle's treatises, has never looked back.

The part of that account which is most securely established is in fact the last. Andronicus did indeed have a major influence on the whole subsequent course of philosophy. Whatever exactly

Andronicus' role was in the ordering of the Aristotelian texts and in establishing an order in which they should be studied, it is with him that the series of commentaries on the *Categories* starts. Because of its place in the curriculum the *Categories* was a major concern of commentators subsequently, and it thus formed an early part of Boethius' project to translate Aristotle's works into Latin and provide commentaries on them. Consequently the early Western Middle Ages found their philosophizing influenced by the preoccupations of the *Categories* and the commentaries on them, such as the problem of universals. While what is new and distinctive about post-Hellenistic philosophy may well be the contribution of revived dogmatic Platonism, a case might be made for the decisive influence of Andronicus on what eventually replaced that post-Hellenistic philosophy - though I do not want to suggest that the influence of both Plato and Aristotle was not present throughout, in varying degrees at different times.

What is less clear is how else Andronicus really contributed to the 'Aristotelian revival'. There has long been a problem over dating Andronicus and his so-called edition, for Cicero shows no awareness of or interest in either, even though he refers quite often to Aristotle and his followers, and was aware of some of the esoteric works. Jonathan Barnes has shown that later commentators on Aristotle never refer to Andronicus as settling disputed textual questions, or even cite his reading of the text as a particularly authoritative one, and has pointed out that if the earlier editions referred to by Strabo were based on defective manuscripts, it is at least quite unclear where Andronicus could have got better ones from.(8)" (pp. 505-506. some notes omitted)

"General Summary.

I have in this essay attempted to prove, first, that of the great bulk of the Aristotelian works as we now have them, there was no kind of publication during the lifetime of the master, nor probably for a considerable period after his death. Secondly, that as to this portion of the Aristotelian whole, we cannot assert with certainty that we have ever got throughout a treatise in the exact words of Aristotle, though we may be pretty clear that we have a fair representation of his thought. The unity of style observable may belong quite as well to the school and the method as to the individual. We have certainly got a most precious Aristotelian literature ; we have not certainly got Aristotle in the strongest and most literal sense. Thirdly, I have tried to prove that the works which are preserved to us come chiefly, if not entirely, from the tradition of Andronicus, and stand in no very definite relation to the list of Diogenes, and consequently we have a very considerable proportion, and not a merely insignificant fraction of the reputed works of Aristotle known to Latin antiquity. Fourthly, I have laid down that the majority of the titles, and probably all the definite references, are post-Aristotelian, and that therefore no safe argument can be drawn from the latter as to the authenticity or original order of the Aristotelian works, though other very valuable inferences as to the subsequent history of these works result from their careful consideration. Fifthly, I have attempted to trace the double texts and repeated passages each to several original sources, and not to a single point of origin. I have applied the doctrines arrived at to the consideration of those Aristotelian treatises which have given rise to most controversy, and seem to myself to have found some solutions at least, through the method I have followed. Incidentally I have been led to

investigate the question of another class of works which bear Aristotle's name, of which we can say with certainty that the portions which we have of them are precisely as the final author wrote them; but cannot with equal certainty assert that that author was Aristotle. We can safely assume, however, that these works, and works like these, were those best known to our earliest authorities on the subject, Cicero and his predecessors, and that on them all the praise of Aristotle's style is founded.

If there be any value in these conclusions, the practical lesson to be drawn from them will be, that the present duty of scholarship is to determine as far as possible the course of the Aristotelian argument, by bracketing superfluous and repeated passages. In some cases there will be internal or external evidence for bracketing the one of two passages rather than the other. In other cases, and I believe they will be the majority, there will be no trustworthy evidence which shall lead us to reject one of such passages more than the other. We shall not follow such assumptions as that of Torstrik in the *De Anima*, that the former of two like passages is always the preferable; nor shall we rashly assume that the one is more strictly Aristotelian than the other. When we have pointed out such reduplications to the student we shall leave him to choose which of them he prefers, showing him only that both cannot be wanted in the text. If we bracket at all, it will not be that we assert the one passage rather than the other to be spurious (except in those rare cases where we have definite proof). It will merely be in order that he may see what is the general line and connection of the argument. We shall be cautious in many cases in assuming even reduplication; for an author or lecturer may deliberately repeat himself. But this caution will not be necessary in the case of repeated and almost identical passages which follow immediately after each other.

In a word, we shall try to get as near as we can to the earliest form of the teachings of the master, but shall not vainly and pedantically hope to restore his actual words; nor shall we rashly reject this or that passage or phrase as being clearly un-Aristotelian, since we shall know well that the Aristotle we have can in no case be freed from the suspicion (or rather almost

certainty) of filtration through other minds, and expression through other voices. Criticism of Aristotle must in truth always be of thought rather than of phrase, of sentence rather than of word." (pp. 176-177).

23. Sollenberger, Michael George. 1992. "The Lives of the Peripatetics: an analysis of the contents and structure of Diogenes Laertius' *Vitae philosophorum* Book 5." In *Aufstieg und Niedergang der römischen Welt, vol. 36: Philosophie, Wissenschaften, Technik. 6. Teilband: Philosophie (Doxographica [Forts.]*), edited by Haase, Wolfgang, 3793-3879. Berlin: Walter de Gruyter.

On the Catalogue of Aristotles' writings see § 2. Writings pp. 3849-3855.

"Accounts of the lives of six early Peripatetic philosophers are contained in the fifth book of Diogenes Laertius' 'Vitae philosophorum': the lives of the first four leaders of the sect -- Aristotle, Theophrastus, Strato, and Lyco -- and those of two outstanding members -- Demetrius of Phalerum and Heraclides of Pontus. Our knowledge of the history of two rival schools, the Academy and the Stoa, is aided not only by the lives of several members of these two schools in Books Four and Seven of Diogenes' work, but also by accounts in the 'Index Academicorum' and the 'Index Stoicorum' which have been preserved for us among the several papyri from Herculaneum. (1) But for the Peripatos there is no such second source of information. There are, to be sure, numerous bits and pieces of evidence which concern the school and its members scattered throughout ancient and medieval literature, many of which have been made readily accessible by F. Wehrli in his well-known series 'Die Schule des Aristoteles'. (2) Moreover, in addition to Diogenes' version, several other lives of Aristotle have come down to us and have been collected and analyzed in detail by I. Düring in his 'Aristotle in the Ancient Biographical Tradition'. (3) But for the lives and careers of other Peripatetics, Diogenes' accounts are the only ones available to us.

All of the many aspects of these six lives cannot be discussed here with comprehensive thoroughness. Rather, relying on the

studies and findings of past scholars, sometimes heavily, I shall offer a compilation of those findings in a systematic manner. Although oversimplification is inevitable in view of the many complex problems encountered in these lives, consideration will be given to general matters of content, structure, organization, and arrangement of material in Book Five as a whole, to the different categories of information in the individual lives, and to the two most striking features of this book which set it apart from other books: the wills of the first four scholars and the extensive catalogues of writings included by Diogenes for five of the six philosophers." Translated from Greek by Alexandra Dumas.

"The Library of Aristotle follows the adventures of Aristotle's book collection down to the edition of the corpus aristotelicum by Andronicus of Rhodes in the first century CE. Aristotle started to collect books in order to form his personal library even before he became a member of the Academy and a pupil of Plato (367 BCE). The kernel of his collection consisted in the texts of his father Nicomachus and medical treatises which the latter, who was physician to Amyntas III of Macedonia, probably had in his possession. Aristotle's own writings, the exoteric together with the didactic, cover 106 cylinders. In order to comment on the whole of the cultural tradition, he also collected all written texts accessible to him at the time: treatises on physics, philosophy, poetry, rhetoric, theory of government and politics, cosmogony, the diatribes of the sophists and all the works of Plato and the members of the Academy. His knowledge of the written tradition is evident from the numerous citations he uses in his texts and his critical comments on the works of other authors. There are three discernible periods in Aristotle's writing, which correspond to the three stages in his life in which he made major additions to his library: the period of the Academy (c. 367-347), the period of his self-imposed exile to Assus, Lesbos and Macedonia (c. 347 - 335) and the time when he taught at the Lyceum of Athens (c. 335-322). His library, comprised of all these books, came to form part of the Lyceum library, and remained intact until Theophrastus's death." (Publisher's website)

"Some of the most puzzling issues surrounding the Alexandria Library involve the source and content of the Library's holdings of Aristotle's works. The history of these works bears a close and intriguing relationship to the history of the library. The argument of this paper is that there are two sources for the transmission of Aristotle's work from the ancient to modern world. The first - what we may call the traditional view - holds that Aristotle's corpus was inherited entirely by Theophrastus,

and subsequently buried, sold, and edited in Rome. Thence, in Roman times, copies made their way to the library. The second, the more controversial, but possibly more interesting view, argues that there is a collection of Aristotle's works which was derived from the works prepared at Mieza for the education of Alexander; and that these were either given by Alexander to Alexandria, or were subsequently stolen for the library by Ptolemy Soter.

These two, parallel accounts, present us with Aristotle's thought at two different stages in its chronological development. One phase we can describe as the 'educational stage', dealing with works intended for the education of Alexander, and embracing Aristotle's four so-called 'non-scientific' works on poetry, ethics, politics and rhetoric; the other can be described in terms of Aristotle's larger philosophical corpus." (p. 79)

26. Tarán, Leonardo. 1981. "Aristotelianism in the First Century B.C." *Gnomon* no. 53:721-750.

Review-article of Paul Moraux, *Der Aristotelismus bei den Griechen, Von Andronikos bis Alexander von Aphrodisias*. Vol. I: *Die Renaissance des Aristotelismus im I. Jh.v. Chr.* (1973).

Reprinted in: L. Tarán, *Collected papers (1962-1999)*, Leiden: Brill, 2001 pp. 479-524; on the Aristotelian Corpus see in particular pp. 481-511.

"This is the first volume of a work which will comprise three.

In that work Moraux proposes to study the history of the Aristotelian tradition from Andronicus of Rhodes (first cent. B.C.) to Alexander of Aphrodisias (latter part of the second cent. A.D.). The book under review covers the first cent. B.C. It contains five parts: The first is devoted to the fate of Aristotle's scholarly treatises up to and including Andronicus' edition and catalogue. The second deals with the earliest Aristotelian commentators, Andronicus himself the Peripatetic Boethus of Sidon, and Ariston of Alexandria.

The third is concerned with Xenarchus of Seleuceia, a Peripatetic who criticized some of Aristotle's central doctrines.

The fourth discusses Staseas of Naples and Cratippus of Pergamum, two authors M. characterizes as offshoots of Hellenistic Aristotelianism. The fifth and final part is devoted to complete expositions and summaries of Aristotelian and/or Peripatetic philosophy. The two authors discussed are Arius Didymus and Nicolaus of Damascus.

The main purpose of M.'s work is to investigate that part of Aristotelian tradition whose main concern was the study and interpretation of Aristotle's works and doctrines especially of his scholarly treatises. Therefore his decision to include both authors who perhaps cannot be regarded as "orthodox" peripatetics, e.g. Xenarchus, and Stoics such as Arius Didymus seems to be justified." (p. 479 of the reprint)

(...)

"The three chapters making up the first part of the book (1. Das Schicksal der Bibliothek des Aristoteles"; 2. Tyrannion von Amisos"; 3. "Andronikos von Rhodos") are devoted to the fate of Aristotle's scholarly treatises after his death up to the time of Andronicus' edition and catalogue. As M. himself indicates, the subject requires that three investigations be undertaken: (i) A critical assessment and evaluation of the ancient notices and anecdotes concerning the fate of Aristotle's scholarly treatises during the period in question; (ii). A study of the ancient lists of Aristotle's writings, of their origins and contents; (iii) An analysis of the philosophical and scientific literature of the first two hundred and fifty years after Aristotle's death in order to determine whether or not there is evidence of direct acquaintance with Aristotle's scholarly treatises on the part of Hellenistic philosophers. One must therefore regret that the author decided to limit his discussion to the first topic only. It is of course well known that M. himself has published an important monograph on the ancient lists of Aristotle's writings.(4) But the results of that work are scarcely used at all in the book under review. Doubtless, however, a systematic exploitation of the catalogues of Aristotle's works in Diogenes Laertius and in the so-called Vita Hesychii (M. himself and others have shown they go back to the early part of the

Hellenistic age) combined with an analysis of later quotations, paraphrases from, and references to, Aristotle's treatises and doctrines would have yielded important results." (pp. 481-482)

(4) Cfr. P. Moraux, *Les listes anciennes des ouvrages d'Aristote*, (Louvain, 1951)

27. Tarán, Leonardo, and Gutas, Dimitri, eds. 2012. *Aristotle Poetics. Editio Maior of the Greek Text with Historical Introductions and Philological Commentaries*. Leiden: Brill.

See the *Introduction* by Leonard Tarán: Chapter One, *History of the Text of the Poetics*: 1. *The Poetics and Its Place among Aristotle's Works. The Availability of Aristotle's Scholarly Treatises during His Lifetime and those of Theophrastus and Eudemus*, pp. 11-25; 2. *From the Deaths of Theophrastus and Eudemus until the End of the First Century CE*, pp. 25-31; 3. *From the Second Century CE to the Poetics' Archetype* pp. 32-35.

"The extant evidence to determine what kinds of works Aristotle wrote is: 1) References and cross-references found in Aristotle's scholarly treatises; 2) Ancient lists of his writings; 3) Fragmentary remains of his lost works; 4) References by later authors to the kind of works Aristotle was supposed to have written. Discussion of the last two topics need not concern us here.

Let us begin with the three ancient lists of Aristotle's writings: that in Diogenes Laertius V, 21–27, which is part of his life of Aristotle; the catalogue extant in the *Vita Hesychii*; and the list extant in the life of Aristotle by a certain Ptolemy, most probably a Neoplatonist, whose biography exists in Arabic translation." (p. 14, a note omitted)

(...)

"These three lists present to the modern interpreter difficult problems which more often than not cannot be solved with reasonable certainty.

The earliest list is preserved by Diogenes Laertius. It has been claimed that it goes back to Ariston of Ceos (Moraux), who

succeeded Lyco, ca. 225 bce, as head of the Peripatos, or to Hermippus of Smyrna, called "the Callimachean" (so Düring, and many other scholars before and after him). Though we need not decide this issue here, I believe the latter opinion to be right. Therefore, the likelihood is that the list in Diogenes Laertius reproduces the record of some library; in any case, it was most probably drawn up during the third century bce. There is evidence that Diogenes himself had access to Aristotle's scholarly treatises in an edition different from the one which the list exhibits. In Diogenes' list we find no evidence of the later arrangement of the Aristotelian corpus generally ascribed to Andronicus of Rhodes (first century bce); for example, there is in it no separate work called "Metaphysics," though we do recognize a few individual treatises, some of which were later rearranged by Andronicus or someone else. In short, whereas Diogenes is to be dated in all probability to the third century ce, the list of Aristotle's writings he has preserved goes back to the third century bce." (p. 15, notes omitted)

28. Verdenius, Willen Jacob. 1985. "The nature of Aristotle's scholarly writings." In *Aristoteles. Werk und Wirkung: Paul Moraux Gewidmet. Erster Band: Aristoteles und seine Schule*, edited by Wiesner, Jürgen, 12-21. Berlin: de Gruyter.

"It is commonly held that Aristotle's scholarly writings were not meant for publication but served the internal purposes of his school. (p. 12)

(...)

"It is true that the writings sometimes show a way of expression which is remarkably full and even circumstantial. On the other hand, many passages of crucial importance are so condensed and elliptical that students who had missed the lectures would hardly have understood the notes. In addition Aristotle's accuracy leaves much to be desired: his writings are full of contradictions and obscurities. We cannot but conclude that during his lectures Aristotle did not simply read his text but added a considerable amount of oral expansion and explanation. It may further be assumed that he continually rewrote and amplified his notes, but the unity of style is so

manifest that a multiple authorship is out of the question. The editors of his writings may have modified the arrangement of the notes, but they seem to have been scrupulous in preserving the master's own words. There are interpolations and alterations, but these have an incidental character and are comparatively easy to detect. The unity of style also shows that the text is not based on notes taken by students. Besides, they were hardly able to take notes, for Aristotle seems to have been walking up and down when he lectured to his students.

There remains a problem to which not much attention has been paid, viz. the coexistence of a literary and a non-literary style in Aristotle's writings." (p. 14-15, notes omitted)

"Diogène n'a pas lu lui-même les ouvrages du Stagirite. Dieu sait par combien d'intermédiaires son information lui est parvenue!

S'il est difficile de mettre un nom sur les sources du compilateur, peut-être une critique sagace pourra-t-elle en déterminer l'époque, les tendances, la valeur.

La question des sources revêt d'ailleurs ici un intérêt tout particulier. Strabon et Plutarque rapportent une étrange histoire sur les traités aristotéliens: la bibliothèque d'Aristote passa, par héritage, à Théophraste, puis à Nélée; les successeurs de Nélée, gens ignorants, enfouirent ce legs dans une cave, à Skepsis, pour le dissimuler à l'ardeur bibliophile des Attales; les précieux ouvrages n'en sortirent, gâtés par les vers et l'humidité, que deux siècles plus tard, dans la première moitié du premier siècle avant J. C. et c'est vers le milieu du même siècle qu'ils commencèrent à circuler dans le monde savant (1).

Le déclin du Lycée après Straton doit, selon nos deux auteurs, s'expliquer par là: ne possédant plus les ouvrages techniques d'Aristote, les péripatéticiens furent incapables de philosopher sérieusement. En fait, il semble bien que le Lycée et les autres écoles n'aient, entre 250 et 50, connu, ou, du moins, utilisé que les écrits exotériques d'Aristote, ceux que leur style et leur contenu rendaient plus accessibles à un public moyennement cultivé, les dialogues. Même si l'on n'ajoute qu'une foi médiocre à l'histoire rapportée plus haut, il reste que cette histoire veut expliquer un fait, l'abandon quasi complet des ouvrages scolaires d'Aristote pendant deux siècles: les traités qui nous sont familiers n'entrent guère dans le monde philosophique

qu'avec Andronikos, le père du commentarisme (milieu du premier siècle avant J. C.). A l'époque où vivait Diogène Laërce (on a de bonnes raisons de croire que c'était au troisième siècle après J. C.), ils étaient de longue date en circulation.

Reste à savoir si l'information de Diogène se fonde sur des ouvrages « modernes », je veux dire postandroniciens, où les traités étaient largement utilisés, ou si, au contraire, elle remonte à une époque où l'on connaissait fort mal les traités scolaires. Dans la biographie d'Aristote, Diogène nous livre un document fort archaïque, la liste des ouvrages du philosophe; il est manifeste que cette liste est antérieure aux travaux par lesquels Andronikos donna au *corpus aristotelicum* sa physionomie actuelle; on est, aujourd'hui, bien d'accord sur ce point, encore que l'attribution à Hermippos, généralement admise, se heurte à de très grosses difficultés (2). L'adoption de cette liste préandronicienne à une époque où les πίνακες d'Andronikos étaient aisément accessibles (3) semble indiquer que le compilateur a voulu interroger les témoins les plus anciens de préférence aux autres. A-t-il obéi à la même tendance à propos de la notice sur la philosophie d'Aristote? Nous tenterons de répondre à cette question au cours de la présente étude." pp. 5-6

15. ——. 1951. *Les listes anciennes des ouvrages d'Aristote*. Louvain: Éditions universitaires de Louvain.

Table des matières: Préface par Augustin Mansion V; Avant-propos IX-X;

Chapitre I. Problèmes et méthodes 1; Le sort des ouvrages scolaires d'Aristote avant l'époque des commentateurs, 1. Utilisation des listes anciennes comme moyen d'information sur le sort des ouvrages d'Aristote 6; Difficultés rencontrées

dans l'identification des ouvrages catalogués 8; Recherche du principe d'ordre appliqué dans les listes 11; Enquête sur l'origine et la destination des listes 13.

Chapitre II. Le Catalogue conservé par Diogene Laërce 15. § 1. État de la question 15; § 2. Texte du catalogue 21; § 3. Contenu du catalogue 27. Dialogues, exhortations, études platoniciennes 27; Logique, 44; Politique 95; Rhétorique et poétique 96; Physique 104; Mathématique 111; Problèmes et ouvrages hypomnémétiques 114; Collections 122; Lettres 133 Poèmes, 144. § 4. Ordonnance du catalogue 145. Le catalogue et la division néoplatonicienne du corpus aristotélicien 145; Ouvrages particuliers, ouvrages intermédiaires, ouvrages généraux, 150; Écrits hypomnémétiques et ouvrages syntagmatiques 153; Dialogues et traités 167; Logique, pratique, poétique et théorie 177; Ouvrages théorétiques, 184; § 5. Accidents survenus au cours de la transmission du catalogue 186.

Chapitre III. Le catalogue anonyme 195. § 1. Contenu du catalogue 195; § 2. Ordonnance du catalogue 204; § 3. Rapports entre le catalogue anonyme et celui de Diogène 206.

Chapitre IV. La source de Diogène et de l'Anonyme 211. § 1. État de la question 211; § 2. Multiplicité des sources pinacographiques de Diogène 216; § 3. L'attribution à Hermippe 221; § 4. L'attribution à Andronicus 233; § 5. L'origine du catalogue 237.

Chapitre V. L'appendice du catalogue anonyme 249. § 1. Contenu de l'appendice 250; La première partie 250; Les pseudépigraphes 265; § 2. Ordonnance de l'appendice 267; § 3. Origine de l'appendice 271; Multiplicité des sources 271; Rapports avec le catalogue 272; Age des différents tronçons 277; Rattachement de l'appendice à la liste anonyme 284.

Chapitre VI. La catalogue de Ptolémée 289. § 1. L'auteur du catalogue 289; § 2. Contenu du catalogue 294; § 3. Ordonnance du catalogue 299; § 4. Modèles et sources de Ptolémée 306.

Chapitre VII. Premières conclusions sur le sort des ouvrages scolaires d'Aristote 311; Les traités connus à Athènes vers 200

avant J.-C. 312; Le cas de la *Métaphysique* 314; Appartenance de certains traités omis par Ariston à la dernière période de l'activité d'Aristote 315; Les catalogues, témoins du groupement progressif d'études apparentés, mais primitivement indépendantes, 320.

Appendice. Notes sur la chronologie de quelques ouvrages d'Aristote 323; Bibliographie 347; Index 361; I. Aristote, ouvrages conservés 361; II. Aristote, ouvrages perdus et titres 368; III. Commentateurs d'Aristote 371; IV. Autres auteurs 374; V. Noms et matières 376; Errata et Addenda 385.

16. ——. 1955. "La composition de la Vie d'Aristote chez Diogène Laërce." *Revue des Études Grecques* no. 53:124-163.

Résumé : "Bien des inepties déparent les biographies dues à Diogène Laërce. Comme le révèle l'analyse de la Vie d'Aristote, une grande partie d'entre elles s'expliquent par l'application maladroite d'un procédé de composition assez singulier: d'un thème normalement amené par la marche du récit chronologique, l'auteur passe volontiers, par associations d'idées, à un thème voisin; de celui-ci, il saute à un autre, et ainsi de suite. Des digressions en cascades se mêlent donc à la narration biographique. On peut retrouver, cependant, la charpente originelle de la biographie: il suffit d'isoler les digressions et de ne considérer que les morceaux qui les ont déclenchées. Or ce démontage de la Vie d'Aristote révèle un fait d'une importance primordiale: le canevas, sur lequel a brodé Diogène est identique à celui qu'on retrouve chez le grand Apollodore, l'un et l'autre découlent d'une source commune, qui est probablement le péripatéticien Ariston de Céos. Diogène a fait de son mieux pour étoffer ce donné primitif en y insérant une foule de renseignements complémentaires; il a rédigé lui-même une partie de ces digressions et a laissé à l'état brut les matériaux qu'il destinait aux autres. Son manuscrit, à demi achevé et bourré de notes additionnelles non encore incorporées au texte, a été confié à un éditeur, qui a transcrit le tout en un texte continu, non sans commettre une foule de bévues et d'erreurs. La stupidité d'un rédacteur incapable est ainsi venue s'ajouter à l'insigne naïveté de Diogène."

17. ———. 1967. "Le Parisinus graecus 1853 (ms. E) d'Aristote." *Scriptorium* no. 21:17-41.

"De tous les manuscrits d'Aristote, le Parisinus gr. 1853 est sans contredit l'un des plus importants. Il compte parmi les plus anciens, puisqu'il remonte, dans sa plus grande partie, au milieu du Xe siècle. L'abondance des scholies marginales et des notes interlinéaires dont il est pourvu et dont l'exécution s'étale sur plusieurs siècles montre qu'il a servi d'exemplaire de travail à de nombreux spécialistes. Mais ce qui lui confère un intérêt tout particulier, c'est le fait que le texte d'un bon nombre des traités qu'il renferme s'écarte sensiblement de celui de la tradition courante et remonte peut-être à une translittération différente de celle d'où sont issus la plupart des autres manuscrits. Aussi n'est-il pas surprenant qu'il ait été collationné à maintes reprises et que les éditeurs en aient toujours fait grand cas. Cependant, plusieurs de ses particularités semblent bien avoir échappé totalement à l'attention des philologues qui l'ont eu en mains. Dans les pages qui suivent, je partirai de quelques observations d'ordre codicologique pour tenter de préciser plusieurs points de l'histoire du manuscrit. On verra que, comme dans une enquête policière, des détails apparemment dépourvus d'importance peuvent constituer autant d'indices révélateurs et mener à des conclusions insoupçonnées." (p. 17)

18. ———. 1970. "Les manuscrits d'Aristote." In *D'Aristote à Bessarion: Trois exposés sur l'histoire et la transmission de l'aristotélisme grec*, 67-94. Quebec: Les presses de l'Université Laval.

"Nous diviserons en trois parties l'histoire du texte grec d'Aristote:

1. Période antérieure à la renaissance byzantine du IXe siècle.
2. Aristote dans le monde byzantin, du IXe siècle à la prise de Constantinople par les Turcs en 1453.
3. L'arrivée du texte grec d'Aristote en Europe occidentale et sa diffusion.

- Ensuite, nous examinerons quelques aspects du travail historique et philologique que rendent indispensable les circonstances de la transmission de ce texte." (pp. 68-69)
19. ——. 1986. "Les débuts de la philologie aristotélicienne." In *Storiografia e dossografia nella filosofia antica*, edited by Cambiano, Giuseppe, 127-147. Torino: Tirrenia.

"Il est temps de résumer rapidement nos observations. Bien avant la renaissance des études aristotéliciennes au premier siècle avant J.-C., plusieurs savants se sont efforcés, en partie avec un succès indéniable, de préciser la chronologie de la vie d'Aristote et de laver le philosophe des calomnies dont l'avaient accablé ses détracteurs. - Il est possible, mais non certain, que la plus ancienne liste conservée des ouvrages d'Aristote ait été élaborée par un savant alexandrin; si tel est bien le cas, celui-ci devait se fonder en partie sur un classement, d'origine péripatéticienne, des écrits du philosophe. - L'édition et les pinakes d'Andronicus de Rhodes marquent un tournant dans l'étude de l'aristotélisme.

Avec Andronicus commence l'époque des commentaires; ceux-ci ne sont pas, en tant que tels, des créations ex nihilo; ils ont comme modèles lointains les commentaires à divers auteurs, dont Homère, conçus et réalisés par les grands philologues alexandrins. - Les méthodes proprement philologiques, également créées par l'érudition alexandrine, ont été appliquées par les commentateurs au texte d'Aristote. Dès avant Alexandre d'Aphrodise, ceux-ci pratiquaient ce que nous appelons aujourd'hui la critique des textes; ils mentionnaient et interprétaient les leçons de plusieurs manuscrits; le cas échéant, ils s'efforçaient d'améliorer, par des conjectures diverses, un énoncé qu'ils trouvaient fautif ou peu satisfaisant.

Enfin, la critique dite supérieure a laissé des traces assez nombreuses dans l'oeuvre des commentateurs. Nous apprenons ainsi que l'authenticité de plusieurs livres avait été contestée, surtout en raison de prétendues divergences doctrinales avec l'aristotélisme authentique. L'hypothèse a aussi été avancée que tel livre ne serait pas à sa place là où nous le trouvons, qu'il n'aurait pas été terminé par Aristote ou nous serait arrivé

incomplet. Dans leur ensemble, les commentateurs que nous lisons se montrent très conservateurs et rejettent unanimement ces vues souvent hypercritiques.

Parfois, ils se fondent sur des points de doctrine assez précis pour montrer qu'une athétèse était sans fondement. Il leur arrive aussi, à l'occasion, d'exploiter les renvois d'un livre à un autre. Mais la plupart du temps, ils se contentent de constatations générales assez subjectives et dépourvues de preuves concrètes: la teneur d'un livre et son style en montreraient bien l'origine aristotélicienne. Sans aucun doute, l'oeuvre d'Aristote leur était familière, et leur intuition ne les trompait pas. Il n'empêche que nous aurions aimé qu'ils nous fournissent plus de précisions sur ce que, par exemple, ils tenaient pour caractéristique du style aristotélicien. A cet égard, nous restons sur notre faim, et c'est assez dommage." (pp. 143-144)

20. ———. 1986. "Diogène Laërce et le *Peripatos* ."

Elenchos. Rivista di Studi sul Pensiero Antico no. 7:245-294.

"Un mot encore des livres et de la bibliothèque. L'école disposait à coup sûr d'une bibliothèque; il semble bien que celle-ci ait partagé purement et simplement le sort de l'école. Aristote n'en dit rien dans son propre testament. La brève indication du testament de Théophraste est assez ambiguë. Après avoir légué à Callinos le morceau de terrain qu'il possédait à Stagire, Théophraste lègue τα [...] βιβλία πάντα Νηλεῖοῦ. S'agit-il de la bibliothèque de l'école ou de la bibliothèque privée de Théophraste ou encore des livres sortis de sa plume? Quoi qu'il en soit, cette indication évoque l'histoire assez rocambolesque qu'on connaît par Strabon et Plutarque: Nélée aurait transporté à Skepsis de Troade les livres d'Aristote et de Théophraste; ils y seraient restés cachés pendant très longtemps et n'auraient été retrouvés qu'au début du premier siècle avant notre ère (10). Pourtant, sous Straton, l'école devait encore disposer d'une bibliothèque. Dans son testament, en effet, Straton lègue la διατριβή à Lycon, puis il ajoute: « Je lui lègue également tous les livres, sauf ceux que j'ai écrits moi-même » (11).

Après cela sont mentionnés le mobilier et la vaisselle servant aux repas en commun (κατὰ το συσσίτιον). Les livres, eux aussi, devaient donc être ceux de l'école. Lycon, en revanche, ne mentionne dans son testament que les livres dont il est l'auteur; ceux qui ont déjà fait l'objet d'une lecture publique iront à Charès; les inédits sont légués à Callinos, pour qu'il en assure une publication soignée (12).

Parmi les autres documents très précieux que nous devons à Diogène, il faut mentionner les "catalogues" des ouvrages d'Aristote (13), Théophraste (14), Straton (15), Démétrius de Phalère (16) et Héraclide Pontique (17)." (pp. 247-249)

(...)

"Ce rapide coup d'oeil sur les renvois à Aristote que l'on trouve en dehors du bios lui-même confirme tout à fait les conclusions auxquelles nous ont amenés les analyses consacrées au V livre. Diogène et ses sources ignorent à peu près tout des traités scolaires d'Aristote. Leur Aristote, c'est avant tout celui des ouvrages perdus: celui des écrits dits exotériques, qu'on lisait beaucoup avant qu'Andronicus ne tirât les ouvrages scolaires de l'oubli à peu près complet dans lequel ils étaient tombés. C'est aussi celui des grandes collections documentaires, qui étaient bien faites pour retenir l'attention des savants de l'époque hellénistique. Dans l'ensemble, on peut dire que l'image de l'aristotélisme que nous livre Diogène, c'est celle qu'on s'en faisait trois ou quatre siècles auparavant, à une époque où les traités scolaires n'avaient pas encore fait l'objet d'une étude approfondie. Si, d'aventure, quelques indications qu'il nous donne mentionnent des ouvrages scolaires ou en évoquent des échos, elles ne représentent, en fait, que les informations assez générales et assez vagues dont on disposait avant Andronicus." (p. 294)

(10) Cette histoire, et, d'une manière plus générale, celle de la bibliothèque d'Aristote ont déjà fait couler beaucoup d'encre. Parmi les études récentes, je citerai H. B. 22. Rashed, Marwan. 2011. "Aristote à Rome au II^e siècle : Galien, *De indolentia* , §§ 15-18." *Elenchos.Rivista di Studi sul Pensiero Antico* no. 32:55-77.

English abstract: "Galen's essay *On not being Distressed* , which was rediscovered a few years ago, contains in §§ 15-18 references to several philosophical manuscripts which had been in his possession. The single copy of the essay dates from the 15th century, and it is wretchedly corrupt.

This paper proposes some emendations to the text. From them, it will emerge that Galen owned a copy of Aristotle's *On Plants*, as well as some rare works by other early Peripatetics (Eudemus, Theophrastus, and the shadowy Clytus of Miletus). In addition, some new information about the libraries in Antium will be discovered. And finally it will be suggested that Galen had had access to books which derived, directly or indirectly, from the Peripatetic collection which Sulla appropriated when he took Athens."

23. Ronconi, Paolo. 2012. "Le corpus aristotélicien du Paris. gr. 1853 et les cercles érudits à Byzance: un cas controversé." *Studia Graeco-Arabica* no. 2:201-225.

English abstract: "Parisinus gr. 1853, a key witness to the Corpus Aristotelicum, is usually believed to be the medieval copy of an ancient corpus. Nevertheless, the analysis of its codicological, paleographic and textual features strongly suggests that it is built up out of smaller items, probably copied in different milieux from different exemplars, and combined in a single manuscript by an unknown scholar in tenth century Constantinople."

"Le Paris gr. 1853 est un livre de grand format qui contient, dans son état actuel, les textes suivants:

f. 1 r - 2 v - *De Anima* II (*partim*)

f. 3 r - 67 v - *Physica*

f. 67 v - *Anth. Pal.* IX. 577

f. 68 r - Κεφάλαια τοῦ Θ (48 propositions tirées du livre Θ de la *Physique*)

f. 68 v - Annotations philosophiques et grammaticales

f. 69 r -106 v - *De Caelo*

f. 106 v -129 r - *De Generatione et corruptione*

f. 129 r - 175 v - *Meteorologica*

f. 175 v - 202 v - *De Anima*

f. 203 r - 210 r - *De Sensu et sensibilibus*

f. 210r-212v - *De Memoria et reminiscencia*

f. 212 v - 221 r - *De Somno et vigilia. De Divinatione per somnum*

f. 221 r - 225 v - *De Motu animalium*

f. 225 v - 308 r - *Metaphysica*

f. 308 r - Deux oracles chaldaïques + un vers d'Empédocle

- f. 309 r - Συλλογή περί νομίμου
- f. 309 r - 312 r - Théophraste, *Metaphysica*
- f. 312v-318r - ([ps.-] Aristot.), *De Coloribus*
- f. 318 r - 351 r - *De Partibus animalium*
- f. 352 r - 393 r - *De Generatione animalium*
- f. 393 r - *De Incessu animalium (partim)*
- f. 393 r - 437 v - *Ethica ad Nicomachum*
- f. 437 v - 453 r - *Magna Moralia* " (p. 203, notes omises).

2. Dietze-Mager, Gertrud. 2015. "Die "Pinakes" des Andronikos im Licht der Vorrede in der Aristoteles-Schrift des Ptolemaios." *Aevum. Rassegna di Scienze storiche linguistiche e filologiche* no. 89:93-123.

English summary: "According to Plutarch, Andronicus of Rhodes (1st century B.C.) drew up Pinakes of the works of Aristotle and Theophrastus on the basis of books from their personal library which had been hidden away in Skepsis, centuries later brought to Rome by Sulla, where finally copies

made by Tyrannio came into the hands of Andronicus. Andronicus' Pinakes are lost. Our sources only provide scant information about them. Interestingly they are mentioned in a treatise on Aristotle written by a certain Ptolemy, the Greek original of which is also lost, but which is preserved in several Arabic sources. Most importantly, this treatise contains a catalogue of Aristotle's writings, and additionally in one source manuscript (Ayasofya 4833) Ptolemy's introduction to his treatise in which he explains its content and structure. Ptolemy's Aristotelian Pinax is one of the three extant ancient lists of Aristotle's writings, its structure and titles closely resembling Aristotle's corpus as it is currently known. Because Ptolemy mentions Andronicus' Pinakes in his list, the general assumption was and still is that Ptolemy more or less copied his list from Andronicus, and that therefore Andronicus' lost work on Aristotle can be reconstructed directly from Ptolemy. However, Ptolemy's introduction – contained only in Ayasofya 4833 – (which, although discovered around the middle of the last century, still is rarely taken into account) clearly excludes this hypothesis, as in it Ptolemy informs us about fundamental differences between Andronicus' approach and his own. Currently there are three widely diverging translations of this introduction which – specifically in four passages – have important consequences concerning the relationship between Ptolemy and Andronicus. This article aims to offer a new interpretation of the relevant passages on the basis of a translation from a new transcript of the Arabic original text by E. Wakelnig."

4. Dihle, Albrecht. 1957. "Der Platoniker Ptolemaios." *Hermes* no. 85:314-325.

Nachdruck: A. Dihle, *Antike und Orient. Gesammelte Aufsätze*, Hrsg. von Viktor Pöschl und Hubert Petersmann, Heidelberg: C. Winter Universitätsverlag, 1984, pp. 9-20.

"In den philosophischen Texten der späten Kaiserzeit stößt man zuweilen auf den Namen Ptolemaios, ohne daß dabei an einen Lagiden oder an den berühmten Astronomen zu denken wäre. Wie jene Zitate auf einen oder mehrere Träger dieses Namens zu verteilen seien, war eine einst viel diskutierte Frage, die dann allerdings im Anschluß an eine Vermutung W. v. Christs durch das Buch von A. Chatzis (Der Philosoph und Grammatiker Ptolemaios Chennos I = Stud, z Gesch. u. Kult. d. Altert. VII 2, Paderborn 1914) endgültig dahin beantwortet schien, es handle sich bei all diesen Ptolemaioi immer weder um Ptolemaios Chennos aus der Zeit um 100 n. Chr., der uns durch den Auszug des Photios aus seiner *καινή Ιστορία* (cod. 190) recht gut bekannt ist. Diese Frage soll hier einer erneuten Prüfung unterzogen werden."

The first two volumes are translated in Italian as:

L'Aristotelismo presso I Greci. Vol. I: *La rinascita dell'Aristotelismo nel I secolo a. C.*; vol. II/1: *Gli Aristotelici nei secoli I e II d.C.*; vol. II/2: *L'Aristotelismo nei non-Aristotelici nei secoli I e II d.C.*, Milano: Vita e pensiero, 2000.

"This is the first volume of a work which will comprise three. In that work Moraux proposes to study the history of the Aristotelian tradition from Andronicus of Rhodes (first cent. B.C.) to Alexander of Aphrodisias (latter part of the second cent. A.D.). The book under review covers the first cent. B.C. It contains five parts: The first is devoted to the fate of Aristotle's scholarly treatises up to and including Andronicus' edition and catalogue. The second deals with the earliest Aristotelian commentators, Andronicus himself, the Peripatetic Boethus of Sidon, and Ariston of Alexandria. The third is concerned with Xenarchus of Seleuceia, a Peripatetic who criticized some of Aristotle's central doctrines. The fourth discusses Staseas of Naples and Cratippus of Pergarnum, two authors Moraux characterizes as offshoots of Hellenistic Aristotelianism. The fifth and final part is devoted to complete expositions and summaries of Aristotelian and/or Peripatetic philosophy. The two authors discussed are Arius Didymus and Nicolaus of Damascus. The main purpose of Moraux's work is to investigate that part of the Aristotelian tradition whose main concern was the study and interpretation of Aristotle's works and doctrines, especially of his scholarly treatises. Therefore, his decision to include both authors who perhaps cannot be regarded as "orthodox" Peripatetics, e.g. Xenarchus, and Stoics such as Arius Didymus seems to be justified." (from the article-review by Leonardo Tarán, *Aristotelianism in the First century B.C.*, *Gnomon*, 1981, 53, pp. 721-750)

English summary: "The purpose of the paper is to defend a modified Version of the report given by Strabo about the transmission of the writings of Aristotle during the Hellenistic period. The basic dilemma was pointed out by Dom Jean Liron in 1717: The existence of our *Corpus Aristotelicum* entails that Strabo must be exaggerating either in assuming that the manuscripts brought by Neleus to Scepsis were the only

manuscripts of the Aristotelian and Theophrastean writings, or in asserting that these manuscripts were severely damaged. Many writings of our *Corpus* are missing in the Hellenistic catalogue of Aristotle's works while they are listed in the later catalogue of Ptolemy al-Gharlb; furthermore, the single books of the transmitted treatises are labelled by means of the pre-Hellenistic System of 24 letter labels, whereas in the Hellenistic catalogue the single books are numbered by means of the Hellenistic System of 27 alphabetic numerals. This suggests that the treatises missing in the Hellenistic catalogue formed part of a collection which was inaccessible in Hellenistic times and which, therefore, preserved the pre-Hellenistic System of book-labelling. After the rediscovery of the collection (ca. 100 BC) its System of book-labelling was maintained by the editors who laid the foundations of our *Corpus*. The same criterion reveals the *Eudemian Ethics* in eight books to be a later compilation."

English summary: "This paper focuses on the reception of Aristotle's writings from 100 BC to early Neoplatonism. The 1st century BC is marked by a renaissance of interest in Aristotle's acroamatic treatises, in connection to Andronicus' editorial work (whatever its precise character). This is a well known fact, but it is worth noting that interpreters of Aristotle between the 1st century BC and the 1st century AD were only familiar with a limited set of treatises (in particular, Aristotle's *Categories*, *Rhetoric*, *Topics* and *De caelo*). The Academic Eudorus of Alexandria was a partial exception, since he was probably acquainted with parts of Aristotle's *Metaphysics*. Aristotle's

exoteric dialogues remained a major source for those interested in Aristotle well into the 2nd century AD. Finally, late-hellenistic compendia and handbooks provided second-hand information on Aristotle's philosophy. It is only between the 2nd and the 3rd centuries that the Peripatetic commentators developed a systematic reading of the whole corpus of Aristotle's acroamatic treatises. Their work culminated with Alexander of Aphrodisias, whose exegesis laid the basis for the subsequent incorporation of Aristotle within Neoplatonism accomplished by Plotinus and Porphyry."

Theophrastus "On First Principles" (known as his *Metaphysics*)

The oblivion of metaphysics in Hellenistic philosophy

"It would not be quite accurate to claim that Aristotle's *Metaphysics*, like Hume's *Treatise*, "fell dead-born from the press, without reaching such distinction as even to excite a murmur among the zealots." First, there was no press. Second, the *Metaphysics* would not have been published as a book had there been a press. And finally, the *Metaphysics* was not completely ignored by Aristotle's school. Still, if one peruses Fritz Wehrli's monumental *Die Schule des Aristoteles* and notes the few scattered and desultory references to ontological or theological topics, one cannot resist forming the impression that the *Metaphysics* is pretty largely an academic failure. Even Aristotle's formidable disciple and colleague Theophrastus, who himself actually composed a treatise on metaphysics, seems to write with a remarkably limited understanding of the work of his predecessor in this area.

(1) Apart from a few references to book twelve, there is almost total silence regarding the central features of Aristotle's work as they are recognized today. There is nothing about the identification of first philosophy with wisdom and theology and a science of causes; nothing of the *aporiai* facing the construction of such a science; nothing of the doctrine of *pros en* equivocacy or of the conclusion that being in the primary sense is separate form. Nor is there a word about the dialectical treatment of sensible substance in the central books of the *Metaphysics*, which has so exercised contemporary scholars. The list of the disappearing doctrines could easily be expanded and reconfirmed by considering other philosophers both

inside and outside the Lyceum. We must not be tempted to account for this extraordinary state of affairs by supposing that Aristotle's successors regarded his metaphysical doctrines as too sublime for comment, for both Theophrastus and Strato, the first and second heads of the Lyceum after Aristotle, appear actually to have rejected the argument for the existence of an unmoved mover.'

Strato's argument amounts to the claim that nature alone is sufficient to account for motion, a claim that must have been intended to recall Aristotle's own admission that if separate substance does not exist, then there is no special science of substance apart from physics (cf. *Met.* 6.1.1026a27-29). Since Aristotle adds that the putative science of separate substance is first philosophy and the science of being qua being, Strato's denial of the need for the hypothesis of an unmoved mover is nothing short of a rejection of the entire enterprise of the *Metaphysics*. And this from within the Peripatos!

If we look beyond the Lyceum to the tradition of Aristotelian commentaries, beginning with Alexander of Aphrodisias, we do indeed find something more like reverence for the words of the founder, but hardly any awareness at all of the problematic and crucial connection between the specific theological arguments in the *Metaphysics* and the science of being qua being. Though the extant corpus of Aristotelian commentaries includes four works on the *Metaphysics*, there exists not a single commentary by one hand on the entire work as preserved and edited by Andronicus of Rhodes in the first century B.C. Alexander's commentary ends at book five and is completed by an anonymous continuator; Themistius has a commentary, or more accurately a paraphrase, of book twelve alone; Syrianus comments on books three, four, thirteen, and fourteen; Asclepius halts his commentary at book seven.

In the face of this modest harvest, one might well conceive the notion that the *Metaphysics* was doomed from the beginning to bear meager fruit. (3) The dominance of Stoicism throughout the Hellenistic period explains in part the near oblivion into which metaphysics in general and Aristotle's work in particular were cast. A central principle of Stoic theoretical philosophy is the refusal -- perhaps for methodological reasons as much as anything else -- to

countenance the existence of immaterial entities. Accordingly, physics becomes Stoic first philosophy, and theology becomes a branch of physics (cf. *Stoicorum Veterum Fragmenta* 2.42; cited hereafter as SVF). Within such a system there is little conceptual space for isolating being as a subject for investigation, and, especially, for raising Aristotelian *aporiai* regarding its nature. The evidence for this claim is to be found in the corpus of Stoic fragments, where a science of being *qua* being makes no appearance at all, not even as a dragon to be slain. It is as if it had never existed. (4) Considering that Stoics, and to a lesser extent Epicureans and Academic Skeptics, were the primary purveyors of theoretical philosophy throughout the Hellenistic period, it is hardly surprising that the doctrines of the *Metaphysics* simply lay dormant. (5)" (pp. 3-5)

Notes

(1) Theophrastus did not of course title his work *meta ta physika*, but he does describe it as dealing with first principles (Theo., *Met.* 4a 1-2) and as distinct from physics (ibid., 2-4) and mathematics (ibid., 4b6-8). The first principles are apparently reducible to a unique first principle, i.e., god (ibid., 4615). As Giovanni Reale, "The Historical Importance of the *Metaphysics* of Theophrastus in Comparison with the *Metaphysics* of Aristotle," appendix to *The Concept of First Philosophy and the Unity of the Metaphysics of Aristotle*, trans. John Catan (Albany: State University of New York Press, 1980), 364-91, shows, Theophrastus closely follows *Metaphysics* 12 in many respects. But apart from these and some less convincing parallels from *Metaphysics* 2, there is little awareness shown by Theophrastus of any connection between theology and a science of being *qua* being.

(2) For Theophrastus's criticism, see his *Metaphysics* 563-10, and for Strato, see the testimony contained in Cicero, *Academica* 2.38.

(3) See Gerard Verbeke's "Aristotle's *Metaphysics* Viewed by the Ancient Greek Commentators," in D. J. O'Meara, ed., *Studies in Aristotle* (Washington, D.C.: The Catholic University of America Press, 1981 114ff., for a useful summary of some of the basic interpretations in the commentators. Verbeke concludes that there is a consistent interpretation among the commentaries that may be aptly termed "Neoplatonic." We should distinguish, however, a

Neoplatonic interpretation of Aristotle from a Neoplatonic refutation of Aristotle, as is to be found in Plotinus.

(4) Zeno, Chrysippus, and Antipater are all reported to have written books titled *Perí Ousías*. Of course, these Stoics all identify *ousía* with matter. The few scattered references to *tò on*, which identify it with body and make it a species of the genus *tò ti*, betray little more than a lingering memory of some Aristotelian terminology stripped of its argumentative context. The Stoic position was perhaps taken to follow immediately from the principle that immaterial entities cannot exist; hence, argument indicating the contrary can be safely ignored. F. H. Sandbach, *Aristotle and the Stoics* (Cambridge: Cambridge University Press, 1985), has argued the revisionary case that, for the Stoics, Aristotle was not rejected but largely unknown. But the lack of hard evidence, rightly insisted upon by Sandbach, is also explicable by the hypothesis that Aristotelian arguments, in metaphysics at least, were rendered irrelevant on the above principle.

(5) Cf. Fritz Wehrli, *Die Schule des Aristoteles: Text and Kommentar* (Basel/Stuttgart: Benno Schwabe & Co., 1959), 10:95-128, who suggests in a *Ruckblick* over the material he has collected that the disintegration of the Peripatetic school was owing to its undogmatic and aporetic character as compared to its Academic, Epicurean, and Stoic rivals. He also suggests that conflict in doctrine between the *Metaphysics* and the early dialogues of Aristotle might account for diffidence or confusion on the part of his disciples: "der Zerfall der Schule hatte seine tiefste Ursache im Werke des Meisters selbst" (ibid., 96). Undoubtedly, there is much in what Wehrli has to say. One may also add the instability of the Peripatetic foundation owing to political reasons.

From: Lloyd P. Gerson, "Plotinus and the Rejection of Aristotelian Metaphysics", in: Lawrence P. Schrenk (ed.), *Aristotle in Late Antiquity*, Washington: Catholic University Press 1994, pp. 3-21.

Summary of On First Principles, Known as Theophrastus' Metaphysics

"Chapter I. The nature of the relation between the first principles and sensible things; II. Problems about the impulse of sensible things

towards the first principle; III. The importance of deducing the observed facts from the first principles; IV. Are the first principles definite or indefinite?; V. The supposed immobility of the first principles; VI. Matter and form; VII: Good and evil; VIII: The multiplicity of being and of knowledge; IX; The limits of teleological explanation."

From: *Theophrastus Metaphysics*. Oxford: Clarendon Press 1929. With translation, commentary and introduction by William David Ross and Francis Howard Fobes. Reprint: Hildesheim, Georg Olms 1967.

“What are first things? They are different from the world of nature, and are the objects of reason, not sense. (Here he adopts Aristotle's standard distinction, derived from Plato.) But how are these two related, and what are the objects of reason? They must either be in mathematical objects, or be something prior to these. If the latter, how many are they? He continues in an Aristotelian vein to say that they/it are the cause of motion, but themselves unmoved. They are objects of desire, and cause the rotation of the heavens. But if the prime mover is one, why do heavenly bodies move differently? If there are more than one, how is their influence harmonized? And why does love of the unmoved cause an imitation which is movement? After an interlude about the Platonists, he continues: anyhow the heavenly bodies, having desire, must also have soul, and the movement of soul, which is thought, is better than rotary movement. And what about the inferior parts of nature? And is rotation essential to the existence of heavenly bodies?

He then criticizes Plato, and some of his followers, including Speusippus (died 339 BO, for not carrying through their accounts to the end, but considers a possible reply, that metaphysics is only concerned with first principles. So are first principles definite, or indefinite, in the sense of shapeless and merely potential? At this point it is difficult to be sure whether he is talking of first things in the sense in which the hot, the cold, the wet, and the dry may be seen as first things, or about the fundamental principles (laws) which govern what exists. So when he asks if they are moving or motionless, it could be that the former are in motion but the latter, being abstract, are motionless. In any case, the universe is complex.

Among particular first things are form and matter, one of Aristotle's basic dichotomies.

What is the status of matter? This problem was developed in his *De Anima*, in which he pointed out the similarities between prime matter and potential intellect, both being merely potential, and probably explained their differences in terms of how each is related to forms. Other pairs then occupy him, especially good and evil -- Why is there so much evil in the world? -- and he mentions the void as the contrary of being. But there are different types of being, and knowledge is of similarity in difference at various levels. (Here again he adopts Aristotle's distinctions.) There are different methods of knowledge for different subject.

One must stop somewhere in searching for causes. It is often difficult to assign final causes, as with floods, male breasts, the shapes of inanimate objects, and many other things. Perhaps these result automatically from the rotation of the heavens. Alternatively there is a limit to purposiveness, and the desire for what is good.

Though wide ranging, this is largely a criticism of many of the assumptions on which Aristotle's system is based, and some people believe that it was so devastating that interest in metaphysics ceased in the Peripatos. Theophrastus's successor, Strato (died 269 BC), concentrated on natural science." (p. 894)

From: Pamela M. Huby, "Theophrastus", in: Hans Burkhardt & Barry Smith (eds.), *Handbook of Metaphysics and Ontology*, Munchen: Philosophia Verlag 1991, vol. II.

The Metaphysics

"Theophrastus recognized the need to justify the assumption that natural science involves principles, causes, and elements. He also warned against inquiring into the cause of everything. Nevertheless, his physics is in large measure an attempt to trace observed phenomena back to principles of order and determination. He believed in the divinity of the heavens and the eternity of the universe and held that the heavenly bodies possess regularity in the highest degree. However, he denied a clean break between the heavenly and sublunary spheres, holding that the universe is a single

system in which the same physical laws apply to all its parts. Theophrastus considered the possibility that the sun might be a form of fire, but the discussion is aporetic and not proof that Theophrastus rejected Aristotle's fifth element, aether, as Strato did. Theophrastus does, however, appear to depart from Aristotle by analyzing place in terms of arrangement and position with reference to the whole universe.

Academic discussion and Aristotle's postulation of an unmoved mover form the background to Theophrastus's treatise on metaphysics. Many of the views discussed are considered plausible, but often we do not know what Theophrastus accepted as part of his own theory. It is probable that Theophrastus rejected Aristotle's unmoved mover and laid greater emphasis on the limits of teleological explanation. Like both Plato and Aristotle, he held that the study of first principles is more definite and ordered than the study of nature. Intelligible and physical entities are related as prior and posterior, but further specification of the relationship is not clearly provided. Most likely Theophrastus posited an unbroken causal series, for he requires continual explanation of all phenomena." (p. 553)

From: "Theophrastus" by William W. Fortenbaugh and Josip Talanga, in: Donald J. Zeyl (ed.), *Encyclopedia of Classical Philosophy*, London; Fitzroy Dearborn Publishers, 1997.

“The historical importance of this brief treatise on first philosophy by Theophrastus has not escaped some scholars who have been concerned with it. It is the most significant metaphysical text that we possess between the time of Aristotle and the flowering of the new philosophical schools of the Hellenistic period. The treatise has two different dimensions, one refers to Aristotle, the other, in a certain way, refers to Stoicism. A careful examination of the precise links which one aspect has to the other as well as in comparison with Aristotle and Stoicism has come only recently and is susceptible of further precisions as well as corrections and modifications.

The historical relations existing between the treatise of Theophrastus and Aristotle's *Metaphysics* has been recently studied by Jaeger, in connection with his well-known thesis on the genesis and

development of Aristotle's metaphysical doctrine, as well as on the basis of his special interpretation of the development of theology and the doctrine of the immobile Mover.(1)

The other dimension of the treatise, which refers to Stoicism, has been investigated chiefly by Grumach.(2)

We intend to limit ourselves to a reexamination of the first point. To review the second point, it would be necessary to reexamine many problems concerning Stoicism, which would take us outside the limits of our subject.” (pp. 364, notes omitted)

Modern editions and translations of Theophrastus' philosophical works

English

1. Fortenbaugh, William W., Gutas, Dimitri, Huby, Pamela, and Sharples, Robert W., eds. 1992. *Theophrastus of Eresus. Sources for His Life, Writings, Thought and Influence. I. Life, Writings, Various Reports, Logic, Physics, Metaphysics, Theology, Mathematics*. Leiden: Brill.

Contents: Preface VII-VIII; Introduction 1; Abbreviations 15; Texts. Life (FR 1-36) 20; Writings (FR 37-55) 90; Various reports (FR 56-67) 104; Logic (FR 68-136) 114; Physics (FR 137-245) 276; Metaphysics (FR 246-250) 436; Theology (FR 251-263) 442; Mathematics (FR 264) 456; Appendix 460-465.

"These two volumes represent the first fruits of an international project to produce a new collection - text, translation and commentary - of the fragments and testimonia relating to Theophrastus (c. 370-288/5 B.C.), Aristotle's pupil and successor as head of the Lyceum. The need for a new collection was apparent: the standard collection, by Wimmer, is already 120 years old, whereas we now have far better texts of many of the ancient authors in which fragments and testimonia of Theophrastus occur. Whilst classicists have devoted the past hundred years to bringing into the light the work of the major post-Aristotelian schools, the contribution of Theophrastus has remained obscure. The second printing contains corrections to the first.

This first stage of the project presents the texts, critical apparatus and English translation of the fragments and testimonia. It contains a long methodological introduction, an

index of Theophrastean texts and concordances with other collections (Scheider, Wimmer and the several recent partial editions).

The second stage of the project, which Brill will also publish, will consist of 9 commentary volumes, planned at present as follows:

1. Life, Writings, various reports (M. Sollenberger, Mt. St. Mary's College)
2. Logic (P.M. Huby, Liverpool University)
3. Physics (R.W. Sharples, University College London)
4. Metaphysics, Theology, Mathematics, Psychology (P.M. Huby, Liverpool University)
5. Human Physiology, Living Creatures, Botany (R.W. Sharples, University of London)
6. Ethics, Religion (W.W. Fortenbaugh, Rutgers University)
7. Politics (J. Mirhady)
8. Rhetoric, Poetics (W.W. Fortenbaugh, Rutgers University)
9. Music, Miscellaneous Items and Index of proper names, subject index, selective index of Greek, Latin and Arabic terms (several authors/editors).

Most of the nine commentary volumes will include significant discussion of Arabic texts, with contributions by Dimitri Gutas (Yale University) and Hans Daiber (Free University of Amsterdam).

2. ———, eds. 1992. *Theophrastus of Eresus. Sources for His Life, Writings, Thought and Influence. II. Psychology, Human Physiology, Living Creatures, Botany, Ethics, Religion, Politics, Rhetoric and Poetics, Music, Miscellanea*. Leiden: Brill.

Contents: Texts. Psychology (FR 264-327) 2; Human physiology (FR 328-349) 106; Living creatures (FR 350-383) 134; Botany (FR 384-435) 188; Ethics (FR 436-579) 254; Religion (FR 580-588) 400; Politics (FR 589-665) 438;

- Rhetoric and Poetics (FR 666-713) 508; Music (FR 714-726) 560; Miscellaneous items (FR 727-741) 584; Appendix Nos. 5-9 600; Concordances 619; Index of Theophrastean texts 629.
3. Huby, Pamela M., ed. 2007. *Theophrastus of Eresus. Commentary Volume 2: Logic. Sources for His Life, Writings, Thought and Influence*. Leiden: Brill.

"This volume contains commentary on the sections concerned with logic (texts 68-136) of the collection of texts published in 1992 (*Theophrastus of Eresus: Sources for his Life, Writings, Thought and Influence*, edited and translated by William W. Fortenbaugh, Pamela M. Huby, Robert W. Sharples (Greek and Latin) and Dimitri Gutas (Arabic) and five others, 2 vols., Leiden: Brill, 1992). It was comparatively easy to isolate those texts connected with logic, though in a few cases there was uncertainty about whether an item was to be assigned to rhetoric rather than logic. There was also little difficulty with problems of texts where the attribution to Theophrastus is doubtful.

The texts on which we are commenting are nearly all ones that contain the name of Theophrastus, along with a few in which only "the colleagues of Aristotle" are mentioned in a context where it is clear that Theophrastus is intended, usually with Eudemus. They are evidence for works now lost, even in translation. We have taken account, either by actual quotation or by giving references in the upper apparatus, of all such passages up to the cut-off date of 1450. Two items printed in the appendix are without attribution, and are included only as possibly by Theophrastus. To facilitate access to contexts we have added references to English translations of some passages quoted or referred to, and have given short accounts of most of the items mentioned in the upper apparatus.

Within the commentary in some cases several items are grouped together for a general discussion, but then individual items are also treated separately. Lists of relevant literature are given either under the heading of a group or with individual items. We have transliterated short items of Greek, but quoted longer ones in the original script.

(...)

It was only after the bulk of this work had been written that I became aware of the important study of De Rijk, entitled *Aristotle Semantics and Ontology*, which in fact contains a great deal of valuable work on Aristotle's logic. I have however been able to incorporate many references to it, either in the text or in footnotes." (from the Preface).

4. Sharples, Robert W., ed. 1998. *Theophrastus of Eresus. Commentary Volume 3.1: Sources on Physics (Texts 137-223)*. Leiden: Brill.

This volume contains commentary to the section concerned with physics (texts 137-223) of the collection of texts relating to Theophrastus compiled and edited under the leadership of W.W. Fortenbaugh and published in 1992 (*Theophrastus of Eresus: Sources for his Life, Writings, Thought and Influence*). The collection of texts was arranged by subject matter, rather than by the known or conjectured relation of testimonia to particular Theophrastean works (cf. the Introduction to the collection of texts, vol.1 pp. 7-8), and the arrangement of topics was broadly that familiar from the ordering of Aristotle's writings in Bekker's edition. The subject matter of the present commentary might thus be loosely described as the Theophrastean counterpart to the Baker pages of Aristotle 184-390 (*Physics, On Heaven, On Coming-to-Be and Passing Away and Meteorology*). Commentary by Han Baltussen on the texts relating to physical doxography (224-245) will appear in a separate volume, 8.2, along with that by Pamela Huby on texts on metaphysics, theology and mathematics (246-264).

It should be emphasised at the outset that our collection of texts is confined, with a very few exceptions, to those passages where Theophrastus is actually named, and that it is explicitly concerned with material that does not survive in Theophrastean works transmitted in MSS. We are concerned, in other words, with reports of Theophrastus' views -- sometimes quotations, but more often paraphrases -- in other authors." (from the Preface).

5. Huby, Pamela M., ed. 1999. *Theophrastus of Eresus. Commentary Volume 4: Psychology (Texts 265-327)*. Leiden: Brill.

"This will eventually be the fourth of nine volumes of commentary by various authors, each relating to a part of the collection of texts relating to Theophrastus compiled and edited under the leadership of W.W. Fortenbaugh and published in 1992 (*Theophrastus of Eresus: Sources for his Life, Writings, Thought and Influence*). This volume covers texts 265-327, which relate to psychology and epistemology.

This commentary is designed to be used in conjunction with the volume of texts and translations; that includes both an apparatus of parallels for each text and an apparatus of textual variations and emendations. In the commentary isolated words or phrases of Greek have been given in transliteration, with longer passages being given in Greek script. The titles of ancient works have generally been given in the same English versions as used in the text and translation volume.

The procedure adopted in writing the commentary varies according to the nature of the passage involved. At the start of each passage there is usually a short list of pieces of modern literature; for references to such works the reader should consult first that list and then the general bibliography at the end of this volume." (from the Preface).

6. Sharples, Robert W., ed. 1994. *Theophrastus of Eresus. Commentary Volume 5: Sources on Biology (Human Physiology, Living Creatures, Botany: Texts 328-435)*. Leiden: Brill.

"This is the first to appear of a projected nine volumes of commentary by various authors, each relating to a different part of the collection of texts relating to Theophrastus compiled and edited under the leadership of W.W. Fortenbaugh and published in 1992 (*Theophrastus of Eresus: Sources for his Life, Writings, Thought and Influence*). The present volume of commentary, no. 5 in the eventual series, cover texts 328-435 in the second volume of that collection, relating to human

physiology, zoology and botany. The collection of texts was arranged by subject matter rather than by the known or conjectured relation of testimonia to particular Theophrastean works (cf. the Introduction to the collection of texts, vol. 1 pp. 7-8), and the arrangement of topics was broadly that familiar from the ordering of Aristotle's writings in Bekker's edition. The subject matter of the present commentary might thus be loosely described as the Theophrastean counterpart to the Bekker pages of Aristotle 436-789 (i.e. starting with the *Parva Naturalia*; Theophrastus' writings on general psychology will be dealt with in volume 4 of the commentary).

It should be emphasised at the outset that our collection of texts is confined, with a very few exceptions, to those passages where Theophrastus is actually named, and that it is explicitly concerned with material that does not survive in Theophrastean works transmitted in MSS. We are concerned, in other words, with reports of Theophrastus' views, sometimes quotations but more often paraphrases, in other authors."

7. Fortenbaugh, William W., ed. 2011. *Theophrastus of Eresus. Commentary Volume 6.1: Sources on Ethics*. Leiden: Brill.

With contributions on the Arabic material by Dimitri Gutas.

8. ———, ed. 2005. *Theophrastus of Eresus. Commentary Volume 8: Sources on Rhetoric and Poetics (Texts 666-713)*. Leiden: Brill.

"The present volume (...) concerns the rhetorical and poetic fragments that are found in the second of the two text-translation volumes.

The central sections of the commentary, i.e., III and IV, are ordered in accordance with the material presented in the second text-translation volume. Section III covers the twenty-four titles that have their primary listing in the section on the "Titles of Books." That section carries the number 666. It also includes discussion of nine titles that have their primary listing elsewhere (under logic, mathematics, physics, ethics, religion and miscellaneous items) but for one reason or another have or might be thought to have a connection with rhetoric and

poetics. Each of these related titles is referred to in 666 and appears in this commentary in the same position in which it is found in 666. For example, the mathematical title *In Reply to Aeschylus* (137 no. 42) appears both in the source volume and in this commentary after the second work *On the Art of Poetry* (666 no. 21) and before *On Comedy* (666 no. 22).

Section IV on "The Texts" is also ordered in accordance with the second text-translation volume: i.e., the discussion of texts 667-713 proceeds in numerical order. There are, however, occasional interruptions, ten in all, when texts whose primary listing occurs elsewhere (under life, logic and ethics, among the miscellaneous items and in the appendix to the second text-translation volume) are discussed. In each case, the text is referred to in the second text-translation volume within the section on rhetoric and poetics, and discussion occurs in accordance with the position of the reference. For example, a logical text from Alexander of Aphrodisias (135) is referred to after one from Cicero (672) and before one from the codex Parisinus Graecus 3032 (673A), and discussion of the text occupies a similar position in this commentary.

I have created a separate section on the ancient sources - Demetrius Rhetor, Philodemus, Cicero, etc. - and placed it at the beginning of the commentary proper, i.e., as Section II. An alternative would have been to reserve discussion on any given source until a text taken from that source is commented upon. Were that procedure adopted, Cicero *qua* source would be discussed at the very outset, for the first text among the rhetorical and poetic texts is taken from Cicero (667). In contrast, discussion of Philodemus, Cicero's contemporary, would occur much later (689A). "

9. ———, ed. 2018. *Theophrastus of Eresus. Commentary Volume 9.1: On Music*. Leiden: Brill.
10. ———, ed. 2014. *Theophrastus of Eresus. Commentary Volume 9.2: Sources on Discoveries and Beginnings, Proverbs et al. (texts 727-741)*. Leiden: Brill.

With contributions on the Arabic material by Dimitri Gutas.

11. Ross, William David, and Fobes, Francis Howard, eds. 1929. *Theophrastus. Metaphysics*. Oxford: Clarendon Press.

With translation, commentary and introduction by W. D. Ross and F. H. Fobes.

Reprint: Hildesheim, Georg Olms, 1967.

Contents: Preface VIII; Introduction IX; Sigla XXXIII; Text and translation 2; Commentary 41; Index verborum 77; Index to the Introduction and Commentary 84-87.

"The text as here given, the English translation, the greater part of the Introduction, and all the Commentary are the work of Mr. Ross; for that part of the Introduction which deals with the MSS., for the *apparatus criticus*, and for the Indexes Mr. Fobes is responsible." (from the Preface)

"All the Greek manuscripts of this work assign it to Theophrastus. A scholion at the end adds that it was unknown to Hermippus (c. 200 B.C.) and to Andronicus (c. 85 B.C.) and does not occur in their lists of Theophrastus' writings, but that Nicolaus (i.e. Nicolaus of Damascus) ascribed it to Theophrastus. Thus the tradition that Theophrastus was its author goes back to about 25 B.C. (...)

The title *ta meta ta phusika* must have been imposed on the work at some time after Andronicus' edition of Aristotle's works, from which the phrase took its origin; and may have been imposed by Nicolaus, who was the first, so far as we know, to refer to Aristotle's *Metaphysics* by that name. (..)

The essay is printed in the *editio princeps* of Aristotle (Aldus, 1498); in the edition of Theophrastus published at Basel in 1541 by Hieronymus Gemusaeus or Oporinus (a reprint of the Aldine), and in a reprint of this (bearing the same date) in which Priscian's *Metaphrasis* is added; in the Camotian Aristotle (Venice, 1552), and in the Sylburg Aristotle (Frankfurt, 1585). It is omitted in the edition of Theophrastus' shorter works by H. Stephanus (Paris, 1557), in the editions of Theophrastus by Furlanus and Turnebus (Hanover, 1605), by Daniel Heinsius (Leyden, 1613), and by J. G. Schneider

(Leipzig, 1818-21), but was printed by Brandis (1) with Aristotle's *Metaphysics* (Berlin, 1823), and in Wimmer's two editions of Theophrastus (Leipzig, 1862, and Paris, 1866), and finally has been edited separately by H. Usener (Bonn, 1890). It is the subject of a Greek commentary by Camotius (Venice, 1551)." (from the Introduction)

(1) Who summarizes and discusses its contents in his *Handbuch der Geschichte der Griechisch-Römischen Philosophie* (1835-1866).

12. van Raalte, Marlein ed. 1993. *Theophrastus. Metaphysics*. Leiden: Brill.

With an introduction, translation and commentary by M. van Raalte.

Contents: Preface XI; Abbreviations XV; Introduction 1; Text and translation 35; Commentary 67; Chapter One (4 a 2 - 5 a 13) 69; Chapter Two (4 a 14 - 6 a 15) 164; Chapter Three (6 a 15 - 6 b 22) 250; Chapter Four (6 b 23 - 7 b 8) 285; Chapter Five (7 b 9 - 8 a 7) 330; Chapter Six (8 a 8 - 8 a 20) 362; Chapter Seven (8 a 21 - 8 b 9) 277; Chapter Eight (8 b 10 - 10 a 21) 393; Chapter Nine (10 a 22 - 12 a 2) 485; References and author index 588; Index of passages cited 598; Index of Theophrastus *Metaphysics* 628; General Index: English 659; Greek 668-657.

"The history of this book is like that of the best of relationships in that it was started lightheartedly and lasted much longer than foreseen.

Initially serving mainly as a counterbalance to the study of Greek stichic verse, the project was meant to be completed in 1983-1985, during which years the Netherlands Organisation for the Advancement of Pure Research granted me a post-graduate scholarship for that purpose. In the course of time it became increasingly clear that Theophrastus' argument, in spite of the deceptive familiarity of its idiom, defies any easy access to a consistent interpretation-even allowing for its obviously dialectical nature. This made the commentary grow to its present size, my extensively quoting of parallel passages testifying to the experience that without a careful study both of

the idiom and of the kind of reasoning involved the purport of the argument remains elusive.

The opportunity offered by Project Theophrastus to present a paper at its 1985 conference at the Institute of Classical Studies of the University of London triggered a choice of focus which is at the base of the present interpretation of the treatise. As if infected by Theophrastus' way of proceeding I have made an attempt to expose each and every question that is posed by the text, and to detect the reasons for preferring one interpretation rather than another-my prevailing criterion being the internal consistency of the argument.

A side-effect of the somewhat unusual set-up of this book might be that it could be used as a kind of sourcebook for Peripatetic idiom; in order to help those who may want to explore this way of making a virtue out of necessity full indices have been provided.

During all these years I had the opportunity to profit from the wisdom and erudition, and certainly did profit from the assistance and support of many people.

First of all I have to acknowledge my indebtedness to the authors of the forthcoming Budé-edition of the *Metaphysics*, and especially to Professor Andre Laks for generously sending me a copy of their completed manuscript in 1990 (and of a revised version of it in 1992), and for allowing me to make use of their *apparatus criticus* and to incorporate references to their interpretation of the text; in this way we have tried to minimize the drawbacks of our simultaneously working on a treatise which had been waiting for attention for so long. It will be clear that the present work heavily relies on Laks & Most's study especially where the manuscript tradition is concerned." (from the Preface).

13. Gutas, Dimitri, ed. 2010. *Theophrastus On First Principles (known as his Metaphysics)*. Leiden: Brill.

Greek Text and Medieval Arabic Translation, edited and translated with introduction, commentaries and glossaries, as well as the medieval Latin translation (by Bartholomew of

Messina), and with an Excursus on Graeco-Arabic editorial technique by D. Gutas.

Contents: Preface XIII; Acknowledgments XVII; Abbreviations and Reference Works XXI; Abbreviations of Works by Aristotle and Theophrastus XXIII; Part I. Introduction to the Texts. Chapter One. Introduction to the Essay 3; Chapter Two. The Greek Text: Manuscripts, Translations, Stemma Codicum 45; Chapter Three. The Arabic Text: Manuscripts, Transmission, Editions 75; Part II. The Texts and Translations 105; Part III. Commentary Introduction 247; Aporia 1-25 248-395; Scholium 395; Appendix. Traduction et notes par J. Tricot.

2. Laks, André, and Most, Glenn W., eds. 1993. *Théophraste. Métaphysique*. Paris: Les Belles Lettres.

Table des matières: Avant-propos VII; Notice IX ; I. La question du titre et du caractère fragmentaire de l'opuscule IX; II. Caractères généraux de l'opuscule XVIII; III. Sommaire de l'argument de l'opuscule XXVII; IV: La transmission de l'opuscule XL; Bibliographie LXXXI; Sigla LXXXIX-XC; Texte et traduction 1; Notes complémentaires 25; Index nominum 91-101.

Texte édité, traduit et annoté par A. Laks et G. W. Most avec la collaboration de Charles Larmore et Enno Rudolph et pour la traduction arabe de Michel Crubellier.

"Le travail que nous présentons ici a débuté, en décembre 1983, par un séminaire sur la Métaphysique de Théophraste réunissant André Laks (Centre de recherche philologique de l'Université Charles de Gaulle-Lille III/Princeton University, Grec), Charles Larmore (Columbia University, Philosophie), Glenn W. Most (Université de Heidelberg, Philologie classique), Enno Rudolph (Forschungsslatte der Evangelischen Studiengemeinschaft et Université de Heidelberg, Théologie). Pendant quatre ans, ce séminaire s'est réuni à intervalles variés, à Heidelberg, Florence ou Paris, pour approfondir le travail d'interprétation. En 1987, Michel Crubellier (Centre de recherche philologique) s'est adjoint au groupe de travail, quand nous nous sommes rendu compte de l'importance de la version arabe conservée à la bibliothèque de Téhéran. Les discussions intensives qui se sont prolongées pendant cette période fournissent la base de ce travail. Si deux auteurs signent finalement le livre, c'est qu'ils se sont chargés de l'établissement du texte grec et de la rédaction de cette édition. G. W. Most a relu les manuscrits grecs et latins et établi le texte avec l'apparat. Il a préparé les parties de l'introduction relatives à l'histoire de la transmission du texte (I et IV), à l'exception de la partie arabe, due à M. Crubellier (qui a aussi collationné les manuscrits arabes), et élaboré un premier état du sommaire (III). Une première version de la traduction, des notes, et de la section II de l'Introduction, rédigée par A. Laks (qui a également révisé l'Index des mots figurant dans l'édition Ross-Fobes), a été soumise à la critique des membres du séminaire. La mise en forme finale de l'ensemble, qui résulte du travail commun des signataires, a tiré profit des remarques de tous." (Extrait de l'Avant-propos)

(...)

(*) En janvier 1993, Marlein van Raalte a mis à notre disposition le manuscrit du volumineux commentaire de l'opuscule qu'elle publie chez Brill, et qui se réfère au manuscrit de la présente édition. Nous n'avons pu comparer et utiliser les résultats obtenus que dans un cas (cf. p. 69, n. 41). Elle n'a pu, de son côté, tenir compte des dernières modifications apportées

à notre propre travail (cf. *e.g.* notre texte en 11a19-20, notre interprétation de 10b25 ou notre note 37, p. 57).

3. Baltussen, Han. 1992. "Peripatetic dialectic in the *De Sensibus* in Theophrastus." In *Theophrastus: His Psychological, Doxographical, and Scientific Writings*, edited by Fortenbaugh, William W. and Gutas, Dimitri, 1-19. New Brunswick: Transaction Publishers.

"The nature and purpose of the *De sensibus* have remained unstudied ever since the text was printed as a fragment of the lost (so-called) *Physikon doxai* in Hermann Diels's *Doxographi graeci* (1879). In this paper its general structure and argument are studied from a Peripatetic point of view by using recent insights in Aristotle's use of dialectic. This procedure provides tools for testing reputable views' (*endoxa*), which may then serve as a starting-point for a systematic exposition. It is shown that Theophrastus also makes use of dialectical moves to examine the theories on perception."

"L'interprétation moderne fait apparaître de plus en plus clairement les divergences de Théophraste par rapport à Aristote. Sa critique est avant tout dirigée contre ce qui, dans Aristote, porte la marque de l'esprit platonicien, et en particulier contre la doctrine du moteur immobile. Homme de science, aveugle à l'esprit ontologique, Théophraste est rétif à tout système abstrait et global et incapable d'admettre l'idée d'une science au-dessus de toutes les autres sciences. Il représente le triomphe du pragmatisme et de l'empirisme et inaugure la séparation entre philosophie et science. Cette optique caractérise aussi sa recherche physique."

15. Cronin, Patrick. 1992. "The authorship and sources of the *Peri Semeion* ascribed to Theophrastus." In *Theophrastus: His Psychological, Doxographical, and Scientific Writings*, edited by Fortenbaugh, William W. and Gutas, Dimitri, 307-345. New Brunswick: Transaction Publishers.

"The purpose of this paper is to establish through an analysis of the language of the text and the arrangement of its contents whether or not the *Peri Semeion* is a genuine work of Theophrastus. The author concludes that it is the work of an anonymous Peripatetic, probably a pupil of Theophrastus, who had recourse to (a) two written sources, (b) oral weather lore, and (c) his own experience, and that it was probably composed c. 300 BC."

16. Crubellier, Michel. 1992. "La version arabe de la *Métaphysique* de Théophraste et l'établissement du texte grec." *Revue d'Histoire des Texts* no. 22:19-45.

"Traduction en français, sur la base d'une nouvelle lecture des manuscrits conservés, de la version réalisée par Ishaq ibn Hunain (IX/X s.). Témoin d'un état du texte grec antérieur à celui que nous fait connaître la tradition directe, cette version offre un grand intérêt pour la reconstitution de l'original."

Theophrastean Studies: On Natural Science, Physics and Metaphysics, Ethics, Religion and Rhetoric, edited by Fortenbaugh, William W. and Sharples, Robert W., 167-188. New Brunswick: Transaction Publishers.

"In Theophrastus's treatise, *Metaphysics*, we find a critique of Aristotle's metaphysical theories, but the critique strangely relies exclusively on book Lambda for the views it addresses. This fact poses a problem for both Jaeger's hypothesis that Lambda is early (why, then, would Theophrastus treat it as "the" authoritative source for Aristotle's views?), and the unitarian hypothesis that it is late (why is there "no" discussion of the views of the central books?). In the paper I try to show, on the basis of a comparison of the conception of metaphysics in book Lambda and the central books, that Lambda was written earlier; I then offer some evidence for the view that Theophrastus' critique was written during Aristotle's lifetime, before the central books of his *Metaphysics* were written. "

"To sum up, the layout of the text pages would be as follows:

1. The text, each fragment introduced by a reference to the primary source; it would use two sizes of print, one for the fragments themselves and the other for the context, but only one fount each for Greek, Roman and Italic.
2. Three, or less ideally two, *apparatus*, of references to earlier publications, of secondary attestations, and *apparatus criticus*.

This gives all the information needed for a first reading of the fragments: the actual quotations, enough of the context to make them intelligible, and the basic facts about the constitution of the texts and their *fortuna* up to the present. But it would not answer all the questions a reader may legitimately ask, and so a commentary would be unavoidable. It will have to deal with several kinds of questions:

1. Textual problems, involving choices between the readings of different manuscripts and also, where the same fragment has been transmitted independently by several intermediaries, between the versions they present.
2. The accuracy and extent of the quotation. This may involve some discussion of the intermediate author's motive for quoting Theophrastus and the distortions or adaptations, particularly of terminology, he may have imported.
3. The relationship of each fragment to the others, especially those belonging to the same work or subject-group. This will necessitate some consideration of the form and subject-matter of the book from which each fragment was originally taken, and where there is sufficient evidence, its arrangement and method of treatment. But in view of the available evidence, this will in most cases fall far short of anything that could be called a "reconstruction".

4. The meaning of the fragment and its historical context, i.e. what Theophrastus is trying to say and what place his ideas have in the history of philosophy." pp. 554-55

"A *scholium* in Paris, BNF, gr. 1853, fol. 312r, provides evidence for the tradition of the Aristotelian corpus. The scholium reveals that Theophrastus' *Metaphysics* was not on early lists of Theophrastus' works. It also reveals that Nicolaus of Damascus in his study of Aristotle's *Metaphysics* (*) identified the author of the work as Theophrastus. The transmission of Theophrastus' *Metaphysics* is thus closely linked to that of the Aristotelian corpus. Conclusions are: that both Book Λ of Aristotle's *Metaphysics* and Theophrastus' *Metaphysics* were written before the central books of Aristotle's treatise as it is

known to us; and that Theophrastus' *Metaphysics* could have provoked, in response, Aristotle' writing of *De partibus animalium* and *De generatione animalium*."

47. Horky, Phillip Sidney. 2013. "Theophrastus on Platonic and 'Pythagorean' Imitation." *Classical Quarterly* no. 63:688-712.

"In the twenty-fourth aporia of Theophrastus' *Metaphysics*, there appears an important, if 'bafflingly elliptical', ascription to Plato and the 'Pythagoreans' of a theory of reduction to the first principles via 'imitation':

Plato and the Pythagoreans make the distance [between the first principles and everything else] a great one, and they make all things desire to imitate fully; and yet, they set up a certain opposition, as it were, between the Indefinite Dyad and the One. In the former [resides] the Unlimited and the Unordered and, as it were, all Shapelessness as such; and they make it altogether impossible for the nature of the universe to exist without this [that is, the Indefinite Dyad] – it [that is, the Indefinite Dyad] could only have an equal share in things, or even exceed the other [first principle, that is, the One] – whereby they also make their first principles contrary [to one another]. Therefore, those who ascribe causation to the god claim that not even the god is able to reduce all things to the best, but, even if at all, only in so far as is possible. And perhaps he wouldn't even choose to, if indeed it were to result in the destruction of all existence, given that it [that is, existence] is constituted from contraries and consists of contraries. ((Theophrastus, *Metaphysics*, 11a26–b12)."

74. Morison, Ben. 2010. "Did Theophrastus Reject Aristotle's Account of Place?" *Phronesis* no. 55:68-103.

"It is commonly held that Theophrastus criticized or rejected Aristotle's account of place. The evidence that scholars put forward for this view, from Simplicius' commentary on Aristotle's *Physics*, comes in two parts: (1) Simplicius reports some *aporiai* that Theophrastus found for Aristotle's account; (2) Simplicius cites a passage of Theophrastus which is said to 'bear witness' to the theory of place which Simplicius himself adopts (that of his teacher Damascius) — a theory which is utterly different from Aristotle's. But the *aporiai* have relatively straightforward solutions, and we have no reason to suppose that Theophrastus didn't avail himself of them (and some reason to think that he did). Moreover, the text which Simplicius cites as bearing witness to Damascius' view on closer inspection does not seem to be inconsistent with Aristotle's account of place or natural motion. "

In *Theophrastean Studies: On Natural Science, Physics and Metaphysics, Ethics, Religion and Rhetoric*, edited by Fortenbaugh, William W. and Sharples, Robert W., 189-215. New Brunswick: Transaction Publishers.

"Detailed study of the text reveals that, in spite of its aporetic character, Theophrastus's *Metaphysics* contains not only a criticism of Aristotelian tenets such as the principle of teleology and the idea of an unmoved mover, but also his own suggestions for a different kind of explanation, in which the cosmos is conceived as a hierarchically structured whole bound by the natural coherence of its parts. Theophrastus's final rejection of Platonic formism -- which takes to its logical conclusion the course taken by Aristotle himself -- accounts for his affinity with both Heraclitean and Stoic thought."

81. ———. 2003. "God and the nature of the world: the "theological excursus" in Theophrastus' *Meteorology*." *Mnemosyne* no. 56:306-342.

"The so-called theological excursus in the Arabic translation of Theophrastus' *Meteorology* shows a division between two kinds of causation that gives rise to serious doubts concerning the authorship of the passage. Whereas from the *Metaphysics* it may be inferred that Theophrastus was inclined to consider the mode of being of the cosmos, by its very essence consisting of both order and disorder, as good and divine, the excursus maintains that god is responsible only for the order in the world (which is good), whereas the nature of the world itself, with its plurality of causes, accounts for the disorder (which is bad). It is argued that those passages adduced as a parallel for the excursus (from the *Metaphysics* and *De pietate* in particular) do not bear out this claim, and that other Theophrastean texts and sources make it unlikely that Theophrastus is the author of the excursus in its present form."

89. Runia, David T. 1989. "Aristotle and Theophrastus conjoined in the writings of Cicero." In *Cicero's Knowledge of the Peripatos*, edited by Fortenbaugh, William W. and Steinmetz, Peter, 23-38. New Brunswick: Transaction Publishers.

"An analysis is given of the 16 passages in Cicero's rhetorical and philosophical works where the names of Aristotle and Theophrastus are mentioned together. Cicero joins them together so often (1) because of his great interest in philosophical successions, and (2) because he regards the encyclopedic research carried out in the early Peripatos as an example to follow in his own attempt to present philosophy to a Roman audience."

90. Rutten, Christian. 1992. "La stylométrie et la question de 'Métaphysique' K." *Revue Philosophique de Louvain* no. 90:486-496.

"Les méthodes de la stylométrie fournissent des indications non négligeables concernant la chronologie relative des parties de la *Métaphysique* et leur authenticité aristotélicienne. Le passage de *Met.* K 7 (1064 a 28 - 1064 b 14), où la science de l'être en tant qu'être se trouve assimilée à la science de l'être divin, est plus proche, du point de vue de la stylométrie, de la *Métaphysique* de Théophraste que de celle d'Aristote. Il en va de même pour *Met.* Kappa 10. En revanche, pour les autres chapitres, le classement fondé sur la stylométrie correspond à l'évolution que paraît avoir connue, à divers égards, la pensée d'Aristote."

"This paper is a piece of detective work. Starting from an obvious excrescence in the transmitted text of Simplicius's treatment of the foundations of Presocratic atomism near the beginning of his Physics commentary, it excavates a Theophrastean correction to Aristotle's tendency to lump Leucippus and Democritus together: Theophrastus made application of the οὐ μαλλον principle in the sphere of ontology an innovation by Democritus. Along the way it shows Simplicius reordering his Theophrastean source in his efforts to find material which will strengthen the contrast between Leucippus's atomism and Eleatic metaphysics. And it argues that in doing so he all but obliterates Theophrastus's attempt to point up the Democritean credentials of the οὐ μαλλον principle."

4. Bobzien, Susanne. 1998. *Determinism and Freedom in Stoic Philosophy*. New York: Oxford University Press.

See Chapter 3 *Modality, determinism, and freedom* pp. 97-143.

"A considerable number of our testimonies about the Stoic doctrine of determinism are concerned with modality. In particular the concepts of possibility and necessity were central to some parts of its discussion. It seems that Hellenistic philosophers generally agreed that an action or, in general, activity does not depend on us and is not in our power, if it (or a corresponding proposition) is necessary or impossible; or, put differently, that a prerequisite for something's depending on us is that it is both possible and non-necessary. This fact is invoked both by the Stoics in defence of their theory and in the criticism of their opponents. But in the debate over fate and determinism, modalities played a role in a number of different contexts. They are dealt with separately in the following sections:

- Chrysippus rejected Diodorus' modal theory, because of its built-in necessitarian consequences (3.1.2).

- Chrysippus developed his own set of modal notions, which, in themselves, do not lead to necessitarianism and which secure a necessary condition for that which depends on us (3.1.3-5).

- Some critics of Chrysippus and the Stoics developed arguments to show that there is a conflict between Chrysippus' modal notions and the Stoic theory of fate (3.2).

- Some later Stoics replied to this type of objection by giving an epistemic interpretation of Chrysippus' modal notions (3.3).

- Critics of the Stoics objected that fate, *qua* Necessity, renders all events necessary; but this objection is not justified in Chrysippus' philosophy (3.4)." p. 97
5. ———. 2005. "Early Stoic Determinism." *Revue de Métaphysique et de Morale*:489-516.
- "Although from the 2nd century BC to the 3rd AD the problems of determinism were discussed almost exclusively under the heading of fate, early Stoic determinism, as introduced by Zeno and elaborated by Chrysippus, was developed largely in Stoic writings on physics, independently of any specific theory of fate". Stoic determinism was firmly grounded in Stoic cosmology, and the Stoic notions of causes, as corporeal and responsible for both sustenance and change, and of effects as incorporeal and as predicates, are indispensable for a full understanding of the theory. Stoic determinism was originally not presented as causal determinism, but with a strong teleological element, in the context of a theory of natural motions, which makes use of a distinction between a global and an inner-worldly perspective on events. However, Chrysippus also employed his conception of causality in order to explicate his determinism, and can be shown to have maintained a universal causal determinism in the modern sense of the term. The teleological and mechanical elements of early Stoic determinism were brought together in Chrysippus' conception of fate, which places elements of rationality in every cause."

"For the Stoics, the *lekton* is as an intermediary between the thought and the object. They do not exist independently of the mind, but, at the same time, the mind does not create them. Due to this status, they guarantee intersubjectivity of the rational discourse. They are incorporeals that do not exist, but subsist and the Stoic Logos-God guarantees their permanent subsistence. The *lekta* are semantico-syntactic entities. Their role is analogous to the role of an interlingua used as a tool for automated translation of languages."

29. Hadot, Pierre. 1969. "Zur Vorgeschichte Des Begriffs 'Existenz'. *Hyparchein* Bei Den Stoikern." *Archiv für Begriffsgeschichte* no. 13:115-127.

"Das Wort existentia erscheint erstmalig im Lateinischen-in den theologischen Werken des Marius Victorinus, in denen es fast immer zur Übersetzung von hyparxis; dient, im Gegensatz zu dem Wort substantia das ousia übersetzt, und zu subsistentia, das hypostasis wiedergibt. (1) Exsistentia ist abgeleitet von exsistere, das in der philosophischen Sprache oft für esse eintrat, zumal in der Form des Partizips.(2) Exsistere seinerseits wurde auch zur Übersetzung von hyparkein verwendet, wie aus der Timaios-Übersetzung des Calcidius ersichtlich.(3)

Für das Verständnis der Vorgeschichte des Begriffes Existenz ist es daher unerlässlich, sorgfältig die Bedeutung zu präzisieren, die das Wort hyparkein innerhalb des technischen Wortschatzes der griechischen Philosophie aufweist, und die vorliegende Studie möchte einen Beitrag zu einer derartigen Untersuchung liefern. Zunächst soll zu zeigen versucht werden, daß das Wort hyparkein innerhalb der Stoa eine Seinsweise bezeichnet, die dem Geschehen, dem Akzidenz, dem Prädikat zukommt und der Seinsweise des Subjektes gegenübergestellt wird. Danach soll diese Bedeutung des hyparkein einerseits mit dem aristotelischen, andererseits mit dem neuplatonischen, Gebrauch dieses Wortes verglichen werden." p. 115

32. ———. 1992. "Diogenes Laertius VII: On the Stoics." In *Aufstieg Und Niedergang Der Römischen Welt, Vol. 36: Philosophie, Wissenschaften, Technik. 6. Teilband: Philosophie (Doxographica [Forts.])*, edited by Haase, Wolfgang, 4076-4182. Berlin: de Gruyter.
- Indices pp. 4404-4411.

"In this study I propose to reexamine Diogenes' composition of the seventh book of his 'Lives' in the light of what is now known about ancient methods of composition of informational works. By carefully picking through the text for evidence on its construction I hope to clarify the nature and identity of most of the sources that he used in this book. This analysis will also bring into clearer focus his historiographical and literary objectives to the extent that they are manifested in this book. It is my hope that these results will, in combination with studies of other parts of his work, also advance our understanding and appreciation of Diogenes as an author and historian of philosophy in the early third century A. D."

33. Ierodiakonou, Katerina. 1993. "The Stoic Division of Philosophy." *Phronesis. A Journal for Ancient Philosophy* no. 38:57-74.

"In introductions to Stoicism, Stoic philosophy customarily is discussed under the headings of "logic", "physics", and "ethics"; the evidence, however, shows that the Stoics' own view on the tripartition was more complex. The paper focusses on a passage in Diogenes Laertius (VII 39-41) and deals with the following four points the passage raises: first, according to most Stoics, it is not philosophy, but philosophical discourse, which is divided into three parts. Second, different Stoics used different terms when referring to the three parts. Third, Stoics were not unanimous as to the order of the three parts. Fourth, different similes were used by the Stoics to describe the interrelation of the three parts. It is only by close analysis of these points that we see in what sense Stoic philosophers divided philosophy, and how they understood the unity of the philosophical disciplines underlying their division."

"This book brings together a set of papers by different hands on problems in Stoicism. Most of the material is published here for the first time, and it deals with problems of Stoic epistemology, logic, metaphysics and ethics. In more than one sense this book is a statement of work in progress. Several of its topics take up questions already treated in recent literature, and further publications on Stoicism by most of its authors are current or forthcoming. More particularly, half the chapters of the book were presented at a series of seminars in the Institute of Classical Studies, University of London, and we are deeply grateful to its Director, Professor E. W. Handley, for offering us such a congenial forum for discussion and for suggesting publication in this form.

The problems in Stoicism are vast, and they vary greatly in type over a long period of time. This book makes no claim to treat more than some of them, much less to give a comprehensive account of Stoicism. But its collection of papers does cover topics of considerable philosophical and historical importance, and through the treatment of these much of the coherence and significance of Stoicism as a whole can be seen. Because we are concerned here with a school of Greek philosophy, and its Roman inheritance, part, sometimes a large part, of the discussion turns on matters of philology. But with the help of translation and transliteration it is hoped that the book will be found intelligible and interesting to those who have no knowledge of Greek and Latin. A short bibliography gives full details of most of the works on Stoicism cited in the notes and often referred to there by abbreviated titles." (From the Preface)

46. Lossky, Nikolay. 1929. "The Metaphysics of the Stoics." *Journal of Philosophical Studies* no. 4:481-489.

"The metaphysical doctrine of the Stoics is a remarkable instance of a theory that appears to be materialism, but is in truth a form of unconscious ideal-realism. It is worth while to give an exposition of it in order to show that this is really the case, and, incidentally, to explain why a materialistic philosophy seems so attractive to many minds. I will refer chiefly to the teaching of the ancient Stoics, i.e. of Zeno, Cleanthes, and Chrysippus, and also to the later doctrine of Posidonius."

49. Papazian, Michael. 1999. "Stoic Ontology and the Reality of Time." *Ancient Philosophy* no. 19:105-119.

"Aristotle starts his discussion of time in *Physics* iv by presenting a couple of paradoxical arguments that appear to show that time does not exist at all or that it exists only 'scarcely or dimly' (217b29). (1) The first paradox begins with the assertion that both infinite time and also any period of time are composed of a part that is past and a part that is future. The past has been but is not now. The future will be but it is not yet. It follows that no part of time just is. Since nothing which consists entirely of non-existing parts can exist, time does not exist.

One may argue on behalf of the reality of time that at least one part of time, namely the present, is. Aristotle replies that the present or the 'now' is not a part. A whole must be made up of parts, but the whole of time is not thought to be made up of 'nows'. Aristotle does not state exactly why the whole of time is not thought to be made up of nows. The argument may be that if there is a present, it either has a duration or it does not. If it has duration or temporal extension, then it is not really present

but consists of a part that is past and future (cf. 234a9-19). But if it lacks extension, it cannot be a part of time because 'parts must measure, and the whole must be composed of parts' (218a6-7). A durationless point of time cannot be used to measure time nor can the whole of time consist of durationless points.

Aristotle does not provide a refutation of the paradoxical arguments against the reality of time in his subsequent discussion. (2) The question of the reality of time remained an issue in Hellenistic philosophy and, in particular, for the Stoics. The purpose of this article is to examine the Stoic ontology of time. Did the Stoics believe that time is real? How did they understand the relation between the past, present, and future? These are important questions not only because Stoic views on time are interesting in their own right but also because they can shed much needed light on the philosophy of time in late antiquity. The Stoic views appear to have had considerable influence on late Neoplatonic theories of time and on Augustine's speculations on time."

(1) Translations of the Physics are from Hussey Aristotle Physics Books III and IV Oxford, Clarendon Press, 1983.

(2) Most commentators, though, claim that Aristotle's discussion of time provides the requisite philosophical apparatus to refute the arguments. See, e.k., Sorabji Time, Creation and the Continuum, Ithaca, Cornell University Press, 1983, 7ff.

"This essay maintains that the extent of influence exerted by Aristotle on the Stoics has often been exaggerated by modern scholars. A collection of all references to him by authors other than Peripatetics, whether contemporary or belonging to the following century, shows that his importance as a philosopher was not then recognised and reveals a lack of evidence that his school-works were known. Professor Sandbach argues that it is a mistake to proceed on the assumption that the Stoics must have known his work, or even an outline of it, and been stimulated whether to agreement or to modification. If the supposed evidence for Aristotelian influence is examined without this presumption, much is found to be flimsy and some can be confidently rejected. A residue remains of varying degrees of probability, which it is hard to estimate owing to our insufficient information, particularly about Zeno, about the Academy of his time, about Aristotle's exoteric works, and about memory of him in oral tradition." (Abstract, p. 89)

58. Sedley, David. 1982. "The Stoic Criterion of Identity." *Phronesis. A Journal for Ancient Philosophy* no. 27:255-275.

"The growing argument, a sceptical puzzle favoured by the Hellenistic Academy, maintained that every material reconstitution, however slight, entails a change of identity. The Stoics responded to this challenge by denying the identity of a "qualified individual" with his material substrate. This was achieved in particular by Chrysippus' paradox about Dion and Theon (ancient forerunners of Geach's Tibbles and Tib), Best interpreted as a dialectical refutation of the growing argument's

assumption that matter is the sole principle of individuation. Chrysippus thereby licensed his theory of the four levels of existence (conventionally called the Stoic theory of "categories"). The notion of enduring "qualified individual" provides a criterion of identity central not only to this theory but also to a quite separate epistemological thesis, that of the possibility of infallible recognition."

"Overview.

In this essay my main concern has been to illustrate the Roman Stoics' attitude to metaphysics. It is an area of philosophical discourse in which Seneca grants the Platonists and Aristotelians greater territorial rights than in any other. For his excursions into it he offers a fundamentally Platonist justification, and as regards ontological kinds, at least, he sees Platonism as superior to the legacy of his own school.

What we have seen to be Seneca's reservations about Stoic metaphysics, I can now add, fit comfortably with Letter 117, where he finds severe ethical disadvantages in the Stoics' too rigid distinction between corporeals and incorporeals, and Letter 113, where he is painfully embarrassed by the Stoic paradox which treats virtues as living beings. But its most typical manifestation is in the counting games which Seneca and other Stoics play with their Platonic-Aristotelian colleagues. Sometimes the Stoics are the winners at these

games-notably when arguing more directly against Aristotle, the inventor and chief proponent of such games-sometimes, on Seneca's own confession, the losers. It is this residue of open-mindedness that most clearly characterizes the syncretism which we have been witnessing.

Seneca's readiness to jump ship shows up with regard to metaphysical questions far more prominently and explicitly than in other philosophical areas.(59) I have tried to sketch in a background which makes it plausible that, far from being Seneca's own quirk, this attitude was characteristic of Roman Stoicism in his day. It is hard to know whether it is anything more than accidental that both the main figures who have emerged as Seneca's fellow-participants in the discussions-Severus and Cornutus have Roman names. But Cornutus at least, like Seneca himself, worked in Italy; and Sergius Plautus has emerged as yet another Roman Stoic of the era who wrote about both Stoic and Aristotelian metaphysics. In the light of this pronounced pattern, I do not see why we should not assume Italy to be the primary scene of those discussions, as indeed Seneca may be taken to imply when he presents them in narrative guise as recent conversations with his friends. My main point, however, is that Seneca is almost certainly not alone among Stoics in his constructively conciliatory attitude to Platonist metaphysics.

If it had merely been a question of Seneca's personal distaste for abstruse areas of Stoic metaphysics, it would have been easy for him to remain silent, as he does for the most part about Stoic epistemology and logic. But instead of thus staying aloof, he cooperates in what I have presented as a pooling of resources between Stoic and Platonic-Aristotelian metaphysics. (60) If I have been even half right, his way of conducting these negotiations can teach us something about what it meant to be a Stoic in an age when the Platonic worldview was rapidly regaining its old ascendancy.(61)" pp. 140-141

(59) Seneca's psychology is often taken to be infused with Platonic rational-irrational dualism. For a measured response to this assessment, see Brad Inwood, 'Seneca and Psychological

Dualism', in J. Brunschwig and M. Nussbaum (eds.), *Passions and Perceptions* (Cambridge, 1993), 150-83. The Platonizing tendency in Letters 58 and 65 seems much stronger and more explicit than that in any of the psychological cases discussed by Inwood.

(60) For evidence of the degree of syncretism that had developed by Plotinus' day, cf. Porphyry, *Vit. Plot.* 17.3, on Trypho 'the Stoic and Platonist'.

(61) Ancestors of this essay have benefited from discussion with audiences at Chicago, Gargnano (Italy), Mexico City, London, and Cambridge. My thanks to all who were kind enough to supply comments, especially Brad Inwood, Victor Caston, Ricardo Salles, Stephen Menn, and Myles Burnyeat, although responsibility for the views expressed is entirely my own.

It is a special pleasure to be contributing, with this essay, to a collaborative celebration of Richard Sorabji and his work. No one has done more than he has to show the philosophical vitality of the debates conducted in the Roman imperial era.

***Lives and Opinions of Eminent Philosophers* by Diogenes Laërtius. Bibliography (A-Lea)**

English studies (A-Lea)

1. Barnes, Jonathan. 1986. "Nietzsche and Diogenes Laertius." *Nietzsche Studien* no. 15:16-40.

Reprinted in: J. Barnes, *Mantissa: Essays in Ancient Philosophy IV*, Oxford: Clarendon Press, 2015, pp. 584-611.

"In 1869 and 1870 Nietzsche published three long studies on Diogenes Laertius: *de Laertii Diogenis fontibus, analecta Laertiana*, and *Beiträge Quellenkunde und Kritik des Laertius Diogenes*.(1) The *Beiträge* contains a short index to all three papers, which Nietzsche evidently regarded as parts of a single work; and indeed the second and third studies can properly be treated as a series of appendixes to the first. Even as the studies were in press Nietzsche wrote of his intention to revise and publish them in book form.(2)

(...)

But these plans and projects were never realized, and Nietzsche published nothing on Diogenes after 1870.(6)" (p. 16)

(1) The studies should be read in KGW II/1 (edd. F. Bornmann and M. Carpitella, Berlin, 1982). Nietzsche's Nachlass contains a vast number of notes, essays and preliminary sketches on Diogenes: the texts are printed, with annotations, in BAW and V.

(2) Letters to Friedrich Ritschl of 16. 10. 69 and 28. 3. 70: KGB [] I/1, p. 66 [no. 35] = BAB II, p. 377 [no. 461], KGB I, p. 110 [no. 68] = BAB, p. 42 [no. 494].

(6) Not that Nietzsche ever forgot his Diogenes: there are occasional allusions or reminiscences in many of his later writings (see the Index to C. P. Janz, *Friedrich Nietzsche: Biographie*, Munich/Vienna, 1978/9).

2. ———. 1992. "Diogenes Laertius IX 61-116: the Philosophy of Pyrrhonism." In *Aufstieg und Niedergang der römischen Welt. Teil II: Principat. Band 36: Philosophie, Wissenschaften, Technik. 6. Teilband: Philosophie (Doxographica [Forts.])*, edited by Haase, Wolfgang, 4241-4301. Berlin: Walter de Gruyter.

Reprinted in J. Barnes, *Mantissa: Essays in Ancient Philosophy IV*, edited by Maddalena Bonelli, New York: Oxford University Press 2015, pp. 510–583.

"Diogenes Laertius includes an account of scepticism in his Life of Pyrrho (IX 61 – 108). An introductory section (IX 61–62) gives a concise description of Pyrrho's life and thought, after which the Life divides into three main parts.

First, there is a collection of anecdotal material, the purpose of which is to illustrate the peculiar διάθεσις of Pyrrho himself (IX 63-69). Then come various observations on Pyrrho's successors, together with a list of his putative precursors (IX 68 – 73). The third part consists of an extended account of the

philosophy of Pyrrhonism (IX 74-108). The brief Life of Timon, which constitutes an appendix to the Life of Pyrrho, is made out of a short biography and a rehearsal of the so-called Pyrrhonian διαδοχή (IX 109- 116).

This outline encourages two preliminary thoughts. First, the Life of Pyrrho, considered at the most abstract level, has a clear and coherent structure: it is not a farrago, nor a jackdaw's nest; it is a unitary piece of composition. Diogenes is often accused of being a scissors and paste man who snipped sections of the works he happened to read and then contentedly glued them into his own scrap-book. The Life of Pyrrho proves that he had at least a minimal literary competence: he could arrange and organise his snippets.

Secondly, the philosophical part of the Life is far longer than the biographical. The strictly philosophical section is over four times the size of the strictly biographical section; indeed, the strictly philosophical section is longer than all the rest of the Life, with the Life of Timon thrown in. It is often said that Diogenes' interests were primarily biographical, and that he cited philosophical views primarily in order to illuminate the characters of the men who maintained them. Whether or not this is true of the Lives in general, it is certainly not true of the Life of Pyrrho." (p. 4242, notes omitted)

3. ——. 1996. "The Catalogue of Chrysippus' Logical Works." In *Polyhistor: Studies in the History and Historiography of Ancient Philosophy. Presented to Jaap Mansfeld on his Sixtieth Birthday*,, edited by Algra, Keimpe A., van der Horst, Pieter W. and Runia, David T, 169-184. Leiden: Brill.

Reprinted in J. Barnes, *Mantissa: Essays in Ancient Philosophy IV*, edited by Maddalena Bonelli, New York: Oxford University Press 2015, pp. 479–494.

"At the end of his brief Life of Chrysippus, Diogenes Laertius remarks that

since his books have a very high reputation, I have decided to record here the list of them arranged by subject. They are these. (VII 189).

There follows an articulated catalogue of Chrysippus' works.

Diogenes has a standing interest in the writings of his subjects, an interest which he implicitly avows in his preface (I 16). Almost all the Lives refer to what their subjects wrote; and in the vast majority of them Diogenes presents a book-list. The list of Chrysippus' writings stands out on three diverse counts. First, it is articulated into sections and subsections, and the articulation is based on philosophical principles. Secondly, it is incomplete: the end of Book VII is missing from all surviving manuscripts of Diogenes-and with it half the Chrysippean bibliography.

Thirdly, it is exciting; for it appears to offer us information about Chrysippus' philosophical activities, and in particular about his logical activities, which we cannot find elsewhere-it parades his terminology; it shows where his interests lay; it indicates the structure which he gave to his philosophical work." (p. 169, notes omitted)

4. Beall, E. F. 2001. "Diogenes Laertius on Aeschines the Socratic's Works." *Hermes*:142-144.

"D.L. [Diogenes Laertius] inform us (II 60-1 = Giannantoni(1) VI A 22) that Menedemus of Eretria slandered A. [Aeschines] in saying he appropriated dialogues by Socrates as his own, and that those called "headless" are poorly written and un-Socratic and not by Aeschines according to Peristratus the Ephesian.

(...)

Finally, D.L. concludes that, in any case (δ οὐν), the truly Socratic works by A. are the sevenpieces Miltiades, Callias, Axiochus, Aspasia, Alcibiades, Telauges, and Rhinon.

It is of course important to know whatever we can about the provenance of A.'s works, in view of his attested close relation to the historical Socrates." (p. 142, some notes omitted)

5. Bett, Richard. 2015. "Pyrrhonism in Diogenes Laertius." In *Pyrrhonian Skepticism in Diogenes Laertius*, edited by Vogt,

Katja Maria, 75-104. Tübingen: Mohr Siebeck.

"This paper has two goals. First, it offers a general overview of Diogenes Laertius' lives of Pyrrho and Timon, distinguishing as far as possible a) the biographical from the more purely philosophical material in these lives, and b) the parts bearing upon the period of Pyrrho himself and his immediate following from those bearing upon the later tradition started by Aenesidemus and taking Pyrrho as an inspiration. Both these distinctions, however, are less than hard and fast, and this is of interest in itself. Second, focusing on the philosophical material, it investigates in detail the many parallels between the text of Diogenes and passages of the Pyrrhonist Sextus Empiricus, and attempts to extract from these parallels some lessons concerning the development of the Pyrrhonist tradition. Though not a Pyrrhonist himself, Diogenes emerges as an important witness to the character of Pyrrhonism." (p. 75)

6. Bollansée, Jan. 1999. *Hermippos of Smyrna and His Biographical Writings. A Reappraisal*. Leuven: Peeters.

"The present study fits in with the larger project to continue Felix Jacoby's unfinished *Fragmente der griechischen Historiker* (FGrHist), a project initiated in 1991 by G. Schepens (K.U.Leuven) and G.A. Lehmann (then Universität zu Köln) and at the moment a truly international enterprise carried out by scholars working in Göttingen, Leuven, Köln, München and Zürich and at Harvard University." (Preface, p. VII)

(...)

"In sum, there are no indications that Hermippos was particularly well educated in the various philosophical systems, let alone that he was ever an active member of the Peripatetic school. In fact, ever since the beginning of this century, it is generally assumed by modern scholarship that Hermippos, just like his (younger) contemporary Satyros, was called a 'Peripatetic' simply because he wrote biographical works, the underlying idea being that during the Hellenistic period (already starting from the third century on, and continuing at least until about 100 B.C.) all authors of studies in literary history and biography connected with Alexandria were called

Peripatetics, regardless of whether or not they actually belonged to that school. Two interrelated reasons are given for this new usage of the term. Firstly, the fields of research concerned had been primarily covered by, and were therefore associated with, Aristotle and his pupils, so that even non-school members who were active in those domains were given the name. Secondly, the pinacographical work conducted by Kallimachos in the Museion's library - in itself wholly in the Peripatetic vein and to a large extent based on the work of the Aristotelian precursors - led to a refinement of the form of those literary and biographical studies. Consequently, the two 'branches' (Peripatos and Museion) were considered complementary, the older lending its name to the younger." (pp. 10-11, notes omitted)

7. ———. 2001. "Animadversiones in Diogenem Laertium." *Rheinisches Museum für Philologie* no. 144:64-106.

"Over the past two decades, a few studies have unearthed and consolidated the important new insight that Diogenes Laertios was not the mindless and untrustworthy copier he has so long been taken for by nineteenth- and twentieth-century scholarship; thus, it has been demonstrated that the standard ancient technique of excerpting - such as it was adopted, among others, by Varro - also underlies Diogenes' work, and that this author may be thought to have assembled by himself a substantial number of the extracts scattered across the ten books constituting the *Lives and Opinions of Eminent Philosophers*. All the same, this deserved rehabilitation does not alter the fact that present-day scholarship frequently comes away from the long-winded treatise with a feeling of frustration, when trying to move beyond the manifold stories recounted by Diogenes and attempting, for instance, to gather precise information even about the sources to which he refers by name (how did he use them, and what did they actually say?). These problems originate in Diogenes' seemingly carefree method of quoting those sources (in itself wholly in line with standard ancient practice, since there were no strict rules enforcing the exact acknowledgement of name, title and book-number of the sources consulted) and in his manner of

editing, rewriting and organizing the material drawn from them. Scattered throughout his work, there are effectively dozens of passages which offer details and/or source-citations in abundance but, at the same time, suffer from poorly thought-out structuring, as borne out by excessive compression or accumulation of information and the resultant confusion and ambiguity." (p. 64, notes omitted)

8. Bredlow, Luis Andrés. 2007. "Some Notes on Diogenes Laertius." *Hermes*:370-372.

3. Three misunderstood witticisms of Diogenes the Cynic."

9. ———. 2008. "Diogenes Laertius 20, 22: Metrodorus of Lampsacus or of Athens?" *Philologus*:145-148.

"The Epicurean Metrodorus of Lampsacus is a relatively well known character(1), as we are to expect from his reputation as one of the most outstanding representatives of the school. But there is a quite obscure passage concerning him in Diogenes Laertius' *Life of Epicurus* (10, 22) which apparently has not yet been sufficiently understood." (pp. 145-146)

(1) See the collection of fragments and testimonia by A. Körte, *Metrodori Epicurei Fragmenta*, Jahrb. Klass. Philol. Suppl. 17, 1890, 531-97.

10. Brent, Allen. 1993. "Diogenes Laertius and the Apostolic Succession." *Journal of Ecclesiastical History* no. 44:367-389.

"I will argue that the concept of διὰδοχαί, and the historiographic form adopted in that genre of literature of which Diogenes Laertius' *The Successions of the Philosophers*, (9) is our surviving representative, are far more important for our understanding of the development of the idea of apostolic succession than Ehrhardt [*] admitted. A careful analysis of Diogenes as representative of a whole genre of historiography about philosophers and their schools will reveal certain specific and fundamental connections between such historiography and Justin, Irenaeus, Hegesippus, Hippolytus, and the Clementine

literature, which have been overlooked in the discussion dominated, at least in English-speaking quarters, by Ehrhardt's thesis. We will see that Hippolytus' extraneous idea of a specifically sacerdotal succession has been falsely imposed upon the essentially scholastic view of succession in these earlier writers." (p.368)

(9) I prefer the title *Successions* to the Byzantine *Lives* (Βίῳν) employed by R. D. Hicks in his edition, *Diogenes Laertius, Lives of Eminent Philosophers*, Cambridge, Mass. 1925. I show below that, in the Severan age in which he lived (c. AD 205) the genre in which he wrote would have suggested the title δῖάδοχαί, as is clear from the titles used by his predecessors.

11. Chroust, Anton-Hermann. 1965. "A Brief Analysis of the *Vita Aristotelis* of Diogenes Laertius (V, 1-16)." *L'Antiquité Classique* no. 34:97-129.

Revised reprint as Chapter III in: A.-H. Chroust, *Aristotle. New Light on His Life and on Some of His Lost Works*, London: Routledge & Kegan Paul, 1973, Vol. I pp. 25-53.

"Book V, sections 1-16, of Diogenes Laertius' *The Lives and Opinions of Eminent Philosophers*, also called *The Lives of the Philosophers* (Photius) or *The Lives of the Sophists* (Eusthatius), contains a rather important,

though at times confused (and confusing), account of the life of Aristotle. In his *Vita*, which to a large extent relies rather heavily on a biography of Aristotle by Hermippus of Smyrna, Diogenes Laertius also employs a number of other divergent sources. Some of these sources are cited by name, others can be determined with a reasonable degree of certainty, while others cannot readily be identified. What is perhaps the most striking characteristic of Diogenes' biography, however, is that he constantly alternates his use of two distinct types of sources or biographical tendencies: the decidedly sympathetic, favorable and even encomiastic tradition; and the clearly unsympathetic, unfavorable and even hostile trend. In this, Diogenes Laertius

and his *Vita Aristotelis* differs from the majority of the extant biographies of Aristotle. The following is a tentative analysis of Diogenes' rather bewildering account in terms of these two types of sources or tendencies." (p. 25 of the reprint, notes omitted)

12. Copeland, Rita. 2016. "Behind the 'Lives of Philosophers'. Reading Diogenes Laertius in the Western Middle Ages." *Interfaces* no. 3:245-263.

Abstract: "The classical learning of medieval readers, especially those fortunate to have access to a good library, could be formidable. But in the Middle Ages knowledge was also a commodity, and there was powerful temptation to satisfy intellectual hunger with compressed, simplified digests and easy fare. One text, *De vita et moribus philosophorum*, long attributed to Walter Burley, seems to have achieved particular success in satisfying that hunger for an easy version of ancient lore. Its roots reach back to Diogenes Laertius' Greek *Lives of the Philosophers*. This essay explores the roads of transmission that led to the making of *De vita et moribus philosophorum*, which fed a popular fascination with ancient philosophy and the lives of ancient philosophers. Through what channels did the 'history' of ancient philosophy find a readership beyond the scholarly academy, and how can we explain the appeal of such classical knowledge?"

13. Corti, Lorenzo. 2015. "Mind and Language of the Laërtian Pyrrhonist: Diog. Laert. 9.74–77." In *Pyrrhonian Skepticism in Diogenes Laertius*, edited by Vogt, Katja Maria, 123-145. Tübingen: Mohr Siebeck.

"The Pyrrhonian sceptic makes no judgements and has no beliefs; if so, how could he speak?"

(...)

"The aim of this paper is to contribute towards filling this gap by analysing and elucidating the Laërtian account in the light of the closest Laërtian and Sextan loci similes.

Diog. Laert. 9.74–7 may be divided into four main parts. Diogenes starts by characterising the sceptics as being devoted

to a certain philosophical activity: they overturn all the tenets of the philosophical schools.

In doing so, they speak – they utter some characteristic phrases. In the rest of our passage, Diogenes reports some remarks indicating how we are supposed to understand these phrases. In the first section (74) he points out that the sceptic does not affirm or determine what he says, but just utters and reports; he then adds that the sceptic's φωναί – of which he mentions “In no way more”, “We determine nothing” and “Opposed to every account there is an account” – express some affections of his. The second part of the passage (section 75) discusses several uses of the expressions “more/rather” and “in no way more”, and indicates that the sceptics use “in no way more” negatively. The following part (76) discusses the self-applying property of two sceptical expressions in particular: “In no way more” and “Opposed to every account there is an account”. Finally, in the last section of the passage (77), Diogenes hints at a dogmatic reaction to the description of the sceptic's linguistic behaviour just sketched and puts forward another one of its features, by indicating how the sceptic uses his words and statements.

In the following pages I will put forward an analysis of each of the four sections and of the major features they ascribe to the sceptical φωναί. I will end by discussing an intriguing difference between the account of the Pyrrhonist we find in Diogenes and the corresponding account we find in Sextus." (pp. 123-124, note omitted)

14. Dorandi, Tiziano. 2012. "Socrates in the Ancient Biographical Tradition: From the Anonymous *PHib.* 182 to Diogenes Laertius." In *Socrates and the Socratic Dialogue*, edited by Stavru, Alessandro and Moore, Christopher, 787-798. Leiden: Brill.

"The life of Socrates, understood as the continuous narrative of the primary events in his life, from birth until death, received only modest attention from ancient authors.

(...)

Except for Diogenes Laertius (third-century ce) we have no traces of proper “biographies” of Socrates comparable in structure and content to the many “Lives” of Plato and Aristotle.” (p. 787)

(...)

"The only complete “biography” of Socrates is that of Diogenes Laertius in his *Lives of Eminent Philosophers* (2.18–47).⁶ The Laertian *bios* of Socrates is shorter than, for example, that of Plato, which occupies the entire third book of the *Lives*, but is about the same length as that of Aristotle (5.1–35). Giannantoni [*] has proposed a plausible division of the *bios* into four sections. The first (2.18–26) is biographical (parents, home, teachers, education, character traits, military exploits, and anecdotes). The second (2.27–37) corresponds to what is in other lives the doxography. In it, through a series of anecdotes, Diogenes describes the character and behavior of Socrates and provides material useful for giving a sense of his thought. The third (2.38–44) is devoted to the trial and death sentence and subsequent reaction. In the fourth and last (2.45–47), Diogenes gets back to the chronology of Socrates, cites the epigram he composed for his death, introduces the discussion related to his disciples (Xenophon, Aristippus, Phaedo, Euclides, Stilpo, Crito, Simon, Glaucon, Simmias, Cebes and Menedemus of Eretria: 2.48–144), and finally adds the list of homonyms." (pp. 791-792).

15. ———. 2014. "Diogenes Laertius and the Gnomological Tradition: Considerations from an Editor of the *Lives of the Philosophers*." In *Ars Edendi Lectures* 3, edited by Odelman, Eva and Searby, Denis M., 71-103. Stockholm: Stockholm University.

"One of the characteristics of the *Lives and Doctrines of Eminent Philosophers* by Diogenes Laertius (third century C.E.) is the preponderance of *chreiai* (apophthegms) within the narrative.(1) One of the *Lives* in particular, that of the Cynic philosopher Diogenes of Sinope (6.20–83), consists almost

entirely in a succession of *chreiai* occupying the central part of the narrative (§ 24–30, 32–69). In other books, and therefore in regard to other philosophers, there are specific groups of sayings or maxims of, first, the Seven Sages (book 1), including Anacharsis (1.103–5); Aristippus of Cyrene (2.65–83), Plato (3.38–40), Bion of Borysthenes (4.48–51), Aristotle (5.17–21), Antisthenes (6.3–10), Zeno of Citium (7.16–24) and Pyrrho of Elis (9.66–8). A separate case, but equally interesting, is that of Epicurus, whose life takes up all of book 10, ending with Diogenes' presentation of forty principal doctrines or maxims (Κύρια δόξαι) of the founder of the Garden." (p. 71)

Traduction française sous la direction de Marie-Odile Goulet-Cazé (Paris: Librairie Générale Française, 1999), p. 668 in the use of the term *chreia*: 'le terme *chreie* comme terme générique s'appliquant indifféremment aux multiples types de dits et d'anecdotes que l'on trouve assemblés dans les collections gnomologiques.'" (p. 71)

16. ———. 2016. "Aristotle in the Biographical Tradition." In *Brill's Companion to the Reception of Aristotle in Antiquity*, edited by Falcon, Andrea, 277-298. Leiden: Brill.

"The oldest "Life of Aristotle" of which we have any evidence is by Hermippus of Smyrna, a work in at least two books.(16) It has also been suggested that the Peripatetic Aristo of Ceos wrote a biography of Aristotle, but this remains uncertain. Aristo probably only collected the wills of his Aristotelian predecessors—from Aristotle himself to Lyco of Troas (F 16 Stork, Fortenbaugh, Van Ophuijsen and Dorandi). Various other ancient "lives" have come down to us either entire or in more or less fragmentary states:

1. Diogenes Laertius' Life of Aristotle (third century AD) is the most rich in detail (5.1–35). Along with a timeline and a section dedicated to biographical information about the philosopher, it contains his will, a list of the titles of his works, and an doxography, which has proven highly useful in making sense of the reception of Aristotelianism in the late Hellenistic period.)"

2. The *Life of Aristotle* attributed to Hesychius of Miletus (sixth century AD).(18) This biography is essentially a long catalog of titles of works of Aristotle. It has a great deal in common with those of Diogenes Laertius and of the *Life of Ptolemy*.

These two “lives” go back to a single unknown Hellenistic source, now lost, which was enriched with supplementary material over the centuries. There does not

seem to be any real support for the hypothesis that the “life” by Hermippus was the main source for the biographies by Diogenes and Hesychius.(19)" (p. 282)

[The other Lives are: 3. *Vita Marciana*. 4. *Vita Vulgata*, 5. *Vita Lascaris*, 6. *Vita Latina* and *Vita Vulgata*]

(16) Hermippus T 10, F 28–33, 73?, 89?.

(17) See below 231–235..

(18) Hesychius' life has been re-edited in Dorandi 2006.

17. Düring, Ingemar. 1956. "Ariston or Hermippus? A note on the Catalogue of Aristotle's writings." *Classica et Mediaevalia* no. 17:11-21.

According to Paul. Moraux the catalogue by Diogenes Laertius is based on the Peripatetic philosopher Aristo of Ceos; according to Ingemar Düring on Hermippus of Smyrna.

18. Ferrer, Montserrat. 2011. "Diogenes Laertius's lives in the fifteenth-century Italian and Catalan versions of Pseudo-Burley's *Vita et moribus*." *Studi Medievali* no. 53:681-696.

Abstract: "This article identifies the Latin translation of Diogenes Laertius's *Lives* by Ambrogio Traversari as one of the sources of a fifteenth-century Italian version of Pseudo Burley's *Liber de vita et moribus philosophorum*. It also presents a Catalan translation made in 1499 of the Italian version of Pseudo Burley's work."

19. Finkelberg, Aryeh. 1998. "Diogenes Laertius on the Stoic definitions of κόσμος." *Scripta Classica Israelica* no. 17:21-26.

"Among numerous reports of the Stoic distinctions between several applications of certain terms¹ there is one which specifies the three senses of the word κόσμος:

D.L. vii: (137) λέγουσι [sc. the Stoics] δε κάσμον τριχώς· αὐτοῦ ἕν τε τοῦ θεοῦ ἕν τοῦ ἐκ τῆς «πάσης οὐσίας ἰδίως ποιᾶν, δε δη ἀφθαρτὸς ἐστὶ καὶ ἀγένητος, δημιουργὸς ὧν τῆς διακοσμῆσεως, κατὰ χρόνων ποιαὶ περιόδους ἀναλίσκων εἰς ἑαυτοῦ τῆν ἀπασαν οὐσίαν καὶ πάλιν ἐξ ἑαυτοῦ γεννῶν. (138) καὶ αὕτη ἕν δε τῆν διακάσμησιν τῶν ἀστέρων κάσμον εἶναι λένουσιν καὶ τρίτον τοῦ συνεστηκοῦ εἰς ἄμφοιν ,

The apparent difficulty of the report is that ἀμφοιν in the third definition must refer to the two preceding meanings of κόσμος, so that the third sense of the term appears to be τοῦ συνεστηκοῦ ἐκ τοῦ ἐκ τῆς ἀπάσης οὐσίας ἰδίως ποιῶ καὶ τῆς διακοσμῆσεως τῶν ἀστερων. This is an impossible notion, and Arnim proposed excising τῶν ἀστερων. Yet his solution is difficult." (p. 21)

(...)

"Accordingly, the original text must have looked like this:

λέγουσι [sc. the Stoics] δε` κάσμον [τριχώς· αὐτόν τε] το`ν θεο`ν το`ν ἐκ τῆς ἀπάσης οὐσίας ιδίως ποιόν, δς δῆ ἀφθαρτός ἐστι και` ἀνένητος, δημιουργο`ς ιυν τῆς διακοσμη`σεως, κατα` χρόνων ποια`ς περιόδους ἀναλίσκων εἰς ἑαυτο`ν τη`ν ἅπασαν οὐσίαν και` πάλιν ἐξ εαυτοῦ γεννών. [και` αὐτη`ν] <κατα` > δε τη`ν διακόσμησιν [τῶν ἀστερων <τῶν τη`ν νῆν περιφερομενων >] κόσμον εἶναι λέγουσι [και` τρίτον] το` συνεστηκο`ς ἐξ [ἀμφοῖ`ν] <αἶθερος και` ἀστερων κατα` περιοχη`ν και` γῆς και` τῶν ἐπ' αὐτῆς ζώων και` φυτῶν >.

If my line of reasoning is correct, Diogenes' report is a result of the mechanical addition of the sense of 'heaven' of the word κόσμος to an account of the Stoic distinction between κόσμος in the sense of eternal god comprising all substance and κόσμος in the sense of world-arrangement. The way in which this addition was made distorted the original account: the phrase κατα τη`ν διακόσμησιν, which explained the conceptual relation between the two senses of κόσμος, was sacrificed, so that these senses came to look unrelated,²² and the original σῦστημα description was mutilated. As a result, the report is misleading: the added sense of 'heaven' is neither terminological nor even frequent in the Stoics." (p. 26)

(1) Two senses of οὐσία (H. v. Arnim, *Stoicorum veterum fragmenta* [Stuttgart, 1905; hereafter SVF], i 25.2; ἦ 114.19) and ἀδιάφορον (SVF iii 28.20, 29; 29.17); three senses of στοιχειον (SVF ii 136.26), ποιόν (SVF ii 128.33), πόλις (SVF iii 81.10), ἀρετή (SVF iii 19.23), etc.

(2) The same report is found in Suda, s.v. κόσμος.

(3) Arnim, SVF, ii 168.9. Arnim is followed by A. A. Long and D. N. Sedley, *The Hellenistic Philosophers* (Cambridge, 1987), ii, 268.

20. ———. 2000. "Diogenes Laertius on the Stoic definitions of κόσμος again." *Scripta Classica Israelica* no. 19:271-280.

"I am very pleased that my short and unambitious piece 'Diogenes Laertius on the Stoic definitions of κο`σμος', published in the previous issue of *Scripta Classica Israelica*,

should have attracted the critical attention of Dr. Ludlam. As a self-conscious scholar I am well aware of the fallibility of my arguments and highly appreciative of professional criticism as a major help in the improvement of my skills and expertise. I am grateful to the Editors of *Scripta Classica Israelica* for inviting me to respond to Dr. Ludlam's critical review of my article." (p. 271)

(...)

"It is a pity therefore that this as well as certain other deficiencies of Dr. Ludlam's article render his rich critical commentary less helpful than it might otherwise have been. But what is regrettable beyond all this is that Dr. Ludlam has chosen to phrase his paper in an unpleasantly dismissive language which does little honour to the profession, and argues in a way which may on occasion strike the less sympathetic reader as simple malice. It is, alas, all too easy to give the uninformed reader the impression that what purports to be detached scientific precision is in reality no more than the expression of personal animus."

21. Fleischer, Kilian. 2020. "Structuring the History of Philosophy – A Comparison between Philodemus and Diogenes Laertius in the Light of New Evidence." *The Classical Quarterly*:1-16.

Considering the fair amount of ancient authors who compiled works on the subject of the 'History of Philosophy', it is remarkable—and regrettable—that there is no solid basis for a comparative analysis of their structures.(1) Most ancient histories of philosophy are only preserved in a few fragments or excerpts and hardly allow any meaningful non-trivial comparison of the structure and order of the philosophers and schools discussed. The only more or less entirely preserved 'History of Philosophy' is Diogenes Laertius' famous treatise." (p. 1)

(...)

"The only other 'History of Philosophy' which has come down to us from antiquity in significant excerpts—or, to be more

precise, in significant original fragments—is Philodemus’
Σύνταξις τῶν φιλοσόφων." (p. 2)

(...)

"In this contribution I present a new reading of the final section of the *Index Academicorum* which has far-reaching consequences not only for the supposed content of the *Index Academicorum* itself but also for the supposed structure of the entire syntax. A reassessment of the similarities between Philodemus and Diogenes, taking the new evidence into account, suggests that the structure of the two works was different in many respects and that the hypothesis that Philodemus’ arrangement of the material served as model for Diogenes has to be rethought and probably rejected.

The *Index Academicorum* (also known as *Historia Academicorum* or similar) is commonly deemed to represent a book of Philodemus’ Σύνταξις τῶν φιλοσόφων (10)" (p. 3, some notes omitted)

22. Fletcher, Richard. 2016. "Imagination dead imagine: Diogenes Laertius’ work of mourning." In *Creative Lives in Classical Antiquity: Poets, Artists and Biography*, edited by Fletcher, Richard and Hanink, Johanna, 219-240. Cambridge: Cambridge University Press.

"Diogenes Laertius’ *Lives and Opinions of the Eminent Philosophers* shares something vital with both Roland Barthes’ mourning diary and Jacques Derrida’s work of mourning.

(...)

It is precisely this conception of the work of mourning that I want to explore in my reading of the ill-fated poetic output of

Diogenes Laertius, which consists in the selections from his collection (or collections) called Epigrammata or Pammetros ('Epigrams or In Various Metres'), interspersed throughout his monumental *Lives and Opinions of the Eminent Philosophers*. (3)

It has been well-documented that Diogenes' work emphasizes the deaths, as much as the lives, of Greek philosophers.(4)

Central to any discussion of Diogenes and death is the role played by his poetic works scattered throughout his biographical narratives, works which I will dub his biographical death-poems." (p 219-220)

Oxford: Archaeopress.

Abstract: "It has become commonplace for scholars to point out the similarities, as well as the vast differences —despite both works belonging to the literary genre of philosophical biography— between Diogenes Laertius' *The Lives of Eminent Philosophers* and Eunapius of Sardis' *Lives of the Philosophers*

and Sophists, which were in all likelihood written in the space of less than a century. It is particularly salient that, although this phenomenon is often backed up by archaeological evidence, the heroisation or even deification of some ancient Greek philosophers in Laertius' *Lives* tends only to be dealt with in the epigrams dedicated to them by the author – the place where Laertius usually expresses his own personal stance and his judgement on the lives and deaths of the philosophers in question. There are scarce few references to this typically Greek religious process in the body of Laertius' narrative, except, tellingly, where this is to condemn it as fraud. As such, this short article looks to explore the somewhat ambiguous mentality, which can be seen to

undergo a transformation of sorts, which emerges in Laertius' *Lives* regarding the cult of the philosophers and their divine character. This is presented against a particularly significant historical backdrop immediately preceding the popularisation of the figure of the θεῖος ἄνθρωπος and Christian hagiography, a viewpoint which brings into focus a number of changes and continuities."

25. ———. 2022. "Conversion to Philosophy in Diogenes Laertius: Forms and Functions." In *Religious and Philosophical Conversion in the Ancient Mediterranean Traditions*, edited by Despotis, Athanasios and Löhr, Hermut, 219-237. Leiden: Brill.

"The well-established theme of the conversion to philosophy by the ancient Greek thinkers has long been identified in various studies.(2) This conversion to philosophy, the usual Greek term for which is ἐπιστροφή,(3) often leads, in effect, to a true initiation process, when the new philosopher abandons his previous life of luxury, excess and superstition, or a life which simply has no connection with philosophy, to embrace a new disciplined life, based on asceticism, σωφροσύνη and, naturally, the practice of philosophy. The philosopher has usually already been called to the vocation of philosophy, often demonstrated by extraordinary skills that have been apparent since childhood and considerable intellectual precocity, but a concrete 'call' is necessary which formalises it in an educational context, always by a master's side, given that the transmission

of philosophical activity is unthinkable outside of a school or at least outside of the relationship between master and disciple." (p. 219, some notes omitted)

(...)

This is why it is useful to classify and analyse the various models of conversion and initiation in philosophy as presented in the ancient biographies, in particular, of course, in Diogenes Laertius' *Lives of the Eminent Philosophers*, the only surviving complete work in this genre. We must clarify that a study of this kind cannot be considered rigorously historical: the ancient biographies, as is well known, can rarely be used in this way. Rather, this seeks to classify and analyse the sense, when possible, of the various biographical themes related to philosophical conversion and initiation that appear in these narratives, in order to understand, at least, how the ancient Greeks viewed philosophers and philosophy." (pp. 220-221)

"The Athenian decree honouring the philosopher Zeno of Citium is generally considered to be one of the most important sources for the social status of philosophers and their public acceptance in Hellenistic Athens. A remarkable aspect of this source, which also constitutes the reason for the present

investigation, is that the text has not come to us as an inscription engraved on stone, but is quoted by Diogenes Laertius in his *Life of Zeno*:(1)" (p. 470)

(...)

"My discussion of this text will focus on the motivation clause and the details for the publication. But rather than assume that the decree is genuine and draw consequences from that assumption, I will consider these two parts of the text against the background of the epigraphic habit of Athenian honorary decrees dating to the third century. To anticipate my conclusions, both the motivation clause and the provisions for the publication of the decree show a fairly consistent pattern of concepts and ideas that are very common in the literary biographies of Hellenistic philosophers, but are exceptional in public inscriptions for philosophers and in Athenian honorary inscriptions in general. Chapter 7.4: *The philosophical gallery: Diogenes Laertius*, pp. 305-317.

"(...) I shall be content to give a general description of contents and disposition, and then to offer a few examples of different kinds of philosophical Lives provided by Diogenes. His close reliance on earlier Lives and collections makes rather futile any attempt at defining a typical Laertian Life, as is possible (to a certain extent) with the Plutarchan form. The best one can do is to show what kinds of ingredients tend to occur and how they are combined in particular cases, and to ask what the author may have wanted to achieve, from a literary point of view, with his voluminous specimen of collective biography." (p. 306, note omitted)

(...)

"What literary ambitions can we detect in Diogenes' collection? It is true that biography, in a sense, dominates over doxography

in the work as a whole. This is one reason why modern users of the work, who mostly consult it to get philosophical information, tend to return disappointed: the author seems to be more interested in 'silly' anecdotes about the philosophers' lives than in what they really thought and taught. But it is difficult to see that he was interested in writing readable and attractive biography either; the aesthetic aspirations that earlier in life moved him to publish the collection of epigrams in different metres seem to be absent in his vast work in prose. He makes no effort to fill in missing parts of the Lives using his own creative imagination, as most ancient biographers do, but is content to reproduce what the tradition offers, leaving the gaps wide open. A uniform literary tone is hardly to be overheard; what unity there is resides in the philological pedantry." (p. 317)

28. Hahn, David E. 1992. "Diogenes Laertius VII: On the Stoics." In *Aufstieg und Niedergang der römischen Welt. Teil II: Principat. Band 36: Philosophie, Wissenschaften, Technik. 6. Teilband: Philosophie (Doxographica [Forts.]*, edited by Haase, Wolfgang, 4076-4182. Berlin: Walter de Gruyter.

Indices pp. 4404-4411.

"Diogenes Laertius' 'Lives of the Stoics', Book 7 is a literary enigma. In a series of so-called biographies of the Stoics of the third century B. C. Diogenes Laertius presents his readers with a kaleidoscopic array of colorful anecdotes, witty sayings, dates and bits of biographical data, bibliographies, and a long synopsis of Stoic philosophical doctrines. Moreover, he presents many of these items as quotations from a bewildering number of Stoic philosophers and other authors of the first three centuries B. C. The thorough going fragmentation of subject matter and authority creates an almost irresistible temptation for the reader to ignore the author's literary pretensions, simply to enjoy the parade of images and ideas, ostensibly emanating from a chorus of ancient authorities. The nature of Diogenes Laertius' literary method,

combined with the fact that most of the surviving biographical information about the early Stoics and the most comprehensive

survey of early Stoic teaching are found in this book have quite understandably led modern readers to focus their attention on the historical information that Diogenes preserves rather than on Diogenes' own literary, historical, or philosophical aims and accomplishments.³ Yet there can be little question that Diogenes' literary and historiographical aims have had a profound influence upon the nature and quality of his historical information, and that an understanding of his method of composition is crucial both for evaluating his own literary and philosophical achievement and for critically interpreting the historical information contained in his work." (p. 4077, notes omitted)

"In this study I propose to reexamine Diogenes' composition of the seventh book of his 'Lives' in the light of what is now known about ancient methods of composition of informational works. By carefully picking through the text for evidence on its construction I hope to clarify the nature and identity of most of the sources that he used in this book. This analysis will also bring into clearer focus his historiographical and literary objectives to the extent that they are manifested in this book. It is my hope that these results will, in combination with studies of other parts of his work, also advance our understanding and appreciation of Diogenes as an author and historian of philosophy in the early third century A. D." (p. 4078)

30. Kindstrand, Jan Frederik. 1986. "Diogenes Laertius and the *Chreia* tradition." *Elenchos. Rivista di Studi sul Pensiero Antico* no. 7:217-243.

"In Diogenes Laertius' work on Greek philosophers pointed sayings and anecdotes play an important role. These collections are prominent especially for the Seven Sages and many members of the Socratic schools, and certainly belong to the most entertaining parts. In some biographies they dominate absolutely, and if they were to be removed, little would be left in the form of biography for characters such as Anacharsis,

Aristippus, Antisthenes and above all the Cynic Diogenes." (p. 219)

31. Kölligan, Daniel. 2012. "Dying in Diogenes: the use of τελευτάω in Diogenes Laertius and beyond." In *Hyperboreans: Essays in Greek and Latin Poetry, Philosophy, Rhetoric and Linguistics*, edited by da Cunha Corrêa, Paula, Martinho, Marcos, Macedo, José Marcos and Pinheiro Hasegawa, Alexandre, 395-428. São Paulo: Humanitas.

"Summary.

The IMPF [imperfect] of τελευτάω in Diogenes Laertius and Plato either opens up a framework for further elaboration on the topic it introduces into the discourse or refers back to a topic already under discussion at some previous point. While the corresponding AOR [aorist] form is sufficient to make a self-contained statement about a fact in the past, the IMPF is not. The imperfective aspectual value it is usually seen to have can either be exploited on the clausal and sentential level by referring to an event without taking into account its temporal delimitation, which gives us the well-known progressive, conative, iterative, habitual, etc., readings, or on the discourse level by creating a setting into which further information may be couched or by referring back to previous information.

This behaviour of τελευτάω sets it off from its semantic near-synonym αποθνήσκω which is much less frequently used in the IMPF, the reason for which may originally have been the fact that the former is an accomplishment, and the latter an achievement verb. The standard readings of the imperfective forms of the latter - iterative, distributive - may have made it less suitable for the discourse related uses described in this paper." (p. 426)

32. Lacalle, Jacinto Martínez. 1976. "Three Stoic Propositions in Diogenes Laertius VII 69-80." *Phronesis*:115-119.

"The present paper aims at suggesting the emendation of the texts of three Stoic propositions appearing in Diogenes Laertius' *Lives and Opinions of Eminent Philosophers* at the

places indicated by the abbreviations 'DL VII 69', 'DL VII 78', and 'DL VII 80'" (p. 115, a note omitted)

(...)

"Ideally, editors of texts of Stoic logic should learn and understand it. In this paper I offer corrected versions of the three incorrect texts quoted. My aim is but to help future editors to establish a better Greek edition of Diogenes Laertius." (p. 119, a note omitted)

33. Laks, André. 2013. "The Pythagorean *Hypomnemata* Reported by Alexander Polyhistor in Diogenes Laertius (8.25–33): A Proposal for Reading,." In *On Pythagoreanism*, edited by Cornelli, Gabriele, McKirahan, Richard and Macris, Constantinos, 371-384. Berlin: De Gruyter.

"One can wonder whether the main responsibility for Pythagoras' Platonization – which is much older, and also easier to understand, given Plato's own clear if indirectly expressed Pythagorean inclinations, than his Aristotelization – belongs to Plato's immediate disciples Speusippus and Xenocrates, as is commonly held, or rather to Aristotle himself, as L. Zhmud interestingly argues in the present volume.(5) In any case, with respect to the line of development that stretches from Pythagoras to the Neopythagoreans through the Ancient Pythagoreans, the Platonic Academy, and Aristotle, the *Pythagorean Hypomnemata* (or *Pythagorean Notes*, as I shall call them)(6) which Diogenes Laertius read in Alexander Polyhistor's *Successions* and which he reproduced in Book 8 of his *Lives* (§§25–33), occupy an interesting position.(7) Although the date of redaction of this text is impossible to settle exactly, there is scholarly agreement that it is both post-Academic and pre-Neopythagorean, which means that it must have been written between the late 4th and the 1st century BC. (8)" (pp. 371-372)

(5) See supra, p. 323 ff. [*Pythagorean Number Doctrine in the Academy*, pp. 323-344]

(6) The title *Hypomnemata* is difficult to translate. Memoirs, Commentaries, Notebooks, which one finds in various authors,

do not strike the right note. Notes might be the least confusing. (...)

(7) Alexander of Miletus, surnamed Polyhistor because of his vast learning, lived in Rome under Sulla at the beginning of the 1st century (for further information, see Schwartz 1894). On doxographical excerpts in Successions-literature, see Mejer 1978, p. 64f. (cf. Zhmud 2012, p. 59). Alexander may have abbreviated the original text, and Diogenes the text he found in Alexander (the *kalei* in § 29 or *phesi* in §32 are clear traces of report and hence intervention, but it is impossible to be more specific). Rewriting might account for some of the text's not infrequent obscurities and oddities.

(8) Alexander Polyhistor, who worked in Rome after 82 – c. 35 provides, of course, a *terminus ante quem*.

34. ——. 2014. "Diogenes Laertius' *Life of Pythagoras*." In *A History of Pythagoreanism*, edited by Huffman, Carl A., 360-380. Cambridge: Cambridge University Press.

"The *Life* [of *Pythagoras*] itself is an odd book, a product of late erudite Hellenistic scholarship, extremely heterogeneous, full of quotations (explicit or not), and often lacking visible, or for that matter any kind of organization. This explains why reading Diogenes may mean – and has in fact often meant – reading him for the sources he quotes and uses, especially since he frequently happens to be the only author to preserve them. This natural tendency to exploit Diogenes' work rather than read it "for itself" has been enhanced on the one hand by a disciplinary orientation towards *Quellenforschung* ("inquiry about sources") and, on the other hand, by a strongly depreciative

judgment on Diogenes' own capacities and achievement. Progressive awareness of the fact that part at least of the strangeness of Diogenes' book may come from our own expectations as to what historiography should be has led some scholars at least (mostly in recent times) to minimize Diogenes' shortcomings and to try to understand better his procedures and intentions.

Given the nature of his work, it is in any case difficult to talk about Diogenes without talking about his sources. I shall do this (section 3) after having reviewed the content of Book 8 and explained its place within Diogenes' work (section 2). I shall then comment about some specific features of Diogenes Laertius' picture of Pythagoras (section 4), give an analysis of the extended report about his (alleged) doctrines which, as I read it, plays a central function in the overall construction of the book (section 5) and eventually raise the problem of Diogenes' attitude towards Pythagoras (section 6)." (pp. 371-372, notes omitted)

Essays on Greek Law in Honor of Alberto Maffi*, edited by Gagliardi, Lorenzo and Pepe, Laura, 227-242. Milano: Giuffrè Francis Lefebvre.

"Conclusions.

In what regards the transmission of Solon's poems — and even taking into account that Diogenes provides sometimes doubtful information (such as the number of verses that the statesman would have composed) —, the doxographer turns out to be a very useful source for the recuperation of the poetic work of the statesman, to the point of preserving verses that no other sources have documented. As for the legislative work, the value of Diogenes is more ambivalent. On the whole, it refers to a still relatively high number of norms, but, unlike with the poems, he chooses not to quote the laws literally, thus giving preference to brief allusive summaries, not always exact in their wording and

in their ascription to Solon. Even so, one can find in his testimony also some useful interpretive suggestions which do not appear in other sources. Still, if one compares the thin information provided about laws with the attention he dedicates to the alleged letters that Solon exchanged with other personalities such as Peisistratus, Periander, Epimenides, and Croesus (1.52-4; 64-7), it is clear that the doxographer (and most probably his readers) would be far more interested in the ethical potentialities of this type of apocryphal material than in critically reconstituting Solon's legislative work. Awareness of this fact requires caution in analyzing the information that Diogenes conveys, but does not obliterate his value and relevance as a source." (pp. 240-241)

***Lives and Opinions of Eminent Philosophers* by Diogenes Laërtius. A Bibliography (Lew-Z)**

English studies (Lew-Z)

1. Lewis, Eric. 1988. "Diogenes Laertius and the Stoic Theory of Mixture." *Bulletin of the Institute of Classical Studies* no. 35:84-90.

"Here I shall discuss the Stoic theory of mixture. Perhaps no other physical theory has ever been so ridiculed, by ancient and modern commentators alike.

The Stoics are thought to have 'bitten the bullet', and claimed that the gin and the tonic in your mixed drink are actually coextensive; that it is a case of two bodies occupying exactly the same place at the same time. This 'absurdity' is thought to result not just from their theory of mixture, but from their whole natural philosophy. The Stoics are thought to have conceived of almost everything as a body, qualities, mental states, the soul, etc., and so coextensive bodies are thought to be found wherever one looks in the Stoic universe. My body and my soul are said to be two coextensive bodies, all of my qualities are claimed to be bodies distinct both from my body, and from each other. Aristotle made it axiomatic that no two bodies can be in the same place at the same time.(6) Most subsequent philosophers have agreed, the Stoics being seen as foolish metaphysicians who base their whole natural philosophy on an obvious falsehood.

This is a mistaken view. Neither has the correct Stoic theory of mixture been discovered, nor has their theory of body, qualities

and soul been properly worked out. Here I hope to correct the first error, but hinting at the proper explication of the second.

The passages most useful for discussing the Stoic theory of mixture are as follows: Stobaeus *Ecl.* XVII 4.153.24-55 14 Wachsmuth (= Ar. Did. *Fr. Phys.* 28 = SVF 2.471), Alexander *de mixt.* 3.216.14-217.2 (= SVF 2.473), and, perhaps most importantly, Diogenes Laertius VII.151 (= SVF2.479)." (pp. 85-86, some notes omitted)

(6) Aristotle denies this possibility at the following: *Phys.* 4.1 209a4-7, 4.6 213b7; *Cael.* 3.6 305a9-20; *GC* 1.5 321a5-10; *DA* 1.5 409b3, 2.7 418b13-18.

2. Long, Anthony A. 1986. "Diogenes Laertius, *Life of Arcesilaus.*" *Elenchos. Rivista di Studi sul Pensiero Antico* no. 7:429-449.

"No philosopher in the Hellenistic period is more intriguing than Arcesilaus of Pitane, and none is of greater historical significance.

His interpretation of the Platonic tradition became the stance of the Academy down to the time of Philo of Larissa and Antiochus of Ascalon. Thereafter in the refurbished Pyrrhonism of Aenesidemus, the dialectical strategies of Arcesilaus and Carneades lived on among the methods of that new school for inducing suspension of judgement (ἐποχή). Arcesilaus in effect was the founder of Greek scepticism, as a methodology for demonstrating that every claim to knowledge or belief could be met with a counter-argument of equal strength. By his rejoinders to Stoic theses, continued and developed by Carneades, Arcesilaus ensured that Stoic philosophers must be constantly on the alert against sceptical challenges. More than any other thinker of his time, Arcesilaus deserves the credit for ensuring that Hellenistic philosophy remained true to the classical tradition of argument, with no quarter given to sloppy thinking or idle dogmatism.

(..)

Some traces of Arcesilaus, we may conjecture, were transmitted in writing through the Academy's Stoic opponents. But if, as seems certain, Arcesilaus published nothing under his own

name we have to reckon with the probability that even our meagre record of his arguments in Cicero, Sextus and Plutarch is nothing like a first-hand report of what he said.

This situation casts Diogenes Laertius' life of Arcesilaus into a prominence which seems not to have been appreciated. If, as I shall argue, his life captures features of Arcesilaus which go back to the third century B.C., we should ask whether, notwithstanding the low level of Diogenes' philosophical acumen, these features corroborate or throw light on our more sophisticated but much later reporters. Apart from this, Diogenes' *Life of Arcesilaus* is one of the best examples we might take if we are interested in a case-study of his collection at the highest level it achieves. That level, to be sure, is a hill of very modest altitude. But with Arcesilaus, it does at least avoid the flatness, not to say, depths, evident in some of his lives." (pp. 429-430)

3. ———. 2018. "In and Out of the Stoa: Diogenes Laertius on Zeno." In *Authors and Authorities in Ancient Philosophy*, edited by Bryan, Jenny, Wardy, Robert and Warren, James, 242-262. Cambridge: Cambridge University Press.

"David Sedley in his celebrated article on 'philosophical allegiance in the Greco-Roman World' emphasizes the extraordinary authority that founders of schools acquired among their followers, at least after the founder's death.(1) This point pertains to Zeno of Citium as much as it does to Epicurus, who is the main focus of Sedley's study." (p. 242)

(...)

"In this chapter I want to develop Sedley's insight by first discussing a striking mismatch between Cicero and Diogenes on details of Zeno's career, and then by exploring in some detail the sources and the structure of Diogenes' vita section.

These findings will tell us little that is certain, unfortunately, about Zeno's philosophical career. What they will illuminate is a large gap between how Zeno was perceived by various contemporary authors and how Stoics at the time of Cicero represented Zeno's role as founding father of the school.

I am far from being a pioneer in taking this line, which Jaap Mansfeld and David Hahm have already pursued most effectively.(10) Much, however, remains to be said about Diogenes' Life of Zeno, leaving us, if I am right, unsettling questions about the first Stoic's intellectual biography and persona." (p. 244)

(1) Sedley (1989).

(10) Mansfeld (1986); Hahm (2002).

7. Mann, Wolfgang-Rainer. 1996. "The Life of Aristippus." *Archiv für Geschichte der Philosophie* no. 78:97-119.

"There are no doubt any number of issues one might want to consider in connection with Aristippus and his philosophy. Yet since all his writings - if ever there were any - are lost to us, we have to content ourselves with the doxography. Here the Life of Aristippus in Book II of Diogenes Laertius occupies a special place. In this paper, I would like to consider four questions or problems that arise with respect to the *Life* (and the life) of Aristippus, not so much in the hope of settling them, as hoping to suggest some lines for further inquiry." (p. 97)

8. Mansfeld, Jaap. 1986. "Diogenes Laertius on Stoic Philosophy." *Elenchos. Rivista di Studi sul Pensiero Antico* no. 7:295-382.

Reprinted in J. Mansfeld, *Studies in the Historiography of Greek Philosophy*, Assen: Van Gorcum 1990, pp. 343-428.

"*Quellenforschung*, just as psycho-analysis, is an heirloom of 19th century positivism; it was believed that something is understood if one knows its origins, or what it is composed of. One could even argue the remote influence, or *actio* very much in distans, of Presocratic arche-speculation. But we have since learned also to take the author and his public into account. Consequently, I have attempted to display less interest in Diogenes Laertius as a person than as an author, and although one knows little about the sort of early third-century provincial public he wrote for, one may at least account for the fact that the traditions used by him reflect the feudings among and the discussions internal to the philosophical schools, as well as the various ways of teaching philosophy or addressing the general public, that evolved in the Hellenistic period and later. The way Diogenes Laertius handles his materials may reveal certain preferences, but it would be jejune to hold him responsible for the information at his disposal." (p. 299)

9. ———. 1988. "Number Nine (Diog. Laert. IX, 87)." *Revue de Philosophie Ancienne* no. 5:235-248.

"In this paper I wish to propose a new interprétation of a well known and vexing passage in Diogenes Laertius. We may Start by quoting the text as found at IX 87:

τὸν ενατον Φαβωρίνος ογδοον, Σέξτος δέ καν Αι νεσί δήμος
δέκατο ν. άλλα και τὸν δέκατον Σέξτος όγδοόν φησι,
Φαβωρίνος δέ ενατον.

It is odd to have a second-order note, dealing with the relative order of tropes eight nine ten in a plurality of authors, interrupting Diogene's first-order account of the ten tropes. It is also odd to find this note, dealing with tropes eight nine ten, at the end of the short descriptive summary of Diogenes' trope nine. Further more, it is odd that these two oddities do not seem to have troubled the learned. Nevertheless one would have been puzzled less if the odd note had been found at the end of Diogenes' account of the ten tropes or had served to introduce his last batch of three. To be sure, in the latter position too it would have interfered with the flow of Diogenes' exposition, but much less flagrantly than as it is now." (p. 235)

10. ———. 1999. "Sources." In *The Cambridge Companion to Early Greek Philosophy*, edited by Long, Anthony A., 22-44. Cambridge: Cambridge University Press.

"Diogenes Laertius' work, though for the most part a treatment of the sects, is structured according to lines of succession, the Ionian in books II-VII and the Italian in books VIII-X. Hence, we find the early Greek philosophers who are Ionians starting with Anaximander (said to be the pupil of Thales and so linked to book I) at the beginning of book II, and the Italians-cum-Eleatics together with Heraclitus and Xenophanes (who are counted as "random") in books VIII and IX. 1-49. Protagoras is added at IX. 50-6 because he was purportedly a pupil of Democritus, and Diogenes of Apollonia at IX. 57 for no visible reason.(36) Diogenes' treatment is very uneven. The early Ionians get only brief chapters, and the sections about the early Eleatics are also relatively short. Pythagoras and Pythagoreanism are treated on an extraordinarily large scale, though not yet in the mystagogical way of a Porphyry, or an Iamblichus; Empedocles (included among the Pythagoreans), Heraclitus, and Democritus are presented in fairly long sections.(37)

(...)

The doxographies in Diogenes Laertius that are concerned with Pythagoras, Empedocles, Heraclitus, and Democritus are preceded by fairly extensive biographies, whereas biographical information about the other early Greek philosophers is thin, or even, as in Leucippus' case, absent (though he is part of the succession). This too shows that Diogenes Laertius, or the traditions he is following, attached a special importance to these figures. The biography of Heraclitus is perhaps the most interesting. Factually, little was known, so stories about his character, his behaviour, and his death were fabricated from the utterances in his book - an interesting example of the idea, prominent in Diogenes Laertius but also quite common in a variety of other authors, that a philosopher's life and his work should agree with each other.(41) The study of the life, activities, and sayings of a philosopher was in fact regarded as

an indispensable preliminary to the study of his writings and doctrines. In the cases where no books were available, the philosopher's "life" itself, including acts, apophthegms, and so on had to suffice. Conversely, if biographical data were unavailable, they were made up from what a person wrote, or from what others were believed to have written about him. These practices gave ancient biography, or at least part of it, its bad name.(42) " (pp. 33-34)

11. ———. 2000. "Diogenes Laertius 7.83." *Mnemosyne* no. 53:592-597.

"The antepenultimate sentence, εἰς μεῖν γὰρ ... ἔχειν εἰπεῖν, of the concluding paragraph of the doxography (as with some latitude we may call it) of Stoic logic in book seven of Diogenes Laertius is by several scholars believed to be corrupt. It has been emended in various ways, sometimes drastically, at other times a bit less drastically, but the results of these attempts are far from satisfactory and no agreement has been reached.

Literal translations of what is in the manuscripts as a rule either avail themselves of tacit, or implicit, additions, or are perhaps too clever (see on Long & Sedley below). What is more, either way the unity and coherence of the passage as a whole are not maintained. In the present note I shall propose a very slight emendation." (p. 592)

12. Mejer, Jørgen. 1978. *Diogenes Laertius and his Hellenistic Background*. Wiesbaden: Steiner.

Contents: Preface IX; Part I: Diogenes Laertius 1; The intentions of Diogenes' book 2; The question of sources 7; The technique of excerpting 16; A specimen of source analysis 29; Diogenes' personality 46; Part II: Hellenistic historiography of philosophy 60; *Diadokai* 62; History of a single School 74; *Peri aireseon* 75; Doxography 81; Biographies of philosophers 90; Concluding remarks 94; Bibliography 96; Index locorum 102; Index nominum 105-108.

"The original motivation for this book was a wish to sort out the many ways in which Presocratic philosophy was transmitted in Antiquity. Only later did I realize that such a study demanded

far more knowledge and skill than I possessed, and that any attempt to discuss the question of historiography of philosophy in Antiquity had to be based on a fresh analysis of Diogenes Laertius. This book is offered as a contribution to Laertian scholarship but its value, if any, is to be decided by the extent to which it will be followed up by further research on Hellenistic scholarship, concerning history of philosophy and biographies of philosophers, and on the transmission of early Greek philosophy in Antiquity. Ultimately, a History of Historiography of Philosophy in Antiquity is to be hoped for." (from the Preface)

13. ———. 1992. "Diogenes Laertius and the Transmission of Greek Philosophy." In *Aufstieg und Niedergang der römischen Welt. Teil II: Principat. Band 36: Philosophie, Wissenschaften, Technik. 5. Teilband: Philosophie (Einzelne Autoren, Doxographica)*, edited by Haase, Wolfgang, 3556-3602. Berlin: Walter de Gruyter.

"It should be clear by now that Diogenes did not mindlessly copy out his sources for his doxographical sections. He must have made an effort to find what he considered the best sources for each philosophical school, and he definitely had his own ideas as to the content of each doxography even if he did not always understand the more complicated philosophical arguments. Most of his doxographies show some affinity to the presentations of earlier Greek philosophy, which we find in other texts from the IInd and IIIrd centuries A. D., though in some cases he seems to have turned to older sources (e. g. for Aristotle and Epicurus). There is no sign of any mechanical use of sources, not even in the case of the Presocratics where he undoubtedly drew upon a source belonging to the doxographical tradition going back to Theophrastus. His information sometimes differs from that in Aetius and Hippolytus. In the few longer excerpts on the Presocratics he seems to reproduce his source(s) fairly closely but he is not averse to changing, or even adding to, the text he found in his source. We may not always be happy with him as a source of information on earlier Greek philosophy, but he is neither incompetent nor consciously misleading; there is little doubt

that he can be taken to represent what an individual interested in philosophy, (161) living somewhere in the provinces of the Roman empire in the IInd or IIIrd centuries A. D., could do, provided he worked hard collecting and excerpting the sources which he could find. Diogenes may not be a great writer, and there were obviously better philosophical minds writing in his period, but he is not to be vilified, and he has preserved much information that would have been lost to us, had it not been for his enthusiasm and industry." pp. 3599-3600.

(161) Diogenes is usually compared to sources like Plutarch, Galen, Sextus, and Hippolytus. They were, however, in some sense all 'professionals' and placed in important positions with access to good libraries in major cities. If we measure Diogenes with another stick, e. g. the philosophical knowledge implied in Lucian's `Vitarum Auctio', his effort becomes much more respectable.

14. ———. 2007. "Biography and Doxography: Four Crucial Questions Raised by Diogenes Laertius." In *Die griechische Biographie in hellenistischer Zeit. Akten des internationalen Kongresses vom 26.-29. Juli 2006 in Würzburg*, edited by Erler, Michael and Schorn, Stefan, 431-442. Berlin: Walter de Gruyter.

"Diogenes' text is divided into 10 'books' (...)

This structure is important since it seems to indicate that Diogenes' work belongs to a type of ancient literature in which the lives of philosophers were arranged as two or three series of biographies so that teacher and student followed one another within each major philosophical school. This type of literature had the title *Successions of Philosophers*, (5) though there are also other books with different titles that seem to belong in this category, not least Philodemus' two surveys of the Platonic and the Stoic schools.(6)

Some of Diogenes' biographies, however, seem to have been composed later than the Hellenistic period (Xenophon, Democritus), and some of his reports on philosophical systems show features that are similar to texts from the second century AD (Plato, Skeptics). Therefore, we must ask:

To which extent is Diogenes representative of the *Successions* type -- and in general of the Hellenistic tradition of biography and historiography of philosophy?

Diogenes' biographical sections are composed of a number of items like birth, parents, name, appearance, relationship to other philosophers, travels, life style and circumstances of death; there is no particular order in which these items are presented, and though many details also were found in Hellenistic sources, they cannot have come from one particular source. In any case, we must ask:

Is the biographical information we get, trustworthy?

The dominating element in all the biographies is Diogenes' use of anecdotes; sometimes the same anecdote is told about more than one philosopher, hence it is hard to believe that Diogenes himself was convinced of them being literally true. Since it is commonly assumed that anecdotes are fictitious, we must ask a third question:

What is the biographical value of anecdotes?

Many, but not all, of Diogenes' Lives include a section on the philosophical ideas, if not of an individual philosopher, then at least of a philosophical school. In the case of the Post-Socratic schools (the Cyrenaics, Plato, Aristotle, the Cynics, the Stoics, the Sceptics and Epicurus) there is no uniform way of presenting their philosophy: Plato is presented in the light of second century AD Platonism, while Aristotle's philosophy seems to represent a fairly early way of doing Peripatetic philosophy; the Stoic philosophy is described with references to many Stoics of different periods while Epicurus' philosophy is represented by four texts going back to Epicurus himself. The survey of the Sceptic tropes (9,79-105) is shorter than in Sextus Empiricus but otherwise comparable.(7)

The philosophy of the Presocratics is, however, for the most part described by means of fairly short systematic surveys similar to what we find in Hippolytus' *Refutatio omnium haeresium* Book One, and -- in content, if not in form -- to Pseudo-Plutarch's *Placita* and to sections of Stobaeus. These

surveys have since Diels' pioneering work *Doxographi Graeci* (1879) been called doxographical, though the term 'doxographical' unfortunately has been extended to mean any text reporting the views of previous philosophers.

Considering this variety of philosophical information, we must ask a fourth important question:

To which extent can we assume that Diogenes just copied his predecessors, or to put the question in another way: are we justified in assuming that most of the Hellenistic biographies of philosophers contained separate sections on the philosophers' views?

I would like to discuss these four crucial questions (8) by examining Diogenes' *Life of Democritus* (9,34-49) and draw some more general conclusions on that basis." (pp. 432-433)

(5) Cf. Mejer *Überlieferung der Philosophie im Altertum. Eine Einführung* (Kobenhaven, 2000). Fragments in Rosa Giannattasio Andria *I frammenti delle Successioni dei Filosofi*, (Napoli, 1989).

(6) Tiziano Dorandi's two editions of Philodemus (*Filodemo. Storia dei filosofi. Platone e l'Academia* (PHerc. 1021 e 164). Edizione, traduzione e commento a cura di T. D. [La scuola di Epicuro 12] (Napoli 1991) and *Storia dei filosofi: La Stoà da Zenone a Panezio* (PHerc. 1018) (Leiden - New York 1994) have superseded all previous editions.

(7) For these philosophical sections in Diogenes, cf. Mejer, *Diogenes Laertius and the Transmission of Greek Philosophy*, in: ANRW II 36.5 (1992) 3556-3602.

(8) A fifth important question which I shall not discuss in this context, is to which extent Diogenes' presentations of philosophical ideas are reliable, cf., however, the paper mentioned in the previous note.

15. Olfert, Christiana M. M. 2015. "Skeptical Investigation and Its Perks: Diog. Laert. 9.69–70 and 79–89." In *Pyrrhonian Skepticism in Diogenes Laertius*, edited by Vogt, Katja Maria, 147-170. Tübingen: Mohr Siebeck.

"In what follows, I will argue that despite some appearances to the contrary, Skeptical investigation has all the features we usually think belong to the epistemic type of investigation described above. The epistemic credentials of Skeptical investigation have often been discussed by other interpreters, but I hope to add to this discussion by focusing on epistemic improvement or advancement, and the sense in which Skeptical investigation aims to improve or advance the epistemic state of the investigator. In particular, I hope to show that the Skeptic – or anyone engaged in a Skeptical investigation – arguably achieves a number of epistemic advancements or benefits when she achieves suspension of judgment. These, we might say, are the perks of Skeptical investigation." (p. 148)

16. Ornelas, Jorge. 2021. "The Missing End of the Threefold Cord in the Transmission of Ancient Skepticism into Modernity: The *Lives* by Diogenes Laertius." In *Sceptical Doubt and Disbelief in Modern European Thought: A New Pan-American Dialogue*, edited by Raga Rosaleny, Vicente and Junqueira Smith, Plinio, 301-318. Cham (Switzerland): Springer Nature.

Abstract: "The orthodox position regarding how ancient Skepticism first arrived in the Renaissance and later into Modernity has been dominated by the work of Charles B. Schmitt and Richard Popkin. They jointly defended what I call here "the Popkin/Schmitt thesis": the transmission of skeptical ideas and arguments took place via a threefold cord made up of Cicero's *Academica*, Sextus Empiricus's *Opera* and Diogenes Laertius's *Lives of Eminent Philosophers*; in which the first two are dominant over the last one. This paper is intended to challenge this historical hypothesis through a twofold movement: on the one hand, I will argue that, from a historical perspective, unlike Cicero's *Academica* and Sextus's *Opera*, Diogenes's *Lives* was one of the primary sources of ancient philosophy since the Middle Ages. I will also argue that, given its particular compositional features, Diogenes's *Lives* transcended the philosophical context, influencing other branches of science like history and literature, through which Diogenes's characterization of Skepticism became commonplace in the Western world. Furthermore, and from a

philosophical perspective, I will argue that Diogenes's version of Pyrrhonian Skepticism has some explanatory advantages that provide us with a more comprehensive image of it, one that is not centered on epistemological topics as in Sextus's version. Both elements allow us to understand why Diogenes's *Lives* has, by its own right, a central place among the Holy Trinity of texts responsible for the transmission of ancient Skepticism into Modernity."

17. Perilli, Lorenzo. 2005. "'Quantum coniectare (non) licet.'" *Menodotus between Sextus Empiricus (P. 1.222) and Diogenes Laertius (9.116)*." *Mnemosyne* no. 58:286-293.

"The sequence of leading figures of the Sceptical school which Diogenes Laertius proposes in the ninth book of his *Lives* has appeared problematic to many. The passage (and the whole book) has been repeatedly investigated, and it is unnecessary to reopen here the related issues, concerning Diogenes' sources and the overall trustworthiness of his account. Diogenes associates Sceptical philosophers particularly with Empiricist physicians, tries to assign a specific role to each, makes out of the Empiricists an underpinning axis of the school. Among others, he explicitly sets Menodotus of Nicomedia, an Empiricist doctor whose floruit was around 125 AD, in the frame of scepticism: together with Menodotus, leading empirical representatives of Sceptical philosophy would have been at least Heraclides of Tarentum (I BC) and Theodas of Laodicea (II AD), then Sextus Empiricus.

Taken for granted the conceptual kinship between Empiricism and Scepticism, as well as the cues that empirical science will have taken, mostly at the outset, from sceptical elaborations (and vice versa), the attempt to incorporate the figures into a school is a characteristic piece of doxography, but it lacks consistency, let alone confirmation. Viano rightly labelled the Laertian list as "most dubious", and Menodotus' position there as "paradoxical". (pp. 286-287, notes omitted)

18. Plass, Paul. 1973. "A Fragment of Plato in Diogenes Laertius." *The Modern Schoolman* no. 51:29-46.

"After opening his book on Plato with a brief biographical sketch, Diogenes Laertius turns to charges that Plato stole some of his ideas from others. The most circumstantial accusation concerns plagiarism from Epicharmus. For this, Diogenes quotes directly from a certain Alcimus, probably a Sicilian historian active during the second half of the fourth century B.C. and therefore a younger contemporary of Plato. Alcimus apparently was interested in establishing Plato's dependence on Epicharmus to bolster his contention that Magna Graecia was a cultural equal of mainland Greece. He made his case in a book addressed to Amyntas, a mathematician and student of Plato. [*]"

(...)

"Before examining this curious "quotation," it will be useful to get some idea of how Alcimus goes about establishing his other parallels between Plato and Epicharmus. We will be concerned solely with his treatment of Plato; the content and authenticity of the lines of Epicharmus which he quotes are of no importance for our purpose. His first summary of Plato's views runs as follows: what never remains the same in quantity or quality but always flows and changes is sensible, for if you take number from anything it cannot have quantity, quality, or any identity. Of all such things there is no being but only constant becoming. The intelligible, on the other hand, is that from which nothing is ever taken and to which nothing is ever added; this is the nature of eternal things, which are always the same (Diogenes Laertius, III. 9, 10)." (pp. 29-30)

19. Ranocchia, Graziano. 2019. "Heraclitus' Portrait in Diogenes Laërtius and Philodemus' *On Arrogance*." In *Presocratics and Papyrological Tradition: A Philosophical Reappraisal of the Sources*, edited by Vassallo, Christian, 221-247. Berlin: de Gruyter.

"It is a matter of fact that the arrogance, conceit, and boastfulness of certain philosophers were well-known in antiquity. As we shall see, the case of Heraclitus is illustrated by the important witness of Diogenes Laërtius' life of this

philosopher, where the author draws copiously upon a source hostile to the philosopher, which highlighted his haughtiness and misanthropy.¹⁴" (p. 224)

(...)

"The author of the biographical-characterological portrait is unknown; the identity of Aristo the author of the Περὶ τοῦ κουφίζειν ὑπερηφανίας is still disputed; the identification of the Aristo mentioned twice in the *Life of Heraclitus* remains problematic; and, finally, the coincidence between Aristonymus and Aristo of Chios is most probable, yet not deductively inferable. With regard to the identity of the author of the biographical-characterological portrait of Heraclitus transmitted by Diogenes Laërtius in the *Life* of this philosopher – whether his name be Aristo or not, and whoever Aristo may be – it will be best to maintain a prudent approach in the future." (p. 244)

20. Román-Alcalá, Ramón. 2021. "Diogenes Laertius: A Moderate Skeptic in the History of Philosophy (Book IX)." *Philosophy Study* no. 11:293-302.

Abstract: "This paper presents the keys and reasons for Diogenes Laërtius' alleged scepticism, based on an analysis of the general design of his work *The Lives and Opinions of Eminent Philosophers*. I believe that it would be manifestly erroneous to seek confirmation of this scepticism solely in Book IX without taking into account the overall structure of the work. A convincing explanation is also provided of one of the most enigmatic and most studied phrases in this work. What did Diogenes mean when he said that Apollonides of Nicaea was ὁ παρ' ἡμῶν ("one of us")?"

21. Sassi, Maria Michela. 2011. "Ionian Philosophy and Italic Philosophy: From Diogenes Laertius to Diels." In *The Presocratics from the Latin Middle Ages to Hermann Diels*, edited by Primavesi, Oliver, 19-44. Stuttgart: Steiner Verlag.

Abstract: "This paper traces the history of a particular cliché of scholarship on the Presocratic philosophers which has persisted from ancient commentators until the present day, and in whose development Hermann Diels work constitutes an important stage. This cliché concerns the division of early Greek philosophy into an Ionian tradition founded by Thales and an Italic one founded by Pythagoras – although a tripartite division is also often found, in texts in which the Eleatic lineage is also given a certain importance and autonomy. I examine in detail how this model, which was originally inspired simply by considerations regarding the different places in which the traditions flourished, developed in various phases of ancient and modern philosophy along with reflections on the distinct theoretical characteristics of the different traditions and on their relations to Plato, whose philosophical system has generally been seen as a synthesis of them. However, even in its simplest, geographical form the model contributed to shape and preserve the tradition of Presocratic thought."

22. Searby, Denis Michael. 1998. *Aristotle in the Greek Gnomological Tradition*. Uppsala: Acta Universitatis Upsaliensis.

Dissertation for the Degree of Doctor of Philosophy in Classical Languages presented at Uppsala University 1998.

Abstract: "This dissertation consists of a new collection of maxims and apophthegms associated with Aristotle in the Greek gnomologies along with an introduction to the sources and a commentary on the content of the sayings. The major sources have been Diogenes Laertius, the anthology of Stobaeus, *Gnomologium Vaticanum* and related collections, cod. Par. gr. 1168 (*Corpus Parisinum*) and cod. Bodl. Digby 6, the *Loci Communes of ps.-Maximus the Confessor* and related anthologies, the *Florilegium Atheniense*, and the gnomology of Joannes Georgides. The introductory chapters concern the definition and history of the gnomological tradition, the investigation of the extant sources, the problem of multiple attributions, possible explanations for the title *The Chreiae of Aristotle* found in Stobaeus, and the different ways Aristotle makes his appearance in the tradition. The collection of sayings

is based on Greek sources alone, but frequent references are made to the Latin and Arabic traditions, and Appendices I and IV offer a sampling of the material to be found in these traditions. Appendix VI shows the sources of the so-called *Gnomologium Parisinum Ineditum*. The commentary dwells primarily on the attribution to Aristotle and the possible Aristotelian content of the sayings while at the same time relating the sayings to the gnomological tradition as a whole."

"Chapter Three: Sources for the Present Collection

II.2 Diogenes Laertius

Our oldest datable source is found in Diogenes Laertius' *Vitae Philosophorum*.

Diogenes composed his work probably during the third century A.D., making wide use of a variety of older sources. He deals with the lives of the Peripatetic philosophers in Book 5, Aristotle being treated in 5.1-35. As earlier noted, Diogenes explicitly mentions collections of sayings several times both as his own sources and as titles in the lists of works attributed to various philosophers. Apophthegms play an important role in general throughout Diogenes' work and are normally given a place of their own in his usual biographical scheme for each philosopher." (pp. 43-44, notes omitted)

23. Sedley, David. 2015. "Diogenes Laertius on the Ten Pyrrhonist Modes." In *Pyrrhonian Skepticism in Diogenes Laertius*, edited by Vogt, Katja Maria, 171-185. Tübingen: Mohr Siebeck.

"The most recognizable and recurrent manifestation of Pyrrhonist Scepticism, from the movement's revival by Aenesidemus in the first century BC down to Diogenes Laertius' *Life of Pyrrho* in the third century AD, is its trademark list of ten 'Modes' or 'Tropes'.(1)" (p. 171)

"In the present study I shall concentrate on Diogenes Laertius' presentation of the Ten Modes. Although he, like Sextus Empiricus (PH 1.164-9), goes on to add the Five Modes (Diog. Laert. 9.88-9), his account of the latter is virtually identical, word for word, to that given by Sextus, and therefore does not appear to demand a separate discussion here.(3)

In Sextus' surviving account of the Ten Modes, they are more fully "the modes [τρόποι, i.e. 'means'] through which (δι' ὧν) suspension seems to be inferred" (PH 1.35–6). Later, contracting this phraseology, Sextus calls each of them simply a "mode of suspension" (e.g. 79, ὁ ... πρῶτος τῆς ἐποχῆς τρόπος). Alternatively, Sextus tells us, instead of 'modes' they can be called 'arguments', λόγοι, or 'headings', τόποι, although the latter may instead, on a variant reading of his text, be 'patterns', τύποι. Jointly, these designations make it reasonably clear that the Ten Modes are so called because they are the inferential means through which, and/or the domains by reference to which, the Sceptic attains *epochē*." (p. 172)

(1) These are exhaustively presented and studied in the pioneering Annas / Barnes 1985.

The primary sources are: Sextus Empiricus *PH* 1.35–163; Philo, *De ebrietate* 169–205; Aristocles ap. Eusebius, *Praep. evang.* 14.18.11–12; Diogenes Laertius 9.78–88. Other apparent references to the Ten Modes include: Favorinus as cited by Gellius 11.5.4–5, and Plutarch's lost *On the Ten Modes of Pyrrho* (Lamprias catalogue 158, accepting the emendation of τόπων to τρόπων). See further, Annas / Barnes 1985, chapter 3.

(3) It has often been observed that the methodology of the Five Modes is at some points applied by Sextus while expounding the Ten Modes. It is impossible to say whether this represents a difference from Diogenes, whose version of the Ten Modes is too condensed for such methodological details to show up.

24. Shalev, Donna. 2006. "The Role of εὐρήματα in the "Lives" of Diogenes Laertius, and Related Literature." *Hermes*:309-337.

"1. the case of Protagoras, founder of speech act types

The father of modern speech act theory and of the canon of speech act types is the Oxford philosopher John Austin:

consensus has ascribed this founding role to Austin. Possibly assuming all his readers to be as erudite as himself, Austin did not feel the need to bring the prehistory of propositional meaning from the sources most accessible to him and his colleagues, the Greek Peripatetic and Stoic philosophers.

Passage (1) below discusses varying taxonomies and terms for speech act types in different Greek philosophical schools of the Classical period as reflected in a much later text from the period of the Second Sophistic, namely, by Diogenes Laertius, the biographer of ancient Greek philosophers, in his chapter on Protagoras.

Diogenes, in *Lives and Opinions of the Eminent Philosophers* 9.53.11-54.4, describes the taxonomy by the sophist Protagoras, an early contemporary of Socrates, giving him credit for having originated this division of speech act types, elsewhere attributed to Stoics:

(1) Διεῖλέ τε τον λόγον πρώτος εις τέτταρα εύχωλήν, έρώτησιν, άπόκρισιν, έντολήν (οι δε εις επτά· (54) διήγησιν, έρώτησιν, άπόκρισιν, έντολήν, άπαγγελίαν, εύχωλήν, κλήσιν), ους και πυθμένας ειπε λόγων. Άλκιδάμας δε τέτταρας λόγους φησι· φάσιν, άπόφασιν, έρώτησιν, προσαγόρευσιν.(3)

[Protagoras] first divided speech into four: entreaty, interrogation, answer, and injunction.

Others [say that he divided speech] into seven [types]: statement, interrogation, response, injunction, promise, entreaty, invocation which he also called pillars of speech. But Alcidamas says [that there are] four [types of] speech: affirmation, denial, question, greeting.

The legitimacy of Protagoras' taxonomy of speech act types in passage (1) above is couched in the vehicle of coming from an innovator (Διεῖλέ ... πρώτος). A survey of the immediate context offers additional signs of a concerted effort to create an impressive effect, and ultimately to establish the standing and reception of Protagoras, the Sophist, as a cultural hero, in the context of the *Lives* of Diogenes Laertius; of Protagoras as a

hero in the realm of the philosophy of language." (pp. 309-310, some notes omitted)

25. Sluiter, Ineke. 2005. "Communicating Cynicism: Diogenes' gangsta rap." In *Language and Learning: Philosophy of Language in the Hellenistic Age*, edited by Frede, Dorothea and Inwood, Brad, 139-163. Cambridge: Cambridge University Press.

"In this contribution, I will focus on Cynic strategies of communication, and on problems of the interpretation of Cynicism resulting from their communicative choices. First, I will look at the Cynics' use of transgressive non-verbal communication with the help of modern socio-linguistic theories of non-verbal communication and impression management. The Cynics scandalise their audience by their conscious use of the body and its processes for philosophical purposes; anthropological ideas about transgression will be helpful here (section 2).

In section 3, I will turn to verbal communication, and investigate the Cynics' characteristic use of language and literature, regarded as an aspect of their self-fashioning. Here, I argue that Cynic ideas on language correspond to a specific type of folk-linguistics, represented for us by a well-delineated literary tradition of iambos and comedy. I claim that the literary representations of Cynicism that have come down to us cannot be fully understood, unless their intertextual relations with other ancient transgressive genres are explored. The literary representations of the Cynics acquire a fuller meaning when they are seen to resonate within a web of comparable texts, notably the tradition of iambos and ancient comedy (section 3).

Finally (section 4), I will raise the question of the effectiveness of the consciously self-undermining aspects of Cynic communication, again by comparing them to other transgressive genres like satire and gangsta rap.

Throughout, my main focus of attention will be Diogenes, supplemented with some Antisthenes and later Cynics." (pp. 139-140, a note omitted)

26. Sollenberger, Michael George. 1985. "Diogenes Laertius 5.36-57. The *Vita Theophrasti*." In *Theophrastus of Eresus: On His Life and Work*, edited by Fortenbaugh, William W., Huby, Pamela M. and Long, Anthony A., 1-62. New Brunswick: Transaction Books.

"Diogenes' *Lives and Opinions of the Outstanding Philosophers* contains ten books, of which the fifth is devoted to Peripatetic philosophers. The *Vita Aristotelis* naturally comes first (5.1-35) and is followed by the *Vita Theophrasti* (5.36-57). While the former has recently been given special attention by Ingemar During, whose 1957 edition is readily available in his *Aristotle in the Ancient Biographical Tradition*, the latter has not received the attention it deserves. Indeed, it has not received special treatment since 1497, when it appeared, together with the *Vita Aristotelis*, in the second volume of the Aldine Aristotle. The text of Aldus' edition is quite unsatisfactory, for it is based on a reading of an inferior manuscript and embodies many conjectural emendations. Hermann Usener did publish an edition of Diogenes' catalogue of Theophrastean writings (5.42-50) in his *Analecta Theophrastea* (Diss. Bonn 1858), but he, too, neglected much of the manuscript evidence, only consulting Cobet's collation of a few manuscripts and some early editions and translations. The complete life of Theophrastus has, of course, been included in all editions of the whole of Diogenes' work, but the text has never been adequately supplied with textual apparatus. My aim, then, is to provide scholars with an edition of the *Vita Theophrasti* which is complete with upper and lower apparatus and generally meets the standards of modern philology." "Accounts of the lives of six early Peripatetic philosophers are contained in the fifth book of Diogenes Laertius' 'Vitae philosophorum': the lives of the first four leaders of the sect -- Aristotle, Theophrastus, Strato, and Lyco -- and those of two outstanding members -- Demetrius of Phalerum and Heraclides of Pontus. Our knowledge of the history of two rival schools, the Academy and the Stoa, is aided not only by the lives of several members of these two schools in Books Four and Seven of Diogenes' work, but also by accounts in the 'Index Academicorum' and the 'Index Stoicorum' which have been preserved for us among the several papyri from Herculaneum. (1) But for the Peripatos there is no such second source of information. There are, to be sure, numerous bits and pieces of evidence which concern the school and its members scattered throughout ancient and medieval literature, many of which have been made readily accessible by F. Wehrli in his well-known series 'Die Schule des Aristoteles'. (2) Moreover, in addition to Diogenes' version, several other lives of Aristotle have come down to us and have been collected and analyzed in detail by I. Düring in his 'Aristotle in the Ancient Biographical Tradition'. (3) But for the lives and careers of other Peripatetics, Diogenes' accounts are the only ones available to us.

All of the many aspects of these six lives cannot be discussed here with comprehensive thoroughness. Rather, relying on the studies and findings of past scholars, sometimes heavily, I shall offer a compilation of those findings in a systematic manner. Although oversimplification is inevitable in view of the many complex problems encountered in these lives, consideration will be given to general matters of content, structure, organization, and arrangement of material in Book Five as a whole, to the different categories of information in the

individual lives, and to the two most striking features of this book which set it apart from other books: the wills of the first four scholars and the extensive catalogues of writings included by Diogenes for five of the six philosophers." (pp. 3793-3794)

29. Swift, Paul. 2007. "The History and Mystery of Diogenes Laertius." *Prajñâ Vihâra* no. 8:38-50.

Abstract: "The History and Mystery of Diogenes Laertius" examines the peculiar status of the *Lives of the Eminent Philosophers*.

As literature, philosophy, and history, the *Lives* is a unique text, since it furnishes us with the only surviving attempt to construct an encyclopedia of philosophy from the ancient western world. This essay examines some of the influence this text has had on the history of philosophy, especially Nietzsche's interpretation of philosophy. There are parts of the *Lives* which are widely regarded as accurate by specialists in philosophy (such as the *Letter to Menoeceus* by Epicurus), but there are

also parts of the text which are historically unreliable and inaccurate. Diogenes veers from history into fiction at times and this essay addresses some of the difficulties involved in determining precisely where these transitions occur. Even when using the best scholarly methods, it is not always possible to know which parts of the Lives are trustworthy: thus there is a mystery, a legend which Diogenes preserves at the dawn of western philosophy."

30. Usher, M. D. . 2009. "Diogenes' doggerel: 'chreia' and quotation in Cynic performance." *Classical Journal*:207-223.

Abstract: "This paper examines Diogenes the Cynic's parodic quotations from Homer in anecdotes, or *chreiai*, preserved in Diogenes Laertius' Life. I argue that Diogenes' reworking of Homer suggests a deep familiarity with the themes, structures and compositional techniques of epic poetry and that Diogenes refashioned it spontaneously as a composing poet or rhapsode might have done in performance."

31. Vogt, Katja Maria. 2015. "Introduction: Skepticism and Metaphysics in Diogenes Laertius." In *Pyrrhonian Skepticism in Diogenes Laertius*, edited by Vogt, Katja Maria, 3-14. Tübingen: Mohr Siebeck.

"In this Introduction, I make some suggestions about ways in which the study of Diogenes' report may alter one's perception of ancient skepticism.

To situate these suggestions, a sketch of the nature of Diogenes' report is needed. I shall address what kind of author Diogenes is, the history of Pyrrhonism, the structure of Diogenes' report, and which versions of skepticism it covers (Section 1). To illustrate how interesting Metaphysically Inclined Skepticism may be, I then turn to §§ 61–73. Here Diogenes talks about Pyrrho, Pyrrho's immediate students, as well as presumed ancestors of skepticism in early Greek thought. Interpreters tend to agree that nothing of philosophical interest can be found in these references to poets and Pre-Socratic thinkers. I shall suggest that the opposite holds (Section 2).

My remarks on these matters are brief. They are intended to raise rather than answer questions, pointing the reader to the essays in this volume, to existing contributions in the field, and to what I see as potential topics for future research." (p. 4)

"Diogenes Laertius' report on Pyrrhonian skepticism occupies part of Book IX of his *Lives of Eminent Philosophers* (§§ 61–116). Diogenes writes in the 3rd century CE, and his account of Pyrrhonian skepticism covers roughly four hundred years of the history of Pyrrhonism. It is divided into two chapters, one devoted to Pyrrho and more generally to Pyrrhonian

skepticism, and a much shorter chapter devoted to Timon, Pyrrho's student.

Next to Sextus Empiricus' writings, Diogenes' report is the most detailed and philosophically sophisticated description of Pyrrhonian skepticism.

This volume offers a new English translation, printed next to the Greek text generously supplied by Tiziano Dorandi, as well as a range of scholarly essays by experts on ancient skepticism." (*Preface*, p. VII)

33. Warren, James. 2007. "Diogenes Laertius, Biographer of Philosophy." In *Ordering Knowledge in the Roman Empire*, edited by König, Jason and Whitmarsh, Tim, 133-149. Cambridge: Cambridge University Press.

"Diogenes' importance as a source for those working on the history of ancient philosophy has never been in doubt, but his credentials as a philosophical historian have not been so universally accepted. Often, Diogenes is praised for the virtue of having collected and ordered information from other, mainly Hellenistic, sources, and is thanked for his compilation but excused for his lack of philosophical acumen. Of course, such damning criticism of his approach is possible only once we have established some more concrete answers to the sorts of questions with which I began, questions about how the history of philosophy ought to be written. I make no effort to do that here. In any case, although I cannot attempt to articulate fully and defend the view here, I suspect that there is no single definitive or superior conception of how the history of philosophy ought to be written. Rather, I will ask why Diogenes wrote as he did. What does the organisation of the work tell us about his conception of philosophy and its history? My central contention will be that Diogenes' work is an example of one way of writing and conceiving the history of philosophy – in terms of biography. But he does not limit himself to telling the life-stories of philosophers; he also wishes to construct from these philosophers' lives the 'life-story' of philosophy itself."(p. 134, a note omitted)

34. ———. 2015. "Precursors of Pyrrhonism: Diog. Laert. 9.67–73." In *Pyrrhonian Skepticism in Diogenes Laertius*, edited by Vogt, Katja Maria, 105-121. Tübingen: Mohr Siebeck.

"I will consider two of these sub-sections in turn: first, and more briefly, 67–9 and then 71–3. As a pair they illustrate rather well the combination of the ethical and the epistemological aspects of Pyrrho's outlook at work throughout this part of book nine and neatly announced in 9.61: "And in general he denied that anything is 'in truth' but thought that all human actions are 'by habit' or 'by convention', for each thing is no more this than that." The question of the precise original emphasis in Pyrrho's own thought between these ethical and the epistemological strands is, of course, rather difficult to settle. Modern interpreters differ, often quite significantly, in their assessment of the extent to which later sceptics influenced the presentation of Pyrrho's original position. This brief section in Diogenes neatly encapsulates the difficulties in our sources that give rise to these on-going disputes and suggests that certainly already by Diogenes'

time it had become difficult to reconcile all the various accounts and interpretations of Pyrrho's philosophy. This passage also exemplifies a more general difficulty that ancient philosophers and ancient historians of philosophy faced in accommodating scepticism as a tradition or movement in their stories of the development of Greek thought.(3)" (pp. 106-107)

(3) For an excellent and concise account of this difficulty see Brunschwig 1999a, 232–7.

35. White, Stephen. 2020. "Diogenes Laertius and Philosophical Lives." In *The Oxford Handbook of Ancient Biography*, edited by De Temmerman, Koen, 251-266.

"Diogenes' Lives is an exceptional work on many counts, including some of special significance for this Handbook. For one, it is the single largest collection of Lives to survive from Classical Antiquity, handily surpassing Plutarch in number and scope if not in depth or length, and so too Philostratus and Suetonius. It is also a key witness to the early stages of biographical literature in the fourth and third centuries BC, preserving valuable evidence for pioneers like Aristoxenus, Antigonus of Carystus, Hermippus, and Satyrus. At the same time, it presents the single most comprehensive account of the origins and development of an entire discipline, and a distinctive form of intellectual history from a biographical perspective. It also, accordingly, represents a distinctive form of life-writing, framed by basic biographical data but lean, often very lean, on the standard biographical fare—from a modern perspective at least—of incident and narrative, and governed instead by its disciplinary orientation, its sustained focus on philosophy as a distinctive cultural practice and way to live. Its over-arching goal, evidently, is to tell, in condensed but leisurely fashion, how that practice began and evolved, the contributions of its formative figures, and especially the enduring fruits of their endeavours: a record of their memorable insights and sayings, their writings, theories, and other discoveries—stopping for the most part well short of the author's own day, some time in the Severan age, most likely the opening decades of the third century. The result thus amounts to an ostensive definition of philosophy, as the author conceived it, in the form of a gallery of its most influential and memorable representatives in all their diversity of attitude, approach, and achievement (Mejer 1992; Warren 2007). Importantly for this Handbook, its peculiar methods, contents, and format also enlarge the range and scope of ancient biography, and in ways that invite and inform critical reflection on the nature and purposes of life-writing in Antiquity." Teil II: Principat. Band 36: Philosophie, Wissenschaften, Technik. 6. Teilband: Philosophie (Doxographica [Forts.]*, edited by Haase, Wolfgang, 4049-4075. Berlin: Walter de Gruyter.

"Cinismo non è né antistenismo né diogenismo(1). Con questa singolare dichiarazione, ricordata sul finire dell'antichità dall'imperatore Giuliano nell'orazione 'Contro i cinici ignoranti', Enomao di Gadara rilanciava, in piena età imperiale, un problema di definizione storiografica su cui vivo era stato il dibattito già a partire dall'età ellenistica, e che anche in seguito avrebbe ricevuto varie formulazioni, spesso intrecciandosi con l'altro, intimamente connesso, relativo alla qualifica di ἀῖρεσις attribuibile o meno al movimento.

E' sintomatico che sia proprio Diogene Laerzio, cui pure si deve la sistemazione canonica e più compiuta del κυνισμός nel sistema di ἀῖρεσις, e διάδοχα ellenistiche, a farsi eco per noi di queste discussioni, trasmettendoci non secondari elementi per valutarne l'incidenza sulla ricostruzione complessiva che egli, per parte sua, ci offre. Il sesto libro delle 'Vite dei filosofi' si conclude infatti con una appendice il cui scopo primario è precisare alcune scelte che sono alla base dell'operazione storiografica compiuta nei nove βιοι precedenti: l'autore vi comprende, peraltro, una definizione unitaria della κυνική φιλοσοφία il cui esame rivela l'esistenza di una fitta rete di relazioni tra cinismo e tradizioni, non solo filosofiche, connesse. Le pagine che seguono si propongono di ripercorrere in modo analitico questo materiale, nel tentativo di chiarire,

dalla ricognizione e dal vaglio delle tradizioni che lo sottendono, le principali questioni d'ordine storico e dottrinario che almeno alcune dichiarazioni di Diogene Laerzio sollevano. (pp. 4049-4050, note parzialmente omesse)

13. ———. 1992. "L'VIII libro delle 'Vite' di Diogene Laerzio." In *Aufstieg und Niedergang der römischen Welt. Teil II: Principat. Band 36: Philosophie, Wissenschaften, Technik. 6. Teilband: Philosophie (Doxographica [Forts.])*, edited by Haase, Wolfgang, 4183-4217. Berlin: Walter de Gruyter.

"L'VIII libro di Diogene Laerzio è dedicato a Pitagora, capostipite del ramo italico della filosofia e primo a chiamarsi filosofo e a usare il termine *philosophia* (1), nonché ai pitagorici famosi; di questi solo Telaugè, figlio di Pitagora, figura nel proemio, ma non ha una vita autonoma a lui dedicata. Il programma descritto nel § 50 e il bilancio tratto nel § 91 lasciano presumere che Diogene abbia condotto a termine il piano previsto e che dunque l'ottavo libro possa considerarsi ultimato (2): dopo aver trattato Pitagora, Diogene annuncia (§ 50) di voler trattare dei pitagorici più famosi, e subito dopo dei cosiddetti 'sporadici', poi di continuare la successione sino a Epicuro. Le scarse notizie fornite su Teano e Telaugè nel corso della vita di Pitagora (§§ 42 -43) valgono ai suoi occhi come una

trattazione esaurita; quanto egli dichiara al termine del libro (§ 91), di aver trattato i pitagorici più famosi, non contrasta pertanto con la concisione dei capitoli dedicati ad alcuni di questi (Epicarmo, Ippaso, Alcmeone, Filolao) e può ritenersi definitivo."

(1) Questa notizia compare nel Proemio delle 'Vite' (I 12), mentre nell'VIII libro la medesima storia (Sosicrate-Eradide) è narrata senza la menzione del primato. Nel proemio (I 41) Pitagora figura tra i sette saggi. Su Pitagora inventore del termine cfr. W. Burkert, *Platon oder Pythagoras? Zum Ursprung des Wortes 'Philosophie'*, *Hermes* 88, 1960, 159-177; H. Gottschalk, *Heraclides of Pontus*, Oxford 1980, stt. 23 - 36, con letteratura critica.

14. Decleva Caizzi, Fernanda. 1992. "Il libro IX delle 'Vite dei filosofi' di Diogene Laerzio." In *Aufstieg und Niedergang der römischen Welt. Teil II: Principat. Band 36: Philosophie, Wissenschaften, Technik. 6. Teilband: Philosophie (Doxographica [Forts.]*), edited by Haase, Wolfgang, 4218-4240. Berlin: Walter de Gruyter.

"Il libro IX di Diogene Laerzio contiene le Vite di Eraclito (1 — 17); Senofane (18-20); Parmenide (21-23); Melisso (24); Zenone (25 - 29); Leucippo (30-33); Democrito (34-49); Protagora (50-56); Diogene di Apollonia (57); Anassarco (58-60); Pirrone (61-108); Timone (109-116)." (p. 4218)

(...)

"Se il quadro generale può dirsi, a grandi linee, comune, la lista delle Vite contenute nel libro IX presenta alcune evidenti discrepanze sia rispetto alla successione italica riportata nel proemio, sia rispetto agli schemi che ritroviamo in altri autori.

1) Diogene inserisce tra i Pitagorici e gli Eleati la Vita di Eraclito, che non entrava, tradizionalmente, in nessuna successione.

- 2) Parallelemente, egli presenta una particolare classificazione, che riguarda non soltanto Eraclito, ma anche Senofane (οἱ σοφῶτατοι).
- 3) In connessione con questo punto vengono segnalate alcune varianti nei rapporti tra filosofi rispetto alla successione tradizionale.
- 4) Diogene di Apollonia appare inserito tra Protagora e Anassarco senza esplicita connessione con i filosofi della successione (in IX 57 si dice soltanto che secondo Antistene egli fu discepolo di Anassimene).
- 5) I filosofi scettici (Pirrone e Timone), che non comparivano nella successione riportata nel proemio, occupano invece i §§61 — 116, cioè poco meno della metà dell'intero libro IX; inoltre, la successione scettica che conclude il libro (115-116) è la sola che si estende fino a tempi vicini a quelli di Diogene, con la menzione di Sesto e del suo discepolo Saturnino." (p. 4220, note omesse)
15. Donzelli, Giuseppina. 1960. "Donzelli, I codici P Q W Co H I E Y Jb nella tradizione di Diogene Laerzio." *Studi italiani di filologia classica* no. 32:156-199.
16. Dorandi, Tiziano. 1992. "Il quarto libro delle 'Vite' di Diogene Laerzio: l'Accademia da Speusippo a Clitomaco." In *Aufstieg und Niedergang der römischen Welt. Teil II: Principat. Band 36: Philosophie, Wissenschaften, Technik. 5. Teilband: Philosophie (Einzelne Autoren, Doxographica)*, edited by Haase, Wolfgang, 3761-3792. Berlin: Walter de Gruyter.
- "Sebbene singoli 'Bioi' siano stati analiticamente studiati nella varietà dei loro problemi, in particolare quelli di Speusippo, Senocrate (Isnardi Parente / Tarán) e Arcesilao (Long), né sia stata trascurata una indagine sui rapporti di Diogene Laerzio con la 'Academicorum historia' di Filodemo (Gaiser, Gigante, Dorandi), manca, per il quarto libro, una trattazione complessiva unitaria. Tale non possono essere considerati infatti né la rapida rassegna del Leo, (11) né il profilo biografico di Antigono del Wilamowitz, (12) interessati entrambi a enucleare

piuttosto la struttura, le fonti e la genesi formativa della compilazione diogeniana.

Il presente contributo, che ricalca idealmente le pagine della mia Introduzione all'edizione della 'Academicorum historia' filodemea, (13) dedicate a Filodemo quale storico dell'Accademia, si propone di colmare, almeno in parte, questa lacuna, ma anche di delineare e definire le caratteristiche salienti del contributo di Diogene Laerzio e porre così i presupposti essenziali di una progettata indagine complessiva sulla tradizione antica dell'Accademia da Speusippo Antioco." (pp. 3762-3763)

17. ———. 1992. "Considerazioni sull'*index locupletior* di Diogene Laerzio." *Prometheus* no. 18:121-126.

"Tra le singolarità più notevoli del *Codex Parisinus gr. 1759* (P) di Diogene Laerzio e dei suoi apografi - *Cod. Laur.* 69.35 (H), *Marc. gr.* 394 (Í), *Vat. Palat.* gr.182 (E), *Angel. gr.* 97 (olim C.2.1: Y) - (1) è, senza dubbio, da annoverare il così detto *index locupletior*, un anonimo πίναξ κατὰ πρόσωπα dei personaggi le cui biografie erano narrate da Diogene nei dieci libri delle *Vite dei filosofi* integrato, dopo Crisippo (l. VII), dai nomi di ben venti stoici successivi dei quali non resta traccia alcuna nella stesura dell'opera quale pervenutaci.

Nel capostipite codice Parigino, l'*index*, copiato dalla prima mano, occupa il f. 1^{r-v} oggi esremamente lacero e malconcio e di difficile lettrura. Lo precede, sul verso del foglio di guardia (A), aggiunto in un secondo momento, un altro indice scritto da Janos Lascaris (2) che rispecchia il reale contenuto del manoscritto, privo cioè dei filosofi post-crisippe (3).

L'*index locupletior* venne pubblicato, per la prima volta, dal Rose (4) estratto dal codice Laurenziano e riproposto, in una forma migliore, a partire dal codice Parigino, dal Manini (5) e nella *Praefatio* all'edizione basileense della *Vita* di Platone (6)."
[Segue l'edizione critica del documento]

(1) Per uno studio sulle relazioni tra questi manoscritti, tutti del sec. XV, e il codice Parigino (della fine del XIII sec.), cfr. G. Donzelli, *I codici P Q W Co H I E Y Jb nella tradizione di*

Diogene Laerzio, *S.I.F.C.* n.s. 32, 1960, 156-199 (d'ora innanzi Donzelli).

Seguo le sigle adottate dalla studiosa: nell'edizione oxoniense, *Diogenis Laertii Vitae philosophorum* (Oxonii 1964), H. Long preferisce fare uso delle lettere minuscole.

"Nelle pagine che seguono presento una trascrizione di **Vi** relativi a Diogene Laerzio accompagnata da una note di carattere esegetico-testuale intese a definire che può derivare dallo studio di questi estratti alla manoscritta e alla critica del testo del nostro autore. Si tratta, per lo più, di *excerpta* che riproducono alla lettera interi passi, anche se non mancano

punti in cui l'anonimo *excerptor* ha preferito sunteggiare o rimaneggiare a fini di 'chiarezza' e di sinteticità il testo originario. Da un attento esame appare evidente che **Vi**, nonostante la relativa antichità, è latore di una tradizione già stabilizzata, che non porta novità di rilievo rispetto alle varianti già attestate negli altri manoscritti delle Vite laerziane. (pp. 64-65, una nota omessa)

"Da una più attenta lettura del paragrafo di Diogene Laerzio dove si riferisce la legge contro i filosofi fatta votare da Sofocle di Sunio è stato dedotto che, prima di quella data, non era necessaria una approvazione dello Stato per aprire una scuola filosofica a Atene e tale situazione si ripropose, a partire dall'anno successivo, dopo l'intervento di Filone e il ripristino dello *status quo ante*. Appare inoltre indiscutibile il fatto che il Liceo ricevette uno statuto di vera e propria scuola a partire da Teofrasto; Aristotele non aveva pensato a Teofrasto come suo successore ufficiale nella direzione della scuola, ma piuttosto come a colui al quale affidare la continuità del suo insegnamento. Questo compito Teofrasto sente come quello

basilare della comunità filosofica che aveva costituito a partire dall'eredità del maestro. Egli stesso, pur proprietario di un giardino suo proprio e di edifici, e fondatore, dal punto di vista giuridico, del Liceo come scuola istituzionalizzata, non nomina uno scolarca ufficiale come suo successore. Il fatto che Diogene Laerzio, per indicare la successione sia di Teofrasto a Aristotele sia di Stratone a Teofrasto, ricorra alla formula διεδέξατο τὴν σχολὴν, non può essere addotto come prova contraria: si tratta, infatti, di una formula ormai stereotipa e canonica nella lingua della letteratura delle diadochai." Recensione dell'edizione delle *Vitae Philosophorum* edita da Miroslav Marcovich (1999).

Un'edizione moderna delle *Vite dei filosofi* di Diogene Laerzio, fondata su una rinnovata collazione dei principali manoscritti e che tenga conto del contributo degli studi accumulatisi per più secoli su quel testo, e un *desideratum* degli studi classici dopo il tentativo discutibile di H.S. Long (Oxonii 1964, 1966²: <<Oxford Classical Texts>>). La recente pubblicazione dell'edizione di M. Marcovich (d'ora in avanti: M.) nella prestigiosa <<Bibliotheca Scriptorum Graecorum et Romanorum Teubneriana>> rappresenta, senza alcun dubbio, un grande passo in avanti, ma non colma questa lacuna, se non in maniera parziale. Quale *futurus editor* delle *Vite* laerziane nella <<Collection des Universités de France>> (Belles Lettres), avrei dovuto rinunciare all'invito di rendere conto di questi due volumi al fine di evitare l'accusa di avere mancato di imparzialità per un senso di malcelato malumore caratteristico di chi è stato battuto sul tempo. Non è tuttavia per il piacere malsano di mettere in evidenza errori o mancanze dell'edizione

di M. che ho accettato l'offerta, ma per presentarla ai lettori con le sue caratteristiche, siano esse pregi o difetti, e per rendere pubblici alcuni almeno dei criteri che intendo applicare nella mia prossima edizione. Nelle pagine che seguono, per rispetto alla rivista che ospita questo contributo, evito di soffermarmi troppo su dettagli tecnici e di catalogare in lunghe e inutili liste le imprecisioni o gli errori, i punti di disaccordo, le presunte o vere anomalie dell'edizione di M. (segnalerò comunque qualche esempio per restare nel concreto) e mi concentro piuttosto su una analisi dei criteri ecdotici seguiti dallo studioso e sui risultati che dalla loro applicazione sono scaturiti nella concretezza della *constitutio textus*." (p. 331)

23. ——. 2002. "Due note alla *Vita di Arcesilao* di Diogene Laerzio." *Prometheus* no. 28:52-56.

"Tra i molti luoghi del quarto libro delle *Vite* di Diogene Laerzio che presentano ancora difficoltà testuali o esegetiche, due passi della *Vita di Arcesilao* (N 32 e 41) meritano di essere considerati con particolare attenzione. Prendo a fondamento il testo della recente edizione di Marcovich accompagnato da un apparato critico(1)

Δια δὲ το περι πάντων ἐπέχειν οὐδὲ βιβλίον τι, φασί, συνέγραψεν· οἱ δὲ, διτι ἐφωράθη (Κράντορος) τινα διορθῶν, α φασιν οἱ μὲν ἐκδοῦναι, οἳ δὲ κατακαῦσαι."

(...)

"Dopo avere narrato che, alla morte di Cratete, Arcesilao aveva ottenuto la direzione dell'Accademia in seguito alla rinuncia di un ignoto Socratide, Diogene continua con la frase trascritta sopra. La fonte alla quale Diogene ha attinto queste informazioni e quella che segue immediatamente, relativa alla

ammirazione di Arcesilao nei confronti di Platone di cui possedeva una copia delle opere, sono i *Bioi* di Antigono di Caristo. Lo dimostra il confronto con il passo parallelo della *Storia della Accademia* di Filodemo (*PHerc.* 1021, col. XVII 41-XVIII 40, p. 152-153 Dorandi = Antig. Car., fr. 18-20 Dorandi). Una differenza sostanziale distingue tuttavia Filodemo da Diogene Laerzio: Filodemo ha utilizzato i *Bioi* di Antigono di prima mano, mentre essi sono giunti a Diogene indirettamente, attraverso uno o più stadi intermedi. È un dato di fatto della massima importanza di cui non può non tenere conto l'editore di Diogene(2)." (p. 52)

24. ——. 2002. "Tracce delle *Vite dei filosofi* di Diogene Laerzio nell'Epistolario di Fozio?" *Göttinger Forum für Altertumswissenschaften* no. 5:59-63.

"Quello che, in conclusione, possiamo dire è che non ci sono elementi sufficienti per dimostrare che Fozio ebbe tra le mani un codice di Diogene Laerzio.

Questo fatto non esclude tuttavia la presenza di un tale manoscritto a Bisanzio.

Fozio non ebbe probabilmente accesso o non ebbe interesse a leggere le *Vite* laerziane. Esse vennero 'riscoperte' qualche decennio più tardi in altri milieux culturali, piuttosto orientati verso gli studi filosofici. Le tracce più antiche della presenza di un codice delle *Vite* nel mondo bizantino sono gli estratti del III libro (*Vita di Platone*) contenuti nei fogli 27r-29v del codice *Vindob. phil. gr.* 314, datato al 28 luglio 925.(15) È possibile risalire un pò più indietro se si considera che questo manoscritto è copia di un codice passato fra le mani del discepolo di Fozio, Areta di Cesarea (nato verso l'anno 850). La vera e propria 'rinascita' laerziana a Bisanzio comincia alla fine

del sec. X, grazie ai redattori della *Anthologia Graeca* e della *Suda*.(16) Fozio è destinato a restare fuori da questa operazione culturale." (p. 63)

"In un articolo recente ho catalogato tutti i *codices integri* delle *Vite dei filosofi* di Diogene Laerzio a me noti e una scelta di

manoscritti che conservano estratti con particolare attenzione alla cosiddetta tradizione degli Excerpta Vaticana.(1)

Ulteriori ricerche, tenendo conto anche dei dati riuniti nel repertorio di Sinkewicz,(2) mi hanno consentito di ampliare la lista dei testimoni con estratti delle *Vite*.(3) Si tratta spesso di documenti nei quali la presenza di brani o pericopi testuali laerziane sono limitate a raccolte (più o meno ampie) di apoftegmi, a singole vite o a piccole antologie. La maggior parte di questi codici sono posteriori al XVI secolo; in un paio di casi, essi sono copiati su altri testimoni tuttora conservati. Nell'insieme, il loro contributo è senza rilevanza per la *constitutio textus* delle *Vite*. Li elenco, di seguito, per desiderio di completezza, ordinati secondo il criterio geografico della biblioteca di conservazione.

Salvo rare eccezioni, segnalo solo il contenuto della sezione laerziana." (pp.1-2, una nota omessa)

Sommario: Premessa XI-XIII; I. Dai codici alle edizioni delle *Vite dei filosofi* 1; II. Ricerche sulla più antica tradizione delle *Vite dei filosofi* 49; III. Lettori bizantini delle *Vite dei filosofi* ovvero del buon uso della tradizione 'indiretta' 125; IV. Verso uno *stemma codicum* dei più antichi testimoni 195; V. Le *Vite dei filosofi* tra Medioevo e Rinascimento latino 201; VI. Appendice. Peter von der Mühl editore di Diogene Laerzio 229; VII. Bibliografia 247; VIII. Indici 256-276.

"Le sei sezioni che compongono questo volume, costituiscono altrettanti capitoli sulla tradizione manoscritta e sulla storia del

testo delle *Vite* laerziane. Nel primo capitolo (Dai codici alle edizioni delle *Vite dei filosofi*) sono catalogati tutti i manoscritti che contengono l'insieme delle *Vite* o una scelta di libri o di estratti nonché le edizioni dell'opera dall'*editio princeps* Frobeniana (1533) a quella di M. Marcovich (1999). Il secondo capitolo (Ricerche sulla più antica tradizione delle *Vite dei filosofi*) si compone di una serie di studi sui principali manoscritti integri e sulla tradizione degli *excerpta* Vaticana; vi è discussa la questione dell'esistenza o meno di una tradizione italo-greca delle *Vite* e proposta una ricostruzione di Ω , il capostipite dei codices integri *antiquiores*, e di X, il modello tardo-antico da cui derivò tutta la tradizione medievale. L'ultima parte del capitolo è riservata alla vulgata e alla sua formazione, da collocare in un'epoca relativamente antica. Con il terzo capitolo (Lettori bizantini delle *Vite dei filosofi*, ovvero del buon uso della tradizione 'indiretta') intendo presentare una storia del testo delle *Vite* nel mondo bizantino attraverso uno studio delle testimonianze degli autori che le hanno lette e utilizzate, dalla fine dell'Antichità alla caduta di Costantinopoli, e oltre. Alla ricostruzione (per molti aspetti ancora incerta) delle vicende delle *Vite* prima della loro sistemazione nel perduto codice X e allo stemma dei testimoni più antichi è consacrato il capitolo quarto (Verso uno stemma codicum dei più antichi testimoni). Il capitolo quinto (*Le Vite dei filosofi* tra Medioevo e Rinascimento latino) indaga le due traduzioni latine delle *Vite*, quella (perduta) di Enrico Aristippo e quella (ancora conservata) di Ambrogio Traversari. L'Appendice (capitolo sesto) contiene una descrizione dell'inedito *Nachlaß* di Peter Von der Mühl, da me per la prima volta utilizzato nella sua integralità, per l'edizione delle *Vite* laerziane." Abstract: "This paper is devoted to the manuscript tradition of the *Divisiones quae dicuntur Aristoteleae* (DA), and in particular to two discoveries that shed new light on it. The collection of DA is transmitted in four different versions, that should be investigated and edited individually. The editor should also resist the temptation to reconstruct a imaginary *Urtext*. The focus of this study is on the three versions independent of the *Recensio Laertiana* (Diog. Laert. III 80-109): the *Recensiones Marciana*, *Florentina* and *Leidensis*. These versions are reconstructed on the basis of six Byzantine manuscripts dated between the 10th and the 15th/16th century. Then, the new edition of the *Recensio Marciana* and the editiones principes of the *Recensiones Florentina*, and *Leidensis* is presented."

39. Giannantoni, Gabriele. 1986. "Socrate e i Socratici in Diogene Laerzio." *Elenchos. Rivista di Studi sul Pensiero Antico* no. 7:183-216.

"La biografia di Socrate scritta da Diogene Laerzio non ha goduto di grande fortuna presso gli studiosi di Socrate: per quanti sforzi si siano fatti, soprattutto dopo il fondamentale

libro di Olof Gigon(1), per liberarsi dalle angustie della classica impostazione del “problema socratico”, che vedeva nel confronto, nella composizione o nella scelta, tra le fonti cosiddette canoniche (Platone, Senofonte e Aristotele) l’unico criterio metodico possibile per attingere il “vero” Socrate, si è ancora lontani da un’utilizzazione esauriente di tutto il materiale disponibile, che solo da una quindicina d’anni si è cominciato a raccogliere e a studiare direttamente(2). In sostanza si può dire che ci si è ormai abbastanza convinti a guardare con maggiore attenzione alle *Nuvole* di Aristofane (e agli altri accenni contenuti nelle sue commedie) e che, soprattutto, si è abbastanza convinti dell’opportunità di prendere in considerazione anche gli altri esiti del socratismo (Eschine, Euclide, Antistene, Aristippo, ecc.), pur se si è ancora a un livello di pura esigenza metodica. Ma ciò che, a tutt’oggi, manca è uno studio approfondito e sistematico della storia della fortuna di Socrate nell’antichità e quindi una ricostruzione esauriente dei vari filoni dell’interpretazione filosofica e delle tradizioni biografiche, aneddotiche, apoftegmatiche ed erudite(3), che poi, almeno parzialmente, confluiscono nell’opera di Diogene Laerzio." (p. 185)

(1) Cfr. O. Gigon, *Sokrates. Sein Bild in Dichtung und Geschichte*, Bern 1947.

(2) Cfr. J. Ferguson, *Socrates. A Source Book*, London 1970 e G. Giannatoni (a cura di), *Socrate. Tutte le testimonianze da Aristofane e Senofonte ai Padri cristiani*, Bari 1971. Entrambi i libri danno le fonti in traduzione.

(3) Solo parzialmente colmano questa lacuna alcuni studi che riguardano l’epicureismo (cfr. la successiva nota 23) o determinate fasi della tradizione cinico-stoica (cfr. K. Doering, *Exemplum Socratis. Studien zur Sokratesnachwirkung in der kynisch-stoischen Popularphilosophie in der frühen Kaiserzeit und in frühen Christentum*, «Hermes», Einzelschr. XLII, Wiesbaden 1979); mancano invece studi adeguati per ciò che concerne lo stoicismo antico, l’Accademia di mezzo e la tradizione scettica, il platonismo medio e il neoplatonismo.

(23) Tra gli studi più recenti su questo argomento mi limito a segnalare: M. T. Runia, *The Epicurean Criticism of Socrates*, «Phoenix», XXXIV (1980) pp. 55-68 e K. Kleve, *Scurra Atticus. The Epicurean View of Socrates*,

40. Giannantoni, Gabriele. 1992. "Il secondo libro delle 'Vite' di Diogene Laerzio." In *Aufstieg und Niedergang der römischen Welt. Teil II: Principat. Band 36: Philosophie, Wissenschaften, Technik. 5. Teilband: Philosophie (Einzelne Autoren, Doxographica)*, edited by Haase, Wolfgang, 3603-3618. Berlin: Walter de Gruyter.

"La struttura del secondo libro delle 'Vite' di Diogene Laerzio è presto detta. Rifacendosi al criterio delle 'successioni' fissato nel 'Proemio', ribadito in questo stesso libro (II 19) e sul quale dovremo tornare, Diogene Laerzio inizia con il *bios* di Anassimandro (II 1 - 2), che - a rigore - se si prescinde dalla indicazione cronologica fornita sulla base di Apollodoro, non è un vero e proprio *bios* quanto piuttosto un compendio dossografico. Ad esso segue il *bios* di Anassimene (II 3 - 5), con la solita indicazione cronologica desunta da Apollodoro e quasi interamente occupato dal testo di due lettere - certamente non autentiche - di Anassimene a Pitagora. Inverosimile, per ragioni cronologiche, è la notizia, desunta da fonti anonime, di un suo discepolato presso Parmenide.

A questi *bioi* seguono quelli di Anassagora (II 6 - 15) e di Archela (II 16 - 17); il seguito del libro è interamente occupato dai *bioi* di Socrate e dei Socratici, ad eccezione di Platone (trattato nel libro III) e di Antistene (trattato nel libro VI): su questa parte ci soffermeremo con particolare attenzione, dopo aver detto qualcosa sui *bioi* di Anassagora ed Archelao." Elenchos. Rivista di Studi sul Pensiero Antico no. 7:7-102.

"Come l'intera opera, così ogni βίος è stato concepito da Diogene quale contributo alla conoscenza di un passato ormai classico, che ha chiuso il suo ciclo di vita, ma non ha esaurito la sua vitalità: da tempo la polis era morta, sopravvivevano le individualità. La biografia laerziana non è in questo dissimile da altre biografie politiche o letterarie: è il regno dell'individuo. E tuttavia l'individuo è creatore di storia dentro la storia, portatore di pensieri o idee e anche di fatti che non sono per lo più meri eventi privati, ma segnali di una cultura e di un'epoca.

Così la filosofia nei βίοι che permangono, se sono storia, una storia "esterna" e non "concettuale" (129), appartiene ad un patrimonio di sapienza anche popolare o al sistema di una scuola, ma non cessa mai di essere espressione di libertà interiore. E la doxa che accompagna quando è possibile il bios e gli è subordinata — almeno dell'impostazione fondamentale — assume anche la forma di una *chreia*, di una massima, di un *apophthegma* e Diogene non esercita generalmente un criterio di valutazione: nella leale registrazione del βίος e della doxa Diogene espone, non giudica. La doxa si configura non solo come filosofia, ma come cultura, letteratura, poesia, arte, politica, in una varietà di forme di espressione dello spirito che si colloca nella forma di un βίος, in un *kefalaion*, o in una serie di *kefalaia*: l'interazione fra biografia e filosofia è perciò mutevole e duttile. Una biografia fondata sulle testimonianze di

pensiero o di vita tratte dall'opera scritta di colui di cui viene scritta la vita è necessariamente diversa dalla biografia di un filosofo che nulla ha scritto o la cui opera sia rimasta inaccessibile." (p. 97)

47. ——. 1994. "Diogene Laerzio." In *Lo spazio letterario della Grecia antica Vol. I.3*, edited by Canfora, Luciano and Lanza, Diego, 723-740. Roma: Salerno Editrice.

"Diogene Laerzio non appartenne a una scuola filosofica, operò probabilmente a Roma prima di Plotino e Porfirio, dispose di una attrezzata biblioteca, fu biografo d' insaziabile curiosità, erudito infaticabile, lettore straordinario, ebbe forse a modello la Scuola di Aristotele non meno che il Museo di Alessandria. Certo una vena aristotelica o se si preferisce un aristotelismo come tendenza storiografica è sotteso più o meno scopertamente alla sua opera, incompiuta e aperta.

Nel Proemio la sua coscienza aristotelica si svela nel concepire la filosofia come creazione dei Greci, nel sottolineare il divario fra Greci e barbari, nella polemica con i sostenitori dell' origine barbarica della filosofia. La filosofia è perfetta creazione dei Greci, il suo nome è greco (1 5). Non omette d' esporre il filosofare orientale, ma prima di esporre la storia del pensiero greco ordinata in categorie, distinta in scuole (αἰσφοεῖς), collocate in successioni (διαδοχαί) afferma (1 12) che Pitagora per primo usò il termine "filosofia" e per primo si chiamò "filosofo" : « più anticamente si chiamava sapienza, e sapiente chi la professasse, ed eccellesse nell' estrema cura dell' anima; filosofo era colui che accoglie la sapienza ». (p. 732)

"Nel proemio alle sue *Vite dei filosofi* Diogene Laerzio, trattando dell'origine della filosofia, ricorda che, secondo quanto racconta Eraclide Pontico nell'opera *Sulla donna esanime* (fr. 87 Wehrli), Pitagora in un colloquio a Sicione con Leone tiranno di Sicione, o di Fliunte, fu il primo a dare il nome alla filosofia e a chiamarsi filosofo, rifiutando l'appellativo di σοφός: φιλοσοφίαν δὲ πρῶτος ὠνόμασε Πυθαγόρας καὶ εαυτὸν φιλόσοφον, ἐν Σικυῶνι διαλεγόμενος Λέοντι τῷ Σικυωνίων τυράνῳ ἢ Φλιασίων, καθά φησιν Ἡρακλείδης ὁ Ποντικός ἐν τῷ Περὶ τῆς ἀπνυ.(1) La notizia è confermata da altre fonti, in particolare da Cicerone, che nelle *Tusculane* (*Heracl. Pont.* fr. 88 Wehrli) riferisce distesamente il racconto eraclideo del dialogo avvenuto fra Pitagora e il tiranno, di cui Diogene sintetizza invece solo le conclusioni.(2) Diogene, per altro, motiva il rifiuto del titolo di σοφός in quanto pertinente esclusivamente a Dio: μηδένα... εἶναι σοφὸν ἄνθρωπον ἄλλ' ἢ θεόν, secondo quanto concordemente tramandato dai manoscritti! (p. 410)

(1) Diog. Laert. 1,12. L'edizione di riferimento è quella teubneriana a cura di M. Marcovich, *Stuttgartiae et Lipsiae* 1999. Quando l'articolo era in bozze è uscita la nuova edizione a cura di Tiziano Dorandi, Cambridge 2013 (vedi sotto, nota 9).

2) L'esame più dettagliato e acuto della notizia su Pitagora e le sue fonti è fornito da W. Burkert, *Piaton oder Pythagoras? Zum*

Ursprung des Wortes 'Philosophie', *Hermes* 88, 1960, 159-177.

(9) Faccio riferimento alle riflessioni metodologiche di T. Dorandi, *Diogene Laerzio, Epicuro e gli editori di Epicuro e di Diogene Laerzio*, *Eikasmos* 21, 2010, 273-301. Ringrazio il Dorandi, che ha letto questo articolo e concorda sulle sue conclusioni, di cui non ha potuto tener conto per la sua nuova edizione di Diogene, già licenziata per la stampa e ora uscita (Cambridge 2013). Sono molto grato anche a R. Kassel per aver esaminato e discusso con la solita generosità e sollecitudine una prima bozza di questo lavoro.

54. Lapini, Walter. 2003. "Il Diogene Laerzio di Miroslav Marcovich." *Méthexis*:105-114.

"Con questa edizione,(1) il compianto Miroslav Marcovich (= M.) ha reso grandi servizi alla tradizione di Diogene Laerzio: ha allargato la base documentaria, ha fatto ordine fra le molte e varie mani di scriba, ha studiato i testimoni disponibili con un'acribia ignota al suo predecessore oxoniense H. S. Long. Sotto questi aspetti la valutazione dell'opera non può che essere positiva, come anche è positiva, anzi preziosa, la scelta di rendicontare in apparato non solo tutte le principali varianti tradite, ma anche, nei limiti del possibile, tutte le congetture, risparmiando al lettore formule frustranti come "alii aliter", "alii alia", ecc. Nelle righe che seguono, però, io cercherò di mettermi nei panni dell'utente, in particolare dell'utente non filologo; di conseguenza lascerò da parte valutazioni stemmatiche e codicologiche, che i futuri editori potranno esprimere con più competenza di me, e giudicherò il lavoro di M. soprattutto dal punto di vista della sua affidabilità e fruibilità pratica per lo studioso di filosofia antica. E devo dire, da questo punto di vista, che l'edizione presenta numerosi difetti, che solo in parte possono essere attribuiti alla mancanza delle *ultimae curae*." (p. 105, note omesse)

"Prima di entrare nell'analisi di questi passi occorrerà ricordare la distinzione - fondamentale e mai abbastanza sottolineata - tra testo di Diogene Laerzio e testo di Epicuro; distinzione che è stata fatta oggetto anche recentemente di uno specifico studio di Tiziano Dorandi(3), e che può essere riassunta nel principio secondo cui l'editore epicureo è tenuto ad emendare tutti gli errori indistintamente, mentre l'editore di Diogene dovrà intervenire solo a valle dell'` `originale", lasciando tali e quali gli errori di primo livello(4), cioè quelli che si possono presumere insorti nel segmento di tradizione che va dall'autore citato all'autore che riporta la citazione. Un principio ovvio, ma tante volte violato, anche da parte dell'ultimo editore laerziano Miroslav Marcovich(5).

Quanto a me, presenterò qui di seguito tre suggerimenti, nuovi il secondo e il terzo, già noto il primo. I primi due mi paiono necessari per il testo di Epicuro e solo possibili per il testo di Diogene; il terzo invece è probabilmente necessario per entrambi." (p. 334)

Bibliographie des études en Français sur Diogène Laërce

Études en Français

1. Algra, Keimpe A. 1994. "Gassendi et le texte de Diogène Laërce." *Elenchos.Rivista di Studi sul Pensiero Antico* no. 15:79-103.

Résumé: "L'étude des objectifs et de la méthode de Gassendi, ainsi que du matériel dont il disposait pour la rédaction de ses *Animadversiones in decimum librum Diogenis Laërtii* (Lyon 1649), permet d'affirmer que le jugement très négatif que la plupart des savants du XIX et XX siècle ont porté sur cet ouvrage n'est pas justifié. Même si les compétences philologiques de Gassendi n'égalaiet pas ses qualités de philosophe, il a donné une impulsion non négligeable à l'établissement du texte de Diogène grâce à sa connaissance de l'épicurisme et à sa maîtrise du grec."

2. Bidez, Joseph. 1894. *La biographie d'Empédocle*. Gand: Université de Gand.

Table des matières: La vie d'Empédocle par Diogène Laërce; Histoire de la tradition; Biographie d'Empédocle.

Reprint: Hildesheim, Georg Olms, 1973; Charleston, BiblioLife 2009.

3. Bodéüs, Richard. 1995. "L'aristotélisme stoïcien." *Cahiers des Études Anciennes* no. 29:7-32.

"The text of Diogenes Laertius' testimony to Aristotle's philosophy is in fact a Stoic construction the principle elements

of which, established in the Hellenistic era, have influenced for centuries our understanding of Aristotle's thought."

4. ——. 1995. "L'influence historique du Stoïcisme sur l'interprétation de l'oeuvre philosophique d'Aristote." *Revue des Sciences philosophiques et théologiques* no. 79:553-586.

"On connaît très mal le sort réservé durant la période hellénistique à l'oeuvre d'Aristote qui nous est familière. De cette époque, pourtant, datent les premiers travaux doxographiques qui ont accompagné le classement des écrits attribués au philosophe. On en a l'indice dans l'exposé de la philosophie aristotélicienne fourni par Diogène Laërce (V, 28-34).

Ce dernier texte, comme l'a montré P. Moraux(1), semble contenir, en effet, les traces d'opinions antérieures aux recherches d'Andronicos de Rhodes (1er s. avant notre ère), qui a ouvert la tradition des commentateurs et marqué le renouveau de l'aristotélisme. Nous voudrions reprendre ici l'étude de ces traces, dans l'intention d'établir l'importance de l'influence stoïcienne sur la plus ancienne interprétation de la philosophie aristotélicienne que nous connaissions." (p. 553)

(1) P. Moraux, « L'exposé de la philosophie d'Aristote chez Diogène Laërce (V, 28-34)• », dans *Rev. Phil. de Louvain*, 47 (1949) p. 5-43; cette étude, citée ci-après P. Moraux (1) a été reprise ultérieurement et partiellement corrigée dans un travail plus global intitulé « Diogène Laërce et le Peripatos » dans *Elenchos*, 7 (1986) p. 247-294, en particulier p. 267-290, ci-après P. Moraux (2). Ce dernier travail intègre les résultats de plusieurs autres recherches effectuées dans l'intervalle, par l'auteur lui-même ou par d'autres; mais aucune de ces recherches, ni aucune de celles qui ont été entreprises après 1986 n'ont directement porté sur la partie du document que nous allons analyser.

5. Brisson, Luc. 1992. "Diogène Laërce, 'Vies et doctrines des philosophes illustres', Livre III: Structure et contenu." In *Aufstieg und Niedergang der römischen Welt. Teil II: Principat. Band 36: Philosophie, Wissenschaften, Technik. 5. Teilband: Philosophie (Einzelne Autoren, Doxographica)*,

edited by Haase, Wolfgang, 3619-3760. Berlin: Walter de Gruyter.

"*Conclusion*. Le livre III, qui, comme on peut le constater, suit un plan assez rigoureux, présente donc un intérêt tout particulier, dans la mesure où la dédicace qui s'y trouve insérée permet de se faire une idée du public auquel s'adressait Diogène Laërce: il s'agissait non de spécialistes intéressés par les doctrines philosophiques, mais d'amateurs éclairés friands de littérature. Ce point précisé, on comprend mieux de quelle manière procède Diogène Laërce, lorsqu'il décrit la vie de Platon, et lorsqu'il évoque ses oeuvres et ses doctrines.

Pour fabriquer la vie de Platon, qui, pour l'essentiel, répond à des intentions bien précises, notamment celle d'illustrer ou d'exemplifier des points de doctrine par référence à des éléments biographiques, un certain nombre de recettes ont été appliquées. Or, cette recherche systématique d'un accord entre la vie de Platon et ses doctrines ne laisse pas de prêter à cette partie du livre III l'allure d'un "roman".

En revanche, les informations que recèle la partie du livre III sur les oeuvres et les doctrines de Platon présentent un caractère plus positif. Diogène Laërce y donne des renseignements de première importance sur la transmission du texte de Platon et sur sa présentation matérielle à son époque. En outre, la doxographie que, par la suite, propose Diogène Laërce nous permet de nous faire une idée de l'interprétation à laquelle furent soumises les doctrines de Platon dans les tout premiers siècles de l'Empire, période que nous connaissons mal par ailleurs.

Cela dit, on ne peut, à la suite de cette lecture "savante", manquer de se poser cette question. Si le corpus platonicien avait été perdu, s'il n'en restait plus que des fragments, serions-nous en mesure de relativiser l'image que l'on pouvait se faire de Platon et de son oeuvre dans certains milieux durant la première moitié du III^{ème} siècle apr. J.-C., pour retrouver une image de Platon plus authentique, celle qu'essaie de reconstituer un historien contemporain de la philosophie, à partir d'une lecture systématique et assidue du corpus

platonicien? Cette question présente d'autant plus de pertinence que les oeuvres de la plupart des philosophes qu'évoque Diogène Laërce ont été perdues en tout ou en partie." (pp. 3759-3760)

Indices pp. 2* - 25*.

6. Caujolle-Zaslowsky, Françoise. 1991. "Note sur l'ἐπαγωγή dans le Sophiste dans le *Sophiste*. A propos de Diogène Laërce III 53-55." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 509-534. Napoli: Bibliopolis.

"Revenons maintenant à l'étude sémantique de l'ἐπαγωγή elle-même.

L'opinion généralement admise, et qui semble fondée, fait donc d'Aristote l'initiateur de l'emploi du terme en philosophie.

Aussi n'est-ce pas sans un étonnement mêlé d'intérêt qu'on voit Diogène Laërce (III 53s.) attribuer sur le ton de l'évidence à Platon un usage méthodique intensif de l'ἐπαγωγή usage qu'il expose aussitôt en détail - et dont on constatera qu'il ne se borne pas à «conduire l'adversaire dans un piège».

(...)

"Quant à la défiance systématique manifestée aujourd'hui par certains à l'égard de Diogène Laërce, on nous permettra de la mettre un peu de côté, en la circonstance, en raison principalement du caractère fort bien structuré et cohérent de notre passage. La véritable imprudence serait sans doute, ici, d'oublier qu'il est arrivé à Diogène Laërce de se montrer bien inspiré dans le choix des textes - des lettres d'Epicure, par exemple, qu'il recopiait." (pp. 518-519, une note omise)

10. Dorandi, Tiziano. 2002. "Remarques sur le *Neapolitanus* III B 29 (B) et sur la composition des *Vies des philosophes* de Diogène Laërce." *Revue d'histoire des textes*:1-23.

Résumé : "L'article met en évidence quelques caractéristiques du ms. Napoli, Biblioteca Nazionale III B 29 (B, s. XII in.), témoin le plus important de la tradition des *Vies des philosophes* de Diogène Laërce. La main du correcteur est contemporaine (s. XII) de celle qui a copié le texte principal ; le modèle de ce correcteur était celui qui avait servi à la copie de B, les rares différences pouvant être expliquées comme des conjectures. L'étude des inscriptions et des subscriptions, la présence de « réclames » à la fin de certains livres semblent démontrer que l'oeuvre de Diogène Laërce fut copiée à l'origine sur des rouleaux de papyrus. L'archétype médiéval des *Vies* est probablement né au VI^e siècle du regroupement dans un seul codex de deux « éditions » partielles ou partiellement conservées.

Diogène mourut sans avoir eu le temps de mettre la dernière main à son oeuvre et sans avoir, en particulier, choisi définitivement la succession des dix livres. Les mss les plus anciens ne conservent pas trace des titres des différentes *Vies* que l'on lit dans les éditions modernes ; ils manquaient dans la rédaction laissée par Diogène et furent ajoutés seulement plus tard, dans le cours de la transmission.

L'application de ces résultats a permis d'avancer dans la constitution du texte de deux passages controversés (II, 47 et V, 57-58)."

11. ———. 2002. "Eustathe a t-il lu Diogène Laërce ?" In *Noctes Atticae: 34 articles on Graeco-Roman antiquity and its Nachleben. Studies presented to Jürgen Mejer on his sixtieth birthday March 18, 2002*, edited by Amden, Bettina, Flensted-Jensen, Pernille, Nielsen, Thomas Heine and Schwartz, AdamTortzen, Chr. Gorm, 76-81. Copenhagen: Museum Tusculanum Press.

12. ———. 2006. "Diogene Laërce du Moyen Âge a la Renaissance." In *Exempla docent: Les exemples des philosophes de l'antiquité à la renaissance*, edited by Ricklin, Thomas, Carron, Delphine and Babey, Emmanuel, 35-48. Paris: Vrin.

"En ce qui concerne le sujet, j'ai évité d'ajouter à« Moyen Âge» le qualificatif de« latin» parce que j'ai l'intention de traiter de la diffusion des *Vies* de Diogène Laërce non seulement dans le monde occidental, mais aussi dans l'Empire byzantin.

li serait impossible de repérer et d'exposer dans l'espace limité d'une communication l'ensemble des traces des *Vies et doctrines des philosophes* de Diogène dans la culture grecque et latine de la fin de l' Antiquité à la Renaissance - grosso modo du VI^e au XVI^e siècle de notre ère; j'ai donc restreint le domaine de ma recherche à trois moments bien définis :

1. La découverte ou redécouverte de Diogène à Byzance entre les IX^e et X^e siècles
2. La circulation des *Vies* dans le Moyen Âge occidental
3. La traduction latine d' Ambrogio Traversari.

Il découle de ce qui précède que j'ai n'ai pas cherché dans les *Vies* de Diogène un ou plusieurs exempla à partir desquels j'aurais pu retracer leur devenir au Moyen Âge et à la Renaissance; j'en ai fait l'exemplum par excellence en essayant de montrer leur présence et leur vitalité tout au long de ces siècles." (p. 35)

13. ———. 2007. "Diogène Laërce "lecteur" d'Aristote." *Elenchos.Rivista di Studi sul Pensiero Antico* no. 28:435-446.

"L'exposé de la doctrine d'Aristote que Diogène Laërce transcrit à la fin de la *Vie d'Aristote* (V 27-34), à la suite de la liste des oeuvres du philosophe, a été à plusieurs reprises corrigé et manipulé afin de lui restituer une "cohérence" avec la pensée du Stagirite⁽¹⁾. Les progrès récents concernant l'histoire du texte des *Vies* de Diogène et sa méthode de travail ainsi que l'étude de la réception et de l'interprétation de l'aristotélisme dans les premiers siècles de l'Empire, ont apporté des éléments nouveaux, concrets et substantiels, qui permettent de progresser dans l'établissement du texte et dans la compréhension de ce passage difficile. Je présente une nouvelle édition de ces paragraphes accompagnée d'un apparat et de quelques notes de lecture qui n'ont pas l'ambition d'un commentaire, mais qui se proposent de fournir aux lecteurs une aide à l'intelligence de quelques-uns de mes choix textuels." (p. 435, une note omise)

¹ A partir de l'édition d'I. Bywater, *Αριστοτέλους βίος ἐκ τῶν Λαέρτιου*, Oxonii 1879, et, en particulier, dans les éditions d'I. Düring, *Aristotle in the Ancient Biographical Tradition*, Göteborg 1957, et d'O. Gigon, *Aristotelis Opera, III: Librorum deperditorum fragmenta*, Berolini et Novi Eboraci 1987. Les deux derniers éditeurs tiennent compte en particulier des corrections suggérées par P. Moraux, *L'exposé de la philosophie d'Aristote chez Diogène Laërce (V, 28-34)*, «Revue Philosophique de Louvain», XLVII (1949) pp. 5-43 (dorénavant *Exposé*) et en proposent d'autres."

14. ——. 2008. "Notes critiques et exégétiques aux livres III et V des *Vies des philosophes* de Diogène Laërce." *Eikasmos. Quaderni Bolognesi di Filologia Classica* no. 19:241-262.

"Les quelques notes critiques et exégétiques qui suivent trouvent leur origine dans mon édition des *Vies des Philosophes* de Diogène Laërce en préparation pour Cambridge University Press. Elles se limitent aux livres III à V et ont pour point de départ le texte édité par M. Marcovich (Stuttgartiae et Lipsiae 1999). Pour chaque livre, je cite le paragraphe et, si nécessaire, la page et les lignes de l'édition de Marcovich. J'espère ainsi fournir aux lecteurs un *subsidiium*

interpretationis à nombre de passages difficiles en justifiant certains de mes choix textuels" (p. 241)

15. ——. 2010. "Diogène Laërce et la datation de Zoroastre." *Rheinisches Museum für Philologie* no. 153:409-412.

"Le prologue des *Vies des Philosophes* de Diogene Laërce s'ouvre par une discussion sur l'origine de la philosophie, laquelle prendrait sa source chez les Barbares. Les initiateurs de la philosophie auraient été les Mages chez les Perses, les Chaldéens chez les Babyloniens ou les Assyriens, les Gymnosophistes chez les Indiens, les Druides ou Semnotheoi chez les Celtes et les Gaulois (1,1). En continuant par des remarques sur la datation de ces philosophes barbares (1,2), Diogene cite à propos des Mages, dont le premier fut Zoroastre le Perse, le témoignage d'Hermodore le Platonicien, et celui de Xanthos le Lydien."

(...)

"Il n'est pas dans mes intentions (je n'en aurais pas les compétences) de re- prendre l'ensemble de la vexatissima quaestio de la chronologie de Zoroastre.⁴ Je voudrais seulement apporter quelques précisions sur la constatio textus au passage de Diogene Laërce, en tenant compte des résultats de la relecture des manuscrits des *Vies* (dont je prépare une nouvelle édition), et ceci afin de justifier un choix textuel que j'ai fait et qui demande quelques mots d'explication. Il y a, à l'origine des discussions innombrables que ce passage a suscitées, un (faux) problème relatif au choix entre les deux variantes (présumées) - εξακισχλια et εξακόσια - dans le témoignage de Xanthos." (p. 409)

(...)

"À la lumière de ces éléments, il apparaît clairement que la lectio εξακισχλια est sans aucun doute une conjecture savante inspirée par la lecture des sources parallèles qui circulaient et étaient lues au XVe siècle, et qu'elle n'a aucune valeur traditionnelle. Dans l'édition des *Vies* de Diogene Laërce, on doit conserver sans hésitation εξακόσια. Il sera donc opportun que les classicistes et les iranistes reprennent la question de la

chronologie de Zoroastre en tenant compte des données fermes de la tradition de Diogène; et ceci sans oublier que, désormais, il est inutile de parler de *lectio difficilior* et de *lectio faciliior* par rapport à εξακισχλια et à εξακόσια, puisque εξακόσια, est la seule *lectio* qui puisse être considérée comme traditionnelle par l'éditeur des *Vies*." (p. 412)

16. ———. 2011. "Sur deux passages difficiles de la Vie de Straton de Diogène Laërce." In *Strato of Lampsacus: Text, Translation, and Discussion*, edited by Desclos, Marie-Laurence and Fortenbaugh, William W., 231-237. New Brunswick: Transaction Publishers.

"La Vie de Straton vient immédiatement après celle de Théophraste dans le livre cinq des *Vies des philosophes* de Diogène Laërce (5.58–64), consacré à Aristote et aux Péripatéticiens qui lui succédèrent dans la direction de l'école (Théophraste, Straton, Lycon, Démétrios de Phalère), y compris Héraclide le Pontique. Après avoir donné quelques renseignements sur la personne de Straton, homme de grande réputation, surnommé le Physicien (φυσικός), sur son séjour à Alexandrie où il avait été le précepteur de Ptolémée II Philadelphe, et sur la durée de sa direction du Peripatos (dix-huit ans selon la *Chronologie* d'Apollodore d'Athènes: 5.58), Diogène transmet le catalogue des oeuvres du philosophe, aujourd'hui perdues dans leur intégralité (5.59–60). L'épigramme funéraire du même Diogène pour Straton ainsi qu'une liste d'homonymes suit (5.61). La brève biographie est complétée par le testament de Straton (5.61–62) que Diogène déclare avoir récupéré dans la collection du péripatéticien Ariston de Céos,(1) et par un éloge du philosophe."

(1) Ariston fr. 16 SFOD. On suppose qu'Ariston a été la source (probablement indirecte) de Diogène pour les autres testaments des Péripatéticiens. Voir Sollenberger (1992) 3859–76 et J. Bollansée dans les notes à Hermippe *FGrHist* 1026 F 28 (304–5).

"Prélude. La figure du philosophe dans les *Vies et Doctrines des philosophes* de Diogène Laërce a fait récemment l'objet de la monographie bien documentée et convaincante de S. Grau i Guijarro, *La imatge del filòsof i de l'activitat filosòfica a la Grècia antiga. Anàlisi dels tòpics biogràfics presents a les Vides i doctrines dels filòsofs més il·lustres de Diògenes Laerci*(1). Il serait donc inutile de revenir sur ce sujet sinon pour y apporter quelques éléments nouveaux ou en modifier l'une ou l'autre des suggestions. N'ayant rien d'important à ajouter à la recherche de Grau, j'ai choisi de me concentrer sur un aspect différent de l'art de la biographie de Diogène Laërce à partir d'une lecture de la *Vie de Polémon*, troisième successeur de Platon dans la direction de l'Académie. Pour cette biographie, on dispose en effet (par l'intermédiaire de Philodème de Gadara) de larges extraits de la source principale utilisée par Diogène, les *Biographies* d'Antigone de Caryste. L'étude comparée de ces données montre comment Diogène, en retravaillant et en intégrant en plusieurs endroits son modèle, a créé une nouvelle image de Polémon, moins expressive que celle brossée par Antigone. La description singulière et vivante d'Antigone, témoin oculaire des événements de la vie de Polémon, s'est ainsi figée dans un portrait statique qui découle de la culture livresque d'un savant désormais enfermé dans sa tour d'ivoire."

"Les quelques modèles de conversion à la philosophie que présente Diogène établissent un ordre de filiation entre l'Académie, l'école cynique et le Portique. Radicales, ces conversions n'obéissent pas tant aux raisons de l'intelligence (*protreptique*) qu'à une intervention incompréhensible et gratuite de la Fortune, c'est-à-dire de Dieu. Ainsi, de spéculative la philosophie devient existentielle, préparant le terrain à la conversion chrétienne."

"Considérons enfin Diogène Laërce : sa préface montre à l'évidence qu'il possède lui aussi une perspective très détaillée de l'histoire de la philosophie. La première moitié de la préface est consacrée à la question de l'origine de la philosophie. Diogène Laërce rejette l'idée d'une origine barbare de la philosophie (I, 3). Ainsi il rejette l'idée d'une sagesse originelle (cf. I, 13) que nous avons rencontrée chez Numénius, mais qui se trouve également chez plusieurs Stoïciens (comme par exemple Chæremon et Cornutus) ainsi que, postérieurement, chez la plupart des Platoniciens de l'âge impérial. Diogène est prêt à reconnaître la catégorie traditionnelle des Sages comme Solon (I, 13). Il est même prêt à maintenir que la philosophie tient ses origines de cette sagesse primitive (I, 13; 15) - peut-être une concession à l'idée stoïcienne classique d'une sagesse, ou mieux d'un bon sens primitif et pré-philosophique. Car il distingue deux grandes traditions philosophiques, l'italique et l'ionienne, dont la première dérive, selon lui, de Pythagore,

tandis que la seconde est inaugurée par Anaximandre. Mais en même temps, il suppose que Pythagore et Anaximandre étaient respectivement les élèves de Phérécyde et de Thaïes, qu'il compte au nombre de ces Sages. Il suggère ainsi que la philosophie s'enracine en quelque façon dans cette sagesse pré-philosophique. L'origine de la philosophie étant ainsi éclaircie, Diogène Laërce cherche à situer, dans le cadre de ces deux grandes traditions, tous les mouvements philosophiques et tous les philosophes du passé dans des listes où se succèdent maîtres et disciples, relation qu'il est prêt à expliquer en détail. Même si nous ne sommes pas d'accord sur certains aspects de son exposé, nous ne pouvons nier que Diogène Laërce a une perspective très élaborée sur l'histoire. (pp. 318-319)

24. ———. 2007. "La conservation et la transmission des textes philosophiques grecs." In *The Libraries of the Neoplatonists*, edited by D'Ancona, Cristina, 29-61. Brill: Leiden.

"Parmi les textes conservés de l'Antiquité, les oeuvres philosophiques représentent une proportion nullement

négligeable. Il suffit de constater la place tenue sur les rayons de nos bibliothèques par le corpus de Platon ou d'Aristote, de Plotin ou de Proclus, et encore plus celle occupée par les commentateurs grecs d'Aristote, pour se faire une idée de l'importance de ce qui a été conservé. Et pourtant les listes d'oeuvres philosophiques que Diogène Laërce fournit pour de nombreux philosophes suffisent à nous convaincre que nous ne disposons plus que d'une fraction de la littérature philosophique attestée(1) que d'une infime portion des oeuvres, certainement encore beaucoup plus nombreuses, réellement écrites." (p. 29, une note omise)

(1) Selon Diogène Laërce, VII 180, la liste complète des oeuvres de Chrysippe comprenait plus de 705 livres. On dénombre pour la logique 119 titres différents en 300 livres ; une note en VII 198 fait état de 311 livres pour la logique. Pour l'éthique, incomplètement conservée, la liste signale 43 titres pour un total de 122 livres. Il manquait donc environ 283 autres livres relevant de l'éthique et de la physique. Encore faut-il ajouter de nombreux titres à cette liste. Voir l répertoire de P. Hadot (notice « Chrysippe » C 121, dans R. Goulet (éd.), *Dictionnaire des Philosophes Antiques*, III, CNRS Éditions, Paris 1994, p. 336–56), complété par R. Goulet (ibid., p. 356–61). Pour Épicure, D. L., X 27–28 cite 41 titres, mais il lui attribue 300 rouleaux de papyrus. Selon D. L., X 25, un autre épicurien, Apollodore Kèpotyrannos, avait écrit 400 livres. C'est également le nombre de livres attribués à Clitomaque, le disciple de Carnéade (IV 67), qui lui n'écrivit rien. Le taux de conservation de ces centaines d'ouvrages en tradition directe est bien entendu voisin de 0%.

26. ———. 1986. *L'ascèse cynique. Un commentaire de Diogène Laërce VI, 70-71*. Paris: Vrin.

"Ainsi que nous l'avons déjà indiqué, l'objectif final de cet ouvrage est de rendre compte de Diogène Laërce VI 70-71. Pour y parvenir, nous avons dû nous livrer à une approche synthétique de la morale de Diogène et déterminer en quoi l'ascèse préconisée par le philosophe était une méthode originale pour accéder à la vertu. C'est pourquoi le commentaire du passage n'apparaît qu'à la troisième et dernière partie de cet ouvrage, comme l'aboutissement de toute une réflexion sur les idées-forces de la morale de Diogène (première partie) et sur l'originalité de l'ascèse cynique face au Socratisme et Stoïcisme (deuxième partie). (pp. 13-14)

Repris dans M.-O. Goulet Cazé, *L Cynisme, une philosophie antique*, Paris: Vrin 2017, pp. 41-193..

"Le lecteur des 'Vies' de Diogène Laëree en général et du livre VI en particulier a le sentiment de pénétrer dans une sorte de labyrinthe où il manque de points de repère. Le texte offre peu de prises, il résiste, parce que les 'Vies' sont le témoignage résiduel d'une vaste littérature en partie disparue. Comment alors échapper à une lecture naïve, à une lecture de surface, et découvrir les problématiques sous-jacentes aux différents matériaux qui, juxtaposés, constituent le livre VI?

D'emblée nous proposons de dégager la structure du livre VI, telle qu'elle peut apparaître au cours d'une première lecture, afin de susciter une confrontation immédiate avec la complexité du texte." (p. 3880).

31. ———. 2006. *Diogène Laërce et le Cynisme*. Villeneuve d'Ascq: Presses Universitaires du Septentrion.

"Les unissant par des liens de type scolaire, les *Vies* présentent les cyniques dans un ordre chronologique, ce qui contribue à les installer dans une relation de durée, signe de leur cohésion, et cela dès le Prologue:

- Socrate eut pour auditeur Antisthène (Σωκράτους διακηκότος Ἀντισθένης), celui-ci Diogène le chien (οὐ Διογένης ὁ κύων), celui-ci Cratès de Thèbes (οὐ Κράτης ὁ Θηβαῖος), celui-ci Zénon de Kition (οὐ Ζήνων ὁ Κιτιεύς) (1). Notons la précision avec laquelle sont évoqués les trois derniers philosophes : leur nom étant accompagné de leur surnom ou de leur origine géographique, ils ne peuvent être confondus avec leurs homonymes(2) , ce qui tend à traduire l'authenticité de ces liens.

Conforme à ce Prologue s'avère la succession qui régit le Livre VI : si elle relie Antisthène, Diogène et Cratès, elle est également encadrée par Socrate en amont et les stoïciens en aval, ce qui les inscrit dans un ensemble où les stoïciens font figure d'héritiers du cynisme, donc de Socrate." (p. 17)

(1) Cf. D.L., 1, 15 : le verbe qui exprime la transmission de la philosophie grecque à travers l'ensemble de ses adeptes ne se trouve exprimé que la première fois, en 1, 13. Le texte grec est celui de l'édition de M. Marcovich, *Diogenes Laertius: Vitae Philosophorum*, Stuttgart-Leipzig, 1999, et de G. Giannantoni,

Socratis et Socraticorum Reliquiae. Naples, 1992, Tome II, Section V, le plus souvent confronté à ceux de H. S. Long. Diogenes Laertius *Vitae Philosophorum* OCT, Oxford, 1964, et de R. D. Hicks, Diogenes Laertius, *Lives of Eminent Philosophers*, with an English Traduction, "LCL", Londres-New York, 1970 ; quant à la traduction, elle est personnelle, librement inspirée de celles que proposent l'ouvrage collectif paru en "Pochothèque", *Vies et Doctrines des Philosophies Illustres* de Diogène Laërce, et L Paquet, *Les Cyniques Grecs. Fragments et Témoignages*. Ottawa, 1988. Afin de ne pas surcharger le texte, nous ne citerons des sources grecques et latines que les termes ou expressions directement en rapport avec le sujet traité ; même s'ils s'avèrent parfois répétitifs, nous les indiquons de manière à mettre en évidence justement leur fréquence et / ou leur récurrence.

32. Jouanna, Jacques. 2009. "Médecine et philosophie : sur la date de Sextus Empiricus et celle de Diogène Laërce à la lumière du *Corpus galénique*." *Revue des Études Grecques*:259-390.

Résumé : "L'objet de l'article est de réévaluer l'oeuvre et la date de Sextus Empiricus en combinant les témoignages philosophiques et médicaux : 1. Sextus dans Diogène Laërce IX 115-116 est l'avant-dernier membre de la lignée des philosophes sceptiques après Timon, mais il est aussi un médecin empirique ; 2. Examen des passages dans l'oeuvre de Sextus indiquant qu'il est médecin et problème de son appartenance à la médecine empirique ou méthodique ; 3. Examen de la place de Sextus dans le *Corpus galénique* : il est totalement absent des oeuvres authentiques, malgré les nombreuses informations que Galien donne sur les empiriques (cf. surtout *Esquisse empirique*, *De l'expérience empirique*). Il est, en revanche mentionné par le Pseudo-Galien, Médecin (= *Introductio sive medicus*) en dernier dans la liste des médecins empiriques. 4. La conséquence en est que le floruit de Sextus est postérieur à Galien et date du début du IIIe s., tandis que le Pseudo-Galien,

Médecin est postérieur à Sextus et a fortiori à Galien. Quant à Diogène Laërce qui cite non seulement Sextus, mais aussi son disciple Saturninus, il est postérieur d'une génération à Sextus (milieu du III^e s.)."

33. Masson, Olivier. 1995. "La patrie de Diogène Laërce est-elle inconnue?" *Museum Helveticum* no. 52:225-230.

"En conclusion de cette enquête, je propose de revenir sans hésiter à l'interprétation traditionnelle pour le nom de «Diogène de Laërte» (le patronyme restant inconnu). Etant donné la diffusion de la culture antique en Asie Mineure au II^e-III^e s., il n'est pas difficile d'admettre que notre Diogène, né dans cette bourgade cilicienne, ait pu devenir un érudit. Ainsi, [l'explication specieuse de Wilamowitz]*] ne représente, à mon avis, qu'un *obiter dictum*, que ses admirateurs et disciples auraient dû contrôler, avant de s'incliner devant son autorité. (23)"

(23) La célèbre formule «le maître l'a dit» a dû être souvent appliquée.

34. Mejer, Jørgen. 1994. "Diogène Laërce." In *Dictionnaire des philosophes antiques. Vol. II*, edited by Goulet, Richard, 824-833. Paris: CNRS Éditions.

"Caractère général de l'œuvre. Si le titre «Vies, doctrines et sentences des philosophes illustres» semble bien connu, cela résulte de la popularité de l'œuvre de Diogène Laërce, car en fait ce titre, qui caractérise de façon exacte l'œuvre de Diogène Laërce, est unique dans l'historiographie philosophique de l'Antiquité. Néanmoins, si l'on prend en considération la structure de l'ouvrage et les sources citées par Diogène, il faut rattacher le livre au genre historiographique des "Successions". Après une introduction consacrée à l'origine et au nom de la philosophie, ainsi qu'aux différentes classifications de la philosophie et des philosophes (I 1-21, cf. 30 O. Gigon, «Das Prooemium des Diogenes Laertios : Struktur und Problème», dans *Freundesgabe für W. Wili*, Bern 1960, p. 37-64), Diogène

présente deux séries de philosophes, une qui conduit des sept Sages aux stoïciens à travers Socrate et les socratiques, Platon et les péripatéticiens (livres I-VII), l'autre de Pythagore aux sceptiques et à Épicure à travers Héraclite, les Éléates et les atomistes (livres VIII-X). L'histoire de l'Académie est conduite jusqu'à Clitomaque, celle de l'école aristotélicienne jusqu'à Lycon, celle de la Stoa seulement jusqu'à Chrysippe dans l'état actuel de l'ouvrage, mais atteignait originellement Cornutus au Ier siècle de notre ère (cf. l'apparat critique à la fin du livre VII de l'édition d'Oxford; on ne peut savoir de façon certaine si Diogène donnait ces noms dans le cadre d'une simple liste ou s'il leur avait consacré des biographies indépendantes). Diogène nomme les épicuriens les plus célèbres jusqu'à Zénon de Sidon, Démétrios Lacon, Diogène de Tarse et Orion, par conséquent jusqu'au premier siècle av. J.-C. Seule la succession sceptique est conduite jusque vers 200 ap. J.-C. Cette progression historique est exclusivement biographique: à l'exception des stoïciens, Diogène décrit toujours les opinions philosophiques du fondateur, mais non celles des successeurs." (p. 827)

35. Moraux, Paul. 1949. "L'exposé de la philosophie d'Aristote chez Diogène Laërce 5.28-34." *Revue Philosophique de Louvain* no. 47:5-43.

"Dans la *Vie d'Aristote* de Diogène Laërce, c'est surtout la notice biographique qu'ont exploitée les modernes; l'exposé doctrinal les a moins intéressés; pour connaître la pensée du philosophe, ils disposaient des propres traités de celui-ci et jugeaient ces témoins bien plus précieux que le médiocre résumé d'un obscur compilateur!

Pourtant, les quelques lignes dans lesquelles Diogène croit condenser la doctrine d'Aristote soulèvent bien des problèmes.

Diogène n'a pas lu lui-même les ouvrages du Stagirite. Dieu sait par combien d'intermédiaires son information lui est parvenue!

S'il est difficile de mettre un nom sur les sources du compilateur, peut-être une critique sagace pourra-t-elle en déterminer l'époque, les tendances, la valeur." (p. 5)

(...)

"Comme le catalogue, l'exposé doctrinal fut donc ajouté au fonds primitif par Diogène lui-même. Il reste à savoir si Diogène l'a emprunté en bloc à un autre auteur, ou s'il en a lui-même rassemblé, tant bien que mal, les éléments. Plusieurs constatations nous inclinent vers la seconde hypothèse. Laisser aller, incohérence et manque d'esprit critique sont, certes, défauts communs aux compilations de l'époque impériale, et l'on comprendrait que Diogène ait pu les tenir de sa source; mais pourtant, ces travers ne déparent que certains genres littéraires, tels que biographies, recueils d'anecdotes, histoires merveilleuses, etc. Nous tournons-nous vers la littérature philosophique de certaines écoles, nous sommes frappés par le sérieux, la méthode, la discipline que l'on s'est efforcé d'y faire régner; nous n'en voulons pour preuve que les travaux scolaires, aide-mémoire, fragments de dialogues et commentaires réunis sous le titre d'*Apories* et attribués à Alexandre d'Aphrodise. Dès lors, il est à peu près sûr que, si Diogène avait emprunté son exposé doctrinal à un ouvrage spécialisé ou même à un manuel sans prétention, nous n'y découvririons pas la disparate que nous avons constatée. En fait, chaque tronçon diffère de l'autre par l'âge, la valeur et le but visé; la forme grammaticale elle-même laisse deviner qu'il s'agit de morceaux étrangers l'un à l'autre; le résumé de la logique est, par exemple, en discours direct, mais la division de la philosophie, qui le précède, est en style indirect dépendant de βούλεται; le commentaire est également en discours direct, tandis que les *placita* sont faits de propositions infinitives introduites, de temps à autre, par un ἔφη ou ἀπεφαινε.

Le compilateur s'est peu soucié d'unifier les documents qu'il a résumés et mis bout à bout; il les a cependant marqués involontairement de son empreinte: on remarque, dans l'exposé doctrinal, plusieurs des relâchements caractéristiques du style des Biographies: ainsi, une proposition sur l'immobilité divine coupe en deux la doctrine de la Providence; or, des insertions malencontreuses du même genre se rencontrent dans les autres livres diogéniens; le commentaire sur la définition de l'âme est défiguré par un déplacement de texte,

faute qui n'est pas non plus sans exemple dans les Biographies; c'est la preuve que l'exposé doctrinal n'a point été simplement copié sur un ou plusieurs manuels, mais qu'il a été retravaillé par la main à qui nous devons la rédaction de l'œuvre tout entière." (pp. 42-43)

37. ——. 1955. "La composition de la Vie d'Aristote chez Diogène Laërce." *Revue des Études Grecques* no. 53:124-163.

"Bien des inepties déparent les biographies dues à Diogène Laërce. Comme le révèle l'analyse de la *Vie d'Aristote*, une grande partie d'entre elles s'expliquent par l'application maladroite d'un procédé de composition assez singulier: d'un thème normalement amené par la marche du récit chronologique, l'auteur passe volontiers, par associations d'idées, à un thème voisin; de celui-ci, il saute à un autre, et ainsi de suite. Des digressions en cascades se mêlent donc à la narration biographique. On peut retrouver, cependant, la charpente originelle de la biographie: il suffit d'isoler les digressions et de ne considérer que les morceaux qui les ont déclenchées. Or ce démontage de la *Vie d'Aristote* révèle un fait d'une importance primordiale: le canevas, sur lequel a brodé Diogène est identique à celui qu'on retrouve chez le grand Apollodore, l'un et l'autre découlent d'une source commune, qui est probablement le péripatéticien Ariston de Céos. Diogène a fait de son mieux pour étoffer ce donné primitif en y insérant une foule de renseignements complémentaires; il a rédigé lui-

même une partie de ces digressions et a laissé à l'état brut les matériaux qu'il destinait aux autres. Son manuscrit, à demi achevé et bourré de notes additionnelles non encore incorporées au texte, a été confié à un éditeur, qui a transcrit le tout en un texte continu, non sans commettre une foule de bévues et d'erreurs. La stupidité d'un rédacteur incapable est ainsi venue s'ajouter à l'insigne naïveté de Diogène."

38. ——. 1986. "Diogène Laërce et le *Peripatos*." *Elenchos.Rivista di Studi sul Pensiero Antico* no. 7:245-294.

"Les matériaux dont est fait le livre V, consacré au Péripatos, sont de valeur très inégale. On y trouve des documents originaux de toute première importance. Je pense par exemple aux "testaments" d'Aristote, de Théophraste, de Straton et de Lycon (1). Les seuls autres philosophes dont Diogène nous ait conservé les dernières volontés sont Platon (2) et Épicure (3). Les testaments des Péripatéticiens, dont l'authenticité peut être tenue pour certaine, ont été bien étudiés (4). Leur intérêt réside surtout dans les renseignements qu'on peut en tirer sur la famille du testateur, ses intimes, ses biens meubles et immeubles. En ce qui concerne l'école elle-même, on n'en trouve pas mention dans le testament d'Aristote, sans doute parce que celui-ci, en tant que métèque, n'avait pas le droit d'être propriétaire de biens fonciers à Athènes. Théophraste, bien que métèque lui aussi, se vit exceptionnellement reconnaître ce droit, grâce à l'intervention de Démétrius de Phalère (5); aussi bien légat-il «le jardin, la promenade et les maisons situées à côté du jardin » à un groupe de dix philosophes décidés à poursuivre leurs recherches en commun (6). Le groupe prit manifestement la décision d'élire Straton à la tête de l'école, si bien que celui-ci put mentionner la διατριβή dans ses dispositions testamentaires; sans doute eût-il aimé suivre l'exemple de Théophraste et céder l'école à un groupe de membres éminents; mais, dit-il, « les uns sont trop âgés et les autres n'ont pas le loisir de se livrer à l'étude ». C'est donc au seul Lycon que reviendra l'école (7). Dans son propre testament, Lycon en revient à la pratique instituée par Théophraste: le Péripatos est légué à un collège de dix

membres, parmi lesquels Ariston, qui fut élu scolarque à la mort de Lycon (8)." (pp. 247-248)

"L'analyse permet de distinguer 1) un texte de base, 2) des compléments (doxographie, lettres, épigrammes, etc.) et 3) des additions postérieures. Le texte de base se subdivise en une étude caractérologique, attribuable à Ariston de Céos d'après Diogène Laërce II, 22, du fr. 13-I Wehrli d'Ariston, et d'un pinax bibliographique. Dans une apostille est reconstituée l'histoire du texte de la Vie et la technique de citation de Diogène."

40. Rocca-Serra, Guillaume. 1987. "Parménide chez Diogène Laërce." In *Études sur Parménide. Tome II. Problèmes d'interprétation*, edited by Aubenque, Pierre, 254-273. Paris: Vrin.

"Nous avons choisi d'organiser notre recherche autour de la notice consacrée à Parménide par Diogène Laërce. Une autre méthode eût consisté dans une présentation qui aurait suivi un

ordre chronologique, mais une telle procédure supposait résolu un problème qui tourmente, au moins depuis Nietzsche, philologues et philosophes, celui des sources de Diogène Laërce. Au contraire, partir de cet auteur et revenir en arrière nous évitait de prendre des positions trop tranchées à la fois sur ses informateurs immédiats et sur les sources de ces informateurs eux-mêmes.

L'oeuvre de Diogène constitue, on le sait, une sorte de synthèse, maladroite et parfois mal intentionnée, de ce que l'érudition hellénistique avait rassemblé sur le thème des «Vies et doctrines des philosophes célèbres». Sa méthode de travail, son esprit superficiel lui ont attiré des critiques méritées, mais il nous a conservé une masse d'informations qui font de son livre un ouvrage indispensable. Ajoutons qu'une partie des absurdités qu'on lui attribue pourrait parfaitement provenir de la maladresse des scribes médiévaux." p. 254

"Cet examen, bien que partiel, de la tradition biographique et doxographique nous aura persuadés, semble-t-il, d'abord, que les restes de cette tradition ne représentent qu'une infime partie d'une littérature jadis très importante. C'est ainsi que la modeste notice de Diogène nous fait entrevoir les travaux de l'école d'Aristote, de l'érudition alexandrine, de la doxographie sceptique.

Ensuite et surtout, on peut mettre en évidence la valeur de certaines des indications qu'elle nous transmet. Elle nous fournit le canevas vraisemblable de la biographie de Parménide, d'abord héritier d'une grande famille et voué probablement à une activité politique et législative, puis se tournant vers la philosophie, sans toutefois que la fine pointe de sa pensée soit mise en évidence, et c'est là une des lacunes de la tradition. Pourtant, bien avant K. Reinhardt 1^o2, Sotion puis Diogène ont dissocié Xénophane et Parménide, présentant ainsi l'originalité de ce dernier. La tradition, enfin, a retenu plus volontiers le monde de l'apparence que le poème. C'est surtout grâce à elle que nous reconstruisons la doxa parménidienne, sur laquelle les parties conservées du Poème

nous renseignent guère. Elle a donc sa place dans l'approche d'un Parménide dans sa totalité." p. 273 (notes omises)

41. Veillard, Christelle. 2009. "Les Vies de Philosophes de Diogène Laërce. Une réflexion sur l'histoire de la philosophie." *Dissertatio* no. 30.

Abstract: "Diogenes Laertius' *Lives and opinions of Eminent Philosophers* is one of the monumental works of ancient philosophy, an inestimable source of biographical and doctrinal information. For a certain time, little value was assigned to the work, since Diogenes Laertius used to be considered someone who was not able to comprehend doctrines, had the unpleasant habit of compiling them out of order and was fond of uninteresting anecdotes.

Diogenes is commonly presented as a great scholar, passionate about philosophy, who copied without understanding what was copied – someone not to be entirely trusted.

However, contemporary studies have shown that such point of view must be corrected through the analysis of the structure of *Lives*, in spite of the still present disagreement over the choices the author made when reorganizing the works he compiled, both in terms of the scope and meaning of such choices. Two interpretative threads are identified: one being deflationary, the other, inflationary. This article tests the validity of the inflationary interpretation, and the investigation will concern two main questions: 1) Does the text show traces of the author's personality?; 2) Is the text the result of a personal conception of the history of philosophy?"

Diogenes Laertius: Bibliography of *Lives and Opinions of Eminent Philosophers (II)*

***Selected translations in English, Italian,
French, German, Spanish, Catalan,
Portuguese and Latin***

English

1. Diogenes Laertius. 1925. *Lives of Eminent Philosophers*. Cambridge: Harvard University Press.
Translated by R. D. Hicks with the Greek text facing.
Reprint with an introduction by Herbert Strainge Long, 1972.
2. Sollenberger, Michael George. 1984. *Diogenes Laertius' Life of Theophrastus. A critical edition of the text with a translation and commentary*, Rutgers University.

Unpublished Ph.D. thesis, Rutgers University, The State University of New Jersey, 1984.

Available at ProQuest Dissertation Express ref. n. 8424162.

"The primary purpose of this dissertation is to provide a critical edition of Diogenes Laertius' life of Theophrastus. The Greek text has been established from an examination and collation of nineteen manuscripts dating from the twelfth to the sixteenth century. The text is furnished with an apparatus criticus of variant manuscript readings, scholarly emendations and conjectures.

Between the text and apparatus criticus appears an apparatus testimoniorum, in which are given references to other ancient and mediaeval authors who offer the same or closely related material.

A long introduction establishes the need for such an edition, outlines the general organization of Diogenes' work and focuses on the content and structure of Theophrastus' life. Also in the introduction the several manuscripts are described and an attempt is made to indicate their various affiliations.

Diogenes' work is unique among literary documents surviving from antiquity and unquestionably a valuable source for the history of ancient philosophy. Not only does it contain more biographical information on Theophrastus than any other ancient source, but also an extensive catalogue of Theophrastus' writings, most of which are lost, and Theophrastus' testament are included as parts of the biography.

Theophrastus was the student of Aristotle and head of the Peripatetic school from Aristotle's death in 322/1 B.C. until his own death thirty-five years later. Today he is best known for his *Characters* and his ground-breaking work in botany. But fragments of his voluminous writings scattered throughout the works of later ancient and mediaeval writers show that he made important contributions in other fields, e.g., logic, physics, metaphysics; zoology, ethics, politics and rhetoric, and in many instances advanced beyond Aristotelian antecedents.

Theophrastus' importance for Hellenistic philosophy is clear, but the actual influence he had on his contemporaries and later philosophers remains obscure. From the abundant details concerning Theophrastus' life and writings provided by Diogenes we can gain valuable insight concerning his influence and better understand the importance of his achievements as a writer and a philosopher." (From the Abstract)

3. Diogenes, Laertius. 2018. *Lives of the Eminent Philosophers*. New York: Oxford University Press.

Translated by Pamela Mensch.

Edited by James Miller.

The translation is based on Tiziano Dorandi edition of the Greek text, published in 2013 by Cambridge University Press.

4. ———. 2018. *Lives of the Eminent Philosophers. An Edited Translation*. Cambridge: Cambridge University Press.

Edited and translated by Stephen White.

The translation is based on Tiziano Dorandi edition of the Greek text, published in 2013 by Cambridge University Press.

Italian

1. Laerzio, Diogene. 1962. *Vite dei filosofi*. Bari: Laterza.

Traduzione Italiana di Marcello Gigante; terza edizione riveduta 1987.

2. Diogene, Laerzio. 2005. *Vite e dottrine dei più celebri filosofi*. Milano: Bompiani.

Traduzione italiana con testo greco a fronte (edizione Marcovich) a cura di Giovanni Reale, con la collaborazione di Giuseppe Girgenti e Ilaria Ramelli.

3. Epicuro. 2002. *Epicurea, Nell'edizione Di Hermann Usener*. Milano: Bompiani.

Traduzione dell'edizione del 1887 di Ilaria Ramelli con testo greco a fronte.

Contiene la *Vita di Epicuro* di Diogene Laerzio.

French

Latin

1. Diogenes, Laertius. 1472. *Laertii Diogenis Vitae et sententiae eorum qui in philosophia probati fuerunt.* Romae: Giorgio Lauer.
Latin version by Ambrogio Traversari (1386-1439) between 1424 and 1433 (the first printed text of the *Lives*) edited by Elius Fanciscus Marchisius.
Many reprints: Venice, 1475, 1490, 1493 and 1497; Brescia 1485, Bologna 1495 (Miroslav Flodr - *Incunabula classicorum. Wiegendrucke der griechischen und römischen Literatur* - Amsterdam, Hakker, 1973, pp. 137-138).
2. ———. 1475. *Diogenes Laertius Vitae et Sententiae eorum qui in Philosophia probati fuerunt.* Venetia: Nicolaum Jenson.

Translated by Ambrosio Camaldulensi [Ambrogio Traversari] from the recension by Benedetto Brognoli.

3. ———. 1566. *Laertii Diogenis de vita et moribus philosophorum, libri decem*. Antwerpiae: Tirnaviensis Pannonii.

Translated by Joannes Sambucus [János Zsámboky] (1531-1584).

Editions of the Greek text

Greek

1. *Diogenis Laertij De vitis, decretis & responsis celebrium philosophorum Libri decem, nunc primum excusi*. 1533. Basileae.

First complete edition (*Editio princeps*) of the Greek text, edited and translated by Hieronimus Frobenius and Nicolaus Episcopus.

Three *Vitae* have been already printed:

Aristotelis et Theophrasti Vitae in vol. II of the Aldine edition of Aristotle (Venetiis 1497).

Xenophontis Vita in the Aldine edition of the works of Xenophon (Venetiis 1525) reprinted in the Giuntina edition (Florentiae 1527).

2. *Laertii Diogenis de vita et moribus philosophorum, libri X*. 1566. Antverpiae: Christophori Plantini.

Edited Ioannis Sambuci (János Zsámboky, 1531-1584).

3. *Diogenis Laertii de vitis, dogmatis & apophthegmatis eorum qui in philosophia claruerunt, libri X*. 1570. Geneva.

Edited with annotations and Latin translation by Henricus Stephanus.

4. *Diogenis Laertii de vitis, dogmatis & apophthegmatis clarorum philosophorum libri X*. 1593. Geneva.

Reprint of the edition by Henri Estienne (Henricus Stephanus, 1570) with annotations by Isaac Casaubon.

5. *Laertii Diogenis de uitis, dogmatis et apophthegmatis eorum qui in philosophia claruerunt, libri X.* 1594. Romae: Aloysium Zanettum.

Edited with annotations by Tommaso Alodbrandini.

6. *Diogenes Laertius, De Vitis, dogmatis et apophthegmatis clarorum Philosophorum, Libri X.* 1615. Geneva: Iacobum Stoer.

Edited by Paul Estienne (son of Henri Estienne), with the notes by Isaac Casaubon.

7. *Laertii Diogenis De Vitis Dogmatis et Apophthegmatis Eorum qui in philosophia Claruerunt; Libri X.* 1664. Londinii: Octavanum Pulleyn.

Reprint by John Pearson (1613-1686) of the Aldobrandinian edition of 1594 with *Annotationes* by Henri Estienne, Isaac and Méric Casaubon and *Observationibus* by Gilles Ménage (Aegidii Menagii, 1613-1692) that contains the first printed edition of an anonymous life of Aristotle (the so-called *Vita Menagiana*).

8. *Diogenis Laertii De Vitis, Dogmatibus et Apophthegmatibus Clarorum Philosophorum Libri X.* 1692. Amstelaeami: Henricus Wetstenium.

Greek and Latin text by Marc Meibom, with annotations to I. and M. Casaubon, T. Aldobrandini in two volumes.

The second volume contains: Aegidii Menagii *in Diogenem Observationes auctiores* [with the unedited *Vita* of Aristotle called *Vita Menagiana*], *ut et Joachimi Kühnii ad Diogenem Notas*.

9. *Diogenis Laertii De vitis, dogmatibus et apophthegmatibus clarorum philosophorum Libri X.* 1739. Curiae Regnitianae: Gotthard Ioannem Puttnerum.

Greek and Latin edition By Paulo Daniele Longolio.

10. *Diogenis Laertii De vitis, dogmatis et apophthegmatis clarorum philosophorum libri X.* 1828. Lipsiae: Carolus Franciscus Koehlerus.

Greek and Latin edition in two volumes: I. (1828) edited by Heinrich Gustav Hübner; II. (1831) edited by Gottfried Hermann.
11. *Commentarii in Diogenem Laertium. Volumen Primum.* 1830. Lipsiae und Londini: C. F. Kochler und Black, Young & Young.

Edited by Heinrich Gustav Huebner, contains: Menagius, Aegidius, *Notae atque Aegrdii Menagii observationes et emendationes in Diogenem Laertium. Addita est historia mulierum philosopharum ab eodem Menagio scripta. Editionem ad exemplar wetstenianum expressam atque indicibus instructam curavit Henricus Gustavus Huebnerus lipsiensis.*
12. *Commentarii in Diogenem Laertium. Volumen Secundum.* 1833. Lipsiae: C. F. Kochler.

Edited by Carl Iacobitz after the death of Huebner; contains the reprint of the notes by Gilles Ménage with the *Vita Menagiana* (1692): Menagius, Aegidius, *Notae atque Aegidii Menagii observationes et emendationes in Diogenem Laertium. Addita est historia mulierum philosopharum ab eodem Menagio scripta. Editionem ad exemplar wetstenianum expressam atque indicibus instructam post Huebneri mortem absolvit Carolus Iacobitz. Volumen Secundum.*
13. *Diogenis Laertii De Vitis Philosophorum libri X cum indice rerum.* 1833. Lipsiae: Charles Tauchnitz.
14. *Diogenis Laertii de clarorum philosophorum vitis, dogmatibus et apophthegmatibus libri decem.* 1850. Parisiis: Firmin-Didot.

Edited by Carel Gabriel Cobet.

Reprinted 1862 and 1929.
15. Diogenes, Laërtius. 1925. *Lives of eminent philosophers.* Cambridge: Harvard University Press.

- Greek text facing an English translation by Robert Drew Hicks.
Reprint with an introduction by Herbert Strainge Long, 1972.
16. Diogenes, Laertii. 1964. *Vitae Philosophorum*. Oxford: Clarendon Press.
Critical edition of the Greek text by Herbert Strainge Long.
17. Diogenes, Laertius. 1999. *Vitae philosophorum*. Stuttgart: B. G. Teubner.
Critical edition by Miroslav Marcovich.
Vol. I: *Libri I - X*; Vol. II: *Excerpta Byzantina et indices*; Vol III: *Indices* Hans Gärtner (2002).
18. Diogenes, Laërtius. 2013. *Lives of Eminent Philosophers*. Cambridge: Cambridge University Press.
Critical edition by Tiziano Dorandi.

Melissa Lane: "The Greatest and Most Beautiful Part of Wisdom" (*Symp.* 209a): Moderation and Justice as the Creating of Laws 251; Anthony Hooper: Scaling the Ladder: Why the Final Step of the Lover's Ascent is a Generalizing Step 257; Maria Angelica Fierro: Loving and Lovable Bodies in the *Symposium* 258; Alonso Tordesillas: Enigmatique *exaiphnes* 263; Beatriz Bossi: On which step of the *scala amoris* is Socrates standing in the dramatic action of the *Symposium*? 264; Rachana Kamtekar: Eudaimonism in the *Symposium*? 272; Vasilis Politis: Eros: One, Two, or Two-in-One? (Abstract) 275; Anthony W. Price: What does Diotima mean by *erōs*? 281; Alvaro Vallejo Campos: Desire and will in the *Symposium* 289; Christopher J. Rowe: On the Good, Beauty and the Beast in Plato's *Symposium* 297-305.

12. Cornelli, Gabriele, Robinson, Thomas, and Bravo, Francisco, eds. 2018. *Plato's Phaedo*. Baden-Baden: Academia Verlag.

Eleventh Symposium Platonicum, Brasilia, 2016.

Contents: List of contributors 5; Table of content 7;

Gabriele Cornelli, Thomas M. Robinson, Francisco Bravo: Foreword 11; Gabriele Cornelli: Plato went South! 12;

1. *Phaedo*'s Structure.

Giovanni Casertano: *Phaedo* — dramatic structure and philosophical content 17; Marcelo D. Boeri: "To act and to be acted upon": Interactionism in the *Phaedo* 28; Michele Corradi: *Il Fedone* e la memoria dell'*Apologia di Socrate*: a proposito di una raffinata strategia letteraria 33; Lidia Palumbo: Filosofia e narrazione. Il caso del *Fedone* 38; Marco Antonio Santamaría Álvarez: *Apology, Crito* and *Phaedo*: Socrates' tragic trilogy 43; Renato Matoso Brandão: On the Translation and Meaning of *Phaedo* 74b7-9 49;

2. Philosophy and Myth in the *Phaedo*.

Irmgard Männlein-Robert: on der Höhle in den Himmel: Der Philosoph im Jenseitsmythos des *Phaidon* oder Sokrates im Glück 57; Alberto Bernabé: Describir el Más Allá. Consideraciones sobre el mito del *Fedón* 62; Beatriz Bossi: ack To The Cock: On Gratitude and Care 74; Francesc Casadesús Bordoy: La definición del verdadero filósofo en el *Fedón* o cómo construir una ortodoxia filosófica a partir de una heterodoxia religiosa 84; Francisco J. Gonzalez: Why the Minotaur is Misology 90; Fulvia de Luise: Il canto del cigno di Socrate. Una celebrazione della morte? 96; Annie Larivée: Socrate « Asclépios politique » dans le *Phédon* 101;

3. Emotions, Pleasures and Philosophical Virtues.

Olga Alieva: How Plato Saved Pleasures for Philosophy 113; Dino de Sanctis: Socrate e le lacrime dei *philoí*: emozioni e catarsi nel *Fedone* 118; Edward C. Halper: The Currency of Virtue: *Phaedo* 68c-69d 124; Marcelo P. Marques: The exchange of pleasures and pains in the *Phaedo* 133; Donald Morrison: Egoism and Benevolence in the *Phaedo* 150; Carolina Araújo: Plato's *Phaedo* on rational suicide 154; Richard D. Parry: Illusions of Pleasure 159; Federico M. Petrucci: There Should Be a Virtue for Everyone. Non-Philosophical Virtue in the *Phaedo* 164;

4. Death and the Problem of Soul's Survival.

Monique Dixsaut: « La mort, estimons-nous que c'est quelque chose ? » 173; Filip Karfík: L'âme et la Forme de la vie 183; Lenka Karfíková: The soul and life – the soul and ratio. Augustine's criticism of the final proof in Plato's *Phaedo* 188; Taichi Miura: Immortality and imperishability of the soul in the final argument of Plato's *Phaedo* 193; Satoshi Ogihara: Immortality and eternity: Cebes' remark at *Phaedo* 106d2-4 199; Cynthia B. Patterson: Metaphors of Body and Soul in the *Phaedo* – and Socrates' Last Words 205; David Sedley: The *Phaedo*'s final proof of immortality 210; Rafael Ferber: *Deuteros Plous*, the immortality of the soul and the ontological

argument for the existence of God 221; Roslyn Weiss: Fear of Death in Plato's *Phaedo* (and *Apology*) 231;

5. Knowledge, Reminiscence and the Forms.

Barbara M. Sattler: Sufficient Reason in the *Phaedo* and its Presocratic antecedents 239; Filippo Forcignanò: Experiences without Self-Justification: the "Sticks and Stones" Argument in the *Phaedo* 249; Andy German: Socratic Iconography: Two Examples in the *Phaedo* 255; Daniel W. Graham: Plato's Scientific Manifesto 262; Manfred Kraus: Δοκεῖν, δόξα and eikō's in the *Phaedo* 268; Anna Motta: Strategie esegetiche neoplatoniche: qual è lo *skopos* del *Fedone*? 273; Graciela E. Marcos de Pinotti: ¿Cuántos y quiénes "recuerdan"? El doble alcance de la reminiscencia en *Fedón* 72e-77a 278; Noburu Notomi: The Soul and Forms in Plato's *Phaedo* 288; Richard Patterson: Malaria, Causality and Plato's Explanatory Framework 294; Karine Tordo Rombaut: Qu'est-ce qui, dans la question de l'anonyme, a pu troubler Socrate (*Phd.* 103a4-c5) ? 299; Harold Tarrant: Argument from Similarity or Socrates' Inspired Vision Part I? 304; Thomas M. Tuozzo: Sense Perception and Explanation in the *Phaedo* 310;

6. *Phaedo*'s Socrates Itinerary and Portrait.

Andrea Capra: Father and Son: Apollo, Asclepius and the Socratic Birth of the Platonic dialogue 319; Lloyd P. Gerson: Socrates' Autobiography: An Epitome of Platonism 323; Gerard Naddaf: The "young" historical Socrates in *Phaedo* 96a-99d: a re-examination of the controversial "autobiography" 328; Mario Regali: Una maschera per il dialogo: la caratterizzazione di Socrate nel *Fedone* 333; François Renaud: L'autorité d'Homère et de la tradition dans le *Phédon* 338; Franco Trabattoni: La "prima navigazione" nel *Fedone* 344;

Bibliography 353; Index Locorum 379; Index Nominum 394; Subject Index 402-407.

13. Brisson, Luc, Macé, Arnaud, and Renault, Olivier, eds. 2022. *Plato's Parmenides. Selected Papers of the Twelfth Symposium Platonicum*. Baden-Baden: Academia Verlag.

Twelfth Symposium Platonicum, Paris, July 15th-20th 2019.

Contents. Introduction 5;

I. On the threshold of the *Parmenides*.

François Renaud: Poésie et poétique dialogique dans le prologue du *Parménide* 17; Nikos G. Charalabopoulos: Road to Academy. The implicit protreptics of Plato's *Parmenides* 25; Lidia Palumbo: Il prologo come chiave di interpretazione del dialogo intero 33;

II. The *Parmenides* in context.

Mario Regali: Parmenide e il cavallo di Ibico: l'immagine dell'eros senile per la dialettica (*Prm.* 136e-137c) 43; Julia Pfefferkorn: Parmenides auf dem Prüfstand: Unendliche Schwierigkeiten und eine Aufgabe 51; André Luiz Braga da Silva: The "Ideas as thoughts" hypothesis of *Parmenides* 132b-c: a historical approach 59; D. Gregory MacIsaac: Plato's Account of Eleaticism: A New Interpretation of *Parmenides* 67; Francesco Ferro: La dottrina eleatica dell'Uno-tutto nel primo λόγος di Zenone 75; Sandra Peterson: Socrates Objects to Zeno at 128e-129a in Plato's *Parmenides* 83; Filippo Forcignanò: Anaxagoras in Plato's *Parmenides* 91; Mathilde Brémond: Gorgias and Antilogic in Plato's *Parmenides* 101; Michele Corradi: Il Parmenide di Platone fra il Περι τοῦ μη ὄντος di Gorgia e il Περι τοῦ ὄντος di Protagora: l'ombra dei sofisti nella γυμνασία 115; Ivana Costa: Las huellas de Gorgias y el robo del λόγος de Zenón 123; Claudia Mársico: Intra-Socratic polemics. The *Parmenides* as an element of an anti-Megaric program 133;

III. Dialogue, dialectics and exercises.

Mary-Louise Gill: Exercise on Being: The ἄγών of Heraclitus and *Parmenides* 149; Annie Larivée: Socrate en devenir. Le développement du jeune Socrate dans le Phédon comme clé herméneutique du *Parménide* 163; Sergio Di Girolamo: *Parmenides*' hypothesis behind Plato's *Parmenides*: 'all the things are collectively called ἔν ὄν' (*Sph.* 242d6) 173; Jens Kristian Larsen: On common forms and dialectical inquiry in Plato's *Parmenides* 183; Georgia Mouroutsou: A Diagnosis of

Dialectic in *Parmenides* 142b1-144e7 193; Alessio Santoro: Eleatic training. The aim and uses of dialectic in Plato's *Parmenides* and Aristotle's *Topics* 201;

IV. The Theory of Forms.

Noburu Notomi: Homonymy and Similarity in Plato's *Parmenides* 211; Antonino Spinelli: Sind die Ideen wirklich unteilbar? Zur zweifachen Natur der platonischen Formen (*Prm.* 131a-e) 221; Irina Protopopova:

The *Parmenides* and the Typology of *eide* (according to Plato's *Hippias Major*, *Protagoras*, *Republic*, and *Sophist*) 229; Vittorio Ricci: Sul cosiddetto "argomento del terzo uomo" (TMA) nel *Parmenide* 239; Amber D. Carpenter: Separation Anxieties. *Parmenides* 133a-135c 245; Beatriz Bossi: Why is the 'greatest' difficulty neither great nor consistent? (*Prm.* 133b-134e) 253; José Antonio Giménez: La "mayor dificultad" y el poder del conocimiento en *Parménides* 133b-134e 261; Irmgard Männlein-Robert: Der ferne Gott – Ideen auf Distanz? Die siebte Aporie im Kontext (*Prm.* 133b4–135b4) 269; Carolina Araújo: *Ousia* and *dunamis* in the greatest aporia (*Prm.* 133b4-135b4) 279; Kezhou Liu: The Problem of Separation in Plato's *Parmenides* 287;

V. Hypothesis and deductions.

Maurizio Migliori: The many meanings of the One in Plato's *Parmenides* 299; Eric Sanday: The Subject and Number of Hypotheses in Plato's *Parmenides* 309; Béatrice Lienemann: Prädikationen *pros heauto* im *Parmenides* als Aussagen über die Struktur von Ideen 317; Luca Pitteloud: La deuxième partie du *Parménide* : identité et altérité de l'intelligible ? 331; Dougal Blyth: Dialectic and Forms in *Prm.* 137c-144e 339; Mateo Duque: "Οὐκ ἔστιν" (141e8): The Performative Contradiction of the First Hypothesis 347; Carmen Di Lorenzo: Il numero come prototipo di pluralità unificata (*Prm.* 147a3-6) 355; Richard Parry: The One and Time: *Parmenides* 151e-153a 361; Aleksei A. Pleshkov: Eternity for Plato: The Dialogue between *Parmenides* and *Timaeus* 371; Francisco J. Gonzalez: "Let us say the third": The Meaning of τοῦ τρίτου in the Deductions of

Plato's *Parmenides* 379; Samuel Meister: Gunk in the Third Deduction of Plato's *Parmenides* 393; Claudia Luchetti: La Noesi nascosta. Sulla presenza della teoria platonica dell'Anima nella $\gamma\upsilon\mu\nu\alpha\sigma\iota\alpha$ del *Parmenide* (142a-144e, 155e-157b, 157b-159b) 401; Roberto Granieri: Riferimento, essere e partecipazione. *Prm.* 160b4-163b5 e il *Sofista* 409; Francesco Aronadio: La duplice accezione dell'espressione *me esti* nella V e nella VI ipotesi del *Parmenide* 423; Lorenzo Giovannetti: Structure and sense of the seventh deduction in *Prm.* 164b5-165e1 431; Jan Szaif: Pseudo-Objects in a World of Seeming (*Prm.* 164b–165e) 439; I-Kai Jeng: Nonbeing and the Final Four Deductions in Plato's *Parmenides* 453;

VI. The Reception of the *Parmenides*.

Federico M. Petrucci: Una lettura stoica della “più grande difficoltà” del *Parmenide* 469; Harold Tarrant: Apuleian Evidence regarding Pre-Plotinian Interpretation of the *Parmenides* 483; Lloyd P. Gerson: Plotinus and *Parmenides* 491; Melina G. Mouzala: Forms as paradigms in Plato's *Parmenides* 132c-d. Proclus' response to Aristotle and Alexander of Aphrodisias' attacks on the Forms considered as patterns 501; Anna Motta: La peculiare solennità dell'isagoge procliana al *Parmenide* di Platone 509; Ivan Adriano Licciardi: Simplicio, in *Cael.* 556, 3-560, 10, a margine di Platone, *Prm.* 135b8-c1. Prolegomeni a una genealogia del parallelismo onto-epistemologico 517;

References 527; Index Locorum 549; Index Rerum 565-568.

14. *Symposium Platonicum XII. Le Parménide de Platon. Plato's Parmenides. Résumés – Book of Abstracts.* 2021. Paris: International Plato Society.

Paris – 15-18 avril 2019. Institut National d'Histoire de l'Art.

15. *Plato's Sophist.* 2024.

Thirteenth Symposium Platonicum, Athens, GA, USA (Jul. 18-22, 2022).

Not yet published.

List of the Proceedings of the "Symposium Platonicum Pragense"

1. Havlíček, Aleš, and Karfík, Filip, eds. 1998. *The Republic and the Laws of Plato*. Prague: Oikoymenh.

Proceedings of the Symposium Aristotelicum

List of the Proceedings of the "Symposium Aristotelicum"

1. Düring, Ingemar, and Owen, Gwilym Ellis Lane, eds. 1960. *Aristotle and Plato in the Mid-Fourth Century*. Göteborg: Studia Graeca et Latina Gothoburgensia.

Papers of the [First] Symposium Aristotelicum held at Oxford in August 1957.

Contents G. E. L. Owen: Preface VII;

SECTION I

David Ross: The development of Aristotle's thought 1;

SECTION II.

O. Gigon: Prolegomena to an edition of the Eudemus 19;

SECTION III

I. Düring: Aristotle on ultimate principles from 'nature and reality': *Protrepticus* fr. 13 35;

S. Mansion: Contemplation and action in Aristotle's *Protrepticus* 56;

E. de Stricker: On the first section of fr. 5 a of the *Protrepticus* 76;

SECTION IV

R. Walzer: Aristotle, *De Philosophia* fr. 24 in the Arabic tradition 105;

SECTION V

P. Moraux: From the *Protrepticus* to the dialogue *On Justice* 113;

SECTION VI

D. J. Allan: Aristotle and the *Parmenides* 133;

G. R. Morrow: Aristotle's comments on Plato's *Laws* 145;

SECTION VII

G. E. L. Owen: Logic and metaphysics in some earlier works of Aristotle 163;

D. A. Rees: Theories of the soul in the early Aristotle 191;

J. B. Skemp: 201;

F. Solmsen: Platonic influences in the formation of Aristotle's physical system 213;

G. Verbeke: $\Upsilon\eta$ and $\upsilon\pi\omicron\delta\omicron\chi\eta$. Plutarch and the development of Aristotle 236;

C. J. De Vogel: The legend of the Platonizing Aristotle 248;

P. Wilpert: The fragments of Aristotle's lost writings 257;

Index of passages 267; Index of subjects 275-279.

2. *Aristote et les problèmes de méthode*. 1961. Louvain: Publications universitaires.

[Deuxième] Symposium Aristotelicum, tenu à Louvain du 24 août au 1er septembre 1960.

Table des matières: Avant-Propos V-VI; Liste des participants VII;

Section 1. Problèmes généraux.

Pierre Aubenque: Sur la notion aristotélicienne d'aporie 3;

Joseph Moreau: Aristote et la vérité antéprédicative 21;

Suzanne Mansion: Le rôle de l'exposé et de la critique des

philosophies antérieures chez Aristote 35; Augustin Mansion: L'origine du syllogisme et la théorie de la science chez Aristote 57; G. E. L. Owen: *Tithenai ta Phainomena* 83;

Section II. La méthode en métaphysique.

Gerard Verbeke: Démarches de la réflexion métaphysique chez Aristote 107; Olof Gigon: Methodische Probleme in der Metaphysik des Aristoteles 131; C. J. de Vogel: La méthode d'Aristote en métaphysique

d'après *Métaphysique* A 1-2 147;

Section III. La méthode en philosophie naturelle.

Paul Moraux: La méthode d'Aristote dans l'étude du ciel (*De Caelo* I 1 - II 12) 173; D. M. Balme: Aristotle's use of differentiae in Zoology 195; Ingemar Düring: Aristotle's method in biology. A note on *De Part. An.* I 1, 639 b 30-640 a 2 213; Heinrich Dörrie: Gedanken zur Methodik des Aristoteles in der Schrift *Περὶ Ψυχῆς* 223;

Section IV. La méthode en éthique.

J. Donald Monan: Two methodological aspects of moral knowledge in the *Nicomachean Ethics* 247; W. Gerson Rabinowitz: *Ethica Nicomachea* II 1-6: Academic eleaticism and the critical formulation of Aristotle's discussion of moral virtue 273; D. J. Allan: Quasi-mathematical method in the *Eudemian Ethics* 303;

Section V. Aristote et son école.

F. Werli: Aristoteles in der Sicht seiner Schule, Platonisches und Vorplatonisches 321;

Table des références aux textes d' Aristote 337; Table des noms cités 353; Table des matières 361-362.

3. Owen, Gwilym Ellis Lane, ed. 1968. *Aristotle on Dialectic: The Topics*. Oxford: Clarendon Press.

Proceedings of the Third Symposium Aristotelicum, Oxford, 1963.

Contents: The Text.

Jacques Brunschwig: Observations sur les manuscrits parisiens des *Topiques* 3; W. J. Verdenius: Notes on the Topics 22; Marion Soreth: Zu *Topik* E 7, 137^a8-20 u n d ^b3-13 43;

Aristotle and Plato.

Friedrich Solmsen: Dialectic without the Forms 49; Gilbert Ryle: Dialectic in the Academy 69; Joseph Moreau: Aristote et la dialectique platonicienne 80; C. J. de Vogel: Aristotle's Attitude to Plato and the Theory of Ideas according to the *Topics* 91; G. E. L. Owen: Dialectic and Eristic in the Treatment of the Forms 103; L. Elders: The *Topics* and the Platonic Theory of Principles of Being 126;

The Equipment of Aristotelian Dialectic.

É de Strycker: Concepts-clés et terminologie dans les livres II à VII des *Topiques* 141; W. A. de Pater: La fonction du lieu et de l'instrument dans les *Topiques* 164; Suzanne Mansion: Notes sur la doctrine des catégories dans les *Topiques* 189; Ingemar Düring: Aristotle's Use of Examples in the *Topics* 202;

The Subject Matter of Particular Books.

Olof Gigon: *Topik* III. 1-3 233; G. Verbeke: La notion de propriété dans les *Topiques* 257; Paul Moraux: La joute dialectique d'après le huitième livre des *Topiques* 277;

Indexes.

I. Index of Sources: (a) Aristotle and the Ancient Commentators 313; (b) Plato 333; (c) Other Ancient Authorities 337; II. Index of Technical Terms 340; III. Index of Persons and Subjects 342-346.

4. Düring, Ingemar, ed. 1969. *Naturphilosophie bei Aristoteles und Theophrast*. Heidelberg: Lothar Stiehm Verlag.

Verhandlungen des 4. Symposium Aristotelicum veranstaltet in Göteborg, August, 1966.

Inhalt: E. Berti: Physique et métaphysique selon Aristote; J. Bollack: Deux figures principales de l'atomisme d'après Aristote: l'entrecroisement des atomes et la sphère du feu; F. Dirlmeier: *Physik* IV 10; A. Eldel: 'Actione and 'Passion' : some

- Philosophical Reflections; K. von Fritz: Das ἀπείρων bei Aristoteles; D. J. Furley: Aristotle and the Atomists on Infinity; K. Gaiser: Das Zweifache Telos bei Aristotles; O. Gigon: Die ἀρχαὶ der Vorsokratiker bei Theophrast; S. Mansion: Το σμῶν et la définition physique; J. Mau: Zur Methode der aristotelischen .Ableitung der Elementar-Körper; J. Moreau: Le temps et l'instant selon Aristote; G. R. Morrow: Qualitative Change in Aristotle's Physics; K. Oehler: Die systematische Integration der aristotelischen Metaphysik; J. Owens: The Aristotelian Argument for the Material Principle of Bodies; G. A. Seeck: Leicht-schwer und der Unbewegte Beweger; J. B. Skemp: P. Steinmetz: The Metaphysics of Theophrastus in Relation to the Doctrine of κίνησις in Plato's Later Dialogues; Ansatzpunkte der Elementenlehre Theophrasts im Werk des Aristoteles; G. Verbeke: L'argument du livre VII de la *Physique*. Une impasse philosophique; W. J. Verdenius: Critical and exegetical Notes on *De Caelo*; H. Wagner: Einige schwierige Partien aus der aristotelischen Physikvorlesung,
5. Moraux, Paul, and Harlfinger, Dieter, eds. 1971. *Untersuchungen zur Eudemischen Ethik*. Berlin: Walter de Gruyter.

Akten des 5. Symposium Aristotelicum, Oosterbeek, Niederlande, 21.-29. August 1969.

Inhaltverzeichnis:Vorwort VII; Fünftes Symposium Aristotelicum, Teilnehmerverzeichnis IX-X;

Dieter Harlfinger: Die Überlieferungsgeschichte der *Eudemischen Ethik* 1; Jean M. Mingay: Some controversial passages in the *Eudemian Ethics* 51; Donald J. Allan: The fine and the good in the *Eudemian Ethics* 63; C. J. Rowe: The meaning of φρόνησις in the *Eudemian Ethics* 73; Olof Gigon: Das Prooimion der *Eudemischen Ethik* 93; G. Verbeke: La critique des idées dans l' *Ethique Eudémienne* 135; Enrico Berti: Multiplicité et unité du bien selon *EE* I 8 157; David B. Index locorum: Aristoteles 385; Index locorum: Auctores Graeci et Latin 403; Index Nominum 407-411.

12. Furley, David, and Nehamas, Alexander, eds. 1994. *Aristotle's Rhetoric. Philosophical Essays*. New Jersey: Princeton University Press.

Proceedings of the Twelfth Symposium Aristotelicum, Princeton, 1990.

Contents: David J. Furley: Preface VII-IX; Alexander Nehamas: Introduction XI-XIV; M.F. Burnyeat: Enthymeme: Aristotle on the logic of persuasion 3; Jacques Brunschwig: Rhétorique et dialectique, *Rhétorique et Topiques* 57; Eckart Schütrumpf: Some observations on the introduction to Aristotle's *Rhetoric* 99; Jürgen Sprute: Aristotle and the legitimacy of rhetoric 117; Mary Margaret McCabe: Arguments in context: Aristotle's defense of rhetoric 129; Glenn W. Most: The uses of *Endoxa* : philosophy and rhetoric in the *Rhetoric* 167; John M. Cooper: Ethical-political theory in Aristotle's *Rhetoric* 191; Stephen Halliwell: Popular morality, philosophical ethics, and the *Rhetoric* 211; Jean-Louis Labarrière: L'Orateur politique face à ses contraintes 231; Alexander Nehamas: Pity and fear in the *Rhetoric* and the *Poetics* 257; André Laks: Substitution et connaissance: une interprétation unitaire (ou presque) de la

théorie aristotélicienne de la métaphore 283; Contributors 307; Index Locorum 309; Index Nominum 321-322.

13. [*Aristotle's De interpretatione*]. 1994.

Unpublished.

"The XIIIth meeting of the Symposium Aristotelicum, which took place in 1993 on the *De Interpretatione*, had a very strange and very sad history. True enough, it took place in the enchanting decor of the Certosa di Pontignano, near Siena; and, as usual, it offered contributions and discussions of the highest order. But this time the publication of the papers met with insurmountable obstacles. It had been initially entrusted to Mario Mignucci and Michael Frede, two of the most faithful and devoted participants in the Symposium. Most unfortunately, however, they were both wrenched from our admiration and affection, Mario Mignucci in 2004, after a protracted and merciless disease, Michael Frede in 2007, owing to an unpredictable, sudden accident. The inevitable ensuing delay for the publication of the XIIIth Symposium has not been caught up with so far and those members of the Organization Committee whom I have been able to contact told me that, in their opinion, it ran a strong risk of never being caught up at all, alas." (p. 35)

Jacques Brunschwig, *Le chapitre 1 du 'De Interpretatione'*. *Aristote, Ammonius et nous*, Laval Philosophique et Théologique, 64, 2008, pp. 35-87.

14. Frede, Michael, and Charles, David, eds. 2000. *Aristotle's Metaphysics Lambda*. Oxford: Clarendon Press.

Proceedings of the Fourteenth Symposium Aristotelicum, Oxford, 1996.

Contents: List of Contributors IX; Michael Frede: Introduction 1; Michael Frede: *Metaphysics* Λ 1 53; 2. David Charles: *Metaphysics* Λ 2 81; 3. Lindsay Judson: *Metaphysics* Λ 3 111; 4. Proceedings of the Symposium Hellenisticum

List of the Proceedings of the "Symposium Hellenisticum"

1. Schofield, Malcolm, Burnyeat, Myles, and Barnes, Jonathan, eds. 1980. *Doubt and Dogmatism. Studies in Hellenistic Epistemology*. Oxford: Clarendon Press.

First Symposium Hellenisticum, Oxford, 1978.

Contents: G. E. L. Owen: Preface V; Acknowledgements VII; Note to the Reader XI-XII; 1. David Sedley: The Protagonists 1; 2. M. F. Burnyeat: Can the Sceptic Live his Scepticism? 20; 3. Gisela Striker: Sceptical Strategies 54; 4. Julia Annas: Truth and Knowledge 84; 5. C.C. W. Taylor: 'All Perceptions are True' 105; 6. Jacques Brunschwig: Proof Defined 125; 7. Jonathan Barnes: Proof Destroyed: 161; 8. Claude Imbert: Stoic Logic and Alexandrian Poetics 182; 9. Michel Frede: The Original Notion of Cause 217; 10. Richard Sorabji: Causation, Laws, and Necessity 250; 11. Malcolm Schofield: Preconception, Argument, and God 283; Select Bibliography 309; Index Locorum 317; Index of Greek Words 333; General Index 335-342.

2. Barnes, Jonathan, Brunschwig, Jacques, Burnyeat, Myles, and Schofield, Malcolm, eds. 1982. *Science and Speculation. Studies in Hellenistic Theory and Practice*. Cambridge: Cambridge University Press.

Second Symposium Hellenisticum, Paris, 1980.

- Contents: Victor Goldschmidt: Preface IX; Acknowledgements XVII; Jonathan Barnes: Introduction XIX; Bibliographical note XXV; Chronological table XXVII; 1. Michael Frede: The method of the so-called Methodical school of medicine 1; 2. Jonathan Barnes: Medicine, experience and logic 24; 3. Ian Mueller: Geometry and scepticism 69; 4. François De Gandt: Force et science des machines 96; 5. G. E. R. Lloyd: Observational error in later Greek science 128; 6. A. A. Long: Astrology: arguments pro and contra 165; 7. M. F. Burnyeat: The origins of non-deductive inference 193; 8. David Sedley: On Signs 239; 9. Jean-Paul Dumont: Confirmation et disconfirmation 273; 10. Victor Goldschmidt: La théorie épicurienne du droit 304; Indexes (i) Passages 327, (ii) General index 341, (iii) Index and glossary of Greek terms 349-351.
3. Schofield, Malcolm, and Striker, Gisela, eds. 1986. *The Norms of Nature. Studies in Hellenistic Ethics*. Cambridge: Cambridge University Press.

Third Symposium Hellenisticum, Bad Homburg, 1983.

Contents: Acknowledgements; G. Patzig: Preface;

Part I. Argument, belief and emotion.

1. J. Annas: Doing without objective values: ancient and modern strategies 3; 2. M. Nussbaum: 2 Therapeutic arguments: Epicurus and Aristotle 31; 3. D. Furley: Nothing to us? 75; 4. M. Frede: The Stoic doctrine of the affections of the soul 93;

Part II. Ethical foundations and the *summum bonum*.

5. J. Brunschwig: The cradle argument in Epicureanism and Stoicism 113; 6. T. Engberg-Pedersen: Discovering the good: *oikeiosis* and *katheconta* in Stoic ethics 145; 7. G. Striker: Antipater, or the art of living 185; 8. T. H. Irwin: Stoic and Aristotelian conceptions of happiness 205; 9. M. Hossenfelder: Epicurus - hedonist malgré lui 245;

Bibliography 265; Index of passages 271; Glossary of Greek and Latin terms 281;

General index 283.

4. Barnes, Jonathan, and Mignucci, Mario, eds. 1988. *Matter and Metaphysics*. Napoli: Bibliopolis.

Proceedings of the fourth Symposium Hellenisticum, Pontignano, Italy 1986.

Contents: Richard Sorabji: The Lays of Ancient Tuscany 9; Gabriele Giannantoni: Introduzione 11; Jacques Brunschwig: La théorie stoïcienne du genre suprême et l'ontologie platonicienne 19; Mario Mignucci: The Stoic notion of relatives 129; Jonathan Barnes: Bits and pieces 223; David Sedley: Epicurean anti-reductionism 295; Malcolm Schofield: The retrenchable present 329; Nicholas Denyer: Stoicism and token reflexivity 375; Anna Maria Ioppolo: Le cause antecedenti in Cicero *De fato* 40 397; Fernanda Decleva Caizzi: La "materia scorrevole". Sulle tracce di un dibattito perduto 425; Michael Wolff: Hipparchus and the Stoic theory of motion 471; Index locorum 549; Index of names 573; Index of subjects 581; Index of Greek and Latin terms 591-596.

5. Brunschwig, Jacques, and Nussbaum, Martha, eds. 1993. *Passions and Perceptions. Studies in Hellenistic Philosophy of Mind*. Cambridge: Cambridge University Press.

Fifth Symposium Hellenisticum, Champagnole, 1989.

Contents: Preface IX; Avant-propos XI-XII;

Part I. Ethics and Psychology of Edonism 1.

1. G. Striker: Epicurean hedonism 3; 2. A. Laks: Annicéris et les plaisirs psychiques: quelques préalables doxographiques 7;

Part II. Atomism and Epichurean Psychology 51.

3. J. Annas: Epicurus on agency 53; 4. D. Furley: Democritus and Epicurus on sensible qualities 72;

Part III. The Passions 95.

5. M. C. Nussbaum: Poetry and the passions: two Stoic views 97; 6. B. Inwood: Seneca and psychological dualism 150; 7. J. Hankinson: Actions and passions: affection, emotion and moral self-management in Galen's philosophical psychology 184;

Part IV. Stoic Psychological Concepts 223.

8. J.-L. Labarrière: De la 'nature phantastique' des animaux chez les Stoiciens 225; 9. C. Levy: Le concept de doxa des Stoiciens à Philon d'Alexandrie: essai d'étude diachronique 250; 10. P. Mitsis: Seneca on reason, rules and moral development 285; 11. D. Sedley: Chrysippus on psychophysical causality 313; Bibliography 332; Subject index 334; Name index 346; Index of passages cited 351-364..

6. Laks, André, and Schofield, Malcolm, eds. 1995. *Justice and Generosity. Studies in Hellenistic Social and Political Philosophy*. Cambridge: Cambridge University Press.

Sixth Symposium Hellenisticum, Cambridge, 1992.

Contents: Preface IX; Introduction 1;

Part I. Political Philosophy: Development and Transformation.

1. David E. Hahm: Polybius' applied political theory 7; 2. Jean-Louis Ferrary: The statesman and the law in the political philosophy of Cicero 48; 3. Julia Annas: Aristotelian political theory in the Hellenistic period 74; 4. Carlo Natali: *Oikonomia* in Hellenistic political thought 95; 5. J. L. Moles: The Cynics and politics 129;

Part II. The Ethical Framework of Politics and Society.

6. Antonina Alberti: The Epicurean theory of law and justice 161; 7. Malcolm Schofield: Two Stoic approaches to justice 191; 8. A. A. Long: Cicero's politics in *De officiis* 213; 9. Brad Inwood: Politics and paradox in Seneca's *De beneficiis* 249; Bibliography 266; General index 280; Index of Greek and Latin words 285; Index of ancient names and philosophical schools 287; Index of passages 290-291.

7. Inwood, Brad, and Mansfeld, Jaap, eds. 1997. *Assent and Argument. Studies in Cicero's Academic Books*. Cambridge: Cambridge University Press.

Seventh Symposium Hellenisticum, Cambridge, 1992.

Contents: Preface VII; Introduction IX-XI; M. Griffin: The composition of the *Academica* : motives and versions 1; W.

Görler: Cicero's philosophical stance in the *Lucullus* 36; J. Glucker: Socrates in the *Academic* books and other Ciceronian works 58; T. Dorandi: Gli *Academica* quale fonte per la storia dell' *Academia* 89; K. A. Algra: Chrysippus, Carneades, Cicero: the ethical *divisiones* in Cicero's *Lucullus* 107; J. Barnes: Logic in *Academica* I and the *Lucullus* 140; R. J. Hankinson: Natural criteria and the transparency of judgement: Antiochus, Philo and Galen on epistemological justification 161; J. Allen: Carneadean argument in Cicero's *Academic* books 217; G. Striker: *Academics* fighting *Academics* 257; M. F. Burnyeat: Antipater and self-refutation: elusive arguments in Cicero's *Academica* 277; Index Nominum et rerum 311; Index locorum potiorum 316-323.

8. Frede, Dorothea, and Laks, André, eds. 2002. *Traditions of Theology. Studies in Hellenistic Theology, Its Background and Aftermath*. Leiden: Brill.

Eighth Symposium Hellenisticum, Villeneuve-d'Asq, 1998.

Contents: D. Frede, André Laks: Introduction VII-XIV; R. Sharples: Aristotelian Theology after Aristotle 1; D. Sedley: The Origins of Stoic God 41; D. Frede: Theodicy and Providential Care in Stoicism 85; B. Inwood: God and Human Knowledge in Seneca's *Natural Questions* 119; M. Erler: Epicurus as *deus mortalis*. *Homoiosis theoi* and Epicurean Self cultivation 159; D. Obbink: 'All Gods are True' in Epicurus 183; J. Dillon: Plutarch and God: Theodicy and Cosmogony in the Thought of Plutarch 223; E. Spinelli: Sesto Empirico e l'astrologia 239; D. Runia: The beginnings of the end: Philo of Alexandria and Hellenistic Theology 281; Indexes compiled by S. Fazzo and A. Laks: Index Nominum 317; Index Rerum 321; Index Locorum 325-348.

9. Frede, Dorothea, and Inwood, Brad, eds. 2005. *Language and Learning. Philosophy of Language in the Hellenistic Age*. Cambridge: Cambridge University Press.

Ninth Symposium Hellenisticum, Hamburg, 2001.

Contents: List of contributors VII; Preface IX; List of abbreviations XI; Introduction 1; 1. J. Allen: The Stoics on the

- origin of language and the foundations of etymology 14; 2. A. A. Long: Stoic linguistics, Plato's *Cratylus*, and Augustine's *De dialectica* 36; 3. A. Verlinsky: Epicurus and his predecessors on the origin of language 56; 4. C. Atherton: Lucretius on what language is not 101; 5. I. Sluiter: Communicating Cynicism: Diogenes' gangsta rap 139; 6. C. Brittain: Common sense: concepts, definition and meaning in and out of the Stoa 164; 7. D. Blank: Varro's anti-analogist 210; 8. S. Bobzien: The Stoics on fallacies of equivocation 239; 9. J. Barnes: What is a disjunction? 274; 10. S. Ebbesen: Theories of language in the Hellenistic age and in the twelfth and thirteenth centuries 299; References 320; Index nominum et rerum 336; Index locorum 341-353.
10. Ioppolo, Anna Maria, and Sedley, David, eds. 2007. *Pyrrhonists, Patricians, Platonizers. Hellenistic Philosophy in the Period 155-86 BC*. Napoli: Bibliopolis.

Tenth Symposium Hellenisticum, Roma, 2004.

Contents: A.M. Ioppolo and D. N. Sedley: Introduction 9; J.-L. Ferrary: Les philosophes grecs à Rome (155-86 A.V. J.-C.) 17; D. E. Hahm: Critolaus and Late Hellenistic Peripatetic Philosophy 47; T. Tieleman: Panaetius' Place in the History of Stoicism with Special Reference to His Moral Psychology 103; F. Alesse: Il concetto di *ousia* nel pensiero metafisico e cosmologico di Posidonio: alcune considerazioni su F 92 e 96 EK (= 267 e 268 Th.) 143; J. Annas: Carneades' Classification of Ethical Theories 187; A.M. Ioppolo: L'assenso nella filosofia di Clitomaco: un problema di linguaggio? 225; M. Schofield: Aenesidemus: Pyrrhonist and "Heraclitean" 269; V. Tsouna: Philodemus and the Epicurean Tradition 339; Chronological Table 398; Index locorum 403; Index of ancient names 421; Index of modern authors 427-430.

11. Algra, Keimpe, and Ioerodakonou, Katerina, eds. 2015. *Sextus Empiricus and Ancient Physics*. Cambridge: Cambridge University Press.

Eleventh Symposium Hellenisticum, Delphi, 2007.

M = *Adversus Mathematicos*.

Contents: Keimpe Algra and Katerina Ierodiakonou: Introduction; 1. Richard Bett: God: M 9.13–194; 2. Michael J. White: Cause: M 9.195–330; 3. Katerina Ierodiakonou: Wholes and parts: M 9.331–358; 4. Gábor Betegh: Body: M 9.359–440; 5. Keimpe Algra: Place: M 10.1–36; 6. R. J. Hankinson: Motion: M 10.37–168; 7. Susanne Bobzien: Time: M 10.169–247; 8. Tad Brennan: Number: M 10.248–309; 9. James Warren: Coming-to-be and passing-away: M 10.310–351.

12. Annas, Julia, and Betegh, Gábor, eds. 2016. *Cicero's De Finibus: Philosophical Approaches*. Cambridge: Cambridge University Press.

Twelfth Symposium Hellenisticum, Budapest, 2010.

Contents: List of contributors VII; Julia Annas: Introduction 1; Charles Brittain: 1. Cicero's sceptical methods: the example of the *De Finibus* 12; 2. James Warren: Epicurean pleasure in Cicero's *De Finibus* 41; 3. Pierre-Marie Morel: Cicero and Epicurean virtues (*De Finibus* 1–2) 77; 4. Dorothea Frede: Epicurus on the importance of friendship in the good life (*De Finibus* 1.65–70; 2.78–85) 96; 5. Margaret Graver: Honor and the honorable: Cato's discourse in *De Finibus* 3 118; 6. Brad Inwood: The voice of nature 147; 7. Anna Maria Ioppolo: *Sententia explosa* : criticism of Stoic ethics in *De Finibus* 4 167; 8. Thomas Bénatouïl: Structure, standards and Stoic moral progress in *De Finibus* 4 198; 9. Christopher Gill: Antiochus' theory of *oikeiōsis* 221; Bibliography 248; Subject index 259; Index locorum 262.

13. Bénatouïl, Thomas, and Ierodiakonou, Katerina, eds. 2018. *Dialectic after Plato and Aristotle*. Cambridge: Cambridge University Press.

Thirteenth Symposium Hellenisticum, Abbaye des Prémontrés at Pont-à-Mousson (Lorraine, France), 15-19 July 2013.

Contents: List of Contributors VII; Preface IX, List of Abbreviations X; Thomas Bénatouïl: Introduction: Dialectics in Dialogue 1; James Allen: Megara and Dialectic 17; Paolo Crivelli: Dialectic in the Early Peripatos 47; David Sedley: Epicurus on Dialectic 82; Katerina Ierodiakonou: Dialectic as a

Subpart of Stoic Philosophy 114; Jean-Baptiste Gourinat: Stoic Dialectic and Its Objects 134; Luca Castagnoli: Dialectic in the Hellenistic Academy 168; Tobias Reinhardt: *Pithana* and *probabilia* 218; Sophie Aubert-Baillet: Terminology and Practice of Dialectic in Cicero's Letters 254; Benjamin Morison: The Sceptic's Modes of Argumentation 283; Riccardo Chiaradonna: Galen and Middle Platonists on Dialectic and Knowledge 320; Bibliography 350; Index of Names 371; Index of Passages 376-391.

14. Inwood, Brad, and Warren, James, eds. 2020. *Body and Soul in Hellenistic Philosophy*. Cambridge: Cambridge University press.

Fourteenth Symposium Hellenisticum.

Contents: List of Contributors VI; List of Abbreviations VII; Brad Inwood, James Warren: Introduction 1;

1. Sylvia Berryman: Hellenistic Medicine, Strato of Lampsacus, and Aristotle's Theory of Soul 9; David Leith:
2. Herophilus and Erasistratus on the *Hegemonikon* 30; 3. Philip van der Eijk: Galen on Soul, Mixture and *Pneuma* 62; 4. The Partition of the Soul: Francesco Verde: Epicurus, Demetrius Lacon, and Diogenes of Oinoanda 89; 5. Francesco Ademollo: Cosmic and Individual Soul in Early Stoicism 113; 6. Christelle Veillard: Soul, *Pneuma*, and Blood: The Stoic Conception of the Soul 145; 7. Jan Opsomer: The Platonic Soul, from the Early Academy to the First Century CE 171; 8. J. P. F. Wynne: Cicero on the Soul's Sensation of Itself: Tusculans 1.49-76 199; Bibliography 231; Index Locorum 252; Subject Index 262.

The Neoplatonic Commentators on Aristotle's *Metaphysics*

The Greek Commentary tradition

"More than any other philosophical current of the Imperial period, Aristotelianism operated as a commentary tradition. Based on the texts of the Master -- on their precise wording and terminology -- Aristotelian philosophy found in the commentary format not only a means of transmission, but also a preferred tool for the development of doctrine. A closed system, but not a static one, it evolved in two main directions: internal consistency and external competitiveness. Thus, the basic aim was, on the one hand, systematic coherence and didactical proficiency; on the other, fuller responsiveness to the various issues that emerged in the long span of time between Aristotle and the last traces of an Aristotelian school.

In a broad sense, one can see a development of this sort starting from the early Peripatos, among Aristotle's immediate successors, Eudemus and Theophrastus. But a major part of the process -- namely, work on the texts of Aristotle -- probably came to a halt in the next generation. We are told that the libraries of Aristotle and Theophrastus were dispersed, while the dialogues and the more popular texts remained in circulation (the so-called exoteric works, i.e. those written for publication outside the school). As a matter of fact, the Aristotelian legacy among masters and teachers of the Hellenistic period was often elementary and non-specialized, open to various influences from other contemporary schools, especially Stoicism.

The development of Aristotelianism into a commentary tradition was not completed until the first centuries of the Christian era. This development presupposes, above all, the accessibility of the treatises

or *pragmateiai* written by Aristotle for his own school (the so-called 'esoteric' works). Here, according to the commonly held view, a decisive role was played by the editorial activity of Andronicus, a Peripatetic scholar who arranged them and made them accessible during the first century BC. Toward the end of the century, these treatises were available again, or became available for the first time (as seems to have been the case with the *Metaphysics* as a whole, although some of its individual books were already listed among Aristotle's works). The Aristotelian corpus was largely accessible to the 'early commentators', in particular to Boethus of Sidon, a pupil of Andronicus, and to Nicolaus of Damascus. The latter's compendium of Aristotelian philosophy implies the circulation of a *Metaphysics* not too far in content and shape from the one we do have, with the same title, *Meta to physika*.

A major qualitative change took place in the course of the second century AD, when the commentary tradition adopted the specific aims of a period of archaizing and of a return to the classics. Literary Atticism is one of the best-known expressions of this archaizing tendency, which saw in the ancients both a timeless model for stylistic imitation and, in the context of philosophy, a legacy of truth that could be neither extended nor surpassed.

This is why the commentary gained such a central position in Aristotelian literature. Still, it was conceived as something to be used, rather than as a product with a cultural value of its own. For this reason, the successive stages of the commentary tradition tend to obliterate one another. A new commentary on a given work of Aristotle thus appropriated, not without criticism and selection, the interpretative legacy of the preceding commentary. At this point the earlier commentary could cease to be consulted and transmitted and so often came to be lost. In the new commentary, both recent and earlier components co-exist in successive layers, often without distinction, so that it is difficult to determine what the most recent commentator has himself contributed and what he has inherited from his predecessors. For both reasons, therefore, commentaries tend to be an impersonal product: both because of their original purpose -- to help the reader of a text written by someone else -- and because of the peculiar dynamics of their use and transmission. Within the Peripatetic tradition, the personality of the commentator

is overshadowed not only by the authority of the Master, but also by the collective authority of the school.

We are now in a position to understand the first basic difficulty that the history of philosophy faces in attempting to give an account of the work of commentators and, hence, in evaluating the Aristotelianism of late antiquity. The evidence is plentiful, but it does not sufficiently explain the activity of individuals. This difficulty is further increased by another factor: the theoretical foundations of nineteenth-century history of philosophy, which inevitably persist in categorizations and evaluations that still have an influence, especially in areas that are not yet fully explored. This approach concentrated, on the one hand, on important individuals, and, on the other, on the reconstruction, through 'successions' or *diadochai*, of a progressive development of ideas that, from imperfect and embryonic beginnings, came to be displayed in all their fullness and power. In both respects, the historical approach has been opposite to the emphases and aims of the commentary tradition itself, which tends to play down the intermediary contributions while looking backward to the past in order to search for (or to reconstruct) a timeless truth, held to be definitively contained in the foundational texts of the school.

Such historiographical difficulties have led to negative judgements on the culture of commentaries. Hence its summary treatment -- if not complete neglect -- in many scholastic manuals, where the commentary seems to be just a dry and long-winded repetition of what is already contained in the texts of the great masters. Nor has the commentary tradition been judged any less critically where it has been possible to point out differences between Aristotle's and a commentator's Aristotelianism: this kind of instances have led to harsh accusations, both of deliberate betrayal, and of incompetence and misunderstanding of the original text.

The rediscovery of the work of the commentators as a living tradition of re-workings of Aristotle's philosophy, and not just of its transmission (or distortion), has taken place only in our own day. And even now, this does not mean that the relevant problems mentioned have been resolved in a single way, nor that methodological principles of inquiry have been firmly and generally

agreed on. Rather, specific interests and contexts have prompted the different, particular direction that research on individual topics has followed (...). But it is precisely this plurality of complementary approaches that is producing now one of the richest, most lively and dynamic fields of research in ancient philosophy." (pp. 3-8) (notes omitted)

Selected Bibliography on The Neoplatonic Commentators

General studies on the Neoplatonic Commentators

1. Adamson, Peter, Baltussen, Han, and Stone, M.W.F., eds. 2004. *Philosophy, Science and Exegesis in Greek, Arabic and Latin Commentaries*. London: Institute of Classical Studies - University of London.

Contents:

Volume One - Preface VII; Richard Sorabji: Poem VIII-IX; Silvia Fazzo: Aristotelianism as a commentary tradition 1; Han Baltussen: Plato *Protagoras* 340-48: commentary in the making? 21;

Gabor Betegh: Exegesis in the Derveni Papyrus 37; R. W. Sharples: Alexander of Aphrodisias: what is a Mantissa? 51; Inna Kupreeva: Aristotelian dynamics in the 2nd century school debates: Galen and Alexander of Aphrodisias on organic powers and movements 71; George Karamanolis: Porphyry: the first Platonist commentator on Aristotle 97; Riccardo Chiaradonna: The categories and the status of the physical world: Plotinus and the Neo-Platonic commentators 121; Jan Opsomer: Plutarch's *De animae procreatione in Timaeo*: manipulation or search for consistency? 137; Peter Lautner: The *koinè aisthesis* in Proclus and Ps.-Simplicius 163; Harold Tarrant: Must commentators know their sources? Proclus in *Timaeum* and Numenius 175; R. M. van den Berg: Smoothing over the differences: Proclus and Ammonius on Plato's *Cratylus* and Aristotle's *De Interpretatione* 191; Anna Somfai:

Calcidius' commentary on Plato's *Timaeus* and its place in the commentary tradition: the concept of *analogia* in text and diagrams 203; Katerina Ierodoakonou: Byzantine commentators on the epistemic status of ethics 221; John Sellars: The Aristotelian commentators: a bibliographical guide 239; Index locorum 269-280.

Volume Two - Preface IX; Gotthard Strohmayer: Galen's not uncritical Commentary on Hippocrates' *Airs, Waters, Places* 1; Peter E. Pormann: The *Alexandrian Summary (Jawami)* of Galen's *On the Sects for Beginners*: Commentary or abrdgment? 11; Marwan Rashed: The problem of the composition of the Heavens (529-1610) a new fragment of Philoponus and its readers 35; Peter Adamson: Correcting Plotinus: soul's relationship to body in Avicenna's Commentary on the *Theology of Aristotle* 59; Dimitri Gutas: Avicenna's marginal glosses on *De anima* and the Greek commentatorial tradition 77; Steven Harvey: The impact of Philoponus' Commentary on the *Physics* on Averroes' three Commentaries on the *Physics* 89; Richard C. Taylor: Improving on nature's exemplar: Averroes' completion of Aristotle's psychology of intellect 107; Dag Nikolaus Hasse: The attraction of Averroism in the Renaissance: Vernia, Achillini, Prassico 131; Robert Winowsky: The nature and scope of Arabic philosophical commentary in post-classical (ca. 1100-1900 AD) islamic intellectual history: some preliminary observations 149; Index Locorum 193-197.

"This two volume Supplement to the *Bulletin of the Institute of Classical Studies* represents the proceedings of a conference held at the Institute on 27-29 June, 2002, in honour of Richard Sorabji. These volumes, which are intended to build on the massive achievement of Professor Sorabji's Ancient Commentators on Aristotle series, focus on the commentary as a vehicle of philosophical and scientific thought. Volume One deals with the Greek tradition, including one paper on Byzantine philosophy and one on the Latin author Calcidius, who is very close to the late Greek tradition in outlook. The volume begins with an overview of the tradition of commenting on Aristotle, and of the study of this tradition in the modern

era. It concludes with an up-to-date bibliography of scholarship devoted to the commentators. Volume Two deals with commentaries in Arabic, including a paper on the reception of Arabic interpretations of Aristotle's *De anima* in Latin during the Renaissance." (From the Preface)

3. ———. 2007. "From Polemic to Exegesis: The Ancient Philosophical Commentary." *Poetics Today* no. 28:247-289.

Abstract: "Commentary was an important vehicle for philosophical debate in late antiquity. Its antecedents lie in the rise of rational argumentation, polemical rivalry, literacy, and the canonization of texts. This essay aims to give a historical and typological outline of philosophical exegesis in antiquity, from the earliest allegorizing readings of Homer to the full-blown "running commentary" in the Platonic tradition (fourth to sixth centuries CE). Running commentaries are mostly on authoritative thinkers such as Plato and Aristotle. Yet they are never mere scholarly enterprises but, rather, springboards for syncretistic clarification, elaboration, and creative interpretation. Two case studies (Galen 129-219 CE, Simplicius ca. 530 CE) will illustrate the range of exegetical tools available at the end of a long tradition in medical science and in reading Aristotle through Neoplatonic eyes, respectively."

- "In the first century BCE Aristotle was subject to an intense textual study. This study eventually led to the appropriation of the conceptual apparatus developed in his writings. In the case of Xenarchus, the relevant apparatus was Aristotle's theory of motion, with an emphasis on the concepts of natural place and natural motion. Xenarchus reworked Aristotle's theory of motion so as to make the celestial simple body expendable. While I do not deny that some of his views are best understood in light of the debates of late Hellenistic philosophy, I contend

- that his textual engagement presupposes the distance from Aristotle that is characteristic of Post-Hellenistic philosophy."

"Neoplatonic thought at the end of antiquity -- like that of most of the schools of the Hellenistic and Roman period -- has an essentially exegetical and scholastic dimension. Beginning with the classical and Hellenistic period, philosophy in Greece is inseparable from the existence of schools (private or public), often organized as places of communal life (*sunousia*), in which

the explication of the texts of the school's founders came to be one of the main activities.⁽¹⁾ The practice of exegesis of written texts supplanted the ancient practice of dialogue. It was sustained through its application to canonical texts, and was put to everyday use in the framework of courses in the explication of texts. The social reality of the school as an institution, with its hierarchy, its *diadochos* (i.e., the successor to the school's founder), its structure as a conventicle in which communal life was practiced, its library, its regulation of time, and its programs organized around the reading of canonical texts, constitutes a concrete context into which we should reinsert the practice of exegesis, which is the heart of philosophical pedagogy and the matrix of doctrinal and dogmatic works." Abstract: "Aristotle was the most important ancient philosopher for all four main traditions of medieval philosophy: Greek philosophy from Byzantium; Latin philosophy; philosophy in Arabic (the work mainly of Muslims, but also Jews and Christians); and, from the thirteenth century, philosophy written by Jews in Hebrew. All these traditions drew, directly, or indirectly, on Aristotle as transmitted by the Neoplatonic schools of late antiquity. But the way in which the Aristotelian texts were disseminated (in translation, except in Byzantium) and studied varied in each of these traditions. And, although all the medieval philosophers had it in common that they lived in cultures dominated by a monotheistic religion, the range of attitudes to Aristotle varied from one to another. This entry has the strictly limited aim of giving enough basic information about each of these circumstances to enable comparisons to be made. Fuller treatment of each of the areas it covers will be found elsewhere in the Encyclopedia. Readers will also

find a fuller exposition of most of the particular view suggested here in Marenbon (*Medieval philosophy; an historical and philosophical introduction.* Routledge, London/New York, 2007; *Medieval philosophy. A very short introduction.* Oxford University Press,

Oxford, 2016)."

"In this paper I shall be considering the emergence, or rather re-emergence, of Platonic commentary around the end of the Hellenistic age. That is the period which forms the essential background to our chief surviving specimens of the genre, the great fifth-century Platonic commentaries of Proclus. Specifically, I intend to examine why Platonic philosophy came to such a large extent to take the form of commentary, and how the resources of the commentary format were deployed for the task of establishing, preserving, and exploiting Plato's philosophical authority.

I have explored this theme, mainly with reference to the Epicureans, in [226] 97-119. The present paper tries to take the same discussion further, with occasional modifications to what I said there.

For three reasons, Rome provides a peculiarly apt vantage-point from which to observe the process. First, the philosophical centre of gravity having shifted away from Athens, Rome had now become more of a magnet to philosophers than at any previous time. Both Philo of Larissa and Antiochus of Ascalon, who fought for Plato's mantle in the Academy's dying phase, were known at Rome, and each had close links with a network of influential Roman figures. Second, by far our most voluminous and eloquent witness to that battle is a Roman, Cicero. And third, the Romans had one unusual advantage over the Greeks. They had the right word: *auctoritas*. As the Greeks themselves admitted, *auctoritas* was a concept inexpressible in their own language. Yet it is this Latin word which, by combining the notions of leadership, ownership, prestige, and validation, most informatively conveys the commanding status that the founder (the *auctor*) of a Greek philosophical system held in the eyes of its subsequent adherents. Such a linguistic advantage, along with his lifetime adhesion to the Academy, makes Cicero a uniquely

valuable witness to, and commentator on, the refurbishment of Plato's *auctoritas* among first-century BC Academics. (Just because the Greek language could not express the notion of *auctoritas*, it does not follow that the phenomenon which it describes was absent from Greek philosophical schools.) And without an understanding of that background, there is no hope of seeing how and why, in the immediate aftermath, Platonists turned to the writing of commentaries.

To illuminate the renaissance of Platonic commentary, I can make no use of the numerous indirect reports of Middle Platonist commentators. Nor can I do much with our considerable evidence for the interpretations of Plato which held the field from the late first century BC to the late second century AD. Most of it comes from epitomes, treatises, and indirect reports which do not directly display the process of textual exegesis, even though this undoubtedly lies just below their surface. It is only when we have the actual words of the commentators in front of us that we can examine their exegetical techniques in adequate depth." (pp. 110-111)

"The story of the ancient commentators on Aristotle has not previously been told at book length. Here it is assembled for the first time by drawing both on some of the classic articles translated into English or revised and on the very latest research. Some of the chapters will be making revisionary suggestions unfamiliar even to specialists in the field. The philosophical interest of the commentators has been illustrated elsewhere. (1) The aim here is not so much to do this again as to set out the background of the commentary tradition against which further philosophical discussion and discussions of other kinds can take place.

The importance of the commentators lies partly in their representing the thought and classroom teaching of the Aristotelian and Neoplatonist schools, partly in the panorama they provide of the 1100 years of Ancient Greek philosophy,

preserving as they do many original quotations from lost philosophical works. Still more significant is their profound influence, uncovered in some of the chapters below, on subsequent philosophy, Islamic and European. This was due partly to their preserving anti-Aristotelian material which helped to inspire medieval and Renaissance science, but still more to their presenting an Aristotle transformed in ways which happened to make him acceptable to the Christian Church. It is not just Aristotle, but this Aristotle transformed and embedded in the philosophy of the commentators, that lies behind the views of later thinkers.

Many of the commentaries are being translated in the series 'The Ancient Commentators on Aristotle', published by Duckworth and Cornell University Press from 1987 onwards (general editor: Richard Sorabji). The present book will also serve as an introduction to them.

(Chapters 1, 4, 10, 11, 19 and 20 are new; 2, 6, 8 and 12 are translated; 5, 9, 14, 15 and 18 are substantially revised. Others are revised in more minor ways; Greek and Latin passages are translated throughout." (from the Preface)

"The aim and organization of this book.

The main objective of this book is to offer a philosophically focused introduction to the ancient commentators.

(...)

There is a wealth of material in the commentaries themselves but no general introduction comparable to this one exists. During the past twenty years, more and more texts by the commentators have become available to English-speaking students and scholars in the translation series led by Sorabji. Sorabji has also edited a sourcebook (2004) that contains a selection of translated texts with brief introductions. Scholars working in continental Europe (such as Hadot's group at the National Centre for Scientific Research [CNRS] in France) have produced considerable research, as well as new editions, on the commentaries. All these works make the commentaries much more accessible than they used to be. However, none of these works serves exactly as an *introduction* to the topic.

In order to introduce the commentators as philosophers, some restrictions have been necessary. Anything like a complete overview of the commentators' thought would be unimaginable. The text material is simply too large, not to mention the fact that the group that could justifiably be called "ancient commentators" would include many more than the authors studied in this volume. The selection of material concentrates on themes that have been found philosophically inspiring during most periods of the history of Western philosophy. They also are themes that were central in the commentaries themselves. Methodologically speaking, the discussions in this

book start from generally recognized philosophical problems or themes (such as the nature and possibility of knowledge, explanatory principles of nature, the nature of reality, the content of a good human life and so forth) and ask how the commentators formulated questions related to these themes and how they answered them. The most important reason for choosing this approach is that it helps integrate the commentators into the continuum of thinkers who work in different historical periods, employ different methods and follow divergent meta-philosophical guidelines." "Les quatre traductions latines de la *Métaphysique* au moyen âge, faites directement à partir du grec, sont intimement liées entre elles, soit par des relations entre les textes originaux tels qu'on peut les reconstituer, soit par la tradition des manuscrits. Il n'est pas possible de discuter de l'une d'entre elles séparément des autres.

On résumera d'abord les résultats qui ont été acquis par les diverses recherches jusqu'à présent pour déterminer les problèmes qui se posent. Ensuite, on examinera en détail quelques questions concernant les trois plus anciennes traductions, en particulier le problème de la *Metaphysica Vetus* et de ses relations aux deux autres traductions. Dans une annexe, on donnera, outre un tableau des mss, certaines informations concernant les exemplaires grecs de la *Metaphysica Vetustissima* et de la *Metaphysica Vetus*." p. 7

"La discussion sur l'authenticité du deuxième livre de la *Métaphysique* d'Aristote (Petit Alpha), qui dure depuis un millénaire, a pour origine une scholie qui se trouve dans le *Parisinus* gr. 1853 (Xe siècle) à la jonction du premier et du deuxième livre. Or, cette scholie a été copiée par la même main que celle qui a ajouté une scholie d'un contenu comparable à la fin de la *Métaphysique* de Théophraste. Ce fait était passé inaperçu, parce que ce scribe a utilisé différentes écritures: droite ou penchée, calligraphique ou cursive. L'ensemble des témoignages et indices déjà examinés par Gudrun Vuillemin-Diem, d'une part, et par Enrico Berti, d'autre part, est analysé et réinterprété à la lumière de cette nouvelle information, qui permet d'établir que c'est le premier livre de la *Métaphysique*, et non le deuxième, qui était attribué par certains à Pasiclès de Rhodes, comme en témoignait déjà Asclépios.

Le contenu et la formulation très proches des deux scholies permettent de penser qu'elles viennent d'un même érudit: à l'aide, notamment, des commentaires d'Alexandre et d'Asclépios à la *Métaphysique* d'Aristote, de l'étude de Nicolas de Damas ou des catalogues d'Hermippe et d'Andronicos, il a préparé une 'édition' d'Aristote destinée à devenir un modèle de référence.

Dans la tradition latine, Grand Alpha a été accidentellement attribué à Théophraste à cause de la seconde scholie. Mais la discussion dont témoigne la première scholie a pu également être provoquée dès l'origine par celle que rapporte la seconde

scholie: la *Métaphysique* de Théophraste avait probablement été transmise comme un traité aristotélicien, jusqu'à ce que Nicolas de Damas en restitue la paternité à Théophraste; par suite, l'authenticité d' autres livres du corpus aristotélicien a pu également être mise en doute, mais parce qu'ils posaient des problèmes d' ordre éditorial, il y a deux millénaires déjà."

16. Lortie, François. 2007. *Le Commentaire d'Asclépius à la Métaphysique d'Aristote (Livre Alpha, Chapitres 1 et 2). Introduction, traduction annotée et étude doctrinale*.

Mémoire présenté à la Faculté des études supérieures de l'Université Laval dans le cadre du programme de maîtrise en philosophie pour l'obtention du grade de maître es arts (M. A.).

"Bien que plusieurs études aient été consacrées à Asclépius de Tralles (VI^e siècle), disciple du néoplatonicien Ammonius à Alexandrie, on ne dispose à ce jour d'aucune traduction de son commentaire aux livres A-Z de la *Métaphysique* d'Aristote. Puisqu'il constitue l'un des plus précieux témoignages de la réception des doctrines métaphysiques du Stagirite au sein de l'école néoplatonicienne, nous avons jugé bon d'entreprendre la première traduction en langue moderne de cet ouvrage. Comme la pleine compréhension de l'exégèse d'Asclépius n'est possible qu'à la lumière de son contexte historico-philosophique, nous avons d'abord présenté la tradition des commentaires grecs à la *Métaphysique* d'Aristote. Nous avons ensuite offert une traduction annotée des premières pages du commentaire d'Asclépius, à savoir de son prologue et des deux premiers chapitres du livre Alpha. Enfin, nous avons rédigé une étude doctrinale concernant les principaux enjeux philosophiques de la section traduite du commentaire: la division du prologue exégétique en questions capitales, le concept d'appréhension simple et les rapports entre les intelligibles, Dieu et le Bien."

Alexander of Aphrodisias' metaphysics: Annotated bibliography of the studies in English: A - Faz

Bibliography

1. Adamson, Peter. 2018. "Dialectical method in Alexander of Aphrodisias' treatises on fate and providence." *Oxford Studies in Ancient Philosophy* no. 54:279-308.

"The second century was a time of philosophical diversity.

(...)

Philosophers of a more 'dogmatic' orientation were under pressure to show how the methods of their favoured school could resolve philosophical dispute. The challenge was, negatively, to offer a convincing refutation of rival views, and positively, to show that one's own school doctrines rested on sound foundations.

In what follows, I will show how the most famous Aristotelian of the second century, Alexander of Aphrodisias, rose to this challenge.

I will do so with reference to two works, neither of which is among Alexander's famous commentaries on Aristotle. They are instead independent treatises devoted to the closely related notions of fate and providence. Whereas *On Fate* has survived in its original Greek version,(3) *On Providence* is known to us only in two medieval Arabic translations.(4)" (pp. 279-280)

(3) For text, translation, and commentary see R. W. Sharples, *Alexander of Aphrodisias on Fate* [*Alexander on Fate*] (London, 1983); cited by page and line from the edition of I. Bruns in *Supplementum Aristotelicum*, □. 2.1.2 (Berlin, 1887 and 1892), reprinted by Sharples. I quote from Sharples' translation with occasional modifications; all other translations in the paper are mine, unless otherwise noted.

(4) I will be drawing in this paper on the version most scholars take to be more complete and reliable, namely the later one produced by Abū Bishr Mattā. For the Arabic text(s) and translations into three languages see H.-J. Ruland, 'Die arabische Fassungen von zwei Schriften des Alexander von Aphrodisias: *Über die Vorsehung und Über das liberum arbitrium*' (Ph.D. thesis, Saarbrücken, 1976); S. Fazzo and M. Zonta, *Alessandro di Afrodisia: La provvidenza* [*Provvidenza*] (Milan, 1998); and P. Thillet, *Alexandre d'Aphrodise: Traité de la providence* (Lagrasse, 2003). For the influence of the work in early Arabic thought see S. Fazzo and H. Wiesner, 'Alexander of Aphrodisias in the Kindi Circle and in al-Kindī's Cosmology' ['Kindi Circle'], *Arabic Sciences and Philosophy*, 3 (1993), 119-53.

2. Avotins, Ivars. 1980. "Alexander of Aphrodisias on vision in the atomists." *The Classical Quarterly* no. 30:429-454.

"In discussing the atomists' theory of vision modern accounts have quite neglected to take into account two sections of Alexander of Aphrodisias on this topic.(1)" (p. 429)

(...)

"In conclusion, a more general question. In his two accounts Alexander has supplied us with material partly attested elsewhere, partly found only in him.

In view of scholars' interest in Alexander's reliability,(91) what can be said about the over-all accuracy of his testimony on atomist philosophy? Wherever we can test him against other material he, or his sources, cannot be accused of outright error or gross distortion. The one possible exception seems to be his intimation that there were atomists who believed that vision of

external objects could occur without idols. One could wish that Alexander had introduced atomist doctrine in the form of statements rather than obliquely by questions because in the latter case it is more difficult for the reader to decide whether a doctrine is being asserted or only inferred. In our two accounts it cannot be clearly demonstrated whether or not the question form has impaired Alexander's veracity or accuracy.

To sum up, the examination of the content and method of presentation of these two accounts shows that Alexander's evidence can neither be accepted nor discarded a priori. Each datum has to be scrutinized separately." (p. 454)

3. Baghdassarian, Fabienne. 2023. "De mixtione IX–X: Promoting the Aristotelian Causal System." In *Studies on Alexander of Aphrodisias' On Mixture and Growth*, edited by Guyomarc'h, Gweltaz and de Haas, Frans A.J., 122-143. Leiden: Brill.

Abstract: "In *De Mixtione* IX–X, Alexander considers the theory of total blending from the perspective of its metaphysical value. He examines whether it can provide a satisfactory account of the being, unity and stability of things and he provides an explicit argument in favor of the Aristotelian causal system, against the Stoic theory of principles informed by total blending. He purposefully and methodically substitutes one causal system for another: in chapter IX, hylomorphism is preferred to total blending to account for the constitution of beings; in chapter X, the motion of the heavens and the formal cause are preferred to the cohesive function of pneuma. By doing so, Alexander does not aim solely at rejecting

Stoic materialism in favor of a number of immaterial causes. He also wants to put forward a positive philosophical claim about the nature of reality: since in his eyes Stoic materialism leads to a pervasive ontological confusion, Alexander wants to re-establish the fact that individual substances are ontologically fundamental and primary."

4. Baltussen, Han. 2016. *The Peripatetics: Aristotle's Heirs, 322 bce–200 ce*. New York: Routledge.

Contents: Sources and abbreviations viii; Preface xi; 1 Aristotle's Heirs 1; 2 The natural world and its (hidden) foundations 27; 3 Things and words: language, logic, and reasoning 55; 4 Ethics and politics: on morality and citizenship 80; 5 Continuity and criticism in the Peripatos 106; 6 Intellectual context: rivals and devotees 127; 7 Epilogue: from Theophrastus to Alexander of Aphrodisias 158; Appendix A: Known Peripatetics 322 bce–250 ce 165; Appendix B: Modern editions and commentaries on the Peripatetics 171; Index 174–177.

"This book is about the Peripatetic school after Aristotle (d. 322 bce) down to Alexander of Aphrodisias (ca. 200 ce). Since a recent and accessible account of the Peripatetics in English is still not available (Lynch 1972 is still useful, but now out of date; Grayeff 1974, ch. 2–4 is in some respects flawed), this book fills an existing gap in the scholarly literature by synthesising the new scholarship of the past four decades. The account offered here is not intended to be comprehensive (an impossible task), but may serve as a good starting point for those who are interested in Hellenistic philosophy, while it suggests further readings for anyone wanting to pursue detailed analysis on specific topics or individuals. A useful companion volume is R. Sharples' sourcebook (Routledge, 2010), which covers roughly the same period (200 bce–200 ce), but has a greater range of materials with some commentary." (*Preface*, p. XI)

37.2.3 *Alexander of Aphrodisias*, pp. 585-587.

"Until recently we had no precise dates for Alexander's working life, since his dedication of *On Fate* to emperors Septimius Severus and Caracalla allowed only an estimate between 198 and 211 CE (the death of Septimius Severus).(29) Our knowledge was supplemented in 2004 by epigraphic evidence from Aphrodisias with publication of a honorary inscription dedicated to his father (also a philosopher) which confirms his status as *diadochos* and provides his full name, which he shares with his father: Titus Aurelius Alexandros.(30) Arguably the commentator par excellence, at least in the Aristotelian tradition, Alexander became the model for the running commentary on Aristotle's esoteric writings for several centuries. His appointment to the chair of Peripatetic philosophy in Athens was significant-one of several chairs set up by emperor Marcus Aurelius (*Philostr.* VS 2.2 [566])." (pp. 585-586)

Abstract: "When one studies the history of universals in late antiquity and in the Arabic and Latin Middle Ages, the key notion is 'nature.' Natures are notions like 'redness qua redness,' which are neither universal nor particular in themselves, but are immanent either in universals, which exist only in the mind, or in extramental particulars. All recent studies agree that Alexander of Aphrodisias probably developed the idea of 'nature.' Then it travelled either directly or via the Baghdad Peripatetic Yahyā b. 'Adī, to Avicenna. From Avicenna, it was transmitted to thinkers of Latin Scholasticism, for instance, Thomas Aquinas and Duns Scotus. In this paper, I will show that this historical reconstruction of the inheritance of the notion of 'nature' neglects an important shift in the middle of the historical chain: natures are ontologically prior to their instances in Alexander and Ibn 'Adī, but posterior in Avicenna.

This crucial difference will be shown on the basis of the parallel between (a) natures and universals, and (b) the material and generic aspects of common notions. We will see that Avicenna's reason for disagreeing with the previous tradition on this parallel was a concern regarding the compatibility of the priority of natures with the principle of the identity of indiscernibles."

8. Betegh, Gábor. 2023. "De mixtione I–II: Alexander's Dialectical Method." In *Studies on Alexander of Aphrodisias' On Mixture and Growth*, edited by Guyomarc'h, Gweltaz and de Haas, Frans A.J., 28-57. Leiden: Brill.

Abstract: "The chapter aims to show that the task of the first two chapters of *De Mixtione* is to set the dialectical strategy for the entire treatise and to indicate the principles of Alexander's methodology. Contrary to what is customarily supposed, Alexander does not seek to debunk the Stoic theory already at the outset, but rather shows why, its basic flaws notwithstanding, Chrysippus' theory shares crucial features with the Aristotelian theory, and why it requires thorough critical analysis. The discussion of the pluralist theories, and in particular that of Democritus and Empedocles, highlights that only the Stoic and the Aristotelian theories have the theoretical resources to countenance the 'unification' of matter, which, for Alexander, is a central feature of blending. Moreover, in the review of alternative views, Alexander is relying on a sceptical *diaphōnia* used also by Sextus. Yet, Alexander deploys this doxographical material not with the aim of reaching a sceptical conclusion, but for the purposes of an Aristotelian-type dialectical investigation. This reading of the initial chapters also shows that Alexander's dialectical methodology in the *De mixtione* is close to the one he applies in *De fato*, and in *On providence*. In these chapters, Alexander spells out further central elements and key terms of his methodology, which also evince his methodological consistency across treatises."

9. Bloch, David. 2003. "Alexander of Aphrodisias as a textual witness: the commentary on the « De Sensu »." *Cahiers de l'Institut du Moyen-Âge Grec et Latin* no. 74:21-38.

"Alexander of Aphrodisias' commentary on Aristotle's *De Sensu* presents readings of obvious interest to an editor of the *De Sensu*. No extant manuscript of the Aristotelian text is older than the 10th century A.D.,

and therefore a famous Peripatetic commentator of the 2nd or the 3rd century A.D. will certainly have had access to

manuscripts now lost, and possibly to a quite different textual tradition. A. Förster explicitly

assumes that this is the case.(1) In preparing a critical edition of Aristotle's *De Sensu*, I have made a complete collation of Alexander's commentary, using Wendland's edition (CAG. III.I, Berlin 1901).

In this article I will show that, even though Alexander seems to be an excellent textual witness, the commentary can rarely be considered solid, textual evidence on a par with manuscript readings. Both Förster and

Ross commit the mistake of treating Alexandrian readings as manuscript readings in their editions. First, I will make some general points about the textual transmission of Aristotle and Alexander; then, I will examine the different parts of Alexander's commentary: lemmata, quotations, paraphrases, and the discussions of *variatio lectionis*; and finally, I will state exactly how I think Alexander's commentary can be used by the editor of Aristotle." (p. 21)

10. Blumenthal, Henry J. 1987. "Alexander of Aphrodisias in the later Greek commentaries on Aristotle's *De anima*, II." In *Aristoteles. Werk und Wirkung, Paul Moraux gewidmet, II: Kommentierung, Überlieferung, Nachleben*, edited by Wiesner, Jürgen, 90-106. Berlin: de Gruyter.

"Of the commentators on Aristotle whose works survive in other than partial or fragmentary form Alexander is unique in that he worked before the new Platonism of Plotinus and his successors came to dominate Greek philosophy: I use "successors" in the temporal and therefore not necessarily philosophical sense. With the exception of Themistius he is also alone in that he wrote more or less unbiased commentaries on Aristotle,(1) commentaries that were on the whole an honest, and generally successful - though this is admittedly now controversial - attempt to set out what Aristotle thought." (p. 90, two notes omitted)

(1979) 391-400; for another view cf. E.P. Mahoney, *Neoplatonism, the Greek commentators, and Renaissance Aristotelianism*, in: *Neoplatonism and Christian Thought*, ed. D.J.O'Meara (Albany 1982) n. 1, on 264-266.

11. Bobzien, Susanne. 1998. "The Inadvertent Conception and Late Birth of the Free-Will Problem." *Phronesis. A Journal for Ancient Philosophy* no. 43:133-175.

Reprinted in R. Sorabji, *Aristotle Re-Interpreted: New Findings on Seven Hundred Years of the Ancient Commentators*, New York: Bloomsbury 2016, pp. 125-159.

Abstract: "In this paper I argue that the 'discovery' of the problem of causal determinism and freedom of decision in Greek philosophy is the result of a combination and mix-up of Aristotelian and Stoic thought in later antiquity; more precisely, a (mis-)interpretation of Aristotle's philosophy of deliberate choice and action in the light of Stoic theory of determinism and moral responsibility. The (con-)fusion originates with the beginnings of Aristotle scholarship, at the latest in the early 2nd century AD. It undergoes several developments, absorbing Epictetan, Middle-Platonist, and Peripatetic ideas; and it leads eventually to a concept of freedom of decision and an exposition of the 'free-will problem' in Alexander of Aphrodisias' *On Fate* and in the *Mantissa* ascribed to him."

"In her important 1979 paper "Aristoteles über Syllogismen 'aufgrund einer Hypothese,' (1) Gisela Striker provided an in-depth analysis of these vexing and perplexing Aristotelian arguments. She showed that they were Aristotle's way of providing a logical vehicle for inferences based on other than term-logical relations; that the "hypothesis" that gives them their name is best understood as a rule that is not based on a relation of terms,(2) rather than as a premise; and that in those arguments "the thing taken instead" (το` μεταλαμβανόμενον)

is an assertion that is used instead of the *dem onstrandum*.(3) It was upon reading this paper that I realized that the (then) prevalent interpretation of later ancient texts on hypothetical syllogisms as presenting the Stoic theory of *indemonstrables* needed a thorough revision. For it is possible to show that, starting from Aristotle's "syllogisms based on a hypothesis," a specifically Peripatetic (and from the third century CE also partly Platonist) development can be traced through the centuries up to the late ancient passages on hypothetical syllogistic in Philoponus and Boethius. Although the Stoic *indemonstrables* undoubtedly played a role in this development, the various theories of hypothetical syllogisms over the centuries are all Peripatetic (and sometimes a little Platonist) in form, function, and terminology.(4) The present paper looks at Alexander of Aphrodisias' role in this development." (p. 199)

13. Bodnár, István M. 1997. "Alexander of Aphrodisias on Celestial Motions." *Phronesis. A Journal for Ancient Philosophy* no. 42:190-205.

"After identifying the contribution of the nature of the celestial spheres with that of their soul, Alexander follows Aristotle in setting out a celestial hierarchy, on top of which there is or there are the separate unmoved mover(s), which move(s) by being object(s) of striving and desire for the less perfect entities of the heavens. This much seems to be firmly settled. A number of further issues, however, call for detailed examination. In this paper first I set out to clarify the contributions of the striving of the different celestial spheres, then I turn to describing the interaction between the various motions of the celestial system, and I discuss whether the theory Alexander propounded could have been a fundamental revision, or rather an alternative exposition of the original, Aristotelian celestial theory deploying homocentric spheres." (p. 191)

Abstract: "This chapter gives further confirmation of the account worked out in chapters XIII and XIV by stressing that a proper blend neither contains the original ingredients in actuality, nor is there a generation of these ingredients in the proper sense of the word when these original constituents are recovered from the mix. Indeed, the recovered constituents are not the original batch of constituent material. Furthermore, such processes of dissolution are in need of a trigger—some slight fermentation in the case of must, a heated stone to separate milk into cheese and whey, and a sponge, to extract

the water from wine mixed with water. In addition to this, the chapter sets out how the divisibility of the ingredients contributes to their ability to be blended, how such a preparatory phase facilitates the interaction of the ingredients leading to blending."

"Conclusion

In this article, I have tried to show how Alexander conceived of the science of being as being as constituting a demonstrative science. In particular, I have tried to show that Alexander thought it possible to apply the scientific conditions codified by Aristotle in the *Posterior Analytics* to ontology. Although it is difficult to discern the precursors of this theory, it is easy to see the great success this model of philosophy had in the history of philosophy after Alexander. The conception of metaphysics as a demonstrative science that I discern in Alexander actually had a fundamental influence on the philosophical tradition: we might mention not only Proclus' *Elements of Theology*, but also Descartes, Leibniz, Spinoza, as well as certain developments in so-called 'analytic' philosophy." 19. Caston, Victor. 2012. "Higher-order awareness in Alexander of Aphrodisias." *Bulletin of the Institute of Classical Studies* no.

55:31-49.

Abstract: "Alexander of Aphrodisias discusses higher-order awareness in perception twice: in *Quaestiones* 3.7, where he offers a detailed exegesis of Aristotle's arguments at the beginning of *De anima* 3.2 on how we perceive that we see, as an explanation of what Alexander calls '*sunaisthesis*'; and in Alexander's own systematic treatise, the *De anima*. In the *Quaestiones*, Alexander develops an interpretation of Aristotle that has since become dominant, the moderate capacity reading, according to which the same faculty that enables us to see also enables us to perceive that we are seeing. But he also makes the provocative claim that higher-order awareness is itself a necessary consequence of perceiving and is entailed by some of Aristotle's central doctrines. It is difficult to make good on this claim, though, and Alexander avoids making it in his own *De anima*, which offers a more nuanced and defensible position on the question."

20. ———. 2023. "Alexander of Aphrodisias' Emergentism: Hylomorphism Perfected." In *The History of Hylomorphism: From Aristotle to Descartes*, edited by Charles, David, 154-173. New York: Oxford University Press.

"Emergentism, to our ears, has obvious ramifications for concerns about reductionism and mental causation. But for Alexander it is primarily a way of understanding and spelling out what is involved in hylomorphism. It allows him to make precise the relation a form has to the matter that underlies it, and to see how this relation is recursively iterated at various levels, resulting in a layered conception of reality. Since the matter of a hylomorphic compound might itself be a hylomorphic compound, it may have a form and matter of its own, which in turn may again be a hylomorphic compound, until we finally hit bottom with prime matter. Therefore, there are forms all the way down, so to speak, in matter at every level except the lowest, a feature which is significant for Alexander because of the distinctive efficient causal role he assigns to form. As a consequence, even material explanations will make essential reference to form, insofar as distinctive types of matter possess forms of their own, which makes any given

matter the kind that it is and explains why it is suitable for the functions required for the form above it. And it is the form at each of these levels that figures in causal explanations.

Alexander does not, then, merely gesture at a rough and ready distinction between form and matter, or the fact that it ‘stacks’ and iterates hierarchically.

His emergentism allows him to offer a highly specific version of hylomorphism, making clear exactly what the distinctive contributions of form and matter are, as well as their relation to one another." (pp. 154-155)

21. Cerami, Cristina. 2016. "Alexander of Aphrodisias." In *Brill's Companion to the Reception of Aristotle in Antiquity*, edited by Falcon, Andrea, 150-179. Leiden: Brill.

"Our Greek, Arabic, and Latin bibliographical sources attribute a great number of writings to Alexander. Not all of them are authentic. Among the authentic ones, the treatises *On Mixture*, *On Fate*, and *On the Soul* are extant in the original Greek. Some writings are preserved only in Arabic translation. Among them, there are the treatises *On the Principles of the Cosmos*, *On Providence*, and *Against Galen on Motion*. Moreover, Alexander wrote philosophical commentaries on several Aristotelian works. His commentaries on the *Prior Analytics* (book 1), *Topics*, *Meteorology*, and *On the Senses* are extant. His commentaries on the *Posterior Analytics*, on the *Physics*, and on the treatise *On the Heavens* survive only in fragmentary form.(3) A complete commentary on the *Metaphysics* is transmitted under his name, but only the first five books are genuine. Finally, his philosophical production included concise expositions on particular exegetical questions prompted by the text of Aristotle's writings or linked to questions debated by other contemporary philosophical schools. These expositions are collected in three books of *Natural Questions*, one book of *Ethical Questions*, and a book that is traditionally known as *Mantissa* ("makeweight"), which is concerned with psychology.

A complete presentation of Alexander's philosophical production would go beyond the limits of this chapter. In the pages to follow, I will try to assess Alexander's unique place in

the Aristotelian tradition by singling out what is distinctive in his reading of Aristotle." (pp. 160-161)

22. Chaniotis, Angelo. 2004. "Epigraphic evidence for the philosopher Alexander of Aphrodisias." *Bulletin of the Institute of Classical Studies* no. 47:79-81.

"Inscriptions often provide information about great figures of ancient literature. This applies to Arrian, Plutarch and Tacitus no less than to the poet Nikandros of Colophon or Aristotle.

A new find from the city of Aphrodisias in Asia Minor in 2001 now adds some important biographical information on the city's most known author and one of the greatest philosophers of the Imperial period. This new inscription will be published together with other recent epigraphic finds from Aphrodisias in a forthcoming issue of the *American Journal of Archaeology*; as the news about this text has already spread among scholars interested in the history of ancient philosophy, it seemed appropriate to present this text as soon as possible in a journal more likely to be read by scholars interested in classical literature." (p. 79)

23. ———. 2004. "New Inscriptions from Aphrodisias (1995-2001)." *American Journal of Archaeology* no. 108:377-416.

Abstract: "This article presents 33 Greek inscriptions found at Aphrodisias between 1995 and 2001. They include an honorary decree, honorary inscriptions of other types, statue bases, dedications, building inscriptions, epitaphs, and a sundial. The most important new text is an honorary inscription on a statue base set up by the prominent philosopher Alexander of Aphrodisias for his father (4).

An unusually early inscription is a posthumous honorary decree for a prominent local citizen (1), which records his achievements probably during the wars and diplomatic exchanges of the first century B.C. The other new texts provide information about cults (Thea Eleutheria: 8; Zeus Nineudios: 11; Hephaistos: 15), the date of the Civil Basilica (14; under Domitian?), gladiatorial competitions (21-22), the prosopography of the city, occupations (11 a bronze-smith; 28: an agent of Fulvia Cervidia Vestina, member of a senatorial family, who probably owned land near Aphrodisias), and the relations between Aphrodisias and the Roman provincial administration (23 and 26)."

Preprint: the volume has not yet been published.

"Conclusion

If I were to attempt a *sunkephalaiôsis* of the preceding discussion, I'd say that our quest for the origins of the Peripatetic doctrine of the formation of universal concepts has led us back, by sometimes tortuous paths, to a period when Academic, Peripatetic, Stoic, and Epicurean views still shared many doctrinal elements, although they were struggling to demarcate themselves from one another. As we tried to track

down the nature and function of “summation” (*kephalaiôsis*, *sunkephalaiôsis*) in this doctrine, we saw that it appeared as a component in the logical scheme of analysis and synthesis, where it served to designate the “upward path” of synthesis, by which species discovered through analysis or division are “summarized” or “recapitulated”, and then added to the genus in order to form a definition of the essence of an object. In an epistemological context, we found that the same terminology could be used by the Peripatetics and others to denote the way in which individual sensations, memories and experiences are somehow “summed up” and “recapitulated” by the rational faculty in order to form universal concepts, and we saw some motives to suspect this may have been the case for the shadowy medical sect of the Empiric physicians as well. This last hypothesis, would, of course, require confirmation by further research.” (pp. 21-22)

25. Cheng, Wei. 2018. "Alexander of Aphrodisias on Pleasure and Pain in Aristotle." In *Pain and Pleasure in Classical Times*, edited by Harris, William V., 174-200. Leiden: Brill.

"Instead, I aim to draw attention to a similar, yet basically ignored debate in antiquity over the obscure relation of supervenience between pleasure and activity in which both Alexander of Aphrodisias and other interpreters of Aristotle, probably his colleagues, students, and even some of his predecessors, took part.(13) This exegetic debate is hidden in Alexander’s theoretical criticism of some anonymous ‘hedonists’ in the *Problemata Ethica* (PE)—a collection of short and unsystematic notes about ethical issues.(14) I shall argue that Alexander develops his anti-hedonistic argument mainly based on the Extrinsic Reading of Aristotle’s supervenience-based interpretation of pleasure, whereas the ‘hedonists’ criticized by him are those who advocate a pleasure-friendly and an Intrinsic Reading of the supervenience in question, or those who try to verify the goodness of pleasure by appealing to Aristotle in this way. In light of this dialogic situation, many of Alexander’s argumentative moves are presumably reactions to, and influenced by, the proposal of his opponents who base their theories likewise on a reading of Aristotle." (pp. 176-177)

(13) This hypothesis does not necessarily commit us to believe that the debates in question happened between Alexander and his opponents in an established institution (as the hedonistic debates among the Academics in the Academy), because (due to the fact that there is no information about any of his immediate pupils) whether and in what sense Alexander had a school is still an open question (cf. Sharples 1990b). Rather, I simply want to argue that the main target at which Alexander aimed was the Aristotelian tradition. For my detailed discussion, see below.

(14) For discussions of this collection, see Madigan 1987; Sharples 1990a. The collection edited by M. Bonelli: *Aristotele e Alessandro di Afrodisia (Questioni etiche e Mantissa): Metodo e oggetto dell'etica peripatetica* (Naples, 2015) awaits further examination given that it was published after I finished the main part of my manuscript. As a remedy, I have added a few footnotes to reflect some of the discussions that arose in that volume, in particular the contributions of L. Castelli and C. Natali.

26. Coda, Elisa. 2012. "Alexander of Aphrodisias in Themistius' Paraphrase of the *De Caelo*." *Studia greco-arabica* no. 2:355–371.

Abstract: "This paper examines some fragments of Alexander of Aphrodisias' lost commentary on Aristotle's *De Caelo* preserved

in Themistius' paraphrase of this work. Its aim is to make available the list of Themistius' explicit quotations of Alexander on the basis of the Hebrew text of the paraphrase, checked against the manuscript Firenze, Biblioteca Nazionale Centrale, II.II.528. It also examines in detail a selection of these passages. It will appear that some of Alexander's fragments, as preserved by Themistius, can be recovered in their original wording and meaning only on the basis of the Hebrew text. The first two passages, discussed in section 1, are meant to substantiate this claim. The third passage, discussed in section 2, raises a doctrinal question. In the Appendix, I provide a list of Alexander's passages explicitly quoted by Themistius. For each quotation, the reference to the folios and lines of the Florence MS is given. This is especially necessary, in consideration of the differences between the Hebrew text as edited and as preserved in the MSS."

Abstract: "Chapter XIII of *De mixtione* makes a start with Alexander's exposition of what he takes to be the only theory of blending that makes sense, namely Aristotle's hylomorphic theory of blending. Alexander defends the theory mainly on three grounds: it alone preserves our common preconception of mixture, it alone accounts for the corresponding phenomena, and it alone can explain the shortcomings of all the other theories of blending. In this chapter I argue that, according to Alexander, all other theories of blending, including the Stoic theory, are of a reductive character. They are reductive in that they do not accept the existence of a qualitative fusion of natural bodies as a physical reality; instead, they reduce blending to other kinds of interaction between bodies all of which fall short of qualitative fusion. Alexander, by contrast, defends Aristotle's realism about blending as philosophically superior: blending is not just an epiphenomenon or a subjective impression but a physical reality, and only Aristotle's realist theory is capable of explaining blending in a satisfactory way."

28. Corrigan, Kevin. 1996. *Plotinus' Theory of Matter-Evil and Question of Substance: Plato, Aristotle, and Alexander of Aphrodisias*. Leuven: Peeters.

"This work attempts to do three things: first, to examine all of Plotinus' major works on matter-evil as individual treatises in their chronological order and as representatives of a cumulative, 'developing' theory; second, to situate these works in the context of questions concerning both the generation of lower matter and the nature of intelligible matter in relation to intellect and the One; and third, to complete the first two parts of the enquiry by locating the whole problem of matter-evil within the context of what Plotinus means by substance, thereby providing a new answer to the problem of substance and matter in Plotinus in the light principally of Plato, Aristotle, and Alexander of Aphrodisias. Chapter 1 is an introduction and Chapters 2 to 5 are extended commentaries on the major works on matter-evil." *Preface*, p. XI)

29. Cranz, F. Edward. 1958. "The prefaces to the Greek editions and Latin translations of Alexander of Aphrodisias, 1450 to 1575." *Proceedings of the American Philosophical Society*:510-546.

"THE present article is primarily a descriptive catalogue, using both quotation in extenso and summary, of the prefaces to the early modern Greek editions and Latin translations of Alexander of Aphrodisias. Its first purpose is to make the prefaces, which are often unpredictable in content and difficult to locate, more accessible to historical study, and it further attempts to suggest some of the points at which they illuminate the thought of their epoch. An index of names is appended which includes all contemporaries mentioned in the prefaces, together with very brief biographical and bibliographical information. A short account of the fortuna of Alexander may serve to place the prefaces in their historical context. Alexander flourished toward the end of the second century after Christ, and he quickly won a position of great authority in the late Greek and Byzantine philosophic tradition. Similarly in the Moslem world, his writings were early translated into Syriac

and Arabic, and here too Alexander exercised an important influence on philosophic thought, notably through his interpretation of the Aristotelian doctrine of the intellect. In the Latin West, however, Alexander played no significant role during the late ancient and medieval periods. His works were not translated into Latin, and his very name was soon forgotten." (p. 516, a note omitted)

30. Dalla Valeria, Lisa. 2013. "Alexander and the Aristotelian formula of the principle of excluded middle in *Metaphysics* Γ 7." *Lexicon Philosophicum* no. 1:193-215.

Abstract: "Alexander of Aphrodisias' comment to the arguments on the principle known as of excluded middle, held by Aristotle in *Metaphysics* Γ 7-8, seems to interpret that text in a predominantly logical and philosophical perspective, and considers the subsequent research carried out in different fields. This perspective emerges from the particular importance that the exegete gives to not only the concepts of true and false with respect to the principle's formula ("For neither can there be anything intermediate of a contradiction, but of one thing we must either affirm or deny one thing, whatever it is" 1011b 23-24) and its first proof, but also to the axioms and the concept of contradiction. The attribution to the principle of a meaning closely related to those concepts can, moreover, be traced back to Alexander. The reason for Alexander's interpretative choice could be found in his own conception of first philosophy as a demonstrative science, which seems to discover a consistent criterion for truth in the principle, thus establishing the existence of something true and how to find it. However, such a requirement would be purely Alexandrian, because in Aristotle, as can be demonstrated by the texts, the truth is nothing more than the discourse which describes reality as it is. In fact, the truth expresses a relationship between terms, and this relationship may be said to subsist, in the case of the affirmative statement, or not subsist, in the case of denial."

31. de Haas, Frans A. J. 2014. "Presuppositions of Moral Action in Aristotle and Alexander of Aphrodisias." In *Fate, Providence and Moral Responsibility in Ancient, Medieval and Early Modern Thought: Studies in Honour of Carlos Steel*, edited by

D'Hoine, Pieter and Van Riel, Gerd, 103-116. Leuven: Leuven University Press.

"Conclusion

Although the list of modifications undertaken by Alexander is much longer, we are now in a position to give an affirmative answer to the question whether the changes in the interpretation of Aristotle's *De anima* that Alexander is famous for were spawned by ethical concerns (among others).

Alexander works hard to create the largest possible distance between the chains of antecedent causes that define Stoic determinism on the one hand, and Aristotle's causal chain of animal locomotion in *De anima* and *De motu animalium* on the other—despite (or because of?) the possible historical relations between Aristotle and Stoic determinism. Alexander denies Aristotle's chain every necessity, and tries to remove any impression that each of the links is itself a motion or a moved mover. As perfections or activities (ἐντελεχεῖαι) they are exempt from motion. Only in this way, Alexander must have thought, could Aristotle's moral psychology be a worthy adversary of 2nd century Stoicism." (p. 116)

32. ——. 2021. "Deduction and common notions in Alexander's commentary on Aristotle's *Metaphysics A 1-2*." *History of Philosophy & Logical Analysis* no. 24:71-102.

Abstract: "In this paper I explore the ways in which Alexander of Aphrodisias employs and develops so-called 'common notions' as reliable starting points of deductive arguments. He combines contemporary developments in the Stoic and Epicurean use of common notions with Aristotelian dialectic, and axioms. This more comprehensive concept of common notions can be extracted from Alexander's commentary on *Metaphysics A 1-2*. Alexander puts Aristotle's claim that 'all human beings by nature desire to know' in a larger deductive framework, and adds weight to Aristotle's use of the common understanding of the notion of 'wisdom'. Finally I will indicate how these upgraded common notions are meant to play an important role in the general framework of metaphysics as a science."

33. ———. 2023. "Alexander of Aphrodisias on the Ancient Debate on Hylomorphism and the Development of Intellect." In *The History of Hylomorphism: From Aristotle to Descartes*, edited by Charles, David, 174-196. New York: Oxford University Press.

"The aim of this inquiry is to reconstruct rival approaches to hylomorphism which helped shape Alexander's version of it, and to show how Alexander's hylomorphism enabled him to expand the scope of the doctrine to the development of intellect. The reconstruction of rival approaches to hylomorphism offers us a glimpse of the long-standing concern for the general theory of hylomorphism, over and above its important application to the relation between body and soul.(8)

In section 1, I shall discuss interpretations of the relation between form and matter that Alexander considers to be mistaken as a first encounter with the ancient debate on hylomorphism. In section 2, I shall highlight Alexander's discussion of more positive suggestions on how to conceive of the relation between form and matter. In section 3, I shall briefly discuss which Aristotelian ingredients Alexander added in order to develop his full account of hylomorphism that we find in *De An.* 1–26. Finally, in section 4, I shall show how Alexander's brand of hylomorphism allowed him to apply it to the development of human intellect." (pp. 175-176)

(8) Sharples (2009) speaks of a sharp decline of interest in the general theory of hylomorphism between Aristotle and Alexander. This chapter may serve to provide some evidence to the contrary.

Mixture and Growth, edited by Guyomarc'h, Gweltaz and de Haas, Frans A.J., 83-99. Leiden: Brill.

Abstract: "In this paper I first set out the role of common notions in the structure of Alexander's argument in *Mixt.* V–VI. Furthermore, I argue that a series of topics discussed in *Mixt.* V–VI, *Mant.* XIV and *Quaest.* II.12 concern the initial stages of Stoic as well as Peripatetic blending rather than the resulting blend. The presence of certain types of (filled) pores and changes in density both facilitate mutual division; mutual division and coextension go hand in hand until a degree of juxtaposition of ingredients is reached which easily allows for the specific interaction that creates the final blend: interaction of qualities for the Peripatetics, tensional dynamics for the Stoics. In addition, I show that a list of stock examples used by Alexander also raises serious questions concerning changes in density and volume, which Aristotle, Alexander and the Stoics had to deal with. I suggest that the role of pores found in *Meteorology* IV may have been part of the solution for some of Alexander's contemporaries. Throughout the arguments in the chapters V–VI, indeed throughout the *De mixtione*, Alexander consistently tries to replace a comprehensive materialist metaphysics of interacting bodies by his own equally comprehensive brand of hylomorphism—even if not every argument is equally convincing."

35. ———. 2024. "Alexander of Aphrodisias on Concepts." In *Conceptualising Concepts in Greek Philosophy*, edited by Betegh, Gábor and Tsouna, Voula, 368-383. Cambridge: Cambridge University Press.

"The numerous works transmitted under the name of Alexander of Aphrodisias (fl. 200 CE) show a rich vocabulary denoting concepts, thoughts, and universals,⁽¹⁾ and an equally rich collection of verbs denoting the human activities of abstracting or constructing concepts, whether they be simple (individual, genus, species) or complex (definitions, propositions). Within the confines of this chapter, I would like to focus on a number of interesting occurrences of the terms *ennoia* and *noēma* in Alexander's texts. I shall deal with Alexander's interrelated views of concept formation as the

development of potential intellect, divine intellect in us as *noēma*, *ennoiai* as concepts under construction, and human intellect as a unity of concepts.

Alexander not only draws on Aristotle's works and the Aristotelian tradition, but also on centuries of polemics against Aristotle by the Stoics and Platonists, which have led to new ways of engaging with Aristotle's legacy. Often terms of Stoic or Platonist origin have become part of the common parlance in the philosophical debates of the first centuries of our era. One example that we shall come across below is the use of 'common notions' as starting points of valid arguments, which Alexander believes is in perfect agreement with Aristotelian dialectic. When Alexander elaborates on the extent of the human capacity to acquire some universal concepts by nature, and others by teaching and study, he always intends to confirm the Aristotelian rejection of innate knowledge." (p. 368)

(1) One term does not play a role in Alexander's own thought: *ennoēma* occurs only in Alex., in Top. 359.13-16 where it echoes the Early Stoic notion of a 'figment of the mind' (cf. Diog. Laert. 7.61.1-3); cf. LS 30 C and D with commentary.

36. Di Giovanni, Matteo, and Primavesi, Oliver. 2016. "Who Wrote Alexander's Commentary on *Metaphysics* Λ? New Light on the Syro-Arabic Tradition." In *Aristotle's Metaphysics Lambda – New Essays: Proceedings of the 13th Conference of the Karl and Gertrud-Abel Foundation Bonn, November, 28th–December 1st, 2010*, edited by Horn, Christoph, 11-66. Berlin: de Gruyter.

"It seems, then, that "Alexander's" commentary on Book Λ as expounded and quoted in Arabic by Ibn Rušd cannot be ascribed directly to the historical Alexander of Aphrodisias, but rather to an unknown Greek reviser of an original work by Alexander of Aphrodisias. For we have shown that the main part of "Alexander's" commentary on Book Λ 1–7 as quoted by Ibn Rušd must belong – pace Freudenthal – with the same translation of a Greek original into Syriac as the book-by-book

analysis expounded in Part III of Ibn Rušd's proem, and that this analysis cannot be attributed – pace Bouyges – to the historical Alexander of Aphrodisias without qualification. The bad news is that the authenticity of the quotations from “Alexander” interspersed in Ibn Rušd's commentary on Book Λ 1–7 will probably have to be examined afresh, as well as the conclusions to be drawn from that evidence with regard to the Greek commentary ascribed to Michael of Ephesus. The good news, however, is that the book-by-book analysis expounded in Ibn Rušd's proem

has turned out to be a document pertaining to the ancient reception of the *Metaphysics* – partly by Alexander of Aphrodisias, partly by one of his successors." (p. 62)

37. Donini, Pierluigi. 2010. "Alexander's On Fate: Questions of Coherence." In *Aristotle and Determinism*, 159-176. Leuven: Peeters.

Original edition: "II de Fato di Alessandro. Questioni di coerenza," in *Aufstieg und Niedergang der römischen Welt II* 36.7 (1987), pp. 1244-1259.

"The Aim of the Treatise

None of the major problems of philosophical coherence posed by *On Fate* - those I have thought necessary to illustrate in the above pages - relates directly to Stoicism and the discussion of Stoic theses. All

instead arise from Alexander's relation to Aristotle's philosophy. If we take into account the remarkable effort (which, as we have seen, is up to a point successful) involved in reinterpreting Aristotle's doctrines so as to incorporate them coherently within the debate on determinism, the common view of *On Fate* as basically a polemical tract against Stoicism, and of the Stoics as the single adversary Alexander has in mind throughout, should seem less adequate to the situation than ever. I am of course fully aware that it would be foolish to deny that Stoicism plays a very large role in Alexander's treatise and in his polemic; but, beside the polemic against Stoicism, another crucial preoccupation of Alexander's should be evident:

that of giving a coherent account of Aristotelianism as an indeterminist philosophy. More than to reiterate the usual arguments, I think the thoughts developed above serve to support the idea that Alexander's treatise offers a comprehensive and general reflection on the problem of determinism. It was logical that the Stoics should capture a great share (not all) of the author's polemical attention here, but this polemic is not all-important : what was at least equally important for Alexander was to grapple with what seemed to him (almost always with good reason) the problematical aspects of Aristotle 's philosophy in the face of a looming and by now unavoidable issue." (p. 176, a note omitted)

38. ——. 2010. "Natural Endowments, Habits and Character in Alexander 's *On Fate*." In *Aristotle and Determinism*, 177-190. Leuven: Peeters.

Original edition: "Doti naturali, abitudini e carattere nel *de fato* di Alessandro," in *Polyhistor: Studies in the History and Historiography of Ancient Philosophy presented to Jaap Mansfield*, ed. K. Algra, P. Van der Horst, and D. Runia (Leiden-New York-Koln: Brill, 1996), pp. 284-299.

"Among the works of Alexander of Aphrodisias, his treatise *On Fate* is thus far the only one to which Jaap Mansfeld has devoted an entire essay(1), I will be considering here a small suggestion found in his essay which in my view is extremely fruitful, and can help ease a substantial interpretive difficulty I had raised myself some time ago." (p. 177)

(,,)

"There is no need to criticize Alexander any further by insisting on the fact that even after thus explaining, as he attempts to do in *On Fate*, how virtuous and vicious characters are formed, his case in defense of the autonomy and power of self-determination of men becomes no stronger; for even after we have granted that an original choice in favor of the good and of virtue is possible, we are nevertheless still faced with the problem that the character of the phronimos, once constituted as such, turns out to be no less binding than that (considered

the expression of "fate, " that is, of nature) of the multitude of people who are not wise.

There is nothing more to add here to what has already been remarked in previous studies on the problem of determinism in Aristotle, and more specifically in *On Fate*." (p. 190, a note omitted)

Abstract: "This chapter discusses Alexander of Aphrodisias' explanation of the relational nature of perception and analyses John of Jandun's and Radulphus Brito's views concerning the same issue. The chapter includes a critical edition of a question from Brito's commentary on *De sensu*."

40. Echeñique, Javier. 2021. "A Peripatetic Argument for the Intrinsic Goodness of Human Life: Alexander of Aphrodisias' *Ethical Problems* I." *Apeiron* no. 54:367-384.

Abstract: "In this article I argue for the thesis that Alexander's main argument, in *Ethical Problems* I, is an attempt to block the implication drawn by the Stoics and other ancient philosophers from the double potential of use exhibited by human life, a life that can be either well or badly lived.

Alexander wants to resist the thought that this double potential of use allows the Stoics to infer that human life, *in itself*, or *by*

its own nature, is neither good nor bad (what I call the Indifference Implication). Furthermore, I shall argue that Alexander's main argument establishes that human life, despite exhibiting a double potential of use, is *by its own nature* or *intrinsically* good. Finally, given that this is not a conclusion that the Stoics are likely to accept, I shall also contend that the argument should be regarded as conducted for the most part in *foro interno*, as a way of persuading the Peripatetics themselves of the falsity of the Indifference Implication, precisely because of the risk that such an implication be derived from their own theoretical framework.

41. Eichner, Hedrun. 2002. "Ibn Rušd's *Middle Commentary* and Alexander's Commentary in their relationship to the Arab commentary tradition on the *De generatione et corruptione*." In *Aristotele e Alessandro di Afrodisia nella tradizione araba*, edited by D'Ancona, Cristina and Serra, Giuseppe, 281-297. Padova: Il Poligrafo.

"The history of the reception of Aristotle's *De Generatione et corruptione* in the Arab world is marked by the fact that Arab/Islamic culture generally had a strong interest in science, and in the beginning gave great prominence to ancient texts dealing with 'science'. Subsequently, works like *De Gen. corr.*, which were rather a sort of development of speculative thought, became outdated because the achievements of empiric research made them superfluous. In the case of *De Gen. corr.*, the lack of interest in later centuries even resulted in the loss of the Arabic text of the translation; therefore, a very important link between the Greek text and the Arabic works dealing with this topic is missing. The Middle Commentary by Ibn Rusd somehow in the Arabic tradition is the text which comes closest to the Aristotelian text, and a comparison between it and the other surviving testimonies is a way to regain some features of the lost Arabic tradition. In my paper I would like to show some possible starting points for such a comparison and thus try to settle the position of Ibn Rusd's Middle Commentary with respect to the other texts." (p. 281)

42. Ellis, John. 1994. "Alexander's Defense of Aristotle's Categories." *Phronesis. A Journal for Ancient Philosophy* no.

39:69-89.

"One aspect of the story of the attempt to challenge Aristotle's categories in late antiquity has already been told. Richard Sorabji has shown us how Philoponus, in the *contra Proclum*, came to consider prime matter as 'the three-dimensional', which he also called a substantial quantity.(1)"

(...)

"By Philoponus' time, in fact, there was already a long standing tradition in place. We can see this in part from the way that Philoponus argues for the notion of a substantial quantity by referring to the already accepted idea that there are substantial qualities.(3)

In this essay I shall be dealing with two problems in this area, both probably issuing from the hostile work against Aristotle Categories by Lucius and Nicostratus.(4) One, which I shall call 'the hylomorphic problem', has to do with the question of whether form is an accident of matter. The other has to do with the problem of 'substantial' (συσιωδης) qualities, viz., are there certain kinds of qualities that make up or complete the substance (τα συμπλήρωτικά της ούσιας) of what they inhere in? For example, is the whiteness of snow an example of a 'substantial' quality?"

(...)

Alexander, the Aristotelian commentator *par excellence*, set himself the task of responding to many of these hostile objections. In this paper I shall be concerned with Alexander's answers to these two difficulties and how his solutions save Aristotle's categorical scheme. His response will be compared with Porphyry's, who *prima facie* is trying to save the categories as well and heal the quarrel(6) between the Platonists and Aristotelians. Porphyry is standardly credited with making the *Categories* palatable for Platonists so that it becomes the introductory text to Platonic metaphysics. As we will see, however, his "cure" in these cases exacts too high a price from the Aristotelian perspective.

My discussion will be divided into three sections. In the first I provide some background to the hylomorphic problem in Aristotle; the second focuses on Alexander's solution to the problem; in the third, I shall look at Porphyry's attempt to solve the substantial qualities problem." (pp. 69-71)

"Late Hellenistic science had to offer its own contribution, which, though based on the general principles of the Platonic and Peripatetic paradigms, sought to cover the data of observation and calculation. Thus a Hellenistic, and *a potiori* a mediaeval reader, had to deal with the models of professional astronomy which, through Ptolemy and his Arab disciples, had developed a high level of observation and mathematical sophistication, but had discarded Aristotle's model of planetary movement.

It was the work of the commentators - starting with Alexander of Aphrodisias in the second century - to bring the works of natural philosophy (the *Physics* on the processes of natural motion, the *De Caelo* on the celestial body, the *quinta essentia* in perpetual circular motion, and the *De Anima* on the phenomena of sense-perception and thought) into a logically argued system.

One of the prominent figures in this scene was Alexander of Aphrodisias, the chief representative of a tradition of literal commentaries influential far beyond the Peripatetic school, regarded as the arch-Peripatetic, and a household name coming in conveniently whenever the contradictions, aporias and lacunae in Aristotle required an authoritative interpreter. Yet in this process, the Arabic Alexander grew to be another virtual text, covering a variety of authentic translations, compilations, and pseudepigraphy accompanying the Peripatetic, Neoplatonic and Gnostic Aristotle who had emerged from the first century of Arabic translation and reception. I am going to present a text transmitted under Alexander's name which is exemplary for this process." (p. 38)

44. Fazzo, Silvia. 2004. "Aristotelianism as a Commentary Tradition." In *Philosophy, Science and Exegesis in Greek, Arabic and Latin Commentaries (Vol. One)*, edited by Adamson, Peter, Baltussen, Han and Stone, M.W.F., 1-19. London: Institute of Classical Studies, University of London.

III. Alexander of Aphrodisias and the Aristotelian commentary tradition 6; IV. The fortuna of Alexander and other Greek commentators 11-14.

"We have seen that it was only in the twentieth century, after the two World Wars, that the study of *Commentaria in Aristotelem Graeca* began to come into its own as a field of research.(44) Among the first to make profitable use of the CAG were those Orientalists, chiefly from Germany, who were interested in Greek-Arabic connections and translations.

In the case of Alexander, the availability of critical editions of the texts made it possible to identify the Greek counterparts of many short pieces transmitted in Arabic under his name but with titles different from those familiar to us.

A first list of Arabic texts attributed to Alexander was drawn up by A. Dietrich in 1964, and supplemented by J. Van Ess in 1966. (45) Still, items included in this list were heterogeneous and mixed up. By the end of the century, further advances enabled scholars to distinguish, at least in a majority of cases, between genuine and spurious works, between whole texts and extracts,

between single texts and groups or collections of texts, between literal translations and free adaptations. As for these latter - which turned out usually to be early versions, originating from the circle of al-Kindī in the ninth century - it was furthermore possible to detect the underlying working methods, and to relate them to the specific cultural inclinations that had motivated the translators." (p. 14)

(44) Extensive use of the CAG lies at the foundation of the first general history of Greek Aristotelianism, Moraux 1973-2001 (Paul Moraux was the founder of the Aristoteles-Archiv at the Free University in Berlin; his early monograph is a pioneer work on Alexander: Moraux 1942). Moraux 1973-2001, vol. 3, devoted to Alexander, was published posthumously under the editorship of J. Wiesner in 2001, accompanied by a chapter on ethics and determinism and an extensive and up-to-date bibliography (618-650), both by R. W. Sharpies. For a general summary of Alexander's philosophy see Sharpies 1987.

(45) See Dietrich 1964, esp. 92-100; van Ess 1966, 148-168 (hence the reference system in use for the Arabic Alexander, with 'D' or 'vE' followed by an index number). These contributions have been a useful starting point but they are now severely outdated: as mentioned above, many items turned out not to be Alexander's at all; in some cases different translations were made of the same Greek original (and different translations might have been revised versions of one another); some items are not single texts but groups or collections of texts: for details and bibliography see Goulet and Aouad 1989 with Fazzo 2003a. A new reference system is therefore an obvious *desideratum*.

45. ———. 2012. "The *Metaphysics* from Aristotle to Alexander of Aphrodisias." *Bulletin of the Institute of Classical Studies* no. 55:51-68.

Abstract: "The article explores (alleged) evidence concerning the *Metaphysics* from Aristotle to Alexander of Aphrodisias, casting doubt on the idea that the work was assembled in its current form by Andronicus of Rhodes. No ancient source supports this claim, nor can we be certain that the collection as it now stands was already available in the first century BC. By contrast, Alexander seems to be well-acquainted with the *Metaphysics* as we have it today. The article also reconsiders the role that Eudorus of Alexandria, Nicolaus of Damascus, Aspasius may have played in the tradition of commentary on the *Metaphysics*."

46. ———. 2016. "Unmoved Mover as Pure Act or Unmoved Mover in Act? The Mystery of a Subscript Iota." In *Aristotle's Metaphysics Lambda – New Essays*, edited by Horn, Christoph, 181-206. Berlin: De Gruyter.

"In my present contribution, I will suggest the hypothesis that the theory of the Prime Mover as pure act, no doubt a main tenet of Aristotelianism in modern accounts, in fact originates from the plain statement that the Prime Mover must be in act; it slowly took its actual shape much later than it is supposed to have done. The process cautiously began with Alexander of Aphrodisias, then developed in a Neoplatonizing atmosphere, partly in Greek, partly in Arabic.(1) In Greek, this happened during a time when scribes and scholars were less and less equipped to make full sense of the most ancient manuscripts, written in *scriptio continua* and uncial script. In such scripts, the subscript iota – which makes the difference between ‘in act’ (or ‘in activity’, ἐνεργείῳ in the dative with subscript iota) and ‘act’ (ἐνέργεια in the nominative without subscript iota) – was not recorded in the majority of cases. Thus, ἐνέργεια written in capital letters can signify either ἐνέργεια or ἐνεργείῳ. This happens in many more recent copies as well, namely in minuscule

manuscripts, as extant manuscripts usually are.(2) For this reason, it is commonly admitted that changes in the subscript iota hardly count as emendations, both in general and especially when dealing with manuscripts from the Aristotelian tradition.(3)" (p. 181)

(1) See below, Appendix 1. "The first principle as ἐνέργεια in Michael of Ephesus, Plotinus and Averroes".

(2) Other minuscule manuscripts have the iota but not as a subscript iota. Hence some further cases of ambiguity, see for example 1051b31 and *ad loc.* note 10 below.

47. ———. 2023. "Aporiai with Multiple Solutions in Alexander of Aphrodisias" In *Ancient Greek Dialectic and Its Reception*, edited by Mouzala, Melina G., 277-286. Berlin: de Gruyter.

"Alexander's so-called *Quaestiones*, in Greek ἀπορία και λύσεις,(1) are of special interest for scholars thinking of Aristotelianism as an exegetical tradition.

In Alexander, an aporia is a peculiarly philosophical kind of problem.(2) Typically, more than one solution can be offered for a single aporia, i.e., for a single exegetical and/or theoretical problem." (p. 277)

(...)

"This makes Alexander's aporiai paradigmatic in a sense, because after Alexander philosophical exegesis became the proper way of making philosophy based on Aristotle's texts. Multiple solutions often arose on the part of different philosophers whose names became famous in the Middle Ages and Renaissance.

Nonetheless, in Alexander's aporiai, the different solutions are not attributed to other authors. Does this mean that Alexander produced all of them? Or rather that a canon was built in Alexander's time as a given standard system on Aristotle's name?

Up to now, it seems that the way aporiai were produced and intended to work still requires investigation.(4) The issue is relevant for that part of the history of ancient dialectics which is concerned with the use of philosophical questions. For the present purpose, I will initially frame my argument rather more widely." (p. 278)

(1) Reference edition by Bruns (1892). Translation by Sharples (1992–1994). For a more comprehensive

inquiry, see Fazzo (2002), with special reference to pp. 25–29.

(2) Aporiai or Quaestiones? The so-called "minor works" (Opera Minora) by Alexander, which bear in Greek the title of Aporiai and lyseis, are better known, if ever, as Quaestiones, which is the title of their first print in the 16th century: "Alexandri Aphrodisiensis quaestiones naturales, de anima, morales" (Venetiis, Zanetti 1536). Since this title appears in catalogues of manuscripts as well, this implies

a frequent confusion between Alexander's *Quaestiones* and pseudo-Alexander's.

(4) See also Kupreeva (2018), p. 228, n. 1, "Much still remains to be done" (my italics), and Fazzo (2002).

48. Fazzo, Silvia, and Wiesner, Hillary. 1993. "Alexander of Aphrodisias in the Kindi-Circle and in al-Kindi's cosmology." *Arabic Sciences and Philosophy* no. 3:119-153.

"How do the heavenly bodies physically affect the sublunary world?"

On this topic, similar accounts can be found in four groups of texts: (1) a few fragmentary statements in Aristotle; (2) Greek works of the Aristotelian commentator Alexander of Aphrodisias (fl. ca. 200 A.D.); (3) Kindi-circle Arabic versions of the same writings; and (4) the cosmological works of al-Kindi.

Across the centuries of transmission and transformation of Aristotle's thought, we observe a gradual expansion from latent possibilities introduced by his own partial or allusive statements, to philosophical justifications of celestial influence in the Greek writings of Alexander, to more specific astrological models in the Kindi-circle's Arabic Alexander, which al-Kindi himself reworks with further astronomical and astrological details. In fact, this is a subject on which al-Kindi's cosmology relies explicitly on Alexander, or better, on the transformed Alexander.

But the relationship was circular. While the Kindi-circle's Alexander was closely followed by al-Kindi on certain points,

al-Kindi exerted a reciprocal influence on the Arabic Alexander, who was largely a product of his own group of translators." (p. 119)

Abstract: "Among Alexander of Aphrodisias's works, a key-role is played by his treatise *On the Principles of the Universe*. It contains Alexander's exegesis of Aristotle's theory of the unmoved mover, as in *Metaphysics Lambda* and in *Physics VIII*. Its original Greek text is lost, but a sixth-century Syriac version and two tenth-century Arabic ones are still extant. All these versions have already been published, and two of them have been rendered into modern languages (English, French, Italian) in the last ninety years, but a really deep textual comparison between them, aiming at the reconstruction of the lost Greek text, has not yet been made. Usually, a key-role is given to the second, later Arabic version of it, mostly since it is more complete than the other ones. Here, a philological re-examination of the history of the textual transmission of Alexander's work is given, and some new conclusions about it are suggested, according to which the role of the first Arabic version, and that of the Syriac one in particular, are found to be more important than hitherto suspected."

50. ———. 2015. "Toward a critical translation of Alexander of Aphrodisias' *De Principiis*, based on the indirect tradition if syriac and arabic sources." *χώρα. Revue d'Etudes anciennes eet médiévales* no. 13:63-101.

Abstract: "One of the main philosophical works by Alexander of Aphrodisias, *De principiis*, is lost in its original Greek text, but it is preserved in three extant Medieval Semitic versions, one in Syriac and two in Arabic, which were written in the Near East between 500 and 950 AD. These versions are not totally identical and, as we have tried to show in another article of ours (2012), they are in a rather complex textual relationship. Like we will show in this article, a tentative reconstruction of the lost

text cannot be based upon a critical edition of only one of the two extant Arabic version, as we have observed elsewhere, but through an attentive and point-to-point comparative analysis of at least some aspect of all three versions of it – a way we have tentatively called “critical translation”.

Abstract: "1. The scope of this article.

The overall scope of this article is to highlight the historical significance of textual findings made by the authors in 2014, namely the confirmation that a large section of Averroes’ introduction to *Metaphysics Lambda* comes from a corresponding text by Alexander of Aphrodisia.

To this end, we reproduce at the end of this paper our original Tables 1 and 2.

The section is to be added to Freudenthal’s 1885 collection of Alexander’s fragments as preserved by Averroes.(2) For quick reference, we call it ‘Fragment Zero’. Since Freudenthal 1885 scholars has been aware that Averroes was still able to use Alexander’s commentary on Aristotles’ *Lām* – the Arabic name for *Metaphysics* book *Lambda* –, even though the Greek had already been lost in Averroes’ times. This was possible because, before disappearing, Alexander’s commentary had been translated in the 9th c. from Greek into Syriac by Hunayn ibn Ishāq (808-873) and in the early 10th c. from Syriac into Arabic by Abū Bishr Mattā ibn Yūnus (d. 940). On this latter basis it was adjusted and rearranged into a summarized form by Averroes (1190 ca.).

The significance of our findings is twofold. Firstly, a standard view, namely a legacy of the late 19th century edition of Alexander's fragments in Averroes (Freudenthal 1885), is revised; additional proof can be integrate into our previous research on the textual history of Aristotle's *Metaphysics*, thus confirming Alexander as a safe *terminus ante quem* for the final assemblage.

This leads to a different issue. This terminus is remarkably later than usually assumed.

According to a widespread vulgate, Andronicus of Rhodes had already made it available in the 1st century BC. Yet, this standard view is no longer convincing, based on our previous results and developments in this same direction and research path, as summarized by Fazzo in 2012(4). Instead, Alexander turns out to be the first safe source of our current arrangement of the books. In this revised frame, one can best make sense of our present point – namely, that a description by Alexander of our *Metaphysics* in fourteen books underlies the one by Averroes. As a result Averroes becomes the witness of a lost text by Alexander, possibly a part of Alexander's introduction to his lost commentary on Aristotle's *Metaphysics* book *Lambda*. This tallies with extant traces of Alexander's *Lambda* commentary within the Arabic tradition: before disappearing from view, Alexander's commentary on *Lambda* was translated into Syriac (probably in the in the 9th century, by Hunayn ibn Ishaq), then into Arabic (in the 10th century, by Abū Bishr Mattā ibn Yūnus)⁵. Only later on (late 12th century), was it adjusted and rearranged into a summarized form by Averroes." (pp. 985-986, some notes omitted)

Alexander of Aphrodisias' metaphysics: Annotated bibliography of the studies in English: Fla - Kra

Bibliography

1. Flannery, Kevin. 2003. "Logic and Ontology in Alexander of Aphrodisias Commentary on *Metaphysics* IV." In *Alessandro di Afrodisia e la 'Metafisica' di Aristotele*, edited by Movia, Giancarlo, 117-134. Milano: Vita e Pensiero.

"What, therefore, can we say after this fairly detailed analysis of some passages in Alexander's commentary on the *Metaphysics*? Three things. I affirm the first two with some confidence; the third is an hypothesis. I believe that I have demonstrated that, when he wrote *in Metaph.*, Alexander was under the influence of a certain model of the proper method of doing philosophy, including first philosophy - that is, he was much attached to the demonstrative method found in the *Posterior Analytics*. On account of this attachment, he had an antipathy for going below the logical and linguistic level of analysis, to the level of signification. I believe that I have also demonstrated that, being so inclined, Alexander in *in Metaph.* also occasionally forces the reading a text. Often he offers us a series of possible interpretations of a text, thereby giving the appearance of objectivity; but, in fact, as we have seen in one such passage, even while doing so, he is capable of succumbing to this most common of academic temptations.

This brings me to the hypothesis. Of course, we cannot assume that mature scholars are never tempted to force a text, but

there are also other factors that suggest that *in Metaph.* (or, at least, *in Metaph. IV*) is less mature than some other works of Alexander's. We have seen that, in *in APr.*, Alexander seems to adopt a more balanced approach: i.e., he seems to have a more exact understanding of the relationship between the logical and the non-logical. We have also seen that in *in Metaph.* he demonstrates a certain ignorance regarding the way in which the game of dialectics is played - an ignorance (I might add) that he does not demonstrate in his comment on the *Topics*. (57) Since there are references in *in Top.* to *in APr.* but not in *in APr.* to *in Top.*, (58) the order of composition that I would suggest is the following: *in Metaph.*, *in APr.*, *in Top.* This is, however, only an hypothesis; such issues demand a more thorough study than I can perform here." (p. 134)

(57) See, e.g., *in Top.* 577.5-15. It is noteworthy also that at *in Metaph.* 204.13-14, Alexander says that something in fact found in *Top.* is found in *APo.*, suggesting with this that, at the time he was writing this section of *in Metaph.*, he did not know *Top.* especially well.

(58) *in Top.* 7.11, 166.21.

2. Flannery, Kevin L. 2019. "Analogy in Alexander of Aphrodisias." In *La dottrina dell'analogia dell'essere nella « MetaFisica » di Aristotele e i suoi sviluppi nel pensiero tardo-antico e medievale*, edited by Salis, Rita, 119-142. Padova: Il Poligrafo.

Abstract: "The author examines the interpretation by Alexander of Aphrodisias of an argument in *Metaphysics* Δ 6 where Aristotle speaks of things that are one 'by analogy' (κατ' ἀναλογίαν). He argues that Alexander's commentary on that passage allows us to conclude that he understands analogy quite broadly so as to include not only four-term proportional relationships but also the two relationships spoken of in *Metaph.* Γ 2: the προ`ς ἓν ('in relation to one') relationship, expounded earlier in that chapter, and the τῶ ἐφεξῆς ('numerical succession') relationship, mentioned later (1004 a 9, 1005 a 11). The author then examines how Alexander, in his *Commentary on metaph.* Γ 2, ultimately distinguishes the

- προ`ς ἔν relationship from the τῶ ἐφεξῆς relationship. The essay concludes with two arguments aimed at resolving problems related to Alexander's reading of *Metaph.* Δ 6 and Γ 2. One of the problems concerns the opening lines of *Metaph.* Λ; the other concerns the final remarks in *metaph.* α 1."
3. Frede, Dorothea. 1982. "The Dramatization of Determinism: Alexander of Aphrodisias' *De Fato*." *Phronesis. A Journal for Ancient Philosophy* no. 27:276-298.

"As we know from other sources,(3) there raged a never ending battle about the notion of fate among the schools, a battle in which the various opponents seem to have relied on the same kind of arguments, counterarguments and examples time and again. Alexander himself does not claim originality; he professes to give only an account of the Aristotelian position (cf. 164, 13; 212,5) which he compares with and defends against the more rigid determinism of a rival school. All commentators agree that the target of Alexander's criticism must be the Stoa. Opinions differ on the question why Alexander does not mention the Stoa or any of its members. The ancient habit of not citing the name of a living person in criticism would suggest that Alexander is dealing with the position of a contemporary, a contemporary as it seems who maintained a stronger determinism than, e.g., Chrysippus himself as witnessed in Cicero's *De Fato*, and who does not always understand the refinements of the earlier Stoic compatibilism.

There is, of course, the problem of our sources' historical accuracy and fairness. The openly polemical tone and arguments in Alexander make it difficult to assess what, precisely, the Stoic position was and whether Alexander in his *reductio* arguments (his favourite method of criticism) does not distort the Peripatetic position sometimes too. I will try to present a 'reasonable' Stoic position and work out what the main points of disagreement are(4)." (pp. 276-277)

5. Frohn-Villeneuve, W. 1980. "Space, time, and change. Alexander's interpretation of Melissus " In *Mélanges d'études anciennes offerts à Maurice Lebel*, edited by J. B. Caron, Michel Fortin and Gilles Maloney, 173-186. Québec: Éditions du Sphinx.

6. Ganson, Todd Stuart. 2003. "Alexander of Aphrodisias on the role of color appearances." *Ancient Philosophy* no. 23:383-393.

"Aristotle has very little to say about how we visually discriminate spatial properties of objects like distance from the perceiver. The task of saying something significant about such cognition was left to Alexander of Aphrodisias, who wished to show that the Aristotelian theory of vision is superior to its competitors.(1) Because rival schools purported to solve difficult problems concerning visual cognition of spatial properties, Alexander wanted to show that one could satisfactorily address these problems within an Aristotelian framework." (p. 383)

(1) In the *Mantissa* there is a valuable discussion of alternative approaches to spatial cognition in the sections which come

before the one titled 'How seeing comes about according to Aristotle'

(141.30-147.25). See especially the section devoted to 'those who say that seeing comes about through the impact of images' (134.30-136.28). In what follows I do not assume that all of these sections

were written by Alexander, though I will take for granted that 'How seeing comes about according to Aristotle' is by Alexander. For discussion of the title and contents of the *Mantissa*, see Sharples

1998.

"The tenth chapter of Alexander of Aphrodisias' *De Fato*(1) contains a treatment of fatalism and future truth which clearly harks back to Aristotle's famous 'Sea Battle' discussion in *De Interpretatione* (DI) 9.2 Alexander's discussion has not yet been satisfactorily interpreted: this paper is intended to help remedy this lack." (p. 75)

(...)

"If my interpretation of ch.10 is correct, it follows that Alexander must have read Aristotle as accepting the fatalist's inference from the truth of a FCS [= future contingent statement] to its (real) necessity. How Alexander responded to fatalism - whether in accordance with the traditional interpretation of Aristotle or that favoured by the commentators - cannot, as I have mentioned, be extracted from *De Fato* itself; but it is an implication of my construal of 177

.15-177 .27 that some sort of restriction or adaptation of PB [= principle of bivalence] would have been accepted by Alexander, and hence that he must have understood Aristotle in DI 9 to be announcing such a restriction or adaptation(51)" (p. 94)

(1) The text of the *De Fato* is available in *Supplementum Aristotelicum* II.ii. 164-212, ed. I. Bruns, Berlin, 1892. Bruns' text is reproduced in the commentary of R. Sharples: *Alexander of Aphrodisias on Fate* (London, Duckworth, 1983).

8. Genequand, Charles. 2019. "Alexander of Aphrodisias and Arabic Aristotelianism." In *Encyclopedia of Medieval Philosophy: Philosophy between 500 and 1500. Second Edition*, edited by Lagerluns, Henrik, 60-62. Dordrecht: Springer.

Abstract: "Alexander of Aphrodisias, commentator par excellence of Aristotle, lived about 200 CE. A fairly important part of his works was translated into Arabic during the ninth century and greatly influenced the reception and interpretation of the Stagirite's thought in the East. Important fragments of his commentary on the *Metaphysics* have been preserved in Ibn Rushd's own *Great Commentary* on that work. Among the independent treatises preserved in Arabic, the most important are *On the Principles of the Universe*, *On Providence*, and *On the Intellect*."

9. Gili, Luca, and Podolak, Pietro. 2018. "Hugh Eterianus, Alexander of Aphrodisias and syllogistic demonstrations a newly discovered fragment of Alexander of Aphrodisias' « Commentary » on Aristotle's « Posterior analytics »." *Documenti e studi sulla tradizione filosofica medievale* no. 29:137-154.

Abstract: "Hugh Eterianus (ca. 1110/1120-1182), an Italian theologian who worked in Byzantium as an advisor to Manuel I Comnenos, is the author of the treatise *De sancto et immortalis deo*, where he argues against the Orthodox denial of the filioque. In this treatise, Hugh quotes from the works of Plato, Aristotle and other Greek philosophers. In chapter I, 4, Hugh includes a short passage from a certain 'Alexander' who commented on Aristotle's *Posterior Analytics*. We show that

this passage is a fragment from Alexander of Aphrodisias' lost commentary on the *Posterior Analytics*. This article includes a new edition of the fragment with an English translation and a philosophical commentary."

10. Golitsis, Pantelis. 2016. "Who were the real authors of the « Metaphysics » commentary ascribed to Alexander and Ps.-Alexander?" In *Aristotle Re-Interpreted: New Findings on Seven Hundred Years of the Ancient Commentators*, edited by Sorabji, Richard, 565-587. New York: Bloomsbury.

"I should like to revisit the so-called *recensio altera* of Alexander of Aphrodisias' *Commentary on the Metaphysics*, part of which was published by Hayduck in the apparatus featured at the bottom of the page of his edition under the title 'the more serious discrepancy of the alternative recension' (*alterius recensiois gravior discrepantia*). To do this, I shall structure my thought around three questions which unfold in a decreasing chronological order, and which will all admit a negative answer: a) did the person who produced the so-called recensio want to produce an 'interpretation' of Alexander's commentary, in other words a text which, by means of its author's intention, maintains its relation to Alexander's commentary?(9) b) did the persons who thereafter reproduced and studied this text, i.e. Byzantine copyists or scholars, consider that they had before them a text by Alexander (whether it be a 'kind' of Alexander's text or not)? c) were the philologists of the modern era, who believed that they had detected a *recensio altera* of Alexander's commentary, judiciously helped in their critical work by an outlook which can be called alexandro-centric? At the end of this investigation, it will become apparent, I hope, that many elements of the exegetical history of the *Metaphysics* have disappeared because of a misapplication of the concept of *recensio*." (pp. 566-567)

(9) Such texts are, e.g., the *recensiones pachymerianae* of Proclus' commentary on Plato's *Parmenides* and of Michael of Ephesus' commentary on Aristotle's *On the Parts of Animals*; see P. Golitsis, 'Copistes,

élèves et érudits: la production de manuscrits philosophiques autour de Georges Pachymère ', in A. Bravo García and I. Pérez Martín, eds, *The Legacy of Bernard de Montfaucon: Three Hundred Years of Studies on Greek Handwriting* (Turnhout: Brepols, 2010), pp. 157–70.

11. ———. 2016. "The manuscript tradition of Alexander of Aphrodisias Commentary on Aristotle's *Metaphysics*: Towards a New Critical Edition." *Revue d'histoire des textes* no. 11:55-94.

"Alexander of Aphrodisias' (fl. 200 A.D.) commentary on the *Metaphysics* is among the first commentaries on Aristotle to be printed in Latin and among the last to be printed in Greek. It might seem as a paradox that the Latin version of the commentary by the Spanish humanist Juan Ginés de Sepúlveda (1490-1573) was quite a philological achievement in its time and can still be admired today, whereas the two editions of the Greek text made by Hermann Bonitz and by Michael Hayduck in the nineteenth century are defective in some important respects. The present article aims at laying the basis for a new critical edition of Alexander's commentary on books A-Δ of the *Metaphysics*, which I have recently undertaken thanks to a generous funding by the *Deutsche Forschungsgemeinschaft* (DFG)." (p. 55)

(...)

"The most important finding, however, of our own recensio is the discovery of the lost hyparchetype β, a copy of which is the *Par. gr. 1878* [P], made by an anonymous scribe and Andronicus Callistus.

I provide in Appendix I two specimens which illustrate the textual improvements that P enables us to make. The number and type of variant readings attested in P, as well as the mere fact that this is not a manuscript exclusively copied by Callistus, who is otherwise known for his good conjectures, suffice to establish that the two copyists had access to a nowadays lost manuscript of Alexander's commentary on *Metaphysics* A-Δ." (p. 72)

12. ———, ed. 2022. *Alexander of Aphrodisias: Commentary on Aristotle, Metaphysics (Books I–III)*. Berlin: de Gruyter.

Critical edition with Introduction and Notes.

"Editing Alexander of Aphrodisias' (fl. 200 AD) commentary on Aristotle's *Metaphysics* is a complicated task for both historical and scholarly reasons. To begin with, there is some doubt whether Alexander, whose full name was Τίτος Αύρήλιος Ἀλέξανδρος,(1)

commented on the entire treatise or only on some of its books. At any rate, the direct Greek tradition of the text delivers no commentary beyond book Delta. Nevertheless, Averroes has preserved some thirty fragments of Alexander's commentary on book Lambda(2) and Syrianus refers to some of Alexander's comments in his own commentary on books Mu and Nu.(3) Taken together with three mentions of Alexander in Asclepius' commentary on book Zeta,(4) these references suggest that Alexander composed a commentary on the entire *Metaphysics*." (*Introduction*, p. XXIII)

"The edition consists of Alexander's reconstructed text with three apparatuses: (a) apparatus fontium et locorum aristotelicorum, (b) apparatus criticus et historicus, (c) apparatus lectionum aristotelicarum. These have been put into this order in accordance

with the relevance that they may have for the potential (Hellenist) reader of the edition: (a) historians of philosophy interested in Alexander's interpretation of Aristotle's *Metaphysics*, who would like to know his references to Aristotle's text(s) and other sources; (b) historians of philosophy and philologists, who may have a different (and possibly better than the present editor's) understanding of Alexander's commentary and may prefer a reading rejected by the present editor; (c) historians of the text of Aristotle's *Metaphysics*, who wish to readily know what was Alexander's reading each time there is a divergence in our textual tradition of the *Metaphysics*. I take it that (a) concerns more people than (b) and (b) more people than (c)." (*Introduction*, p. CLIII)

(1) According to the epigraphic evidence from Aphrodisias discussed by Chaniotis 2004: 388–389.

Alexander had a homonymous father, who was awarded Roman citizenship by the governor of Asia (135/136 AD) Titus Aurelius Fulvus Antoninus (the later emperor Antoninus Pius), as the pronomina Titus Aurelius imply.

(2) See Freudenthal 1885; Genequand 1986. Di Giovanni – Primavesi 2016 raise some issues as to whether Averroes had access to Alexander’s genuine commentary.

(3) Syrianus, *In Metaph.* [= Kroll 1902] 96.18, 111.34, 122.12 and 18, 160.8, 166.27, 186.16, 195.12. In 186.16,

Alexander is quoted by Syrianus as an authority for the traditional division between books *Mu* and *Nu*.

Alexander’s commentary on *Nu* is mentioned in the *Kitāb al-Fihrist* of the tenth century; see below, p. xlviii, n. 3.

(4) Asclepius, *In Metaph.* [= Hayduck 1888] 408.5 and 20, 428.13.

"A particular difficulty for our study is the almost complete loss of the relevant literature. This is in large measure due to the character of that literature, much of which consisted of commentaries on Aristotle's works or discussions of problems arising out of them. Such writings were by their very nature liable to be superseded as each generation reread Aristotle in the light of its own needs and preoccupations. The only writings by professed Aristotelians of this era to have survived in their original form are a commentary on parts of the 'Nicomachean Ethics' by Aspasius (second century AD) and the 'De mundo' wrongly attributed to Aristotle himself, to which one can doubtfully add the pseudo-Aristotelian 'De virtutibus et vitiis' with its doublet, falsely ascribed to Andronicus of Rhodes. In addition two treatises by Nicolaus of Damascus, originally perhaps parts of the same work, have survived through being translated into Syriac or Arabic.(1) Besides these we only have fragments quoted by later writers; the chief sources are the commentaries on Aristotle's works written by Alexander of Aphrodisias in the third century and by Ammonius (the son of Hermeias), Philoponus and Simplicius in the fifth and sixth.(2) The last-named is especially generous with quotations and sometimes gives a synopsis of the views of earlier interpreters on particular problems;(3) the introduction of his commentary on the 'Categories' (pp. 1-2) includes a survey of the work of earlier commentators. The information they provide is sufficient to give us an idea of the problems which interested

the earlier Aristotelians and the kind of answer they gave, but usually not to reconstruct their arguments in full." (p. 1080)

(1) All these works will be discussed below.

(2) This and the other ancient Greek commentaries on Aristotle have been excellently edited in the series 'Commentaria in Aristotelem Graeca' (CAG), published under the auspices of the Prussian Academy (Berlin 1883-1909); other relevant works, notably the treatises and essays of Alexander of Aphrodisias, have been published in the same format in the 'Supplementum Aristotelicum' (Berlin 1885–1903). They will be quoted by page and line of these editions.
